Reliant names new chief, seeks U.S. sales partner

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Reliant Motor, the British specialty-car maker, has a new managing director and is seeking a North American partner to help distribute its open-top Scimitar two-seater in the United States.

Cyril Burton, a Reliant director since 1974, has been named managing director of the company, which produces the Michelotti-designed Scimitar and the Rialto three-wheeled vehicle. It also produces Ford RS200 rally cars on a contract basis.

Burton, who previously served as commercial and export director, replaces Ritchie Spencer, Reliant's managing director for the past 10 years. Spencer left to join GKN, a British engineering and industrial group and major auto industry supplier.

Spencer has said he was recruited by GKN and that his leaving was unrelated to conditions at Reliant, which has lost money for the past two years. He said Reliant has been operating profitably in recent months and reducing its debt load.

Michael Bennett, Reliant marketing director, said there are no plans to enter the North American market until the company finds a partner to share the expense of the project.

"Various people have expressed an interest," he said, "but we're insistent that it has to be a partnership interest. It is beyond the resources of this company to do the engineering and homologation work that is necessary. That is an enormous task for a company our size to undertake. We feel we have to have a greater commitment."

Though discussions have been under way, Bennett said no deal is imminent.

"We're not ready to toss a coin and say let's go," he said, adding that it is doubtful a partnership agreement can be concluded by the end of the year.

Spencer last year cited exchange rates and high product-liability insurance costs in the United States as reasons for delaying the planned launch of the Scimitar 1800Ti for the 1987 model year.

He said an annual insurance bill of more than $750,000 was difficult to justify in view of Reliant's projected annual U.S. volume of 500 units and estimated sale price of about $16,000. The Scimitar 1800Ti retails in Britain at 10,300 pounds, or $16,480 at current exchange rates.

Last year, Reliant sold about 2,500 Rialto three-wheelers — 2,350 in the United Kingdom and another 150 to export markets. Sales of the Rialto, introduced in 1982, have been steady in recent years, but are down from the early-1970s heyday for three-wheelers. Reliant sold 15,000 three-wheeled cars in 1972.

The Scimitar, Reliant's moderately priced sports car in the tradition of British Leyland's two-place Triumph and MG roadsters, suffered a sales decline in 1986. Reliant sold 277 Scimitars in the United Kingdom and another 55 to export markets. In 1985, following the car's debut in the fall of 1984, Reliant sold 547 Scimitars in the United Kingdom.

Sales fell off last year as customers sought more performance than was offered by versions powered by 1.6-liter Ford CVH engines, Bennett said.

The top-of-the-line 1800Ti turbocharged model, using Nissan's 1.8-liter Silvia Turbo engine, did not appear until last June, restricting 1986 volume, he said.

Reliant is now producing about 10 Scimitars a week at its factory in Tamworth, Staffordshire. It is counting on selling about 400 units in the United Kingdom this year and exporting another 150 to Japan, Germany, Switzerland and, beginning in May, to France. Reliant also sells a few cars in such locales as Hong Kong, where United Kingdom specifications apply.

Reliant reported an operating profit of $267,200 for the fiscal year ended Sept. 30, compared with a $486,400 loss before servicing debt the previous year. Overall, interest payments of $540,800 and a $4,800 tax debit in fiscal 1986 pulled the company $278,400 into the red, compared with a loss of $1.03 million after taxes in fiscal 1985. Reliant achieved a net profit in each of the three previous fiscal years.

The company registered a profit of $38,400, after interest payments, for the last six months of the 1986 fiscal year.

On the strength of the Rialto, Reliant sales revenue for the 1986 fiscal year increased slightly, to $22.9 million from $22.8 million.

The company also reduced its bank debt in 1986 by $1.4 million — to $3.2 million. Company officials have predicted a further decline this year.

The company's 1986 results also reflected an extraordinary debit of $483,200. That charge consisted of $724,800 in redundancy and reorganization costs, which were partially offset by a $241,600 profit from the sale of various properties.

LAMBO

FROM PAGE 1

Lamborghini factory here was watched by workers, local dignitaries and passing members of the public.

Repeated questions about the price paid by Chrysler were deflected, but the rumored figure is around $30 million. It is not known whether that figure includes the product and facility expansion plans sketched out by the new owners.

Technically, what Chrysler is buying is a Dutch-registered company, Micooperan BVH, through which the Franco-Swiss Mimrans had 100 percent control of Lamborghini.

The share capital of Lamborghini is 3.8 billion lire, or about $2.9 million at current exchange rates. Sales last year were 27 billion lire ($20.8 million), compared with 25 billion lire the previous year.

Lamborghini is said to have made a small profit last year and has been at about breakeven since Patrick, Jean-Claude and Robert Mimran bought the company seven years ago. But the Mimrans felt that a family company could not provide the financial commitment required to expand and develop the business. It needed a major company with proper financial muscle.

Initial contacts between Patrick Mimran and Greenwald took place in Detroit in November 1985. The proposal at that time was for Lamborghini and Chrysler to jointly develop a car that would be sold primarily in the United States by Chrysler.

The talks developed to the point at which Mimran offered to sell 40 percent of the stock in Lamborghini to Chrysler. But Chrysler wanted to hold a controlling majority.

As talks continued, news of the proposed sale leaked out earlier this year, although the precise details of the sale were not agreed upon until 2 a.m. last Thursday — a few hours before the official announcement.

Greenwald said the purchase will not affect Chrysler's relationship with Maserati, another famous manufacturer of sports cars, based in nearby Modena. Chrysler owns 15.6 percent of Maserati and has an option to increase that to 51 percent by 1995.

However, Greenwald said he did envisage Maserati producing some components for Lamborghini on a subcontract basis. In all other respects, the two companies will be run separately, he said.

Similarly, Chrysler will offer Lamborghini exchange of components, including electronics, and use of its test facilities and proving ground.

Indeed, Greenwald declared that day-to-day management at Lamborghini will be left entirely to the current staff, General Manager Emil Novaro and Managing Director Giulio Alfieri. The so-far-un-named Chrysler executive who will join Lamborghini's board will not be directly involved in the management of the company.

At present, Lamborghini employs 320 people. Last year, it made 270 cars but output this year will increase to about 450 vehicles — 220 Countachs, 70 Jalpas and 160 of the LM002 luxury off-roaders that went into production last year. The company recently began producing marine versions of its V-12 engine.

The highest annual volume it ever attained was 650 cars in the late 1970s.

But Italian sources said that Chrysler has earmarked Lamborghini for substantial expansion during the next five years, including annual volume as high as 5,000.

An important element of that will be a new model with a mid-mounted V-8 that will appear in three years. It is regarded as a likely replacement for the Jalpa, which it will resemble in size, specification and performance.

In addition, Greenwald said that the LM002 was a plus for Chrysler in the agreement. Unlike the Jalpa and Countach, the so-called Rambo Lambo has not so far been been approved for U.S. sale.

A replacement for the Countach is regarded as a lesser priority. Only 1,100 of the $127,000 high-speed two-seaters have been produced since it was introduced in 1974.

There is plenty of room for expansion of the Lamborghini facility. At present, only about one-fourth of the 947,000-square-foot site is covered by factory buildings.

Greenwald said that Lamborghinis will be sold in the United States through a combination of "the most qualified" Chrysler Motors dealers and other specialized-car dealers.

The 150 Lamborghinis sold in the United States last year were distributed by a privately owned company, Lamborghini East, headquartered in North Bergen, N.J.

Lamborghini East President Joe Nastasi said he bought the rights to distribute the cars east of the Mississippi River plus Texas in June 1985. Lamborghini East has dealers in Illinois, Maryland, New Jersey, Rhode Island, Pennsylvania, Florida, Texas and Puerto Rico.

Nastasi, who was out of the country last week, told Automotive News earlier this year that he plans to import 200 vehicles this year.

The issue of distribution rights on the West Coast is in litigation. Lamborghini West, headquartered in Beverly Hills, Calif., distributed cars in California and Arizona until the beginning of 1986.

The Lamborghini sports-car company was founded in 1963 by Ferruccio Lamborghini, an industrialist who established a successful agricultural-tractor-making business. He is said to have begun the sports-car concern after complaining about the quality and reliability of his Ferrari to Enzo Ferrari and being treated in an offhand manner.

Lamborghini was forced to sell the sports-car company after the tractor business got into difficulties in the early 1970s. The tractor business was eventually taken over by a Fiat company, but the sports-car operation had a number of difficult years under various managements in the late 1970s. That continued until some stability was introduced with the purchase by the Mimrans in 1980.

PATENT

FROM PAGE 1

of no challenges to date in the United States since a 4ws car has not been introduced. Both indicated that their respective companies will probably await the outcome of any disputes in Japan before taking up the fight here.

A spokesman for American Honda said the dispute in Japan has not affected the company's plans to market such a system in the United States on the 1988 model. No date has been set for introduction. The car was introduced earlier this month in Japan.

A Mazda spokesman said, "We expect to introduce it to the Japanese market this summer and later this fall in the United States." He added the situation in Japan has not changed those plans. The system will be offered as an option on the company's all-new 626 series.

Although Nissan and Toyota are actively pursuing 4ws technology, they have no immediate plans to offer it as an option on U.S. models.

In Japan, the five manufacturers involved in the dispute are seeking 4ws patents from the Japanese patent office. Some have hinted that additional complaints will be filed against others, charging infringements on their systems.

A Honda spokesman in Japan said the company applied for patents in several countries on Dec. 29, 1978 for two 4ws systems — a steer angle-dependent system and a speed-response system.

He said patents for the steer angle-dependent 4ws were granted to Honda by the United States on Oct. 20, 1982; Great Britain, June 15, 1983; West Germany, Nov. 22, 1984; France, May 24, 1985; and Japan, May 29, 1986.

The steer angle-dependent 4ws system is offered by Honda on its new Prelude Si and XX models that went on sale in Japan.

The Honda spokesman in Japan also said Honda was granted patents for the speed-response system by the United States on Feb. 2, 1982; Great Britain, June 15, 1983; and France, May 24, 1985.

According to that spokesman, Honda has not received patents for the second system from Japan and West Germany.

Toyota, Nissan and Mazda, in their complaint to the Japanese government, claimed that the speed-response system — on which Japan has not granted a patent — can be conceived by any automaker.

Although the automakers involved would not elaborate on their complaints against Honda, industry analysts said the speed-response 4ws system will become the industry norm in the future. Toyota, Nissan and Mazda, which have been developing their own systems, do not want Honda to have exclusive rights to the 4ws because Honda's patent applications covered a microcomputer-controlled version.

Since most automobile mechanisms can be controlled by a microcomputer, the three automakers apparently fear that if patents on the microcomputer-controlled 4ws are granted to Honda, their 4ws systems and various other control systems could infringe Honda's patents.

Mazda recently introduced its speed-sensing 4ws that electronically controls the steering direction and angle of the rear wheels in response to vehicle speeds.

Mazda said it has applied for more than 200 patents for the system, which will be featured on its new Capella (626) model to be introduced May 8 in Tokyo. A Capella-based car will be produced this fall by Mazda at its new assembly plant in Flat Rock, Mich.

Toyota said the 4ws concept was introduced on its FXV experimental model at the 1985 Tokyo Motor Show.

A Toyota spokesman said the company has applied for "quite a few patents" for the system with the Japanese patent office since 1985. He said the company also has filed infringement complaints but would not identify the companies named in the complaints.

Nissan claims it was the first to introduce 4ws, called HICAS (high capacity actively controlled suspension), on its Skyline model in August 1985. It also has applied for patents.

According to a Nissan spokesman, Mitsubishi has infringed on some features of its system, but he said that Nissan "has not decided what its is going to do about it."

The Nissan spokesman said Mitsubishi's system infringes in the areas of "steering sensitive efforts and picking up speed from the differential for rear-wheel steering."

Mitsubishi recently unveiled a 4ws system which, it said, integrates four-wheel-drive, four-wheel steering and four-wheel independent suspension systems. The system, MMC said, will be featured in its next-generation vehicles.

A Mitsubishi spokesman said the company was not filing any patent complaints against any auto companies "at this time."

Automotive News Staff Reporter Matt DeLorenzo in Washington contributed to this report.

Copyright, 1987, Automotive News

All four of the U.S.-based manufacturers offer captive imports. Captives are foreign cars whose U.S. distribution is controlled by a U.S. maker. Volkswagen United States sells both U.S.-built and imported VWs. In addition, many domestic dealers sell an independent import, in some cases along with their captive line.

In the first quarter, General Motors was responsible for the downturn in dealerships with a decline of 50 establishments. Elsewhere, the domestic manufacturers were pretty stable.

Chrysler Motors reported a gain of 14 dealerships, and VW was up two. Ford Motor Co. was down nine, and American Motors-Renault lost 12 outlets during the quarter. A change in the number of intercorporate duals brought the overall slip to 46.

All figures in this article and in the accompanying tables indicate the net change in the dealer population, both for the individual corporations and car lines and for the domestic industry as a whole.

Chrysler's increase was its 16th in the last 18 quarters. Another quarter in that span resulted in no change, and only one showed a drop. During those 18 quarters — starting in October 1982 — Chrysler has added 408 dealers.

Volkswagen's upturn was its second quarterly advance in a row. VW's dealer total has gained or held steady in five of the last six quarters.

On the franchise side, the first quarter saw gains for each of the Chrysler Motors makes and for Lincoln and VW. The Chrysler increases were uniform — 15 for Dodge, 13 for Plymouth and 12 for Chrysler. Lincoln added six franchises, and VW added two.

Chevrolet had a decline of 30 franchises. Cadillac and Pontiac were unchanged during the period, and dips ranged from two to nine for Mercury, Buick, Oldsmobile, Renault, AMC and Ford.

Chrysler Motors' addition of 14 dealerships was its best first-quarter showing since 1984. Its total of 4,037 car outlets is its highest since mid-1980 — before the dawn of the Iacocca era.

Chrysler also has three dealerships that handle only Dodge trucks. They are not counted in the corporation's car-dealer total or in the Dodge car-franchise total.

Ford Motor's loss of nine locations was lighter than last year's first-quarter dip of 16.

Ford has 112 dealerships that sell only Ford heavy-duty trucks. They are excluded from the company's car-dealership count and from Ford Division's franchise total.

GM, with 9,630, has nearly half of the nation's domestic-car dealers. Its first-quarter dip of 50 was its heaviest for that period since 1983 (also down 50), but it amounted to just one-half of one percent of GM car-dealer total.

GM's corporate dealer count is 10,180, including GMC truck outlets that do not handle any of the corporations's car lines.

The AMC-Renault dealership total of 1,337 includes 1,213 that handle both makes. AMC has 723 duals with Big Three cars, and Renault is included in 92 percent of them.

The AMC-Renault-Jeep dealership total on April 1 was 1,459, including Jeep outlets that do not handle either of the company's car lines.

Volkswagen U.S. has an estimated 170 duals with Big Three cars and with AMC-Renault.

Looking back a year, the total of 20,359 domestic-car dealerships is down 289 from the 20,648 in operation on April 1, 1986. Chrysler added 32 outlets during the 12-month period, and VW was up three.

There were dips of 195 for GM, 83 for AMC-Renault and 50 for Ford Motor Co. A change of four in the number of intercorporate duals brought the decline for the industry to 289.

PRODUCTION

Car output moves up

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Auto production in the United States remained at a low level last week as most assembly plants worked only four days because of a holiday.

Car output was targeted at 133,634 units last week. 4.76 percent more than the previous week's 127,561. The prior week's build also was trimmed by a holiday.

Last week's production was 19.57 percent below the year-ago week's 166,146.

Companies split last week's scheduled production as follows: General Motors, 51.27 percent; Ford Motor Co., 24.72 percent; Chrysler Motors, 12.95 percent; Honda of America Manufacturing Inc., 4.98 percent; New United Motor Manufacturing Inc., 2.24 percent; Nissan Motor Manufacturing Co. U.S.A., 2.19 percent; Volkswagen of America, 1.20 percent; and American Motors, 0.45 percent.

Volkswagen's plant in Westmoreland, Pa., is down this week (April 27) for inventory adjustment, affecting about 1,600 workers. The plant is expected to resume output on May 11.

GM reported that no Cadillac Cimarrons were built last week, and only 53 units are scheduled this week. A company spokesperson said the shutdown and reduction at GM's Janesville, Wis., plant are the result of high inventory. No date was given for Cimarron's return to full line speed.

GM's Leeds, Mo., plant is idle this week for inventory adjustment, affecting 2,000 workers. The plant is expected to resume operations May 11.

GM's Oklahoma City plant resumed production last week (April 20). The plant was idle for one week for inventory adjustment.

Saturday (April 25) overtime was slated for GM's No. 1 plant in Lansing, Mich.

Ford slated Saturday overtime at its Dearborn, Mich., plant.

All Ford car plants are scheduled for daily overtime this week.

Chrysler's Sterling Heights, Mich., plant was slated for Saturday overtime. That plant and the Newark, Del.; and St. Louis plants are scheduled for daily overtime this week.

Week's truck production dips 5%

Domestic truck production was scheduled at 63,943 units last week, 5.10 percent below the previous week's 67,378.

Each week included a holiday, although General Motors slated overtime at five plants last Saturday (April 25).

Last week's build was 13.00 percent below the year-ago week's 73,501.

GM slated Saturday overtime at the Baltimore; Detroit; Flint, Mich.; Lordstown, Ohio; and Pontiac, Mich. (medium-duty line) plants.

No Saturday overtime was scheduled at Ford Motor Co. truck plants.

Ford has slated daily overtime this week (April 27) at all of its truck plants.

Canada truck build is year's best

Canadian truckmakers last week scheduled their highest week's production so far this year.

The estimate was 19,112 trucks, 48.30 percent more than the previous week's 12,887. Plants worked only four days the previous week because of the Easter holiday.

Last week's scheduled truck output was 0.84 percent below the year-ago week's 19,273.

Auto production totaled 17,860 last week, 23.15 percent more than the holiday week's 14,503.

Last week's scheduled build was 29.75 percent below the year-ago week's 25,422.

High stocks may idle GM 'E' plant for 10 weeks

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

Swollen dealer stocks and sluggish sales of General Motors E-body cars have prompted GM to plan a 10-week model changeover at the Detroit-Hamtramck assembly plant.

The E-cars are the Oldsmobile Toronado, Buick Riviera and Cadillac Eldorado.

The K-body Cadillac Seville line is likely to be down for the entire E-body changeover, although the V-body Cadillac Allante line could have less downtime.

A week to two weeks is the normal changeover period for plants building cars that do not have major model-year-to-model-year changes. Although the 1989 Eldorado will get more than just a facelift, the extended changeover period is primarily due to sluggish sales.

In addition, a source at the plant said Detroit-Hamtramck officials, apparently acting on their own initiative, already are considering a plan that would extend the year-end holiday three extra weeks, until Jan. 25, in anticipation of the need to adjust 1988 model output at mid-year.

Those tentative plant-level plans do not seem to take into consideration a possible strike by the UAW or changes in the production rate — if any — at the start-up of the 1988 model year.

A spokesman for GM's Buick-Oldsmobile-Cadillac Group, which operates the plant, said the corporate scheduling committee has not finalized model changeover schedules and is not likely to do so until about June 1.

The scheduling committee, which meets at least once a month, is responsible for approving production schedules. The committee acts on recommendations that originate with the divisions and are forwarded to the groups.

Normally, the scheduling committee works only 60 or 90 days ahead, the B-O-C spokesman said, fine-tuning quarterly schedules on a monthly basis.

Detroit-Hamtramck is the sole source of Eldorado, Riviera, Toronado, Seville and Allante.

On April 1, there were some 21,400 unsold K- and E-cars, equal to a 97-day supply of Toronados, a 69-day supply of Rivieras, a 67-day supply of Sevilles and a 112-day supply of Eldorados.

Since the beginning of the 1987 model year, the Detroit-Hamtramck plant has been closed completely or partially just two weeks for inventory adjustment.

OBITUARIES

Irving Woodin

MONTICELLO, N.Y. — Irving Woodin, 76, former owner and president of Queensbury Motors, died here April 14.

John A. Rooney

BOSTON — John A. Rooney, 79, longtime automobile editor of the old Boston Herald-Traveler, died April 14.

CONTENTS

PRODUCTION 3

Japan produced more vehicles than the U.S. in 1986 for the seventh year in a row. Not surprisingly, South Korea had the biggest percentage gain in production.

SALES/ REGISTRATIONS 29

Total vehicle sales in the U.S. reached record proportions, with Chrysler Motors selling more vehicles than ever in its history.

PRODUCTS/ SPECIFICATIONS 57

Need to know the wheelbase of a Ferrari 328 GTB? Or how about a Ford Escort diesel? We've got specs of just about every car on the road — trucks, too.

PRICES 77

Here are all the prices: Domestic and import auto prices, average new-car selling prices, and much more.

OPTIONS/EQUIPMENT 83

The most popular factory-installed options in 1986 were — drum roll, please — power steering, power brakes, tinted glass and steel-belted radials.

MANUFACTURERS 99

An expanded list of overseas vehicle makers and their addresses, along with 1986 financial highlights for the U.S. Big Three automakers.

DEALERS 105

The number of new-car retail outlets handling domestic makes in the U.S. fell again last year, but the number of import-make dealerships continued to rise.

DIRECTORIES 109

Who's who in the auto industry ■ Roster of auto firms and executives ■ 1987 dealer buyer's guide.

ET CETERA 201

Joint ventures of major automakers ■ Import and domestic new-car inventories ■ Auto industry advertising data ■ Car and truck scrappage figures ■ Dealer introduction dates of U.S. models.

PRODUCTION

For the seventh straight year, Japan produced more vehicles than the United States. Japan turned out 12,259,819 units in 1986 versus 12,271,095 in 1985, a drop of 0.09 percent.

The United States produced 11,372,865 vehicles in 1986, compared to 11,671,475 in 1985.

South Korea took honors in 1986 for the biggest percentage gain in production. That nation built 601,546 vehicles, a 59.07-percent increase over 1985's 378,162.

Other big gainers were: Brazil, up 9.30 percent to 1,056,507 in 1986 compared to 966,625 in 1985; and Spain, up 8.11 percent to 1,532,623 in 1986, compared to 1,417,604 in 1985.

West Germany also increased output in 1986, turning out 4,596,963 vehicles, 3.40 percent higher than 1985's 4,445,920.

Italy increased production by 16.41 percent in 1986, making 1,831,089 units compared to 1,572,907 in 1985.

Mexico had the biggest percentage drop in 1986, producing 272,168 units, a 31.65-percent drop from 398,192 in 1985. ■

PRODUCTION

Car production in Canada fell 1.62 percent in the 1986 calendar year to 1,073,312 units versus 1,090,983 in 1985.

Although Canadian production dropped in 1986, it was the second-highest annual volume in the nation since 1978.

Most of the production loss was attributed to General Motors, which reduced output by 33,141 units in 1986, or 5.78 percent below its 1985 total. GM produced 540,546 cars in 1986 and 573,687 in 1985.

Reversing GM's position was Ford Motor Co., which boosted production by 21,463 or 4.33 percent. Ford made 517,418 cars in 1986 compared to 495,955 in 1985.

AMC production fell by 60.82 percent to 4,432 cars in 1986 compared to 11,311 in 1985.

Honda, which started production of cars in Canada in October 1986, made 526 units. Volvo produced 10,390 cars in 1986 compared to 10,030 in 1985, an increase of 3.59 percent. ■

SALES/REGISTRATIONS

From a vehicle-marketing standpoint, the United States was an exciting arena in 1986.

It had everything from sales records, import price hikes and distress selling of domestic makes to cut-rate financing and limited-option price leaders.

Total vehicle sales — cars and trucks combined — in 1986 rose to a record 16,333,931 units, up 3.86 percent from 15,727,482 units sold in calendar 1985.

Industry new-car sales rose above the 11-million mark for the second straight year, reaching a record 11,463,092 units versus 11,045,784 units delivered in 1985. The previous record was 11,446,589 in 1973.

New-truck deliveries, largely a reflection of increasing versatility and popularity of light trucks and minivans, climbed to 4,870,839 units, up 3.89 percent from 4,680,453 in 1985.

Light trucks numbered 4,601,606 in 1986, up 4.64 percent from 4,397,705 in 1985.

Sales of imported cars were able to overcome woes stemming from major switches in the value of the U.S. dollar relative to overseas currencies.

Imported car sales in 1986 totaled 3,248,430 units, up 14.34 percent from the 2,841,063 units sold in 1985.

Domestic car sales in 1986 totaled 8,214,662 units, up 0.12 percent from the 8,204,721 units sold in 1985.

Chrysler Motors in 1986 sold more vehicles (domestic and import models) in the United States than ever in its history, and finished the year with domestic car sales at the third-highest level in company history.

General Motors car sales in 1986 were the best since 1979, with Chevrolet, Pontiac and Cadillac scoring increases over 1985. Oldsmobile sold more than 1 million cars for the fourth time in division history, as 1986 became Oldsmobile's second-best year ever, topped only by the record set in 1985.

American Honda Motor Co. sold 235,247 cars in 1986 compared to 1985's 145,976, a rise of 61.15 percent. Nissan Motor Corp. in U.S.A. sold 52,602 cars in 1986 compared to 39,794 in 1985, up 32.19 percent.

Volkswagen of America Inc. sold 73,911 cars in 1986, down 4.90 percent from 1985's 77,716 units. ■

SALES/REGISTRATIONS

Domestic new-car registrations in the United States in 1986 declined by 181,824 units to 7,695,652 compared to 7,877,476 in 1985.

Import-car registrations in 1986 rose by 433,058 units to 3,444,190 compared to 1985's 3,011,132.

Total new-car registrations in the U.S. in 1986 were 11,139,842, second-highest volume in history behind record-year 1973 (11,350,995).

The figures are compiled from data by R.L. Polk & Co., which compiles registration numbers from 49 states, and manufacturers' records for Oklahoma.

Among domestic makers, Chrysler Motors' market share of 1986 new-car registrations climbed, while General Motors' and Ford Motor Co.'s fell.

Imports collectively commanded a 28.18-percent registration share.

1987-model domestic car body family designations

What's a body to do when a new-model season begins in Detroit?

In the case of *Automotive News*, you do a study of domestic car-body family designations — or "platforms" as they're called by technical people.

There were a number of happenings in the '87 model year.

Gone is Ford Motor Co.'s L-body Ford LTD and Mercury Marquis, full-size rear-wheel-drive cars that were phased out during the '86 model run.

Also gone is Chrysler Motors' Chrysler Limo, designated the KC-body during its brief lifespan.

Whereas Ford did not add any new bodies in '87, Chrysler did — a J-body Chrysler LeBaron coupe and convertible, and P-body Plymouth Sundance and Dodge Shadow.

General Motors did not discard any bodies, but added some — the brand-new L-body Chevrolet Corsica and Beretta, and super-lux V-body Cadillac Allante.

In addition, Pontiac Bonneville, a rear-wheel-drive G-body in '86, was resized and redesignated a front-wheel-drive H-body in '87.

While no other complete body families were dropped or added by the three companies in '87, there were individual-model comings and goings and some name-changing.

Chrysler dropped its CV-body Dodge 600 convertible and G-body Chrysler Laser. But showing up in '87 was a G-body Dodge Daytona Turbo Z.

In a parenthetical gesture, Chrysler's L-body Plymouth Horizon and Dodge Omni were designated Horizon (America) and Dodge (America) in the '87 chart.

GM's Buick Motor Div. relabeled its '86 B-body Estate Wagons the LeSabre Wagon and Electra Wagon for '87.

The accompanying charts detail the 1987 model-year family/platform nomenclature. ■

PRICES

RETAIL PRICES, 1987 U.S. MODELS

This table shows the prices of 1987 U.S.-built models as of March 25, 1987. All prices are Manufacturers' Suggested Retail Prices. They do not include destination charges, state and local taxes, optional equipment or any charges that may be passed on to the buyer. In the equipment section, "STD." means standard equipment; "N.A." means the item is not available on the model mentioned. On some models, the standard-equipment radio is a delete option.

Comparison of selected 1987 and 1986 domestic models by market class. Prices are Manufacturers' Suggested Retail Prices in effect on March 25 of each year.

No adjustment has been made for year-to-year equipment changes or dealer-discount changes or for standard-equipment variations among competing models. If there is no entry in the 1986 column, it means that the 1987 model is or had no direct counterpart in 1986.

OPTIONS/EQUIPMENT

The number of factory-installed options on cars continued to climb in the 1986 model year.

The most popular items were power steering, power brakes, tinted glass and steel-belted radial tires, which appeared on more than 90 percent of U.S.-built cars.

Close behind in popularity were automatic transmissions, air conditioning, intermittent windshield wipers, digital clocks, reclining seats, cloth seats and rear window defrosters.

Air conditioning installations declined in '86, going into 75.16 percent of cars produced compared to 83.69 percent in '85.

The most notable option upswing in the '86 model year was AM/FM stereos with cassette, which climbed to a 41.94 percent installation rate from 34.37 percent in '85.

Other options that continued to rise steadily in popularity during the '86 model year were fuel injection, tilt steering wheels, rear window defrosters and power side windows.

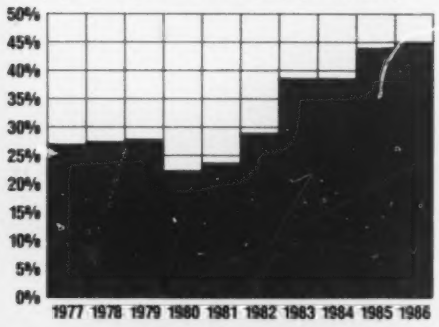
Falling steeply in '86 were diesel engines and AM radios. Also declining in '86 were eight-cylinder gasoline engines, getting a 20.29-percent market share in '86 versus 25.94 percent in '85.

On the other hand, four-cylinder engines went into 49.52 percent of the cars built in 1986, up from 46.67 percent in '85.

Most optional-equipment installation figures in this chapter are for 1986-model passenger car production in the United States, although some include cars built in Canada. ■

POWER SIDE WINDOW INSTALLATIONS

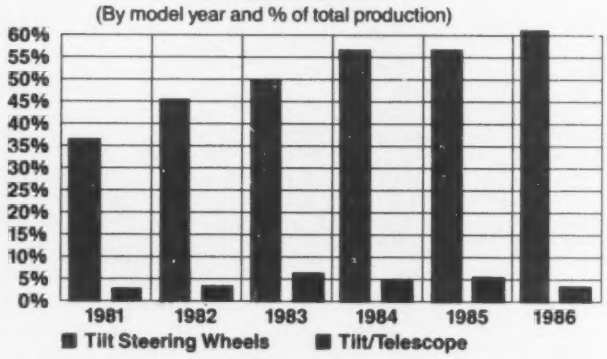
(By model year and % of total production)



Installations of power side windows continued to rise in 1986. More than 45 percent of cars built in the United States last year had power side windows installed. See table on page 88.

TILT AND TILT/TELESCOPE STEERING WHEEL INSTALLATIONS

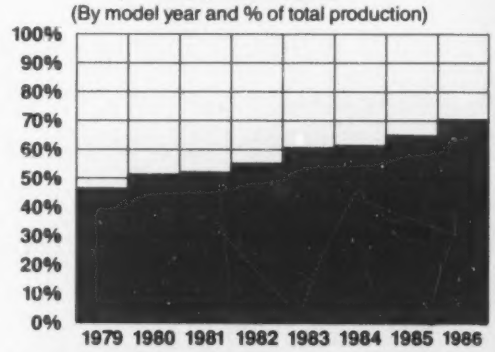
(By model year and % of total production)



Tilt-wheel installations took a leap, topping the 62-percent mark. However, combination tilt/telescope wheels fell off slightly in 1986. See table on page 91.

REAR-WINDOW DEFROSTER INSTALLATIONS

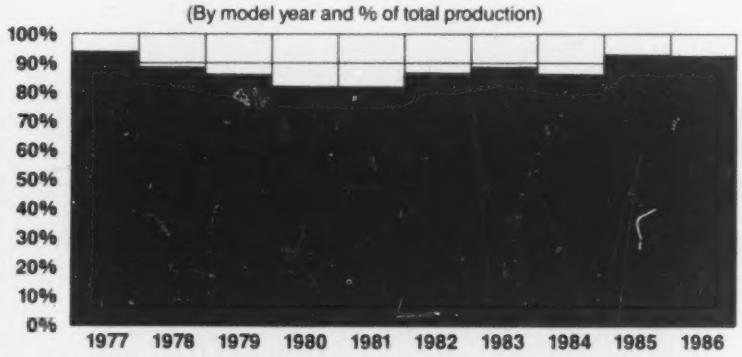
(By model year and % of total production)



Rear window defrosters continued to be a popular option in 1986; nearly 72 percent of U.S. cars produced had them installed. See table on page 88.

POWER STEERING INSTALLATIONS

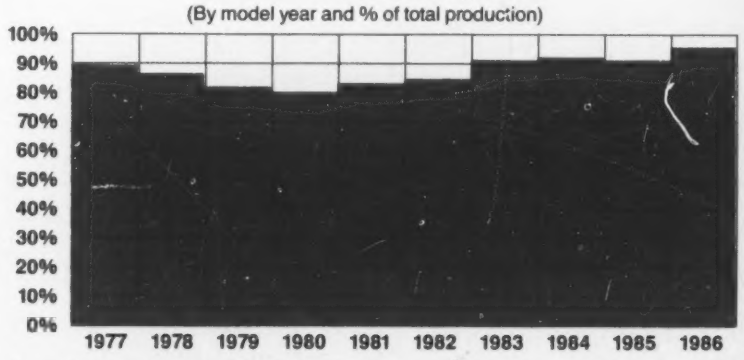
(By model year and % of total production)



Power steering installations in 1986 ran about the same as the previous year — just over 92 percent. See table on page 88.

POWER BRAKE INSTALLATIONS

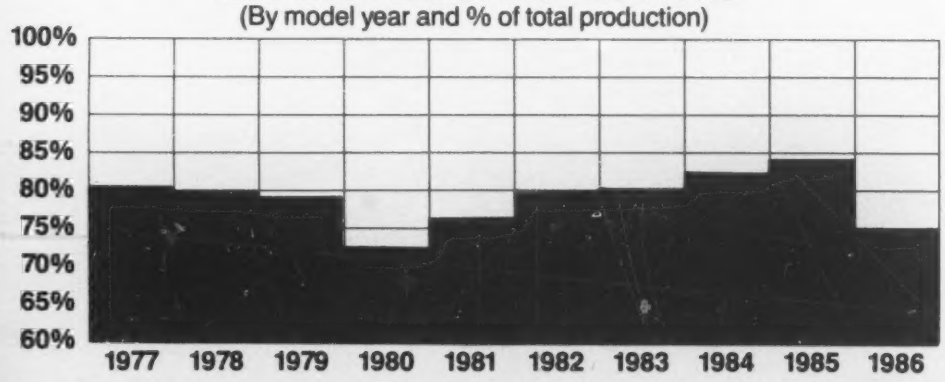
(By model year and % of total production)



Power brake installations in 1986 took more than a 5-percentage-point jump over 1985 — 97.30 percent versus 91.83 percent. See table on page 88.

AIR CONDITIONING INSTALLATIONS

(By model year and % of total production)



Air conditioning installations nose-dived to 75.16 percent in 1986, versus 83.69 percent in 1985. See table on page 96.

TRENDS IN TIRES AND AIR CONDITIONING

Percentages of model-year production

Steel-Belted Radials

	Units	%
1986	7,879,458	96.14
1985	7,360,588	91.75
1984	7,349,298	87.60
1983	4,371,530	73.10
1982	3,947,008	69.10
1981	4,726,896	69.90
1980	4,927,895	68.90
1979	7,029,705	75.20
1978	6,765,427	73.90

Glass-Belted Radials

	Units	%
1986	316,174	3.86
1985	166,309	2.07
1984	1,058,608	12.60
1983	1,600,992	26.70
1982	1,575,541	28.10
1981	2,012,336	29.70
1980	1,891,158	26.40
1979	1,581,983	16.90
1978	832,694	9.10

White Sidewalls

	Units	%
1986	4,126,613	50.35
1985	5,303,399	66.10
1984	2,558,142	30.40
1983	4,565,653	76.30
1982	3,408,972	59.70
1981	5,512,389	81.50
1980	6,140,605	85.90
1979	8,426,449	90.10
1978	8,315,505	90.90

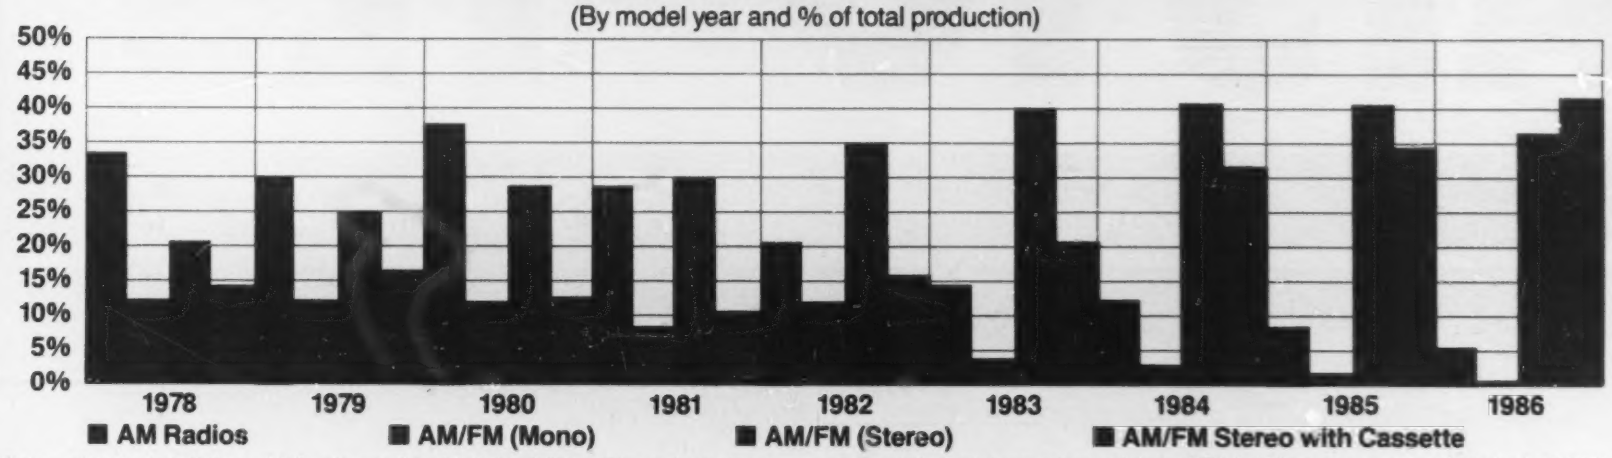
Air Conditioning

	Units	%
1986	6,159,745	75.16
1985	6,714,306	83.69
1984	6,857,866	82.70
1983	4,866,838	80.90
1982	4,585,627	80.20
1981	5,186,776	76.50
1980	5,181,365	72.50
1979	7,449,352	79.70
1978	7,352,117	80.40

OPTIONS/EQUIPMENT

RADIO INSTALLATIONS, 1978-1986

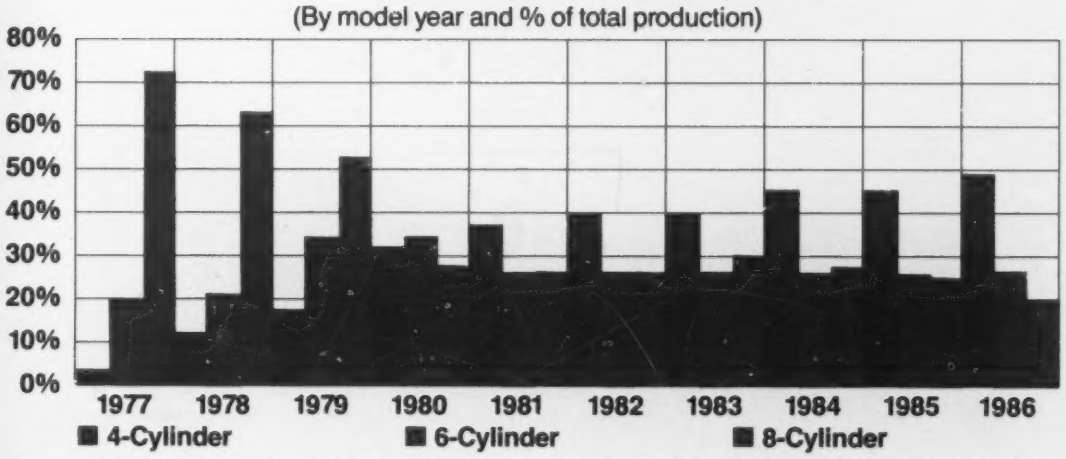
(By model year and % of total production)



Not surprisingly, installations of AM radios continued to fall in 1986, settling to the 5.10-percent mark. Popularity of AM/FM mono units also continued to wane. Installations of AM/FM stereos fell about 5 percentage points in 1986, but there was a concomitant rise in AM/FM cassette stereo installations. See table on page 92.

GASOLINE ENGINE INSTALLATIONS, 1977 – 1986

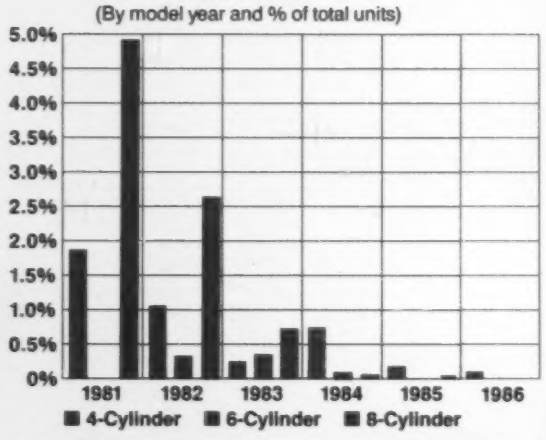
(By model year and % of total production)



In the engine department, installations of four-bangers rose nearly 3 percentage points in 1986 to 49.52 percent of total production. Sixes were up only slightly from 1985, and V-8 installation fell more than 5 points to wind up with 20.29 percent of production. See table on page 93.

DIESEL ENGINE INSTALLATIONS, 1981 – 1986

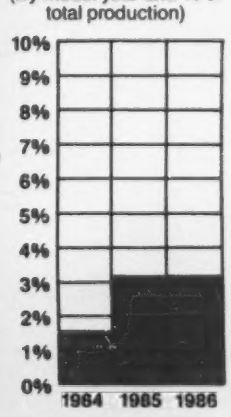
(By model year and % of total units)



Are we witnessing the death of the domestic diesel? No six- or eight-cylinder diesels were installed in 1986, and four-cylinder diesels were installed in only 0.22 percent of total production. It looks as though only another fuel crisis will resurrect the American diesel engine. See table on page 93.

TURBOCHARGER INSTALLATIONS

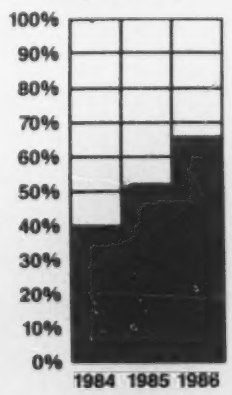
(By model year and % of total production)



Turbocharger installation leveled off at 3.20 percent in 1986. See table on page 93.

FUEL-INJECTION INSTALLATIONS

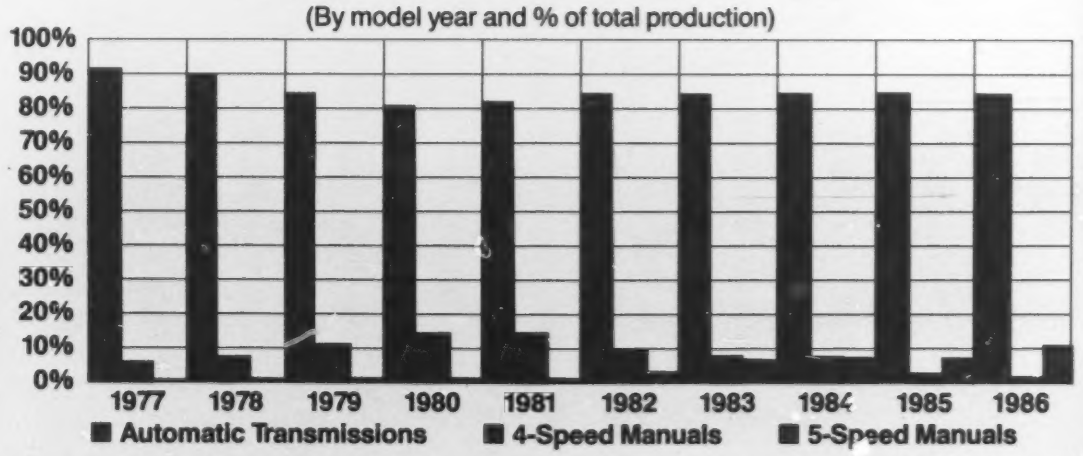
(By model year and % of total production)



Fuel-injection continued to gain ground on carburetion, taking nearly 66 percent of total production in 1986. See table on page 93.

TRANSMISSION INSTALLATIONS, 1977 – 1986

(By model year and % of total production)



Automatics are still the transmissions of choice, taking about 85 percent of total production in 1985 and 1986. Is the drop in installations of four-speed manuals (to 3.86 percent) and the rise in five-speed manuals (to 11.16 percent) indicative of American automakers' fascination with Eurostyling? See table on page 91.

DEALERS

The number of dealerships handling domestic-make passenger cars continued to tumble in 1986.

The annual *Automotive News* census found 20,405 domestic-car outlets on Jan. 1, 1987, down 268 from 20,673 doing business a year earlier.

The loss was higher than in 1985, when 229 dealerships faded away.

Those declines followed two "up" years for the industry. The dealer total climbed slightly in 1983 and 1984, but they were the only advances in the last 30 years.

Chrysler Motors was the most upbeat performer in 1986, as it increased its dealer total for the fourth consecutive year. The company posted a gain of 20 outlets last year. Volkswagen also was on the plus side with a gain of one.

Elsewhere, there were declines of 150 car dealerships for General Motors, 57 for Ford Motor Co. and 72 for American Motors/Renault. The combined loss of 258 grew to 268 because of a change in the number of intercorporate duals.

The number of import-make franchises and import-car retail outlets continued to increase last year, according to the census.

Continued proliferation of imported-car nameplates in the U.S. market and some internal marketing shifts at Chrysler Motors helped increase the number of imported-car franchises to a record total of 24,065 on Jan. 1, 1987, up 18.9 percent from 20,235 one year earlier.

Although Sterling, Acura and Hyundai franchises were added during 1986, the bulk of the increase came at the start of the 1987 model year when Chrysler Motors designated all Mitsubishi-built Conquest models as Chryslers, instead of Plymouths, in effect creating a new franchise, although the company's outlet count was unaffected.

The total number of dealerships selling imported cars in the United States reached 16,969 on Jan. 1, 1987 — a 3.5-percent increase from 16,392 on Jan. 1, 1986.

The franchise total and outlet total differ because of dualing — two or more franchises often are combined in a single outlet.

The latest figure was the largest number of imported-car retail outlets in the United States since Volkswagen and Renault were reclassified as domestic makes in the early 1980s. ■

The number of new-truck dealer outlets in the U.S. fell by 120 during 1986, bringing the Jan. 1, 1987 truck dealer population to 19,737.

Seven makers increased their dealer totals; 12 showed declines; one was unchanged.

Figures were obtained from manufacturers and from the American Truck Dealers Division of the National Automobile Dealers Assn.

1984	135	250	358	458	—	197	380
1985	91	285	374	465	—	246	393
1986	52	292	365	464	—	247	399

*Average for all U.S. industry includes Studebaker for 1956-1964. 1973-1985 figures based on retail sales. Prior years based on R.L. Polk registrations.

DEALERS

Past NADA presidents

1987 — James T. Caplinger
Chevrolet, Chrysler
England, Ark.

1986 — James B. Woulfe
Ford, Chrysler
Dublin, Calif.

1985 — William J. Symes
Cadillac
Pasadena, Calif.

1984 — James P. Jennings
Chevrolet
Glenview, Ill.

1983 — William C. Turnbull
GMC, International Harvester
Huntington, W. Va.

1982 — George W. Lyles
Chevrolet, Rolls-Royce
High Point, N.C.

1981 — Wendel H. Miller
Dodge, Honda, Lincoln-Mercury
Binghampton, N.Y.

1980 — George S. Irvin
Chevrolet, Subaru, BMW,
Mercedes-Benz
Denver, Colo.

1979 — William C. Doenges
Ford, Toyota
Bartlesville, Okla.

1978 — Robert P. Mallon
Ford
Tacoma, Wash.

1977 — Reed T. Draper
Chevrolet
Saginaw, Mich.

1976 — John J. Pohanka
Oldsmobile, Fiat, Honda
Marlow Heights, Md.

1975 — William E. Hancock Jr.
Buick-Opel
Columbia, S.C.

1974 — Hugh R. Gibson
Ford
Cleveland, Ohio

1973 — John S. Hinckley
Dodge
Ogden, Utah

1972 — Charles J. Whittey
Chrysler-Plymouth
Bismarck, N.D.

1971 — Warren J. McEleney
Chevrolet, Oldsmobile, Cadillac
Clinton, Iowa

1970 — Sam H. White
Oldsmobile
Houston, Texas

1969 — Lyman W. Slack
Chevrolet
Portland, Ore.

1968 — T.A. Williams Sr.
Chevrolet
Greensboro, N.C.

1967 — William E. Voyce Jr.
Ford
Baltimore, Md.

1966 — S.E. Kossman
Buick, Cadillac, Pontiac, GMC,
Rambler, Jeep
Cleveland, Miss.

1965 — Peter Val Preda
Oldsmobile, Cadillac
Burlington, Vt.

1964 — C. Ed Flandro
Ford, Lincoln-Mercury
Pocatello, Idaho

1963 — John H. Lander
Rambler
Atlanta, Ga.

1962 — Thomas F. Abbott Jr.
Pontiac, Rambler
Fort Worth, Texas

1961 — Walter B. Cooper
Chevrolet
Fort Collins, Colo.

1960 — Birkett Williams
Ford
Cleveland Ohio

1959 — H.L. Galles
Chevrolet, Cadillac, Oldsmobile
Albuquerque, N.M.

1958 — Dean Chaffin
Chevrolet, Buick
Bozeman, Mont.

1957 — Frederick M. Sutter
Dodge, Plymouth
Columbus, Ind.

1956 — Carl E. Fribley
Pontiac, Cadillac, GMC
Norwich, N.Y.

1955 — Frank H. Yarnall
Chevrolet
Chicago

1954 — Charles C. Freed
DeSoto, Plymouth
Salt Lake City

1953 — Robert S. Armacost
Studebaker
Kansas City

1952 — J. Saxton Lloyd
Buick, Cadillac
Daytona Beach, Fla.

1951 — R.D. McKay
Chrysler-Plymouth
Wichita, Kan.

1950 — Fred L. Haller
Hudson
Washington

1949 — George F. Ziesmer
Ford
Mankato, Minn.

1948 — Ben T. Wright
Lincoln-Mercury
Chicago

1947 — M.O. Anderson
Buick
Seattle

1945-'46 — W.L. Mallon
Pontiac
Newark, N.J.

1944 — D.G. Kelly
Dodge, Plymouth
Grand Forks, N.D.

1942-'43 — D.E. Castles
Buick
St. Louis

1942 — Harry Sommers
Chrysler-Plymouth
Atlanta

1941 — L. Clare Cargile
Chevrolet
Texarkana, Ark.

1939-'40 — Stanley H. Horner
Buick
Washington

1938 — J.W. Roby
Shreveport, La.

1936-'37 — E.M. Lied
Omaha

1933-'35 — F.W.A. Vesper
St. Louis

1932 — Floris Nagelvoort
Seattle

1931 — F.J. Edwards
Milwaukee

1930 — J.R. Histed
Beverly Hills, Calif.

1929 — W.E. Griffith
San Francisco

1928 — C.C. Coddington
Charlotte, N.C.

1927 — W.L. Hughson
San Francisco

1926 — C.B. Warren
New York

1925 — Charles F. Gambill
San Marino, Calif.

1924 — John L. Butler
Los Angeles

1923 — G.G.G. Peckham
Cleveland

1922 — Thomas J. Hay
Chicago

1922 — W.J. Brace
Kansas City

1921 — Jesse A. Smith
Milwaukee

1920 — H.B. Harper
Rosemont, Pa.

1918-'19 — F.W.A. Vesper
St. Louis

1917 — George W. Browne
Milwaukee ■

MAJOR AUTOMAKERS' JOINT VENTURES, EQUITY STAKES WITH OTHER CAR COMPANIES, ASSEMBLY OPERATIONS

UNITED STATES

American Motors Corp.
49% of Arab American Vehicles Ltd., Egypt. Jeep assembly.
31.4% of Beijing Automobile Works, China. 4wd vehicle assembly.
(Chrysler has signed a letter of intent to buy AMC.)

Chrysler Corp.
50% of Diamond-Star Motors Corp., Bloomington-Normal, Ill. Car assembly. With Mitsubishi.
24% of Mitsubishi Motors Corp., Japan.
15.6% of Maserati S.p.A., Italy. (Chrysler has option to acquire a total of 51% by 1995.)
(Chrysler has signed letter of intent to acquire American Motors Corp.)

Ford Motor Co.
70% of Ford Lio Ho Motor Co. Ltd., Taiwan.
25% of Mazda Motor Corp., Japan.
48% of Iveco-Ford Truck Ltd., Great Britain. With Iveco (Fiat).
10% of Kia Motors Corp., South Korea. (See Mazda.)
49% of Autolatina, Brazil. Car assembly. With Volkswagen (pending).
42% of South African Motor Corp., South Africa.
30% of AMIN Holdings, Malaysia. Vehicle assembly.
30% of Otomobile Sanayii Anomin Sirketi, Turkey. Car and truck manufacture.

General Motors Corp.
50% of Daewoo Motor Co. Ltd., South Korea.
38.6% of Isuzu Motors Ltd., Japan.
24% of Volvo GM Heavy Truck Corp., Greensboro, N.C. With Volvo. (GM has option to buy up to 35% by 1993.)
5.3% of Suzuki Motor Co. Ltd., Japan.
50% of New United Motor Mfg. Inc., Fremont, Calif. Car assembly. With Toyota.
49% of General Motors Kenya Ltd. Vehicle assembly.
49% of Constructora Venezolana de Vehiculos C.A., Venezuela. Vehicle assembly.
45.9% of Autos y Maquinas del Ecuador S.A., Ecuador. Vehicle assembly.
31% of General Motors Egypt S.A.E. Commercial vehicle assembly and manufacture.
22% of Omnibus BB Transportes S.A., Ecuador. Bus manufacture, vehicle assembly.
20% of Industries Mecaniques Maghrebines S.A., Tunisia. Vehicle assembly. (See Isuzu.)

JAPAN

Daihatsu Motor Co. Ltd.
Has equity stake in Daihatsu Malaysia. Vehicle assembly.
Has equity stake in Daihatsu Indonesia. Vehicle assembly.
(Percentages not available)

Fuji Heavy Industries Ltd. (Subaru)
49% of Subaru-Isuzu Automotive Inc., Lafayatte, Ind. Car and truck assembly. With Isuzu.
35% of Ta Ching Motor Co., Taiwan. Small-car assembly.

Honda Motor Co. Ltd.
29% of Honda Cars Thailand. Car assembly.
25% of NZMC Ltd., New Zealand. Car assembly.
17% of Oriental Assemblers Sdn. Bhd., Malaysia. Car assembly.
13.5% of San Yang Industry Co. Ltd., Taiwan.
10% of Tata Engineering and Locomotive Co. Ltd., India. Car assembly.

Isuzu Motors Ltd.
51% of Subaru-Isuzu Automotive Inc., Lafayette, Ind. Car and truck assembly. With Fuji.
47.4% of Isuzu Motors Co. Ltd., Thailand. Vehicle manufacture.
25% of Automotive Manufacturers Sdn. Bhd., Malaysia. Vehicle manufacture.
20% of General Motors Egypt S.A.E. Commercial vehicle assembly and manufacture.
15% of Qingling Motors Co. Ltd., China. Vehicle manufacture.
15% of Anadolu Otomotiv Sanayii ve Ticaret A.S., Turkey. Vehicle manufacture.
10% of Industries Mecaniques Maghrebines, Tunisia. Vehicle assembly. (See General Motors.)

Mazda Motor Corp.
50.6% of Kijkamol Sukosol Co. Ltd., Thailand. Vehicle assembly.
50% of Mazda Motors of New Zealand Ltd. Car and commercial vehicle assembly.
31.8% of Asia Automobile Industries Sdn. Bhd., Malaysia. Vehicle assembly.
15.6% of Swaraj Mazda Ltd., India. Commercial vehicle assembly.
15% of Compania Colombiana Automotriz S.A., Colombia. Car and commercial vehicle assembly.
8% of Kia Motors Corp., South Korea. (See Ford.)

Mitsubishi Motors Corp.
30% of Perusahaan Otomobil Nasional Sdn. Bhd. (PROTON), Malaysia.
15% of Hyundai Motor Corp., South Korea. (7.5% each held by MMC and its parent, Mitsubishi Heavy Industries.)
50% of Diamond-Star Motors Corp., Bloomington-Normal, Ill. Car assembly. With Chrysler.
50% of Canlubang Automotive Resources Corp., Philippines. Car, truck, bus assembly.
49.8% of Mitsubishi Motors Australia Ltd. Car and truck manufacture.
49.8% of UNIVEX, Comercio e Industria de Automoveis E Camides, S.A.R.L., Portugal. Vehicle assembly.

*—Adjusted to reflect transfer of 1,310,918 window vans from passenger total.
(1)—Each year many trucks are issued passenger car license plates because oftheir intended use or local state laws. Beginning in 1966 VIN prefixes were used to achieve an accurate means of identifying these trucks in all states. The 1965 growth and scrappage figures have been adjusted to reflect the estimated 700,000 trucks which were selected from the passenger car file and properly counted as trucks.
(2)—Each year vehicles registered in one state to an address in a different state have been excluded from the count of vehicles in operation. Beginning in 1971 about 181,000 passenger cars registered to fleets at out-of-state addresses have been included.
NOTE: Adjustments for the absence of Oklahoma and other states have been made where applicable.

John Lotter, Ltd.

It's What Happens Down The Road That Counts

Out there alone. When the sun is an ember. When darkness hovers beyond a distant ridge. When dust and shadow share the road with you—and nothing more. You need to know one thing.

First American will be there when you need us.

Indeed, our extended service contract program can yield the driver up to 5 years worth of down the road confidence. No matter how many miles he drives.

And it can make the dealer more confident too. In fact, a lot more confident. A flexible cash commission on every sale, retail prices for work done under service contract, returns on fully earned contracts, and investment income on reserves—all mean a smoother ride when the going's good. And security when the going's rough.

More importantly, as the oldest and strongest independent in the insured service contract industry, we promise something others really can't.

Our presence.
Down the road.
Where it counts.

Japan's V-8s slated for U.S. dealers

Top makers aiming for 1989-90 intro

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Japan's three largest automakers are developing lightweight, powerful V-8 engines for new larger luxury vehicles that could ignite a modern-day horsepower war.

Toyota Motor Co., Nissan Motor Co. and Honda Motor Co. each will have upscale cars powered by V-8s on sale in the United States in the 1989 or 1990 model year.

They will compete at the upper end with a new generation of European performance luxury cars powered by all-new V-8 and V-12 engines. At the lower end of the luxury market, domestic automakers will respond with more powerful versions of existing V-8s and eventually some new, more sophisticated eights.

All of this will have a profound effect on the United States, with 200-plus horsepower motors becoming commonplace rather than a rarity, industry analysts say.

Audi, Lotus and Porsche are developing new V-8s aimed at that market. BMW and Daimler-Benz will soon join Jaguar, Ferrari and Lamborghini in offering V-12s on top-end models.

General Motors has new V-8 programs in the works at Chevrolet and Oldsmobile to supplement GM's present 5-liter and 5.7-liter V-8s. Cadillac is expected to offer a bored-out version of its 4.1-liter V-8 on 1988 models, hiking displacement to 4.5 liters.

Ford Motor Co. will have to rely

Poling: Ford's effort "to be known as the producer of high-quality products with low cost and value for money for the consumer" is paying off

FLYING: *Ford's financial fortunes skyrocket; dealer profits, Nissan deal add lift*

By Charles Thomas, Francis J. Gawronski and Al Fleming
AUTOMOTIVE NEWS STAFF REPORTERS

It wasn't exactly a typical week in the seemingly do-no-wrong success saga of Ford Motor Co.

- Ford reported first-quarter earnings of $1.5 billion — its best ever — on the heels of its best profit year in history.
- Ford prepared for yet another joint venture the kind that on a global scale has contributed to its success — this one with Nissan.
- And Ford President Harold A. Poling, in an interview with Automotive News, smiled and said it was all part of a plan "to be known as the producer of high-quality products with low cost and value for money for the consumer. That's been the whole thrust of our effort now for several years. We think the results in the marketplace and our financial results reflect that effort."

That may be a classic understatement. Ford has become the most profitable automaker in the world. Along the way, one estimate shows that Ford dealer profits have doubled in the last year alone — when profits from most other franchises were flat or down — and that Ford dealer profits have quadrupled in the last five years. And, in the wake of Ford's announcements last week, its stock price rose five percent in just one day and was trading around $93 — 33 percent above book value. In 1981, in contrast, Ford stock traded as low as $7 a share.

U.S. lines heating up price war

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

The battle for the small-car market has heated up again.

Pontiac has priced its entry-level LeMans at $5,995; Chevrolet has introduced a low-priced version of its Isuzu-built Spectrum; and Chrysler Motors has announced an ad campaign promoting its price advantage over Japanese competitors.

Chevrolet said last week it is introducing a new version of its front-wheel-drive Spectrum subcompact. The Spectrum Express two-door hatchback will have a manufacturer's suggested retail price of $6,495, $917 less than the previous base price.

Standard equipment includes a 1.5-liter engine, five-speed manual transmission, reclining front bucket seats, electric rear window defogger and General Motors' 6-year/60,000-mile powertrain warranty.

Dealers had been pressuring Chevrolet to provide an entry-level car to compete against the Hyundai Excel and others and fill the void left by the Chevette. The Chevette had a base price of $4,995. Production ended in December, leaving Chevrolet without a model priced closer to $5,000 than to $6,000.

Pontiac announced last week that its entry-level 1988 LeMans will have a base price of $5,995. Base prices of other models range upwards to $8,399. The car goes on sale June 11.

The LeMans was engineered by General Motors' West German subsidiary, Adam Opel AG, and is built off the Opel Kadett platform. The front-wheel-drive subcompact is assembled in South Korea by Daewoo Motor Co. GM owns 50 percent of Daewoo.

Pontiac and its dealers have viewed pricing as the key to LeMans' success. General Manager J. Michael Losh said the division listened to dealers in determining the price. "They told us

It's been just over a year since the Audi 5000-S began a decline that has seen its image of engineering excellence slide into a reputation for runaway acceleration.

Its sales and values have slid, too. Today, Audi of America finds itself contending with lawsuits, slumping sales, crippled dealers, sinking resale prices, angry consumer groups and countless other problems as it attempts to restore credibility to its tarnished nameplate.

Along the way, dozens of decisions were made — some good, some bad; some right, some wrong. The most common way managers learn about coping with such situations is through the "case method" approach, in which previous business decisions are dissected, reviewed, critiqued and re-enacted.

Through that process, people learn. In fact, right now Audi's U.S. boss through most of the last year's trauma, Vice President Peter Fischer, is participating in a senior executive program at the Harvard Business School using the case method.

But before finding out how some students, followers and members of this industry and other organiza-

Chevrolet giveaway hikes traffic for dealers

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

Showroom traffic at Chevrolet dealerships is picking up as people bring in foil keys from Procter & Gamble products to see if they have won a Corsica, Beretta or pickup truck.

Generally, dealers queried by Automotive News said 30 to 50 persons visited their dealerships during the first week of the promotion to see if their keys were winners. A couple dealers said more than 100 persons turned up.

The keys are part of a $50 million promotion by Chevrolet and Procter & Gamble for which national advertising began April 25. The keys were sent by direct mail to potential customers and are on seven Procter & Gamble products.

The keys must be placed under a black light installed in a Corsica, Beretta or full-sized pickup truck at the dealership to see if the key is a winner of one of the 750 cars or pickups to be given away.

Dealers reporting the most activity were doing heavy advertising on their own or through a tie-in promotion with area supermarkets.

John F. Bergstrom, Bergstrom Chevrolet-Buick-Cadillac, Neenah, Wis., parked Corsicas and Berettas at three local supermarkets. His dealership has had a couple hundred key-holding visitors.

One customer, Bergstrom said, came in with a key, had no intention of buying a vehicle, but left with a Chevy S-10 truck.

Bergstrom said he has noticed a hesitancy on the part of customers coming to the dealership, "like a child going in the water to swim but being afraid it's too cold."

"Once they see that no one is going to bite them, they seem to enjoy the hoopla," he said.

William A. Tyrrell, of Tyrrell Chevrolet in Cheyenne, Wyo., said his dealership had seen hundreds of customers with keys. He has a new full-sized pickup parked in front of a nearby supermarket.

Bill Nimnicht Jr., of Nimnicht Chevrolet, Jacksonville, Fla., said his dealership is giving away a free car wash to people who bring in keys.

Thirty people came in during the the first few days of the promotion. Four sales, including a sale of a Corsica, were made to people with keys.

Last Thursday Chevrolet announced it is offering a choice of a $500 cash rebate or low-interest financing on Corsica and Beretta.

AUTOMOTIVE NEWS JOE WILSSENS

The Romeo site is attractive because of its proximity to Ford's engineering center in Dearborn, Mich.

Ford taps Romeo for engines

Seeks new labor pact first; 1991 startup proposed

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

An agreement was reached between UAW Local 400 officials — representing the Romeo, Mich., tractor plant — and Ford Motor Co. last week, paving the way for the new engine plant the company said it needs. The timetable suggests the plant may produce a new 4.6-liter V-8.

The agreement would reduce job classifications and institute job teams. If it is ratified and other requirements are met, the Romeo plant would not be closed as scheduled next year. But Louis R. Ross, Ford vice president — North American Automotive Operations, said the final decision will not be made until 1988.

In a statement made following the agreement with Local 400 officials, Ross said Ford needs "a new engine plant for the 1990s."

If Ford retools the Romeo plant to build V-8s, it would take another step in the automakers' march toward production of new, more efficient V-8s in the 1990s.

Joe Peters, president of Local 400, said the first engine would come off the line at the Romeo plant in 1991. Ross said production would begin "in about three years." That could tide Ford over as it awaits a new V-8, which is due to follow a V-6 from Ford's new modular engine plant in about 1994.

Peters said he heard that the planned engine for Romeo was a 4.6-liter engine, but he did not know whether it would be a V-6 or a V-8.

Ford could conceivably produce a 4.6-liter V-6 by lopping off two cylinders from its current 5.0-liter V-8, but that move is unlikely. Neither is it likely that Romeo's engine would fit in Taurus/Sable.

Sources said that personnel from the Lima plant toured the Romeo plant recently. The Lima plant builds the 3-liter V-6 engine used in the Taurus/Sable and the Aerostar minivan.

Ross would provide no specifics on the car the new engine would go into. Asked about production volume, he said it would be "a lot."

The new agreement is scheduled for a ratification vote by the members of Local 400 in mid-May. Peters said. The contract would not involve a wage cut, he said.

Ross said that if the workers ratify the agreement, Ford will "pursue Romeo as the recommended site for the plant."

The NAAO spokesman said the Romeo site is attractive because of its proximity to the company's engineering center in Dearborn, Mich. Ford has engine plants in Lima, Ohio; Cleveland; Dearborn; Windsor, Ontario; Essex, Ontario; and Chihuahua, Mexico.

On retooling the Romeo plant to build engines, Ross said, "The investment required to bring this project to fruition would be huge and requires us to conduct detailed feasibility studies. We are working toward a final decision in 1988."

A UAW spokesman in Detroit confirmed that an agreement had been reached, following weeks of discussions involving the UAW Ford Department, Local 400 leaders and Ford. He could give no details, pending ratification by the membership.

The Romeo plant opened in August 1974 and reached its peak employment of 2,500 workers in 1979. It now employs 630 workers. "This would take care of all of them," Peters said.

He said that — with the plans for Romeo — the mood at the plant is "pretty high." The leadership is recommending the agreement, he said.

The plant has been building agricultural and industrial tractors and fabricating backhoes and front loaders. Next month production of agricultural tractors will be consolidated at Ford facilities in Basildon England, said a Ford New Holland spokesman.

By mid-1988, production of industrial tractors will also be consolidated at other Ford locations in Europe, he said.

He said the 1,379,306-square-foot plant is "in mint condition," and that its workforce "is one of the finest around — it's known throughout the company. The quality of the products at the plant has increased since the closing was announced in October," he said.

"The advantage of Romeo is that it's an existing plant that works well," Ross said.

Incentives extended and sweetened

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Domestic automakers extended, sweetened and revised consumer incentives on cars and light trucks last week in an attempt to attract buyers and reduce heavy inventories of some models.

General Motors lowered the interest rate by two percentage points on 36- and 48-month loans. GMAC is now offering 5.9 annual percentage rate paper on 36-month loans and 6.9 percent on 48-month contracts compared with 7.9 APR and 8.9 APR, respectively, in the program that ended April 30. Loans of 3.9 APR for 24 months and 9.9 APR on 60 months also are available on certain models.

Cash rebates for some Chevrolet models have been reduced under the new program. For instance, Chevrolet reduced cash-back incentives from $1,000 to $800 on Celebrity and from $750 to $500 on Nova.

As yet, GM has not announced a spring price increase, as it did last year. GM has not raised prices since the introduction hike on 1987 models.

Chevrolet sweetened its previous program by placing the first incentives on its all-new Corsica and Berretta models. Buyers of those models can choose either a $500 cash rebate or a low-interest loan. Chevrolet dealers had complained that Corsica and Beretta prices are too high and that the previous $1,000 rebate on Celebrity models had hurt the new models.

Chevrolet also is offering $1,000 cash rebates on Camaro, $500 on Spectrum and $500 on Cavalier. Buyers must purchase cars from dealer stock. The program ends May 31 for U.S. models, June 30 for Spectrum.

Chevrolet also extended $500 cash rebates on S model pickups until May 14 and $600 rebates on RV pickups until May 9. Dealer participation cost varies by model in all Chevrolet programs.

Cadillac sweetened its incentive on 1987 and 1986 Cimarron models by adding a $600 cash rebate. A cut-rate loan program remains in effect. No dealer participation is required.

Pontiac is offering enhanced GMAC financing or cash rebates ranging from $500 to $1,200 on many 1987 models. Dealers pay 30 percent to 33 percent of the rebates.

Oldsmobile also is offering lower-rate GMAC loans and rebates from $500 to $1,200 on most of its models. Dealer participation on rebates varies by model. The division is also offering special dealer incentives on Cutlass Ciera and front-wheel-drive Delta 88 models delivered out of stock before July 31.

Buick is offering the lower GMAC loans or rebates. Rebates are $1,200 on Electras and Park Avenues, $800 on LeSabre and Century, and $500 on Skylark, Somerset and Skyhawk. Dealer participation is about 33 percent on rebates.

Ford Motor Co. extended financial incentives on selected 1986 and 1987 cars and F-series trucks until May 9 and on Ford Bronco II and Ranger models until May 31. Incentives on those vehicles were to end April 30.

Buyers of selected models can choose rebate of $400-$600 or low finance rates ranging from 3.9 percent on 24-month contracts to 9.9 percent on 60-month paper. No dealer participation is required.

AMC announced it will offer $500 cash rebates or financing ranging from zero percent for 24 months to 9.9 percent for 60 months on 1986 Renault Alliance and Encore models, 1987 Alliance and GTA models and 1986 and 1987 Jeep Comanche models, excluding the Jeep two-wheel-drive short-bed pickup.

AMC is offering $300 rebates on Medallion, $600 on 1986 and 1987 Cherokee two-door models and $400 on 1986 and 1987 Wagoneer and Cherokee four-door models.

Buyers of Medallions and two-door Cherokees can choose either the rebate or low-interest loans ranging from 3.9 percent for 24 months to 9.9 percent for 60 months. Wagoneer and four-door Cherokee buyers can choose rebates or loans ranging from 5.9 percent for 24 months to 9.9 percent for 60 months. No expiration date was announced for the AMC incentives.

AUTOMOTIVE NEWS (ISSN 0005-1551) is published weekly except semiweekly the fourth week in April at 965 E. Jefferson, Detroit, MI 48207. Second-class postage is paid at Detroit, MI and at additional mailing offices. Postmaster: Send address changes to AUTOMOTIVE NEWS, Circulation Department, 965 E. Jefferson, Detroit, MI 48207.

New service from Automotive News

DETROIT — Today's issue of Automotive News introduces a new program to assist advertisers and readers.

In this and selected other issues throughout 1987, Automotive News will feature a new ad inquiry program called ReaderService.

ReaderService will be free to both readers and advertisers who desire it.

In a ReaderService issue, each ad will be keyed with a number. Interested readers can circle the corresponding ad numbers on a ReaderService card in the issue and mail the card to Automotive News, postage-paid.

Automotive News then provides advertisers with respondent names including title, company, address, phone number and industry affiliation on gummed labels for mail, telephone or personal follow-up. Labels are forwarded biweekly for 90 days from the date of the issue.

"ReaderService was developed to enhance the communication between reader and advertiser," explained Keith E. Crain, publisher and editorial director of Automotive News. "It's a simple and effective way to bring qualified buyers and sellers together."

Issues scheduled for ReaderService are: June 15, July 27 including OEM Edition — Demographic, Aug. 24, Sept. 21 and Nov. 9.

ReaderService will not be available on classified or auction directory advertising.

For more information concerning the Automotive News ReaderService program, contact the marketing department of Automotive News at 1400 Woodbridge Ave., Detroit, MI, 48207, 313-446-6000.

New market for Chrysler minis

Extended-wheelbase vans, V-6 capture interest of converters

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Motors plans to become more aggressive in the minivan customizing market and in specific Class 3 commercial segments.

Its new extended-wheelbase minivans already have generated considerably more interest from converters than its previous standard-sized minivans, officials said.

Chrysler can produce 150,000 of the long-wheelbase minivans annually.

In the 1987 model year, Chrysler expects to ship about 4,000 minivans to converters, about the same number as last year, said James Lynch, sales manager, special vehicle sales, Truck Operations.

In the 1988 model year, he said, shipments to converters could range as high as 20,000 units, depending on a smooth resolution of Chrysler's labor contract with the UAW in Canada. The contract is up for renewal this fall.

A Canadian strike would upset all of Chrysler's minivan plans. Chrysler's regular minivans are built in Windsor, Ontario. The extended-wheelbase units are assembled in St. Louis.

Lynch said that about 25 of the 50 van conversion companies Chrysler does business with have been converting its minivans.

With the extra capacity and V-6 engine availability in the extended-wheelbase models, "most of our accounts are showing a renewed interest" in converting minivans, he added.

"There also is renewed interest from the raised-roof manufacturers, who are calling to get vehicles so they can develop molds for raised roofs for those models," he said.

York: "We have to plan our launches very carefully so our whole engineering office doesn't have to empty out and go to three plants at the same time."

Given a 60-day launch curve to get up to full speed in producing the new extended-wheelbase minivans, and the fact that converters do most of their work from March to June, Chrysler "won't have a ton of iron available to converters until March or April of next year," said Jerome B. York, vice president — Truck Operations.

That, of course, assumes no labor problems in Canada this fall, York cautioned.

Chrysler also is developing a new program to increase sales of its chassis cabs for Class 3 commercial applications, such as wreckers, stake, dump and high-cube trucks.

It has been setting up a commercial body distributor network in each of its 25 zones to which it will consign a certain number of chassis cabs.

It currently sells about 5,000 to 6,000 chassis cabs yearly in that 80,000-unit market, but it anticipates increasing that by at least 20 percent to 30 percent with its new program.

Under the program, called "Partners in Progress," distributors will be able to equip the chassis cabs with bodies specified by Chrysler dealers and deliver them in a few days.

"What we're trying to do is marry that body company to our dealer organization within a given territory," Lynch said. "This line of distribution will provide a customer with quick delivery of a brand-new truck and will get our dealers into this business more aggressively."

Chrysler already has signed 17 major body distributors, such as Great Lakes Truck Equipment in Cleveland, and is reviewing applications from seven others.

The new program will go into effect late this year.

As part of its program, Chrysler is planning to offer the previously reported new higher-powered turbodiesel engine supplied by Cummins.

Officials added, however, that the Cummins engine won't be available in full-sized pickups and chassis cabs until fall 1988 because of a crush of other new-product introductions it has scheduled and limited resources to handle them all.

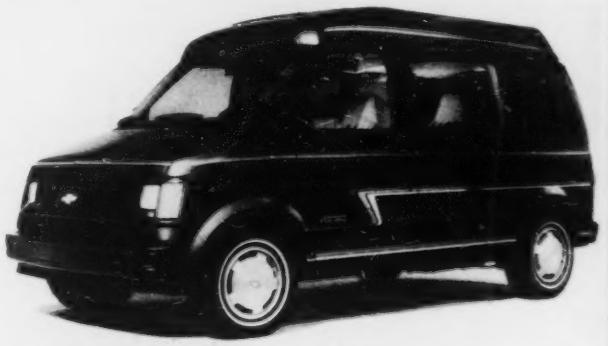
"We could launch it in December if we wanted to," York said. "But in our total new-model program, we're bringing out a new vehicle every six months, and we have finite engineering and manufacturing resources.

"We have to plan our launches very carefully so our whole engineering office doesn't have to empty out and go to three plants at the same time," he concluded.

The latest in RVing

New Starcraft campers
Starcraft, of Goshen, Ind., has redesigned its fold-down campers and has introduced four hardside campers for pickups. The fold-down campers have an improved lifter system and new graphics and colors. The hardside campers are all-new products, marketed under the Fleetstar name.

International's price cutter
International Vehicles Corp., of Bristol, Ind., developed this specially priced $17,995 van camper. Available only on a Chevrolet chassis, it features automatic transmission, power brakes and steering and other standard items like a small refrigerator, two-burner gas range, steel sink and dining table.



Raised roof for Astro van
Responding to raised-roof demand for Chevrolet's Astro, Turtle Top, of Goshen, Ind., has introduced its Sport Top, which can be installed by dealers and van conversion companies. The tops are made of fiberglass and can be painted to match the van's exterior color scheme.

RVIA chooses Louisville for 1987 show

RESTON, Va. — The Recreation Vehicle Industry Association will hold its 1987 National RV Show at the Kentucky State Fair and Exposition Center in Louisville and is leaning toward Louisville for its 1988 show.

The decision by RVIA's national board of directors to use Louisville in 1988 is still subject to final negotiations with Louisville convention site authorities.

Commitments to hold the show in Louisville beyond 1988 will not be made until RVIA-specified improvements to the Kentucky Expo Center are made, said RVIA President David J. Humphreys.

Delays in promised improvements to Kentucky Expo Center facilities initially convinced the association to alternate its national show between Louisville and Atlanta during a trail period from 1986 to 1989.

The National RV Show was held in Atlanta in 1986.

RVIA's 1987 National RV Trade Show will be held at the Kentucky Expo Center Dec. 1-4 and is tentatively scheduled there for Nov. 29-Dec. 2, 1988.

Meanwhile, RVIA reported that it plans to conduct an all-day seminar on Federal Motor Vehicle Safety Standards May 21 at the Dulles Marriott Hotel, near its Reston headquarters.

Van conversion firms working toward meeting the qualifications for membership in the association are invited to attend.

RV shipments climb, but market appears even stronger

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Wholesale RV shipments during January and February were up 3.2 percent over last year, according to the Recreation Vehicle Industry Association.

However, Ford and Chevrolet sales to their consignment pool companies indicate the industry may be in for a much stronger year than the two-month RVIA report indicates.

Dave Tarrant, RV/OEM sales manager, Ford Division, said Ford set a record for wholesale shipments to its consignment pool companies in the first quarter of calendar 1987.

The "very, very strong" first quarter start surprised Ford officials because they had an incentive on van conversions last December and felt it might affect this year's first-quarter shipments.

Recreational Vehicle Wholesale Deliveries

	Febraury 1986	February change	% change	2 months 1986	2 months 1987	% change
Travel trailers	7,400	6,100	+ 21.3	15,700	14,400	+ 9.0
Folding camping trailers	3,200	2,500	+ 28.0	6,000	6,000	0.0
Truck campers	700	500	+ 40.0	1,300	900	+ 44.4
Towable RV total	11,300	9,100	+ 24.2	23,000	21,300	+ 8.0
Conventional (type A)	3,300	2,900	+ 13.8	6,100	5,400	+ 13.0
Van Campers (type B)	500	400	+ 25.0	1,100	1,000	+ 10.0
Chopped vans (all)	2,200	2,200	0.0	4,200	4,000	+ 5.0
Motor home total	6,000	5,500	+ 9.1	11,400	10,400	+ 9.6
Van conversions	14,600	16,300	– 10.4	28,700	31,400	– 8.6
TOTAL ALL RVs	31,900	30,900	+ 3.2	63,100	63,100	0.0

Source: Recreation Vehicle Industry Association

But quite the opposite turned out to be true.

Ford saw record strength "across virtually every segment of van conversions, motor homes and related vehicles and our partial delivery vans," Tarrant added.

Similarly, Chevrolet's total shipments to bailment pool companies, basically made up of RV manufacturers, were up 20 percent over last year during the first quarter, according to Robert Rieth, Chevrolet manager of special vehicles.

Shipments were at near-record levels, Rieth added.

Tarrant said he felt that RVIA's numbers differed from Ford's because van converter members of RVIA don't all have consignment pools with Ford.

He added that it was even difficult for Ford to gauge the total number of its vans that were converted because dealers often hedged their bets in ordering a vehicle with two seats and enough equipment so that it could eventually be turned into a van conversion or a walk-in van for the commercial vehicle market.

"They'll swing with that locally," depending on particular market demand, he added.

Tarrant said he believes a "high number of vans get converted in that configuration, though there's no way to know it."

He said that slightly over 20 percent of the vans Ford sold for conversion were Aerostars (the balance being Econolines), but that the important thing was balanced availability of Aerostars in the field.

With greater minivan production industrywide and more competitive models available this year, Ford is keeping a close eye on Aerostar demand vs. supply. Thus far, it is at a "quite acceptable" level, Tarrant added.

Meanwhile, shipments of van conversions by manufacturers to dealers totaled 14,600 in February, according to RVIA, off 10.4 percent from February 1986. January-February van conversion shipments totaled 28,700 and were off 8.6 percent from a year earlier, RVIA reported.

Total shipments of 31,900 RVs in February were up 3.2 percent according to RVIA. For the first two months, total RV shipments of 63,100 were exactly equal to last year's 63,100 for the same period, RVIA said.

FORD

FROM PAGE 1

But it was in those down days that Ford established the formula that led to its success, reflected in the profit column last year when it earned $3.3 billion — more than General Motors. And analysts are saying Ford's strong continuing performance this year could lead to even higher profits — in the $4 billion-$4.5 billion range.

Poling and others say Ford's success has been rooted in these key areas:

- Strong positions in several market segments.
- A company-wide cost-cutting program, begun in 1979, that saved $5 billion — the equivalent of Ford's pretax 1986 profit.
- Strong aerodynamic styling in the Taurus and Sable, which beat its GM-10 competitors to market by two years and become synonymous with Ford's success.
- A truck business that even exceeds cars in sales.
- And a global strategy and strong market presence.

Ford moved even further on those last two points in announcing its joint venture with Nissan to study the joint development and production of new vehicles, first among them a competitor to Chrysler's successful minivan.

The first phase calls for a feasibility study of the joint development and production of a multipurpose vehicle to be introduced in the early 1990s in the North American market, where neither Nissan nor Ford have entries.

At the same time, Ford and Nissan jointly revealed that their Australian affiliates are to study model sharing programs.

Nissan President Yutaka Kume said the depth and scope of the North American project is unprecedented — and part of Nissan's efforts to strengthen overseas production to cope with the adverse effects stemming from the yen's appreciation.

According to a Nissan spokesman, the Nissan-Ford feasibility team, consisting of 20 members, will start its study this month with completion targeted for next spring. Production is expected to begin in the early 1990s at an annual rate of 200,000 units, with the split between the two companies yet to be decided.

The spokesman said the new multi-purpose vehicle will be a bigger version of Nissan's Prairie — the Stanza wagon in the United States.

The new model will be above the 2-liter class, he said. Currently, the Prairie is available in Japan in 1.5, 1.8 and 2.0 liters.

Ford officials first stated their desire to build a so-called "high cube" style minivan several years ago.

Whether the new vehicle would be produced in an existing Ford plant, Nissan's Smyrna, Tenn., plant or in a newly constructed plant in the United States or Canada will be governed by the outcome of the feasibility study, a Nissan spokesman said.

"The world automobile industry has entered an extremely competitive era, in which demand growth is slowing as markets become saturated, and every maker is doing its utmost to pursue product development," Kume said in announcing the agreement.

"Ironically, this era has created more opportunities for cooperation, for we must support each other in projects that will be mutually beneficial and seek to optimize all corporate resources."

The Nissan president said the common concern of both companies was profitability and because of that, "We will conduct an especially careful study of parts and components procurement, areas that will represent the largest part of the product cost."

Analysts say Ford, which owns 24.0 percent of Mazda Motor Corp., sought the linkup with Nissan because of its extensive model range and use of high technology in production.

Ford reportedly is negotiating with a third Japanese automaker to develop and produce another vehicle. It has been reported that Ford is eyeing Fuji Heavy Industries Ltd. and its fulltime four-wheel drive. Nissan owns 6.0 percent of Fuji.

Products of the minivan and four-wheel-drive class could provide Ford even more might in its battle for U.S. market share gains. Already, Ford has seen its share for U.S. passenger cars climb from 17.3 percent in 1980, to 18.2 percent in 1986, and 20.0 percent in the first quarter of 1987. Ford's U.S. truck share grew from 28.1 percent in 1986 to 29.4 percent in the first quarter of 1987.

In Europe, Ford has made gains from a 11.1 market share in 1980 to an 11.8 share in 1986 — an important unit surge of some 250,000.

In the process, Ford has established itself, in the words of industry analyst Arvid Jouppi, "as the premier world automobile company in more places making more money than anybody else."

But how long can it last? Will Ford's bubble burst?

"I think the products will continue to sell very well," said Poling. "I look for our share to continue to be strong. So far in April our share has improved over the first-quarter levels, both cars and trucks, so I'm very optimistic for the rest of the year in terms of share."

Trucks, important to the company's profitability due to their markups, are Ford's best-selling product, with the F-series truck No. 1 among all vehicles sold in the United States. Ranger, Aerostar minivans, Bronco and Econoline vans also are industry leaders.

Despite threats from BMW, Mercedes and Jaguar, Ford's Lincoln is a growth leader in the luxury car market — the Town Car's sales have increased more than 300 percent over five years.

Ford began streamlining its operations in 1979 calling for a 25 percent reduction of employees at all levels. Since then it has closed 15 plants in the United States and reduced its workforce 24.5 percent from 244,300 in 1979 to 184,500 in 1986.

And the company plans to continue reducing costs.

"Last year, before taxes, our profits were somewhat over $5 billion," Poling said. "Between 1980 and 1986 we reduced costs by about $5 billion. So there you see the reflection of the improvement of costs in terms of our profitability. And there will have to be continuous improvement in our cost structure, no question about it."

Earlier this year, for example, Ford told suppliers it wanted a 25 percent reduction in prices over the next five years.

Another success factor is the company's lean manufacturing capacity. David Cole, director of studies for automotive transportation at the University of Michigan, said: "The reason the company has done so well is that it hasn't built a plant in 30 years; instead, it has been unburdening itself."

Ford's strategy is to have as little excess capacity as possible even if it means risking sales.

"We reduced our capacity in the early 1980s and established a philosophy of operating closer to capacity over time," Poling said. "That philosophy says that we will miss some of the peaks, but we won't have as many valleys, and that over time we will operate closer to capacity. By doing so, we will be more efficient and more profitable."

Cole believes Ford must continue to invest for the long term in the types of cars that have been successful for it. He said the company has built the foundation for success but can't allow it to erode with a rich labor settlement or become lazy and complacent.

But another analyst, Maryann Keller of Furman, Selz, Mager, Dietz & Birney, is more blunt — saying, "Ford's momentum is the result of GM's flops."

Ted Sullivan, researcher with Wharton Econometrics, said: "The products Ford has are better designed for the marketplace. The Taurus/Sable — even though sluggish — are well-positioned. The Town Car is doing well and the Escort is holding up better than we thought it would."

In the near term, Ford may have to offer consumers aggressive incentives to keep inventories lean. Poling hinted there will be "some kind of marketing program" aimed at keeping the marketplace competitive.

As for when Ford's next Taurus-Sable type success might come, Poling said, "I'd like to think we've got it coming this fall. It will be called Continental."

In addition, the company plans new skin for the Ford Tempo and Mercury Topaz and a facelift for the Ford Crown Victoria and Mercury Grand Marquis. The 1988 Mercury Tracer, which is built in Mexico, went on sale in March, and the Ford Festiva, a subcompact built in South Korea, goes on sale this month.

The one storm cloud on the horizon could involve this year's contract talks with the UAW — especially if Ford is chosen as the union's strike target.

Said Poling: "Everything you read in the paper would indicate we're one of the candidates."

But, more to the point, analyst Sullivan points out that with a current 70-day car supply, Ford's stocks are hardly lean, but are lower than GM's.

Said Sullivan: "This could make it a tempting target for the UAW."

Automotive News staff reporters Joseph Bohn and Michelle Krebs contributed to this report.

Ford bonanza hikes U.S. profits

Company earns $1.5 billion to push combined net over '86

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. earned a record $1.5 billion in the first quarter of 1987, more than double its profit of $728 million for the year-ago period. Ford's performance enabled the four U.S.-based auto companies to increase their combined earnings 19 percent over the same period in 1986.

The industry's profits totaled $2.71 billion for the quarter, compared with $2.27 billion last year.

Ford was the only one of the Big Three to earn more in 1987 than in 1986. Chrysler Corp., which reported its results last week, showed a profit of $270 million, down from $357 million in the 1986 quarter.

General Motors and American Motors announced their first-quarter figures a week earlier (Automotive News, April 27). GM's earnings dipped to $923 million from $1.2 billion last year, and AMC showed a profit of $23.4 million after a loss of $18.9 million in the 1986 period.

Sales of the four auto companies totaled $50.4 billion in the first quarter, up 4 percent over last year.

Ford enjoyed the biggest quarter in its history. The $1.5 billion profit was realized on sales of $18.1 billion, both up substantially from a profit of $728 million and sales of $14.8 billion last year. Ford's previous quarterly profit record was $1.1 billion, set in the second quarter of 1986.

The company earned $5.73 per share of common stock in the first quarter, more than double last year's $2.70. Its profit margin (net income as a percent of sales) rose to 8.2 percent from 4.9 percent.

Factory sales of vehicles totaled 1,635,000, up 10 percent from last year.

Ford's after-tax profit in the United States was $1.2 billion for the first quarter, nearly double the 1986 figure. Outside the United States, the company earned $330 million, which was 150 percent more than last year's $132 million.

Ford's car and truck market shares in the United States, Canada and Europe were up over the first quarter of 1986. Ford's U.S. car share in the first quarter was 20 percent, an increase of 2 percentage points from the year-ago quarter, because of Ford Taurus and Mercury Sable, Ford said. Ford's U.S. truck share was 29.4 percent, up 1.7 points from the first quarter of 1986.

Ford Motor Credit Co. also had its best quarter in history. Its first-quarter profit of $196 million was 44 percent higher than in 1986. First Nationwide Financial earned $26 million, up 18 percent from $22 million a year ago.

UAW Vice President Stephen P. Yokich, who directs the union's Ford department, said Ford's "record-shattering first-quarter earnings are gratifying but also troubling to the union."

Yokich said the union hopes Ford management is mindful of the sacrifices UAW members have made at Ford. He said the sacrifices, including massive permanent layoffs of the hourly workforce since 1979, "are clearly the source of a large share of Ford's profits today."

He said Ford should expect to share its success with workers in upcoming contract negotiations. The UAW's national contracts with Ford and General Motors expire Sept. 14.

"Ford is obviously in a strong position — strong enough to commit to secure jobs in this country for more UAW members, and that is the commitment we will be seeking," Yokich said.

Chrysler Corp.'s earnings slipped 24 percent, to $270 million from $357 million in the first quarter of 1986. Sales totaled $6.0 billion, up 3 percent over last year's $5.8 billion. Worldwide factory sales of vehicles were 570,002, up 1 percent from 566,771 in the year-earlier quarter.

On a per-share basis, Chrysler made $1.24 this year vs. $1.57 last year.

Chrysler increased its market share in almost every category. Its share of the overall car and truck market in the United States (including imports) was 11.9 percent for the quarter, compared with 11.2 percent in the first quarter a year ago. Chrysler's market share for cars was 11.1 percent, up from 11.0 percent; its truck market share jumped to 13.3 percent for the quarter from 11.7 percent for the year-ago period.

Chrysler Chairman Lee Iacocca said the lower earnings reflected the cost of incentives, which was $100 million higher this year than in last year's first quarter, and the production loss of Chrysler's high-profit-margin and high-volume vehicles while plants were being retooled.

"We're right in the middle of launching 12 new products in an 18-month span," Iacocca said at a press conference to announce earnings. "It's expensive. It becomes even more expensive when you have three of your biggest plants involved in changeover."

Iacocca said Chrysler spent nearly $600 million during the quarter for plant modernization and new products. Chrysler's St. Louis I plant was still on its acceleration curve for the new Chrysler LeBaron Coupe and Dodge Daytona. Production of the Chrysler Fifth Avenue, Dodge Diplomat and Plymouth Gran Fury was moved from the St. Louis II plant to American Motors' Kenosha, Wis., plant during the quarter; and St. Louis II began producing the stretch minivans.

The Belvidere, Ill., plant stopped building the Dodge Omni and Plymouth Horizon to prepare for production of the Dodge Dynasty and Chrysler New Yorker Brougham.

Meanwhile, Chrysler Financial Corp. reported record first-quarter earnings of $62 million, up 59 percent from the previous record of $39 million in the first quarter of 1986.

PRODUCTION

Car output is 164,471

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Recovering from Easter holiday downtime, last week's targeted auto production of 164,471 was 18.41 percent more than the previous week's 138,895 and slightly higher (0.10 percent) than the year-ago week's 164,310.

So far this year, 2,669,975 cars have been assembled, 8.98 percent below the 2,933,249 completed last year at this point.

Last week's estimated production was shared as follows: General Motors, 54.04 percent; Ford Motor Co., 24.62 percent; Chrysler Motors, 13.32 percent; Honda of America Manufacturing Inc., 3.75 percent; New United Motor Manufacturing Inc., 1.95 percent; Nissan Motor Manufacturing Co. U.S.A., 1.86 percent; and American Motors, 0.46 percent.

Volkswagen of America's plant in Westmoreland, Pa., was idle last week for inventory adjustment. The plant is expected to resume operations today (May 4).

As previously reported, GM's Leeds, Mo., plant will be down until May 11 for inventory adjustment, affecting 2,000 workers.

GM's Lakewood, Ga., assembly plant is idle for model changeover. The plant is expected to resume production May 18.

Chrysler's Belvidere, Ill., plant is down for model changeover and is expected to return in early July.

Saturday (May 2) overtime was slated for Ford's Lorain, Ohio, plant.

All Ford car plants are scheduled for daily overtime this week (May 4).

Chrysler scheduled Saturday overtime at its St. Louis (No. 1) and Sterling Heights, Mich., plants.

Those plants and the Newark, Del., plant are scheduled for daily overtime this week.

Truck production on a roll

Domestic truckmakers scheduled production of 79,975 units last week, 21.03 percent more than the previous week's 66,080 and 8.60 percent more than the year-ago week's 73,645. The week of April 20 included a one-day extension of the Easter holiday.

Year-to-date, 1,279,452 trucks have been built, 2.18 percent more than the 1,252,164 assembled last year at this time.

General Motors slated Saturday (May 2) overtime at five plants: Baltimore; Detroit; Lordstown, Ohio; Flint, Mich.; and Pontiac, Mich. (medium-duty line).

No Saturday overtime was scheduled at Ford Motor Co. truck plants.

Canadian trucks aim high

Last week, Canadian truckmakers scheduled their highest week's production so far this year.

Targeted output of 19,199 trucks was 4.82 percent more than the previous week's 18,317, and 0.91 percent more than the year-ago week's 19,025.

Year-to-date, 277,268 units have been assembled, 16.37 percent below the 331,541 built last year at this point.

Last week's estimated auto production of 17,876 was 1.96 percent more than the prior week's 17,532 but 27.06 percent below the year-ago week's 24,507.

So far this year 286,695 cars have been assembled, 28.56 percent less than the 401,324 completed last year at this time.

As reported earlier, General Motors' Ste. Therese, Quebec, plant remains idle for model changeover. The plant is expected to resume production May 18.

PRICES

FROM PAGE 1

they wanted a vehicle that was attractive, contemporary and competitively priced," he said.

Pontiac said dealers have ordered 52,000 LeMans models. Pontiac hopes to sell at least 85,000 during the 1988 model year. The first shipment is enroute.

The entry level LeMans coupe, priced at $5,995, fits into the slot left vacant when production of the U.S.-built Pontiac 1000 ended last December. The 1000 had a base price of $5,959.

Pontiac has said all along that the LeMans would not be priced as low as the Hyundai Excel because the LeMans is a more upscale car.

Two-door sedans or hatchbacks priced lower than the LeMans include the Hyundai Excel, $5,195; Mitsubishi Precis, $5,195; Subaru Justy, $5,495; Volkswagen Fox, $5,690; Ford Festiva, $5,765; Toyota Tercel, $5,848; Honda Civic, $5,849; and Dodge Colt, $5,949. The Chevrolet Sprint carries the same $5,995 base price as the LeMans.

Priced slightly higher than the LeMans are the Mazda 323, $6,099; Nissan Sentra, $6,299; and Ford Escort, $6,586.

The LeMans Aerocoupe is an uplevel version of the base model with a few more standard features including an AM/FM radio and a five-speed manual transmission.

Priced at $7,325, the LeMans Aerocoupe is among the lowest-priced of the models that Pontiac considers to be in its class. Priced lower than the LeMans Aerocoupe are the Ford Festiva LX, $6,868; Ford Escort GL, $6,949; and Renault Alliance L, $6,925. Priced higher are the Honda Civic DX, $7,599; Mazda 323 DX, $7,799; and Mercury Tracer, $7,926.

The LeMans four-door sedan has the same equipment as the Aerocoupe and is priced in the middle of its competitors' range with a base sticker of $7,925. Priced lower are the Omni America and Horizon America, with a base price of $5,799; Volkswagen Fox, $6,490; Hyundai Excel GL, $6,545; Ford Escort GL, $7,163; and Dodge Colt DL, $7,591. Higher price tags are on the Nissan Sentra E, $8,249; Mazda 323 DX, $8,299; and Honda Civic, $8,580.

The top-of-the-line LeMans SE sedan has a base price of $8,399. Its additional standard equipment includes tilt steering wheel, a European-style seat with a height adjuster and split folding rear seats.

Priced below the LeMans SE are the Hyundai Excel GLS, $7,245; Toyota Tercel Deluxe, $8,138; and Mercury Tracer GS, $8,364. Priced above the LeMans SE are the Volkswagen Golf, $8,400; Dodge Colt Premier, $8,522; Honda Civic, $8,580; Mazda 323 LX, $8,899; and Nissan Sentra XE, $9,049.

Meanwhile, Chrysler will launch a print ad campaign this week that compares prices of its small cars to prices of Japanese cars.

At his quarterly press conference last week, Chairman Lee Iacocca unveiled a chart comparing prices of six "typically equipped" Chrysler vehicles with Japanese competitors in the same segment. Japanese car prices have risen about 20 percent as the yen has appreciated.

The chart, for instance, listed the "typically equipped" Plymouth Horizon/Dodge Omni subcompacts as selling for $7,917, compared to $10,821 for a typically equipped Honda Civic sedan, and the sporty Dodge Daytona at $11,038 compared to $14,348 for a Toyota Celica GT.

Advertising Age Detroit Bureau Chief Raymond Serafin contributed to this report.

"It's almost synonymous with freedom. Jeep won the war. It's Ike. It's America. It's all about personal freedom and fun."

JEEP: *Chrysler dealers have no priority; Sperlich expects sport-utility boom*

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Expanding distribution of Jeep products to its entire dealer network will not be a priority for Chrysler Motors despite its intent to exploit the burgeoning sport-utility market.

Chrysler Motors President Harold K. Sperlich said in an interview that the pending acquisition of American Motors will allow Chrysler to gain a premier position in a utility-vehicle market that is poised "to explode."

However, when asked if distributing AMC's Jeep products throughout the Chrysler Motors dealer network would be a priority if the AMC takeover is completed, Sperlich said it would not.

"We may do some cross-franchising among the franchised dealer groups over time," Sperlich said. "But you have got to remember why you called the party. The fundamental reason for our interest in AMC was one word — Jeep. You nurture an asset like that.

"There are only two words in any language that don't need translation — Coke and Jeep. It's the most significant automotive brand in the world. They know it everywhere. It's a massive property, properly exploited. Coke doesn't give out its formula. If Chrysler acquires AMC, Chrysler is going to nurture that tremendous asset. That's the most important thing.

"It's a tremendous brand," Sperlich continued. "It's awesome. It's almost synonymous with freedom. I mean, Jeep won the war. It's Ike. It's America. It's all about personal freedom and fun. It's a marvelous, marvelous brand and it has really deep roots.

"The core of the acquisition is aimed at that incredible brand Jeep, its worldwide strength and its position at a crossroads that we think will explode from a market standpoint," Sperlich said.

"We're going to be anxious to exploit the potential of the acquisition, but we don't want to undermine the purpose of the acquisition.

"Our goal is to nurture it and exploit it. Nurturing and exploiting can be in conflict with each other. We have to do this carefully. We'll be tested to see if we do it right. History will write that."

Dealers rap Buick ads

Agency on the spot; factory execs shifted

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

Under intense, sustained pressure from its dealers, Buick Motor Division has restructured its advertising, marketing and strategic planning operations and has sent ad agency McCann-Erickson back to the drawing board in a "no-holds-barred" effort to overhaul Buick's ad campaign.

The restructuring, scheduled to be announced today (May 11), creates a new marketing department and integrates Buick's engineering and strategic planning departments.

Buick dealers have been particularly critical of this year's campaign, which features new print advertising, a new themeline and a new spokesman — actor Hal Holbrook.

The situation came to a head at the dealer council's April meeting in Phoenix, Ariz., after a year of pressure.

In the restructuring, Darwin E. Clark has been named to the new position of general marketing manager and will report directly to Buick General Manager Edward H. Mertz. Clark had been assistant general sales manager — administrative.

David S. Sharpe gets the new title of general engineering and planning manager as head of the newly merged engineering and planning departments. Sharpe's title had been chief engineer.

Jack W. Qualman Jr., who was strategic planning director, was named to the new position of general director of advertising, replacing Harold E. Savage who is retiring from General Motors to become the full-time Detroit representative of the Magazine Publishers Association.

Incentive craze forces props for new models

By Mary Connelly, Michelle Krebs and Laura Clark
AUTOMOTIVE NEWS STAFF REPORTERS

General Motors, Chrysler Motors and American Motors are using incentives to bolster the spring launches of three pivotal new models.

In the past, such props would have been a sign that the cars were doomed to fail. But it now appears that makers must offer special deals to avoid having their all-new cars wash out in today's sea of incentives.

"In the past, we would not have wanted to put incentives on a new model because it would be like distress merchandising," said Chrysler General Marketing Manager A.C. "Bud" Liebler. "But now it's the normal course of doing business. The customer expects it."

Chrysler's 1987 LeBaron Coupe is one of the three brand-new models to be hyped with incentives; Chevrolet's 1988 Corsica/Beretta and Renault's 1988 Medallion are the others.

Thomas Mason, marketing manager for Chevrolet cars, said the auto industry is the only industry that doesn't offer special introductory prices for its new products. Airlines, he noted, offer special low rates when they enter a new market. Today's environment may force automakers to resort to similar tactics when introducing new models.

The launches are make-or-break-it cars in many ways:

- Chevrolet has called Corsica and Beretta the most important cars since the 1955 Chevrolet, and the two are hoped to eventually top 500,000 sales annually. For GM, the cars symbolize the new GM: They are the first major products since the corporation's reorganization began in January 1984.

But sales of Corsica and Beretta have been slower than the division had hoped, and a $500 cash rebate or low financing is being offered only two months after introduction.

- At Chrysler, the LeBaron Coupe is designed to carve a niche in an upscale, luxury market. Chrysler-Plymouth dealers have cited the proliferation of LeBaron models in the market and said they hope the upcoming arrival of the LeBaron convertible in showrooms will boost awareness of the coupe as an all-new product.

Chrysler last week announced an incentive program that in-

Key figure casts doubt on pact for Romanian car, dealer status

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

The key middleman in Roman Motors' negotiations to market Romanian-built vehicles in the United States said the contract thought to provide those import rights now appears "in doubt."

Statements made by Joseph Constantine Dragan, president of Marimex SA, would appear to confirm allegations that Roman Motors Corp. was not authorized

lions — from the 70 U.S. dealers it signed to sell the Dacia, Oltit and Aro models. In the last month two other U.S. firms have been granted U.S. import rights for the Dacia and Aro.

In a telephone interview, Dragan said an agreement signed in Paris on Nov. 20, 1985, between his company and the export manager of Auto Dacia, Milton Garcea, was not approved by the higher management of Auto Dacia.

Domestic trucks get price labels

Ford dealer council opposes move; Chevy expanding program

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Domestic truck manufacturers have begun shipping pickup trucks with Monroney price labels. They plan to expand the practice to more models despite protests from some dealer groups.

Chevrolet began attaching price stickers to its full-sized 1988-model C/K pickups in late April and plans to price-label other trucks, such as the S-10 pickup, Chevy Van, Astro Cargo van and carryover R/V full-sized pickups, within the next four to six weeks, according to John Kelly, Chevrolet marketing manager — trucks.

All Chevrolet trucks except chopped vans and chassis cabs will carry the labels, Kelly added.

Ford began putting price stickers on its 1987 Rangers, largely against the recommendation of its National Dealer Council.

Ford currently has no plans to put them on its full-sized F-series trucks, according to a spokesman.

The labels do not appear on most Econoline cargo vans and other commercial vehicles.

Chrysler Motors isn't putting price labels on any of its domestic or captive import pickups or cargo vans.

However, Jerome B. York, Chrysler Motors vice president — Truck Operations, said, "We are studying it. We believe serious consideration should be given to it from a customer standpoint."

American Motors began putting Monroney labels on its Jeep Comanche and J10/J20 pickups last fall and now has them on all its trucks.

The labels have been a controversial issue and have been strongly resisted by some dealers.

Ford's dealer council recommended that, as a compromise to window-label prices, "each Ranger be delivered with an unpriced label affixed to the window and the priced window label (be) mailed with the dealer invoice."

Giving dealers two labels would allow those who wanted to use a price sticker to do so. Those who didn't would still be able to list equipment and features on the window, without prices.

Some General Motors and Ford dealers have scraped the labels off trucks where they weren't legally required.

Noting that practice, Ford's dealer council said it considered it "extremely important" to give dealers an optional label because those who removed the price label "cannot retain that (package equipment and feature) information."

It told Ford to either adopt its compromise or drop the price-labeling idea.

Ford replied that Monroney stickers on Rangers served various purposes, such as making them more competitive with price-labeled import pickups, satisfying consumers who frequently come from of the car market where they're used to seeing such price labels.

Ford told dealers it was "continuing to monitor" the situation; that, to date, Ranger grosses and market share have increased; and that it currently had "no plans" to remove the Ranger price labels.

Federal law requires only that trucks sold as passenger vehicles, such as sport-utility models and passenger vans, carry Monroney labels. Passenger cars have been required to carry price labels since the beginning of the 1959 model year.

The labels are not required on pickups, which were traditionally regarded as commercial vehicles, except in four states that have specific laws requiring them.

The states are Minnesota, Iowa, Nevada and New Hampshire.

Chevrolet's Kelly said the division's full-scale price-labeling efforts were designed as both a sales aid to dealership personnel and as an aid to consumers in ascertaining prices more easily.

Dean Greb, director of field sales operations for American Motors, said the price labels have proved to be a very effective marketing tool to communicate special discounts and special option groups to consumers.

He added that AMC is currently looking at ways to redesign the labels and rewrite the information to "make them even more useful to the consumer and improve the communication level of option groups and discounts."

Many dealers, of course, don't have any problem with the price labels and feel they add credibility.

Chrysler and Ford extend incentives

By Laura Clark
AUTOMOTIVE STAFF REPORTER

Chrysler Motors and Ford Motor Co. have followed General Motors and American Motors in extending cash rebate and low-interest finance programs on many of their cars and light-duty trucks.

A Ford spokesman said the company is expected to announce today (May 11) that it is extending its previous incentive program through June 8. The new round will add car and truck models to the previous program and will sweeten rebates, the spokesman said.

The specific models and rebate amounts in the new incentive plan were not disclosed. No dealer financial participation will be required.

All Ford and Lincoln-Mercury incentives, with the exception of those on Bronco II and Ranger models, were to end May 9. The cutoff date for Bronco II and Ranger models was May 31.

Ford had been offering a choice of financing rates of 3.9 percent to 9.9 percent or cash rebates of $400 to $600 on selected small and intermediate-sized cars, F-series trucks and sport-utility models.

The Chrysler incentive program is similar to the one that was to end May 5. The new program began May 6 and has no expiration date.

Chrysler is offering rebates of $1,000 on Dodge Ramcharger sport-utility vehicles; $750 on Chrysler New Yorker; $500 on Plymouth Reliant, Dodge Aries, Chrysler LeBaron coupe, Dodge Daytona, Chrysler LeBaron sedan and Town & Country wagon, Plymouth Sundance, Dodge Shadow, Dodge Ram Wagon, Dodge Ram pickup, Dakota pickup and Dodge Raider; and $300 on Plymouth Colt and Dodge Colt.

Dakota S-model pickup trucks and Colt Vista models are not included in the program.

Buyers can choose the cash rebate or finance rates of 3.7 percent on 24-month contracts, 5.9 percent for 36 months, 6.9 for 48 months and 9.9 percent for 60 months.

No dealer financial participation is required. Consumers must purchase vehicles from dealer stock and take delivery before the program ends.

Chrysler Motors President Harold K. Sperlich said he anticipates the continuing use of incentives to boost sales in 1987.

"I think you're going to see incentives off and on throughout much of the year because there is less demand than there is supply," Sperlich said.

"Everybody is fighting like dogs for their turf. The result is pressure on prices and you see that in the form of incentives," he added.

Chrysler Credit Corp. announced last week that is offering pre-approved credit to 400,000 Chrysler owners through May 31. The customers contacted are presently financing vehicles through Chrysler Credit with loans of 24 months or more and have made 18 or more payments on the loan.

The credit company sent out letters detailing the program and notifying customers of their pre-approved credit limit.

Chrysler plans to offer the pre-approved credit program at the start of each new product launch to prompt present owners to buy new Chrysler products, said Gary Howe, marketing vice president.

This is the second year Chrysler Credit has offered the program. Last year, 2,400 of the 210,000 persons contacted purchased new vehicles.

Audi's $5,000 rebate doing job; dealers report sales gain in April

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Audi of America's $5,000 rebate to Audi 5000 owners has paid off off with a dramatic sales improvement in April, the first month of the program.

The rebate was the first of a series of steps Audi plans to use in its attempt to recover from the damaging publicity surrounding reports of runaway acceleration in Audi 5000s with automatic transmissions. By company and dealer accounts, the program is working better than expected.

"It's been a winner in more ways than one," said Gene Young, president of Northland Audi in Cincinnati. "The confidence that people have in Audi has been reassuring to the dealers."

Audi sold 4,901 cars in April, the highest monthly total since last October. April's figure was nearly twice as high as this year's previous peak, 2,489 in March. Even with last month's boost, though, sales through the first four months of 1987 were about half those of the same 1986 period. The sudden-acceleration issue gained widespread attention in March 1986.

Under the program, called the Audi Private Purchase Plan, the 140,000 owners and lessees of 1984-86-model Audi 5000-S cars are being given the $5,000 rebate when they buy a 1987 model.

Dealers interviewed by Automotive News said that most of their April sales came from current owners. One said that 80 percent of his sales went to coupon holders; another said that 20 of his 22 sales were made under the program.

Most of the 1987 cars chosen have been equipped with automatic transmissions, dealers said. Audi's 1987 models have a shift-lock device that requires drivers to put their foot on the brake before shifting into gear.

The program ends June 30. Audi has given dealers a list of current owners, and dealers have been inviting them into the showrooms.

One dealer expressed concern that sales might sag once the rebate expires, but Audi has stressed that the recovery will take time.

In another step, the company is offering factory-to-dealer cash incentives on 1987 Audi 4000 models through the summer. According to one dealer, the amount ranges from $500 to $1,500, depending on the number of 4000s the dealer sells.

A new version of that car, to be called the Audi 80 and 90, makes its debut this fall.

"Our approach is that it's very much of a building process," said an Audi of America spokesman. "We are not going to recapture all of the lost ground in one giant step."

OBITUARIES

Pete Wemhoff, 76; was Automotive News editor

ORMOND BEACH, Fla.— Pete Wemhoff, retired editor and publisher of Automotive News, died May 7. He was 76 and had lived here since retiring in 1971.

Keith E. Crain, Automotive News publisher and editorial director, said last week, "Pete Wemhoff made a great contribution to Automotive News. We and the entire auto industry owe him a huge debt."

Mr. Wemhoff's given name was Bernard, but he never used it. His byline read "By Pete Wemhoff."

He was a copy editor for the Detroit Free Press before joining Automotive News in 1936. He arrived just in time to cover the sitdown strikes in the auto industry.

Mr. Wemhoff became editor of Autmotive News in 1943 and served in that position until 1965, longer than any other editor in the history of the paper.

Mr. Wemhoff

In 1955, he added the duties of general manager. He became publisher of Automotive News in 1965 and retired at the end of 1971.

Mr. Wemhoff is survived by his wife, Ann; four sons, a daughter and eight grandchildren.

Mark R. Chenowith

SYKESVILLE, Md. — Mark R. Chenowith, 87, retired president of Jarman Motors Pontiac-GMC, died here April 23. In 1955 he was president of the Automobile Trade Association of Maryland.

Scorpio trade price guaranteed for L-M dealers

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Scorpio, Ford Motor Co.'s entry in the luxury sedan market, will be offered with a guaranteed trade-in price and a variety of customer-service programs in an effort to establish the car among the prestigious competitors in its class.

The trade-in guarantee has some caveats, however. The deal will apply only to 1988 models traded for other Lincoln-Mercury or Merkur products. The trade-in also must be made between 24 and 48 months after the original purchase.

Scorpio, a Ford of Europe import, is the second car for the 737-dealer Merkur franchise. The first, the XR4Ti coupe, has never lived up to initial sales projections.

L-M is issuing a modest sales forecast for Scorpio: 5,000 to 7,000 through the end of this year and twice those numbers in 1988.

Division officials expect the $26,405 (fully equipped) Scorpio to broaden the Merkur line while adding some zest to the two-year-old franchise. Scorpio's official introduction date is May 21. The base sticker is $23,248.

The fact that Scorpio will have plenty of competition will help boost the car's prospects, L-M General Manager Thomas J. Wagner said in an interview.

Whereas the XR4Ti, now $17,832, had no clearly defined market segment, Wagner said the Scorpio is entering a well-established niche with some formidable competitors, such as the Saab 9000, Audi 5000, Mercedes-Benz 190, Volvo 700 series and BMW 5 series. The marketing campaign will aim at putting the Scorpio name in those ranks.

Scorpio's Guaranteed Resale Value program promises a trade-in value equal to that of the Mercedes-Benz 190 as a percentage of the original retail price. In L-M's eyes, that is the car that customers believe is the best in the segment.

When a Scorpio owner trades in a car, L-M will compare the average resale value of that product to the average resale value of the Mercedes 190, using monthly figures from the National Automobile Dealers Association's used-car guide. If the average Scorpio's resale value is rated at 45 percent of the original purchase price and the average Mercedes 190 is rated at 50 percent, for example, the Scorpio owner would get a check equal to 5 percent of the car's retail cost.

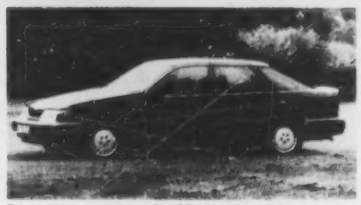
If the percentages are the same or the Scorpio's resale percentage is greater, no payment would be made.

The guarantee is figured only by comparing a Scorpio's book value to the Mercedes 190's book value. A Scorpio owner and dealer would separately negotiate a trade-in price that reflects the condition of the car.

L-M believes it is the first national program of its kind on any car. The division ran a pilot test on Lincoln models in California in 1982.

According to Wagner, the program is tailored for Scorpio's upscale buyers, who might stay away from a new car until its resale value is established.

"We're not willing to wait a couple of years," Wagner said. "We decided that we have great confidence in the car, and we'll short-circuit this whole thought process by doing the resale thing."



Scorpio: second car for Merkur franchise

Other L-M efforts will echo those offered by some of Scorpio's competitors. Scorpio owners can get a free loaner car when they bring their cars in for service.

In addition, Scorpio owners who need emergency road service will be reimbursed for towing, lodging and other expenses. And L-M offers free delivery from Europe for customers who pick up their new cars there.

The Guaranteed Resale Value program will be used in the Scorpio advertising campaign, which L-M has said will take 20 percent of the division's ad budget for 1987. According to figures from Advertising Age, the Scorpio outlay is about $25 million.

Seventy percent of it will spent on print advertising, where L-M feels it can target its audience more directly. Eight-page inserts will be included in Time, Newsweek and other publications this month.

The remainder of the ad budget will be spent on television in an attempt to establish the Scorpio name and the fact that it's a new entry in the European luxury sedan field.

One effect of the Scorpio launch, Wagner said, will be to reaffirm Merkur as a car line rather than just a car. Up until now, the only Merkur has been the XR4Ti.

The XR4Ti has never met sales expectations. L-M had predicted 20,000 XR4Ti sales in its first year, but sold only 8,974 in 1985 and 14,315 last year. Through April of this year, 2,656 had been sold, compared with 4,836 last year.

"It's been a loser for us," said a Merkur franchise holder. And a recent survey by J.D. Power & Associates revealed that only 3 percent of all dealers and 6 percent of Merkur dealers rated the Merkur franchise as an excellent financial investment.

From the start, L-M has said it will apply lessons from the XR4Ti launch to Scorpio.

"We've learned that you've got to build a car for the American market, and not what you think is the European market," Wagner said. "We built the XR4Ti in seven shades of gray and silver, almost all cloth and standard transmissions. Well, it turns out that the American market wants almost all automatics, a lot of colors and leather."

The Scorpio will be available in 11 colors, and leather upholstery will be an option. And 85 percent will have automatic transmissions.

Wagner also believes L-M was not restrictive enough in accepting Merkur dealer applications. And it is pushing dealers to have one or two salespeople who specialize in Scorpio sales.

Ford hopes to sell 35,000 Festivas by the end of 1987

Ford pegs Festiva at $5,765, staggers dealer introductions

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. has jumped into the under-$6,000 car market with last week's launch of the Festiva, a new import from South Korea.

Ford has put a $5,765 price tag on the base model, slightly above two other young entries in the market, the Subaru Justy and the Volkswagen Fox. But it comes in slightly lower than the new Pontiac LeMans. A top-of-the-line Festiva LX version starts at $6,868.

The company hopes to sell 35,000 through the end of 1987 and expects to boost sales to 50,000 the following year. Kia Motors Corp., the assembler, has capacity to make 85,000 Festivas annually for the U.S. market.

To keep dealers stocked, Ford is staggering Festiva's introduction. The car officially went on sale last week in Oregon, Hawaii, Nevada, Alaska, Washington and California. It will debut in the Northeast next month, the Southeast in July and the rest of the country by fall.

Ford is billing Festiva as a companion to Ford Escort, but the newcomer could compete directly with the popular subcompact in some price ranges. One California dealer said that with the $600 rebate currently in effect on the Escort Pony, that car can be bought for slightly less than Festiva.

Ford hopes that Festiva will draw attention from shoppers considering other products in the "B-class" small-car market, a field that Ford expects to account for 40 percent of all small-car sales by 1990.

Another South Korean product, the Hyundai, has scored considerable success since its launch last year, selling more than 168,000 units in its first 10 months.

Ford's advertising campaign will target young, educated, first-time buyers. Thirty-second television spots are running on the West Coast.

Festiva, developed by Ford of Japan with Mazda Motor Corp., has been sold in Japan for two years. More than half of the componentry is shipped by Mazda to Kia for assembly in South Korea. Ford owns 25 percent of Mazda and 10 percent of Kia; Mazda owns 8 percent of Kia.

Festiva carries few options, just air conditioning, rear wiper/washer and a cassette tape player. Automatic transmission will be available on the 1989 model.

Ford believes the base model carries enough standard equipment to capture half of all Festiva sales. A fully loaded LX version sells for about $7,800. No options will be installed by the dealer.

Incentives, cutbacks trim dealer stocks

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

Inventories of unsold United States-built automobiles shrank a bit in April.

The decrease in stocks came on a wave of production cutbacks and widespread sales incentives consisting principally of cut-rate financing and cash rebates.

On May 1, the number of cars on dealers' lots and en route to dealerships was 1,912,132, the equivalent of a 72-day supply.

It was the highest May 1 figure since 1979 when stocks totaled 1,913,597 units. On April 1 of this year, the count was 1,945,438 cars, a 74-day supply.

It is generally accepted that a 60-day supply of domestic cars is optimal.

By company, May 1 inventories were divided this way: General Motors, 55.86 percent; Ford Motor Co., 25.98 percent; Chrysler Motors, 13.53 percent; Nissan, 1.48 percent; Volkswagen 1.20 percent; American Motors, 0.95; Honda, 0.48, and Toyota 0.52.

By size class, domestic new-car inventories consisted of 38.82 percent intermediates, 19.23 percent compacts, 18.67 percent subcompacts, 12.96 percent standards and 10.32 percent luxury models.

General Motors managed to reduce its May 1 inventory of unsold cars to a 76-day supply from an 85-day supply a month before. Ford Motor's stockpile climbed a bit to a 68-day supply from 64 days.

Chrysler's stocks grew to a 79-day supply from 72 days at the beginning of April, while Nissan's dipped to 60 days from 68 days. Volkswagen's supply eased to 114 days from 124 days.

AMC's inventory was the equivalent of a 166-day supply on May 1. That was down from a 172-day supply a month earlier.

Honda's position was in sharp contrast to that of the other companies. Honda had a skimpy 9-day supply compared with 8 days a month earlier. Toyota's May 1 inventory of unsold passenger units made in this country dipped to 65-day supply from 68 days on April 1.

Ford Canada reports huge profit gain for quarter

OAKVILLE, Ontario — Ford Motor Co. of Canada rebounded in the first quarter after dismal financial results in the same period a year ago.

Ford of Canada earned $73 million, or $8.79 a share, in the first quarter, compared with $6 million, or 76 cents a share, in the year-ago first quarter.

Ford of Canada had sales of $3.6 billion in the first quarter, up from $3.5 billion in the first quarter of 1986.

Kenneth W. Harrigan, Ford of Canada president, said the improvement was the result of the strengthening of the Canadian dollar, an improved cost structure and increased production at the Windsor casting plant.

In the year-ago period, Ford of Canada's results were adversely affected by the weak Canadian dollar, overseas losses, high marketing costs associated with the launch of the Taurus/Sable and sales incentives and the shutdown of the Essex engine plant for model changeover.

Net income from Canadian operations amounted to $73 million in the first quarter, compared with $11 million in the year-ago period. Ford of Canada broke even on its overseas operations in the first quarter, improving its position slightly from a year ago. Ford of Canada's overseas sales were $441 million.

Harrigan said Ford's share of the Canadian car market in the first quarter was 19 percent — the highest since 1979. That compares with 17.2 percent in the same period of 1986. Ford of Canada's truck sales took 30.9 percent of the market, up from 30.1 percent in the first quarter of 1986.

The Canadian industry's best-selling car in the first quarter was the Ford Tempo, built in Oakville, with sales of 10,891. The new F-series pickup truck, also produced in Oakville, was the industry's best-selling truck. F-series pickup sales totaled 13,402.

Canada truck sales set record; April car deliveries decline 3%

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Ford, Chrysler and American Motors posted all-time record truck sales in Canada last month while General Motors broke its previous April truck sales record.

Meanwhile, domestic new-car sales dipped 3.42 percent from the year-ago month. Canadian dealers delivered 83,693 North American-built cars in April, compared with 86,659 in April 1986.

Truck sales totaled 41,591 in April, up 15.66 percent over 35,961 a year earlier. Ford, Chrysler and AMC said last month's truck sales in Canada were the highest for any month in their history. General Motors set an April truck sales record.

AMC's Jeep sales rose 69.78 percent to 2,000 from 1,178 a year ago. Chrysler truck sales totaled 8,081, a 38.97 percent gain over 5,815 last year. Ford sold 15,283 trucks, a 12.52 percent rise from 13,582 in April 1986. GM posted a 5.47 percent increase, selling 16,227 trucks last month compared with 15,386 a year ago.

General Motors, Ford and Chrysler continued to offer incentives on selected cars and light-duty trucks to woo spring buyers.

Chrysler posted the largest percentage gain in car sales last month. It sold 17,999 North American-built cars, 10.67 percent more than the 16,263 sold in April 1986.

Ford reported a 4.59 percent increase in sales of its North American-built cars. It sold 23,131 last month compared with 22,115 in April 1986. Sales of GM's North American cars dropped 13.04 percent to 40,953 units from 47,093 a year earlier.

Sales of AMC cars dropped to 24 units last month from 29 in April 1986. Deliveries of North American-built Renault cars fell to 350 from 846 in the year-ago month.

Volvo sold 250 Canadian-built cars in April, down from 313 a year ago. Honda sold 986 Canadian-built autos; it was not building cars in Canada last year.

In addition to North American cars, GM sold 86 Suzuki-built Chevrolet Sprints, 705 Suzuki-built Pontiac Fireflys, 56 Isuzu-built Chevrolet Spectrums and 39 Isuzu-built Pontiac Sunbursts. Ford sold 960 Tracer and 35 Merkur XR4Ti models. Chrysler sold 1,059 Mitsubishi cars and 17 Peugeot cars.

AMC sold 423 imported Renault vehicles in April; Volvo sold 663 Swedish-built Volvo cars; and Honda sold 7,236 Japanese-built cars.

Cadillac drops proposal to set limo-builder rules

By Scott Miner
AUTOMOTIVE NEWS STAFF REPORTER

Because of fear of legal ramifications, Cadillac has dropped a Master Coachbuilder plan that would have imposed stricter standards on limousine converters. Instead, Cadillac will review other methods to assist what a Cadillac official calls "the good coachbuilders."

Dave John, director of fleet sales, declined to comment further on any efforts being considered until Cadillac approves such measures.

However, he did say that Cadillac could share technical advice or "drop ship" the cars directly to the coachbuilders.

In drop shipping, the manufacturer delivers new cars to the coachbuilder's plant. Builders that produce about 100 cars a year would qualify, John said.

Coachbuilders still purchase the cars through a local dealer, but they can save time and money if the manufacturer ships the cars directly to them.

Sharing technical advice would give the coachbuilders advance notice of model changes or drivetrain changes. The builders would be able to adjust their assembly lines in time for Cadillac's new-car introductions.

The major stumbling block with the Master Coachbuilder program was "how do you determine the haves and the have-nots," said John.

"We want to take care of the good coachbuilders," he said.

He said that helping the coachbuilders "is an ongoing thing. We're always trying to find ways to assist the good coachbuilders."

Coachbuilders, dealers and automakers have all expressed interest in developing some sort of program to control product quality. At present, automakers have no control over what happens to the car once it is sold.

James L. Centner, president of Moloney Coachbuilders, said his company has been talking with Cadillac and Lincoln for about three years about a Master Coachbuilder program.

Moloney is one of the four largest limousine conversion companies. Each of the four produces about 1,000 limousines a year, and they account for an estimated 80 percent of the limos built for sale in the United States.

Centner was in favor of the Master Coachbuilder concept because, "bad quality hurts business." He added that many builders do not have sufficient liability insurance.

Centner said some builders carry only "garage insurance" — insurance that covers only their property and persons on that property.

He said builders should carry the more expensive type of insurance to cover the limousines after they leave the shop.

A Lincoln spokesman said that no formal plan for coachbuilders is in place, but he acknowledged that such a plan is being reviewed.

NHTSA probes Ford Econolines

WASHINGTON — NHTSA has opened an investigation into fuel spurting and possible fires in 1984-86 Ford E-150, E-250 and E-350 Econoline vans.

In opening the engineering analysis, the safety agency granted a petition filed by the Center for Auto Safety last January and, in essence, admitted that the problem with fuel-spurting is not merely one that occurs when the vans are converted into ambulances.

According to the safety center, 324,000 Ford vans are involved, and there have been 72 reports of overpressurized fuel, including 14 fires and 5 injuries on non-ambulance vans.

According to NHTSA, 145,000 Ford vans are involved, and there have been 91 complaints including 21 fires and 10 injuries.

A class-action suit on behalf of all owners of Ford Econoline vans is pending against Ford in U.S. District court in Denver. The issue is alleged danger from fire.

The case was filed by Aspen Limousine Service Inc., which does business as VANS TO VAIL, and Intra-Rockies Limousine Service.

An Invitation

To complete our network, Avanti seeks a few dealers in our remaining key markets to sell and service the handcrafted luxury sports coupe and convertible now in production at our factory.

U.S. foreign-pickup purchase hit

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The U.S. Defense Department has taken delivery of 3,743 Dodge D-50 pickup trucks manufactured by Mitsubishi Motors Corp. as part of a $76.7 million contract with Chrysler Motors for 10,033 vehicles.

The D-50s were purchased for $20.7 million, or $5,530 per vehicle.

The International Brotherhood of Teamsters protested the purchase of the Japanese-made trucks before the House Armed Services Committee late last month. The union claimed the purchase of Japanese-made trucks will cost American workers their jobs.

According to a spokesman for the UAW, Congress appears likely to accept an amendment to its defense authorization bill that would bar large Defense Department purchases of imported cars and light-duty trucks. The UAW-supported amendment, to be offered by Rep. Dennis Hertel, D-Mich., specifies that only American-made "administrative vehicles" can be purchased if the contract is worth more than $50,000.

Surprisingly, Chrysler Corp. said that in principle it does not support the D-50 purchase either.

According to a Chrysler spokesman here, the company has long supported legislation that would require the U.S. government to buy American-made products. The legislation has not been successful, however, and Chrysler's bid was accepted by the government because it was the lowest, he said.

A spokesman for the General Services Administration, the government's purchasing agency, said General Motors, Ford Motor Co. and American Motors also bid on the contract, but their prices were "18 to 42 percent higher" than the Chrysler bid.

Paul Locigno, Teamsters' director of governmental affairs, told the House committee that the purchase illustrates why the union has asked Congress to enact legislation requiring the federal government to purchase only American-made products.

Locigno said that if the 3,000 pickup trucks had been manufactured in the United States, 72 auto workers would be employed for one year in addition to hundreds of employees in the supplier industry.

"You don't have to represent a district in Michigan to realize what a serious problem this procurement policy poses to this country and its workers," he said. "As it stands, the laws on the books allow American taxpayers' dollars to be used to export American jobs. It is a senseless policy."

Chrysler said the government also bought "about 2,000 assorted cars" as part of the contract. Other trucks made up the balance of the purchase, Chrysler said. The contract was approved in April 1986.

April's car market slips 3.8%

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

Sales of new cars built in the United States continued a lackluster performance through the final 10 days of April and were below those of a year earlier for the entire month.

Deliveries in the 10 days totaled 297,523 units, off 0.32 percent from the 298,487 units delivered at retail a year before.

The month's deliveries to customers by dealers totalled 691,803 units, off 3.86 percent from deliveries of 719,563 units in April 1986.

Sales of imported cars in April this year dipped 3.94 percent to 242,394 units from 252,339 last year.

The industry total — domestics plus imports — eased 3.88 percent to 934,197 units from a combined total of 971,902 units a year before.

The daily-selling rate for domestics inched upward for the 10-day selling period and for the month. Cars were sold at a rate of 33,058 units a day in the 10 days compared with 28,505 domestic units a day in the preceding 10-day sales period. For the month, sales averaged 26,608 a day compared with 26,235 a day in March, 24,215 cars a day in February and 17,107 cars a day in January.

The lukewarm sales performance gains added significance in light of the fact it came during a period of widespread sales incentive programs — rebates and low-priced financing plans.

Between April 21 and 30, sales improvements were reported by just three of the eight domestic car builders.

Nissan deserves an asterisk in the record book. Because it had limited production a year ago, it reported a sales gain of 465.78 percent for the 10 days.

Honda had a gain of 95.62 percent from year-earlier sales levels and Ford Motor Co. had a gain of 0.89 percent.

American Motors had a drop of 29.72 percent during the the 10-day period and Chrysler Motors declined 24.98 percent from year-earlier levels.

Volkswagen dealers sold 7.77 percent fewer U.S.-built cars in the 10 days and General Motors was down 2.93 percent.

Toyota, which was not building cars in this country during the year-earlier period, sold 2,187 units in the 10-day period.

Nissan had a sales gain of 206.17 percent for all of April.

Honda sales rose 83.74 percent and Ford Motor's were up 7.10 percent. Toyota sales totaled 3,939 units.

American Motors sales in the month slipped 45.46 percent below those of April 1986. Volkswagen's eased 27.75 percent, Chrysler Motor's 16.41 percent and GM's 10.83 percent.

In terms of market share, GM took 39.24 percent; Ford Motor, 20.21 percent; and Chrysler, 9.06 percent. Honda's share amounted to 2.95 percent; Nissan, 1.31 percent; and Volkswagen, 0.56 percent. Toyota had 0.42 percent of the total market and American Motors 0.30 percent.

The imports' share was 25.95 percent of the total.

Louis E. Lataif, vice president, sales operations, Ford North American Automotive Operations, touched an optimistic chord on the month's sales.

"With our April car sales up 7.10 percent and trucks up 15.0 percent, the demand for Fords products is well ahead of the industry pace," he said. "The intent is to gain car-market share by pushing our volumes ahead of last year."

Lataif added, "We are seeing more movement in trucks than expected, bringing April industry car and truck sales in slightly ahead of our full-year projection of about 15 million units."

Chrysler's new entries, LeBaron J, Plymouth Sundance and Dodge Shadow, show up with stength in the sales columns. LeBaron sales grew to 2,787 for the 10 days and 5,631 for the month. Sundance and Shadow sales hit 6,010 in the final 10 days of April and totaled 12,075 for the month.

Sales set record in South Korea

SEOUL, South Korea — South Korea's automakers set a domestic monthly sales record of 39,999 vehicles in April, an increase of 60.3 percent over the volume in the same month a year earlier.

According to industry reports, Hyundai Motor Co. was the pacesetter with 17,070 sales, followed by Kia Motor Co. with 13,619, Daewoo Motor Co., 9,170, and Dong-A Motor Co., 140.

Cumulative sales of the four automakers in the first four months of the year were 123,705 units, a 49.2 percent increase over the year-earlier period.

Fiat holds first-quarter car sales lead in Europe

By Richard Johnson

Despite forecasts of a downturn in 1987, new-car sales in Western Europe are still booming.

Following a sharp increase in March, volume was nearly 5 percent better than last year's record pace through the first quarter.

Italy's Fiat Auto S.p.A., including newly acquired Alfa Romeo, held the European sales lead over West Germany's Volkswagen AG after three months.

At the same time, Japanese products as a group ran 5 percent behind their 1986 performance.

Sales in Western Europe's 17 major markets grew 11.5 percent in March after a depressed January, plagued by poor weather, and a 4.2 percent gain in February.

The West German market picked up momentum in March and regained European leadership, after slipping behind the United Kingdom and Italy through January and February.

Benefiting from a strong home market in the first quarter, French giants Peugeot S.A. and Renault recorded the biggest increases among Western Europe's big six producers.

The sharpest first-quarter decline among Western Europe's top 10 manufacturers was suffered by West Germany's BMW AG, hurt by a declining share in a weaker German market.

Sales figures are derived from industry estimates compiled by *Automotive News*.

****—Opel, Vauxhall, Isuzu, GM-U.S./Canada

Western European sales totaled 3,062,100 in the first quarter of 1987, 4.8 percent higher than the same period in 1986.

The industry achieved a record volume of 11,673,900 in entire 1986, and most analysts expect a slight reduction in 1987.

Fiat Auto, including Alfa Romeo, controlled 15.2 percent of the market through the first three months of this year. Unit volume was up 5.1 percent to 464,700. Fiat improved 9.1 percent by registering big gains in the French and U.K. markets through March. Combined Lancia/Autobianchi/Ferrari sales were off nearly 11 percent.

In its first three months as a Fiat stepchild, Alfa Romeo sales were just under 4 percent lower. However, had Fiat not reaped Alfa's 1.5-percent European market share, 1986 sales leader Volkswagen group would have retained first place over the Italian company in the first quarter.

Overall, new-car sales in West Germany were down 5.4 percent for the first quarter to 633,800, but picked up 9.4 percent in March.

VW's Audi AG numbers swelled nearly 26 percent to 85,900 on the strength of the new Audi 80 (which is coming to the U.S. as the new 4000), while Seat S.A. sales skyrocketed more than 50 percent to 61,400 in the first quarter.

About 40 percent of Seat sales are in the red-hot Spanish market, where volume for the former state-controlled producer grew 75 percent in the first three months.

Buoyed by a strong French market, Peugeot S.A., No. 4 in Europe last year, has moved past Ford Motor Co. into third position with 12 percent. Peugeot group sales increased 12.4 percent to 367,200, with Automobiles Citroen improving sharply at home (up 33 percent in France) and Automobiles Peugeot registering big gains in Italy (up 19.6 percent) and the United Kingdom (up 30.6 percent).

Renault has been the main beneficiary of a French market that improved 27 percent in March and ran 14.5 percent ahead through the first quarter. The state-owned automaker is 21.8 percent above the same period last year in France and recorded the biggest overall first-quarter gain among the top six European producers — 15.1 percent to 321,400.

However, Renault still remains in sixth place in sales rankings with a 10.5-percent share.

Ford and General Motors each improved European sales through March. Ford climbed 5.9 percent to 357,400 and maintained its 11.7-percent share. GM was up 1.8 percent to 343,600, good for an 11.2-percent share.

BMW sales were down nearly 10 percent in the first quarter, a drop attributable to a declining share in Germany. The Munich automaker is off 11.4 percent for the year in its home market.

Japanese auto sales in Europe were depressed in the first quarter following a decline in shipments in late 1986. But a sharp upturn in Europe-bound exports, starting in January, has begun bolstering volume.

After lower sales in the first two months, Japanese sales improved by about one-third in March. For the three-month period, sales are off 5 percent to 315,100. Market share in this year's first quarter dropped to 10.3 percent from 11.4 through the first quarter of last year and 11.6 percent for all of 1986.

The Japanese are down 11.6 percent in unrestricted West Germany. Their share of the smaller first-quarter market in West Germany was 13.1 percent compared to 14.8 for all of 1986.

Toyota paced Japanese makes in Western Europe in the first quarter of 1987 with 78,100 sales, down 5.8 percent from the first three months of 1986. ■

SWF Auto-Electric eyes North American market

BIETIGHEIM, West Germany — ITT SWF Auto-Electric GmbH, headquartered here near Stuttgart, is busily making product and manufacturing plans for the North American auto market.

According to Klaus P. Bleyer, managing director of the company, a subsidiary of ITT Automotive, Bloomfield Hills, Mich., SWF intends to transfer technology from its European operations to a North American product group to be headquartered in the Detroit area.

The plans include manufacturing facilities.

Noting that SWF will proceed with the plan before the end of 1988, he said, "It is very critical for us to marshal our forces as soon as possible because major decisions are being made by North American automakers concerning future electric and electronic components and systems."

Bleyer said SWF currently has the potential to offer automakers 150 different products per car and plans to boost that to 180 by year 2000. The company's electrical systems group specializes in D.C. motors, electronics, harnesses, switches, wiper systems and lighting products.

Daily production in SWF's 11 manufacturing locations currently totals 100,000 wiper blades, 40,000 wiper arms, 35,000 motors, 50,000 switches and 20,000 lamps, according to Bleyer.

He said opportunities in North America result in part from outsourcing actions by U.S. automakers — particularly General Motors.

"They are looking for creative, innovative outside suppliers with new technical solutions," he said.

He emphasized that SWF should have no trouble competing with in-house suppliers of U.S. auto companies.

"Captive divisions develop products only for their parent company," he said. "We develop products for the world. We are technologically a step ahead. Normally, if you are able to compete in a broader market, you are able to remain ahead."

SWF has a number of new products under development or ripe for sale to U.S. automakers, Bleyer said. They range from parts to entire systems.

High on the list, Bleyer said, is an electronic wiper system with contact-pressure adjustment. It automatically adjusts the spring tension of the wiper arm to provide optimum tension at a given speed.

Among its advantages, according to Bleyer: Higher vehicle speeds can be achieved before the wiper blade lifts off the windshield; wiper rubber does not deform when the car is parked for a long time; there is less spring tension at lower speeds, resulting in less vibration of the blade on the glass; and there is less load on the wiper bearings at low vehicle speed.

The company also has come up with a side window wiper-wash system. Besides its capability of being robotically installed on cars in the assembly plant, Bleyer said it has a number of other advantages including: fewer cable and tube coupling points; shorter wires and tubes; and the capability of all components in the system being functionally tested by the supplier — rather than the automaker — including control electronics and connecting wires.

SWF is heavily involved in multiplexing systems, and has one under development for the driver-side door. It requires only four wires compared to a couple of dozen normally used, and includes seat-position memory, a window-closing device with safety switch and mirror adjustment.

"Multiplexing will start in the driver-side door," predicted Bleyer, who added it is "less than five years away."

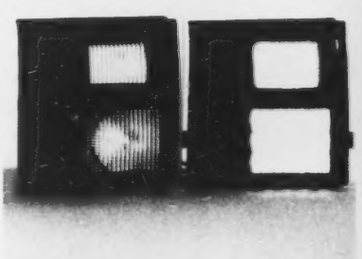
Ready for marketing now is an electronic rear-wiper unit whose D.C. motor can be placed inside or outside the vehicle, according to the car designer's wishes.

Another innovation is a windshield-wiper control system with a rain sensor. It detects the intensity of rain hitting the windshield — regardless of whether the vehicle is idling or operating at highway speeds — and adjusts the wiper to optimum operating conditions.

SWF also is working on an ultrasonic parking aid. By means of a computer-controlled in-car transmitter-receiver, the system calculates the distance of objects close to the car, and signals the information to the driver via a screen display.

Another product, a flat-design rear lamp, is a "lifetime" mini-bulb lamp system. If one of the tiny bulbs burns out, it has little effect on the lamp's overall brightness. Bleyer said the flat, compact design is seen as a styling plus.

Bleyer predicts a bright future for SWF's four-color injection-molded taillights. The one-piece assembly is injected with four colors — black, plus three "operating colors" including white (backup light), yellow (turn signal) and red (side marker).



SWF describes its flat-design rear lamp as a "lifetime" minibulb system; if one of the tiny bulbs burns out, it has little effect on the lamp's overall brightness.

Said Bleyer, "It is made in a single mold. Styling people are very excited about this. We foresee the first application by the end of 1988."

Among SWF's other new products are a steering-column switch that incorporates an injection-molded lead frame and progressive contact-latching, and has what Bleyer called "a more sophisticated switch feel"; a fuel-tank gauge that is self-adjustable with integrated pre-supply pump; and a speed sensor that can be used in applications ranging from integration in electric motors to use as a wheel-revolution sensor in anti-skid systems. ■

There's something about a train...

Could Pinifarina already be working on a replacement for the Cadillac Allante? Naw. This is an artist's rendition of Italy's first high-speed train, the ETR 500, for which Pininfarina did aerodynamic research and styling. The ETR 500 is expected to do 300 kmh (about 186 mph) on existing track. A scale model was on display recently at the international public transport show in Geneva.

AUTOMOTIVE NEWS/JOE WILSSENS PHOTOS

Gilmour, Mair address group
Allan D. Gilmour, above, Ford Motor Co. executive vice president, and Alex C. Mair, retired group vice president — technical staffs at General Motors, addressed more than 100 auto industry executives who attended a conference last week on domestic industrial competitiveness sponsored by the President's Council of the GMI Management and Engineering Institute. Gilmour warned that "if you only take care of the long-term, corporate raiders appear on your doorstep," while Mair spoke of the need to adopt some Japanese manufacturing approaches.

New entries juggle California market shares

Hyundai, Acura, Yugo take 4% for '86; most Japanese lines dip; Chevy gains

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Three newcomers further heightened competition in the California new-car market in 1986, causing market-share losses for five of seven Japanese automakers and 13 of 20 other nameplates.

Honda and Chevrolet were the only major winners while the other General Motors divisions and Nissan suffered significant market-share losses. The figures, comparing new-car registrations for 1985 and 1986, were compiled by R.L. Polk & Co. for J.D. Power and Associates, Westlake Village, Calif.

The figures reveal that 18 of the 27 major nameplates lost market share in a pivotal and trend-setting market. Unit sales in California were up about one percent last year, to about 1.15 million cars.

The fragmentation of the California market continues. Only two of the 13 largest-volume nameplates gained market share, while seven of the other 14 improved penetration.

Hyundai of America captured nearly 3 percent of California sales in the South Korean car's first year. American Honda's new Acura Division won 0.85 percent, and Yugo of America had 0.25 percent — a total of 4.04 percent for new nameplates.

Much of that market penetration apparently came out of the hides of Japanese. Five Japanese makes lost a combined 2.36 percent in market share. Nissan fared worst with a dip 1.67 percentage point; Toyota, Mazda, Mitsubishi and Isuzu also were down.

But the Japanese move upscale put pressure on the domestics, especially GM. Ford Motor Co. finished in plus territory and Chrysler Motors lost about a third of a percentage point.

The success of the newcomers still left a little room for major gains among existing players. Honda Division moved past Nissan Motor Corp. in U.S.A. and Toyota Motor Sales for third place (behind Ford and Chevrolet) with a gain of 0.87 percentage points to a 9.50 percent share.

Chevrolet moved back into double digits in California with a 0.43-percentage-point gain to 10.16 percent and closed the gap between itself and market leader Ford Division, which slipped 0.22 percentage points to an 11.34 percent share.

The only other share gains were modest — 0.2 percentage points and less — and were confined to smaller sellers: Volkswagen, Volvo, Mercedes-Benz, Subaru, Jaguar, Saab and Alfa Romeo.

"Of major significance is GM's continued loss of market share in California," said Christopher Cedergren, senior automotive analyst for J.D. Power. "GM is below 28 percent in the nation's most competitive market."

GM's most upscale divisions combined for a share loss of almost 2 percentage points, although Chevrolet's gains bolstered by captive imports reduced the overall drop to 1.48 points.

Total GM share for California was 27.35 percent in 1986 compared with 28.83 percent in 1985. GM's California penetration is only slightly higher than Chevrolet's share in the late 1960s.

But Cedergren said he believes the GM plunge will slow with the introduction of several new models this year and next that are closer to meeting the preferences of California consumers.

"GM is getting closer to what the customer wants in California and has learned from past mistakes," Cedergren said. "Chevrolet's Corsica and Beretta are certainly not look-alike cars and the 1988 GM-10 coupes are more distinctive between divisions than Ford's Taurus and Sable. They'll definitely yield more market share than the rear-drive models they replace."

The Pontiac LeMans, which is imported from South Korea and goes on sale June 11, should also be a winner in California's hot imported small-car market. Expected to help sales are the car's value-price position and a rub-off from Pontiac's performance image.

AMC purchase cools Chrysler's hot buying pace

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp. is winding down its corporate buying spree with the planned purchase of American Motors.

Chrysler Motors President Harold K. Sperlich told Automotive News, "We're kind of getting up to our eyeballs. Our plate is pretty full.

"We've got a good team here but we are reaching our limit."

Chrysler's $1.1 billion bid to buy AMC follows a wide range of purchases since 1985. Chrysler spent $642 million on its Gulfstream acquisition; $405.2 million to buy FinanceAmerica; $125 million to purchase E.F. Hutton Credit Corp.; $111.4 million to increase its stake in Mitsubishi to 24 percent; and $33 million to increase its holding in Maserati. The company has not disclosed what it paid for Lamborghini but the rumored figure is $30 million.

Through the purchases, Chrysler sought to strengthen its core car and truck business and to diversify into areas that would protect it from the cyclical nature of the auto industry.

Asked if the corporation will now pull back from additional purchases, Sperlich said, "I think so. There may be some odds and ends. It's not that easy to plan.

"You get a sense of where you are trying to get, both in terms of diversification and in terms of the development of your core car and truck business, and you have to move when a situation is right. You can't always decide how much you want to take on at what time."

Chrysler announced March 9 it is seeking to acquire the 44.84 percent stake in AMC owned by Regie Nationale Des Usines Renault as well as all publicly held AMC shares.

"If the acquisition of AMC happens, that will keep us busy for awhile," Sperlich said. "You can only grow a company in so many directions at one time. I think that will leave us sticking to our knitting for awhile."

Chrysler also has been conducting a corporate search for a high-technology company to feed technologies back to the vehicle manufacturing operations and to offset the cycles of the auto business. To date, it has had little success in that search.

Asked if the so-called high-technology acquisition box on the corporate organization chart will be left empty at the current time, Sperlich said:

"As we find interesting possibilities we'll do it if it fits in and makes sense. But it's not the kind of thing you say, 'I'm going to go out and do this' or you'll end up buying a bunch of junk."

Sperlich also said that Chrysler anticipates differing results in its relationships with Maserati and Lamborghini.

Chrysler bought Lamborghini in April. It increased its equity in Maserati to 15.6 percent in 1986 with options to increase the holding to 51 percent by 1995.

"They are different animals. Maserati produces an exotic automobile and they have an image of performance and Italian craftsmanship. We're working with them to do more cars like the Chrysler TC by Maserati.

"Lamborghini is different. Its image is just outrageous performance. It's a different kind of thing, more expensive. We'll be developing that on a different basis and we think the two will be quite different."

Asked if there would ever be joint product development with Lamborghini as there is with Maserati, Sperlich said, "They'll be developed as thoroughbred Lamborghinis all the way."

"A trickle" of the Chrysler TC by Maserati convertibles will begin arriving in the United States in the third quarter of 1987, Sperlich said, with a heavier flow in the fourth quarter.

"We have not picked an introduction date," he said. "But we've been introducing it for two years. I guess when we finally announce an introduction date it will be a little anti-climactic.

"We are bringing it out as soon as we can bring it out in the quality that we think is required by a car of that price," Sperlich said.

Chrysler has not announced pricing but the car is expected to retail for about $30,000.

JEEP

FROM PAGE 1

purchase Renault's 44.84 percent stake in AMC as well as AMC's publicly held stock.

Renault and Chrysler said last week that they had failed to complete negotiations for a final agreement due to the complexity of the process. Three deadlines for reaching the agreement have passed. Last week, the companies said they were continuing work on the agreement but without a deadline.

"We are not finished yet, but we are optimistic," a Chrysler spokesman said.

Legal technicalities, marketing plans between Renault and Chrysler in the United States and Europe and determining the worth of AMC were items being discussed, according to French sources.

"It's a merger, not an assimilation of a new subsidiary, so we have to mesh the two companies," Sperlich said.

"It's going to be a massive undertaking. Obviously, our goal is to complete that as fast as possible."

Sperlich said it will take several years before "the vision of what could be" will be realized.

"In our business, the timing cycles are long," he said. "A lot of things you want to do from a product standpoint take a lot time. We'll assimilate the cultures in the organization in a hurry and, hopefully, over time create a stronger, new company.

"Our hope is that we'll be able to make synergies so that it will come out that two and two equals five."

Chrysler's $1.1 billion bid to buy AMC, if successful, will place Chrysler in a position to mount a massive assault on the utility-vehicle market that Sperlich sees as ripe for expansion. The company would use its minivan lineup and the Jeep products to mount the campaign.

"It's the area between truck and car," Sperlich said. "For years, when we've talked market segments, those were the two macro segments. We gave them names like they were airtight compartments.

"The truth is that over the years those two aren't airtight. It's become a continuum of products as the light trucks become more civilized and more useful for personal transportation and the station wagons worked their way over from the car segment.

"In the middle, you have the sport-utility market itself that is probably the fastest-growing single market and where Jeep is a dominant player.

"That whole area of utility vehicles in terms of product innovation has been the most fertile of the last decade or so. That market, in my mind, was the forgotten product segment and it's the one that is going to explode," Sperlich said.

"We're positioning ourselves, obviously, with our tremendous investment and product push in the minivan market. They are utility vehicles. And with the program to acquire Jeep, we're going to have the two premier positions in that new market."

Earlier this year, Chrysler began production of stretched versions of the Dodge Voyager and Plymouth Caravan minivans, giving it two assembly plants devoted solely to minivan production.

"How big will that new market get? I don't know but it's just been tapped, in my opinion, and everybody is going after it," Sperlich said.

"I don't know how big it will get, but we hope it gets big because we're going to bet the ranch on it."

The United States market for full-sized sport-utility vehicles, compact sport-utility vehicles and compact vans totaled 1.24 million units in 1985, 1.4 million units in 1986, and is projected at 1.5 million units in 1987, according to J.D. Power & Associates, a marketing consultant firm.

That represents a climb from 8.09 percent of the total car and light-truck market in the United States in 1985 to a projected 9.90 percent in 1987.

MARKET STEPS UP FOR SMALL VANS, SPORT—UTILITIES

Outsourcing protest may ignite GM strikes

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

Local unions at General Motors facilities in Michigan and Indiana last week took action against the automaker's outsourcing and subcontracting of work, action that could result in a strike at one Indiana plant within weeks.

The UAW has said that outsourcing and subcontracting undermine job security, and the union has made those issues its top priority during this year's bargaining with GM and Ford Motor Co.

Underlying the seriousness of those and other issues, Pete Kelly, president of Local 160 at GM's Tech Center in Warren, Mich., is advising his membership that they "could be in for a long and bitter strike" when the contract expires this fall.

So far, the following action has been taken by three locals:

- Workers at GM's Delco Remy Division plants in Anderson, Ind., voted 3,445 to 356 last week in favor of going on strike to protest outsourcing and subcontracting. A strike in Anderson could start a process like the one that crippled more than 20 General Motors assembly plants late last year following a strike at Delco Electronics in Kokomo, Ind.

The Delco Remy plant in Anderson is a major supplier of ignition systems and horns to GM assembly plants.

The Anderson facility also is a major supplier of electrical components for Ford heavy trucks, a Ford spokesman said. He said the company is "looking at the situation and will try to minimize the impact" of a possible strike.

Though outsourcing is a major point in the Anderson dispute, it is not a strikeable issue. The strikeable issue is the subcontracting of skilled trades work in violation of the agreement.

- Local 599, GM's largest local, representing the Buick City complex in Flint, Mich., took a strike vote in April. Last week, it asked the international union for a five-day letter warning GM of its intent to strike. But the local subsequently withdrew its request when the automaker announced that 4,700 workers would be laid off this week for inventory adjustment.

Buick City produces Buick LeSabre and Oldsmobile 88 models and supplies powertrains for several models.

"The problems (of outsourcing and subcontracting) are there and are very real. But we've put the matter on the back burner," said Fred Myers, Local 599 president.

- At GM's Tech Center in Warren, that local's president announced last week he is soliciting proxies from GM stockholders as part of a campaign to protest outsourcing, subcontracting, foreign investment, plant closings and executive bonuses. Kelly said he will vote the proxies in support of a resolution on those issues at the stockholders' meeting May 22 in Detroit.

Kelly said that subcontracting is still a problem at the Tech Center, despite a month-long strike last fall to protest violations of the contract. He said that small engineering firms are flourishing around the Tech Center and siphoning off UAW jobs. Kelly said grievances are not being resolved and another strike is possible.

John Coale, president of Local 662, said that Delco Remy in Anderson, Ind., has been outsourcing switches and alternators to a plant in Mexico, resulting in the loss of hundreds of Anderson jobs. Coale said GM is planning to outsource more switches.

Coale said the company and the union have been discussing the outsourcing and subcontracting situation for several months.

According to Coale, local members are angry about the outsourcing because they have been making quality products and have cooperated with management.

"We want some quid pro quo. We'll cooperate, but keep the damn work in Anderson," Coale said.

Kelly said that is precisely what is angering GM workers. He said GM says it needs worker cooperation — and the company gets it in the form of progressive contracts with team production and other concessions — yet GM continues to subcontract in violation of agreements. Kelly said the company also continues to slash UAW jobs through outsourcing.

"We all know that GM is in deep trouble. But it continues to shoot itself in the foot because at the time when it needs its employees' loyalty the most, it continues to arouse their anger, frustration and disgust," Kelly said.

Mack workers ratify contract

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

Mack Trucks workers at three sites ratified a master contract May 3 that will keep thousands of jobs in the Northeast.

The 5½-year pact includes a wage cut of $1.01 per hour and other benefit reductions as well as requirements to increase productivity. It was approved by a 4-to-1 margin by UAW members in Allentown, Pa.; Hagerstown, Md.; and Somerset, N.J.

Mack had previously announced plans to move out of the Northeast if it could not obtain competitive contracts.

The contract has yet to be signed, "pending clarification in writing of the contract language," said Charles Fenstermacher, alternate shop chairman.

Some issues are still in arbitration and will not be resolved before the end of the month, he said. Those involve union demands that the UAW be recognized at Mack's new Winnsboro, S.C., plant and that Mack workers at one of its Allentown plants, which is slated to be closed this summer, be allowed to transfer to the new plant with full seniority.

The master agreement was negotiated with the help of a labor mediator. The international union had previously refused to recognize six-year agreements reached by Mack locals without the participation of the international.

PRODUCTION

April auto output dips

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Production of domestic cars in April totaled 655,892 units, 11.72 percent below the March total of 742,941 and 11.56 percent below the year-ago month's 741,584.

Last week's targeted output of 163,216 was 0.90 percent below the previous week's 164,702 and 2.26 percent more than the year-ago week's 159,604.

Companies split last week's scheduled production as follows: General Motors, 53.76 percent; Ford Motor Co., 23.82 percent; Chrysler Motors, 13.60 percent; Honda of America Manufacturing Inc., 4.10 percent; New United Motor Manufacturing Inc., 2.45 percent; Nissan Motor Manufacturing Co. U.S.A., 1.81 percent; and American Motors, 0.46 percent.

Volkswagen of America's assembly plant in Westmoreland, Pa., was idle for inventory adjustment last week. The plant was scheduled to resume output today (May 11).

Three GM plants are idle this week for inventory adjustment. They are: Buick City in Flint, Mich., affecting 4,700 workers; Wentzville, Mo., 6,100 workers; and Tarrytown, N.Y., 3,500 workers.

Production was halted at two GM plants on May 8 for model changeover. The Fairfax, Kan., plant was shut down to prepare for the new front-wheel-drive Pontiac Grand Prix to be introduced in mid-1988, idling 5,500 workers.

GM's Arlington plant will be idle for 16 weeks (affecting 2,400 employees) for changeover to Chevrolet Caprice sedans and wagons and Oldsmobile Custom Cruiser wagons.

Saturday (May 9) overtime was scheduled at GM's No. 1 plant in Lansing, Mich.

Ford has slated daily overtime this week (May 11) at all its car plants.

Chrysler's St. Louis (No. 2) plant was scheduled for Saturday overtime. Daily overtime is slated this week for Chrysler's Newark, Del.; Sterling Heights, Mich.; and St. Louis (No. 1) plants.

Truck production a record

Truck production set a record in April. The total was 330,826, which topped the previous April peak of 326,162 in 1986.

However, last month's output was 7.75 percent below the March total of 358,622.

Targeted production of 76,374 units last week was 3.45 percent lower than the prior week's 79,107 but 4.76 percent more than the year-ago week's 72,901.

Ford Motor Co. scheduled all its plants to work Saturday (May 9).

Canada trucks: year's best

Canadian production of 79,555 trucks in April was the highest for any month since last April when 86,525 were built.

Last month's production was slightly higher (0.43 percent) than the March total of 79,212.

Last week's scheduled output of 18,585 trucks was 1.97 percent more than the previous week's 18,226 but 3.27 percent below the year-ago week's 19,213.

April car output of 69,052 was 9.85 percent lower than the March total of 76,599 and 38.09 percent below the year-ago month's 111,533.

Scheduled production of cars last week dipped considerably from the previous week's and year-ago week's output because of shutdowns at three General Motors plants.

GM's Oshawa, Ontario (No. 2) and Ste. Therese, Quebec, plants remain idle for model changeover.

The Oshawa, Ontario (No. 1) plant was idle last week for inventory adjustment.

NADA to fill two halls in San Francisco

SAN FRANCISCO — The National Automobile Dealers Association Convention and Exposition will fill both this city's major meeting and exhibit halls when it convenes Feb. 6-9.

"By using both the Brooks Hall-Civic Auditorium complex and the Moscone Center, we'll be able to overcome space limitations at each facility," said Jim Clark, convention committee chairman. The committee finalized arrangements last week for the 71st annual convention.

The two facilities are about a mile apart, and NADA will expand its shuttle bus service between the two halls and NADA hotels.

"Had we been limited to even the most spacious facility in San Francisco (Moscone), we'd still have had to turn away more than 100 firms which exhibited with us earlier this year in Las Vegas and want to be with us again in 1988. That kind of serious cutback just wasn't acceptable," he said.

NADA last held its convention in San Francisco in 1985; at that time 17,000 delegates attended. More than 24,000 persons attended this year's NADA convention in Las Vegas. "And since San Francisco has been one of the most popular cities and the most-visited city by NADA over the last 50 years, we're preparing for another record year," Clark said.

Exhibits, workshops, make meetings, tape sales, food service and exhibition registration will be available at both facilities.

Brooks Hall-Civic Auditorium will host opening and closing general sessions, the Sunday morning inspirational service, lifestyle section and tour program launches. The Moscone Center will be the sole site for delegate registration.

NADA exhibitions will occupy 120,000 square feet at Moscone and 50,000 at Brooks. "Brooks is being used for numerous events to help assure balanced delegate traffic there," Clark said.

The 24 hotels NADA has contracted with for room blocks are: Cathedral Hill, Four Seasons Clift, Fairmont, San Francisco Hilton, Holiday Inn Civic Center, Holiday Inn Financial District, Holiday Inn Fisherman's Wharf, Holiday Inn Golden Gateway, Holiday Inn Union Square, Hyatt Regency San Francisco, Hyatt Union Square, King George, Mark Hopkins, Marriott Fisherman's Wharf, Hotel Meridien, Hotel Nikko, Portman Hotel, Ramada Fisherman's Wharf, Ramada Renaissance, Sheraton Fisherman's Wharf, Sheraton Palace, Sir Francis Drake Hotel, Hotel Stewart and Westin St. Francis.

The first opportunity to register for the convention will come in mid-June when promotional brochures will be mailed.

Joining Clark, a dealer from Lawrence, Kan., on the convention committee are: Ernie Bates, Kentucky; Frank England, Mississippi; Ray Green, Illinois; Marv Hartwig, Iowa; Mark S. Herrman, New York; Harry Martens Jr., Washington D.C.; James H. McDonald, Nebraska; Robert F. Pulliam, South Carolina; Edward L. Scuncio, Rhode Island; Richard R. Smith, Missouri; and James A. Willingham, California.

Past NADA President James B. Woulfe, Dublin, Calif., is executive committee liaison, and Dennis Jungmeyer, Arkansas, is Automotive Trade Association executive liaison.

Japan's parts firms speed U.S. attack; total may hit 300

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The troubled U.S auto parts industry is about to be overwhelmed by an unprecedented wave of Japanese investment in the United States.

An internal U.S. Commerce Department report obtained by Automotive News predicts that by the end of the decade, Japan will have as many as 300 parts and materials suppliers operating in the United States — competing with U.S. parts makers for business from Big Three and Japanese automakers.

The report surfaces as General Motors is planning to stop in-house production up to 10 percent of its own parts because they cannot be manufactured on a world-competitive basis. Similar re-evaluations are under way at Ford Motor Co. and Chrysler Corp. Those Big Three phaseouts and supply needs of Japanese assembly facilities under construction in the United States are sure to mean more business for outside parts suppliers.

And while U.S. auto parts trade associations quarrel with the 300 number in the Commerce Department report, they concede that at least 150 Japanese auto parts companies have announced plans to make U.S. investments by the mid-1990s.

When those 150 Japanese parts makers join other Japanese automotive firms already manufacturing in the United States, the combined force will employ at least 35,000 people by 1989, according to a forecast by the Original Equipment Division of the Motor and Equipment Manufacturers Association.

The government's parts-making study was compiled for internal distribution to the Commerce Department's working group on auto-parts trade. It emerged at a time when there is widespread concern among U.S. companies and their employees about the future of manufacturing in this country. But the report pointed out that efforts by this country's Big Three auto manufacturers to cut costs and efforts by individual states to attract foreign investment are contributing to the decline of American-owned parts firms.

Japanese industry sources told

HAULERS: *Carrier alleges $400 million scam in overcharges on domestic autos*

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

A rate structure that charges domestic makers more than importers to ship cars is at the crux of a Tennessee haulaway company's lawsuit against the giants of the hauling industry.

In its lawsuit, Coltrans Systems Inc. claims that the domestic automakers are being overcharged because of the dual-rate structure on cars, and a Coltrans executive says the overcharge could be as much as $50 per car or $400 million a year.

The Big Three automakers declined to comment on haulaway rates, and the big haulers declined to discuss specific rates.

Coltrans claims that the defendants are violating the Sherman Antitrust Act by charging domestic automakers artificially high rates to subsidize lower rates given to auto importers.

Coltrans seeks $30 million in damages and maintains that the lawsuit is critical to its future because the company hauls primarily imported cars. Coltrans says it can't compete if other companies are operating below cost for roughly the same service.

The company has about 16 percent of the haulaway market for imports and has sales of about $50 million annually.

Defendants in the lawsuit filed in U.S. District Court for the Central District of California are Ryder System Inc., Leaseway Transportation Corp., Allied Services Inc., their subsidiaries and Cassens Transport Co.

Coltrans accuses them of providing depressed rates on imports in order to drive mid-size motor carriers — like itself — out of business. "In some cases, there is a difference in rates of up to $100 per car," said Norman W. Collins, Coltrans' president and chief executive officer.

Common carrier rates filed with the Interstate Commerce Commission in Washington lend support to Coltrans' complaint.

For example, Motors Convoy Inc., a subsidiary of

More U.S. Hondas due for dealers

New program at Marysville slated to hike plant's output

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

MARYSVILLE, Ohio — Honda of America beheves increased automation and more efficient work methods will allow its Marysville plant to exceed its posted production capacity by next year — giving Honda dealers more U.S.-built cars to sell.

Shoichiro Irimajiri, president of Honda of America, said in an interview that next year's output may pass the 360,000 units Honda officials had termed the plant's capacity.

Productivity improvements worldwide are a major thrust within Honda, as it implements a plan revealed last December to become so efficient that the company can operate profitably even if the yen rises to 120 against the U.S. dollar.

The Marysville plant, which employs 3,700 workers, is expected to produce 320,000 Accords and Civics this year — a total that will exceed the company's original projection for 1987 by 20,000 units.

Irimajiri outlined the ways productivity will be increased even more at the Marysville plant.

"First we will introduce much more automation," he said. Secondly, Irimajiri said, focus will be on improving employees' work methods to eliminate wasted effort and shave seconds from each production step.

A Honda spokesman said that the Marysville plant has been able to produce beyond original expectations because improved production methods

Western Star's future: Navistar or 'no sale'

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Western Star Trucks Inc., a medium-sized heavy-truck manufacturer, is expected to make an announcement in the next few weeks regarding its possible sale to Navistar International or its removal from the market as a sale candidate.

A board meeting of the principal shareholders of Western Star Trucks is scheduled May 20.

The meeting, already delayed once, may be delayed again, James Prendergast, chairman of Western

Tomorrow's automobile designers

If the future belongs to the young, the automotive designs by students at the Center for Creative Studies in Detroit will be shaping the next generation of cars.

Last week, some 20 domestic and foreign motor-vehicle manufacturers sent representatives to evaluate the work of 50 students enrolled in the CCS Industrial Design/Transportation Department.

Here, students Erik Klimisch, top, and Hermidas Atabeyki show off their respective automotive designs.

Automakers who visited CCS last week are offering jobs to the 13 seniors and will fill summer internship programs with underclassmen. The school will place about 95 percent of the students with auto manufacturers this year, according to Bill Robinson, assistant chairman of the transportation department.

The automotive designs by CCS students are on display at the school and can be viewed by the public until June 7.

Chrysler rejects minicar market

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Unlike its domestic competitors, Chrysler Motors plans no immediate foray into the minicar market.

Instead, Chrysler will rely on the Omni/Horizon America subcompacts to anchor the low end of its product lineup and may continue producing those models for an additional three to five years.

The base price of the Omni/Horizon America five-door hatchbacks currently is $5,799. Chrysler executives cited the relatively small volume of the minicar market and the strength of Omni and Horizon sales in explaining the decision to remain on the minicar sidelines.

Ford Motor Co. jumped into the mini market earlier this month with the launch of the Festiva, a new import from South Korea that has a base retail price of $5,765.

Chevrolet offers the one-liter, three-cylinder Sprint for $5,995. The Sprint is manufactured by Suzuki in Japan. The Subaru Justy, which has a base retail price of $5,495, also competes in the mini segment.

"We don't really see a compelling need for us to get into that market segment," said Robert Lutz, Chrysler Motors Executive Vice President. "We do have the Omni/Horizon Americas that are base-priced below $6,000. We can offer a five-door Omni/Horizon for just about the price of some of the Far Eastern mini, or almost micro, cars."

Chrysler has not announced where it will build the 1988 Omni and Horizon models. The cars were taken out of production in March at Chrysler's Belvidere, Ill., assembly plant to make way for the 1988 Chrysler New Yorker Brougham and Dodge Dynasty.

Inventories on May 1 showed a 51-day supply for Omni and a 55-day supply for Horizon. A 60-day supply is considered comfortable.

In an interview, Chrysler Motors President Harold K. Sperlich, said the America models could remain for several years.

"As long as they provide good value and good quality, they will last," he said. "At their price, they'll last quite a few more years. Three to five more years is easily within the realm. Are we certain of that? No. You can plan life cycles but you can't be certain what will happen."

Speculation in the past has centered on the possibility that Chrysler would compete in the bottom end of the market by importing a small car from a country such as Romania, South Korea or Taiwan.

Sperlich said the market below Omni and Horizon is "not that big a segment at this time.

"Down the road, we will need a replacement for Omni and Horizon," he said. "If the market for even lower-priced cars turns out to be significant, we'll have to be involved in it. We have to be involved in anything that's very significant, but we feel pretty content with our situation right now."

Allantes bring premium prices in auction action in Florida

Action at the auction may not be what Cadillac had in mind for its mint-new, big-ticket Allante, but the car made it to the block almost as soon as its paint was dry.

Florida Auto Auction in Orlando which handles a large number of exotics, was among the first auctions to move Allantes.

Dealer invoice price for the car is $46,659 and suggested retail price is $54,700. The car went on sale in certain areas of the United States in February.

The first car sold in Orlando went for a husky $60,000, according to Joe Greco, general manager. The seller was a Texas Cadillac dealer and the buyer an unidentified General Motors dealer from Alabama, he said.

Subsequently, Allantes were moved by Florida Auto Auction auctioneers at $58,750, $56,500 and $56,000.

A Cadillac spokesperson said, "When a car is hot you can't keep it off the auction. Those in Florida were sold at good prices and it's at the auctions that used-car prices are established so it's generally good news. It's certainly nothing Cadillac would be upset about."

Greenwald to be World Congress keynoter

Gerald Greenwald has never been one to back away from a challenge.

The biggest one in his automotive career occurred in April 1979, when he quit his job as president of Ford de Venezuela S.A. and joined then-struggling Chrysler Corp. as controller.

As a key member of Chairman Lee A. Iacocca's comeback team, Greenwald helped devise and carry out the long-range programs that made Chrysler successful.

Greenwald, now chairman of Chrysler Motors Corp., will be keynote speaker at the 12th Annual Automotive News World Congress, to be held July 26-29 at the Hyatt Regency Hotel in Dearborn, Mich.

The 51-year-old executive, who is responsible for all of Chrysler's automotive operations worldwide, will deliver the State of the Industry address on Sunday evening, July 26.

Greenwald is well versed on this year's World Congress theme, "Facing Up to Competitive Times." He's been traveling far and wide in carrying out an aggressive Chrysler strategy.

A few weeks ago, he was in Sant' Agata, Italy, where Chrysler concluded its acquisition of Lamborghini, famed performance-car maker.

In the past year, Chrysler also completed its Dodge City truck plant in Warren, Mich., at a cost of $500 million; retooled its St. Louis No. 2 plant for stretched minivans, at a cost of $475 million; spent $445 million to put new Dodge Daytona and Chrysler LeBaron cars into its St. Louis No. 1 plant; and spent $71 million to prepare American Motors' Kenosha, Wis., plant for the Chrysler Fifth Avenue and other cars.

Also in the past 12 months, Chrysler revamped its Belvidere, Ill., plant for assembly of its new full-sized Chrysler New Yorker Brougham and Dodge Dynasty, an $800 million undertaking; started construction of the Diamond-Star Motors Corp. plant in Illinois, a $600 million joint-venture project with Mitsubishi; reorganized its $2.8 billion parts business into a separate company, Acustar Inc.; and launched negotiations to acquire AMC.

In an effort to squeeze more than $500 million out of its costs, Greenwald said, the company has frozen white-collar hiring; cut out all management overtime premiums; and cut in half the merit-raise pool for its executives. Departmental budgets have been cut and Chrysler has asked suppliers for a price reduction.

"What we're telling our own people, as well as our suppliers, is that we're in a *war* right now," Greenwald said.

In his World Congress keynote address, Greenwald is expected to provide insights into how that industrial conflict is being waged on the automotive battlefronts of the world.

In addition to Greenwald, more than 30 other speakers — all industry experts — will address the World Congress.

Design in aerodynamics
Fontaine Truck Modification Center, Louisville, Ky., is manufacturing bumper air dams and fuel-tank side shields to reduce drag and improve the efficiency of Ford's L-series trucks. New designs are being developed for the "hot-shot" and other markets.

Nissan Diesel uses Texas trade zone

The Auto Park in Midlothian, Texas, has announced that Nissan Diesel America will use Foreign Trade Zone 113 there to import Class 5, 6 and 7 trucks. Nissan estimated it will ship up to 20 percent of its U.S. volume from California to The Auto Park under that program.

The Auto Park, 25 miles southwest of Dallas, is designed for processing, distributing and storing motor vehicles. Mazda Motors, Isuzu Truck, American Honda and American Isuzu also use the park. Last year, it handled more than 90,000 vehicles.

A Foreign Trade Zone, although located within the United States, is considered for tariff purposes to be outside the U.S. customs territory.

DON'T PUT UP WITH ANYTHING LESS THAN OUR FIVE-YEAR WARRANTY.

If an above-the-floor lift doesn't come with this five year warranty, don't put up ~~with it. Put up with a new~~ Gilbarco lift instead.

We offer five years on parts, labor and travel. The best warranty in the business. But then, these new ATF lifts are among the best in the business too.

So how much do these great lifts with the great warranties cost? Not as much as you think. They're right in line with the competition's least expensive models. And we guarantee parts availability for a minimum 15 years from date of purchase.

Send us the coupon. We'll give you even more reasons why you shouldn't put up with anything less than Gilbarco.

Light-truck sales records topple for April, 4 months

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Domestic light-truck sales continued at a record pace in April and for the first four months of the calendar year.

Sales of 424,084 light trucks in April were 7.7 percent higher than last year's 393,631, the previous April high.

January-April sales also set a record. The total was 1,478,953, up 3.6 percent over last year's count, which was the previous high.

Most truck companies and divisions — with the exception of Chevrolet, Mazda, Mitsubishi and Subaru — recorded good sales gains in April.

Full-sized pickup trucks have been showing a strong comeback, aided by Ford's restyled F-series, the recently introduced 1988 Chevrolet C/K and GMC Sierra models and special merchandising efforts, such as rebates, incentives and price-leader models, on Dodge's D and W-series.

Chevrolet and GMC are expected to benefitmore strongly from their respective 1988 C/K and Sierra series, beginning in May.

Chevy and GMC versions were officially introduced last month.

General Motors sources said there were production restrictions on the C/K and GMC Sierra models until recently, limiting available trim levels, for example.

The new pickups now are being built with in higher trim levels and production is accelerating.

In April, Chevrolet retailed 6,080 of the new 1988 C/K pickups and GMC sold 1,831 Sierras. So far, Chevrolet has retailed 9,887 C/K models and GMC has sold 2,969 Sierras.

Ford led the April sales parade by retailing 128,562 light trucks, up 15.5 percent from a year earlier. Chevrolet sold 103,037 units, a 6.3 percent drop; Chrysler, 62,985, up 21.0 percent; GMC, 28,277, up 8.1 percent; and Jeep, 17,144, up 16.3 percent.

Import sales totaled 84,079 units, up 6.0 percent from April 1986.

Suzuki continues to be the fastest-growing truck retailer with sales of 28,942 for the January-April period, more than twice the 12,187 retailed in the corresponding period of 1986.

SERVICE MANAGEMENT

Cadillac goes all-out on Allante service program

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

Owners of Cadillac's new $54,700 Allante have a right to expect that their Italian/American-built car can be fixed quickly and conveniently. Cadillac is taking great pains to be sure that it can.

Cadillac has developed special Allante training classes for its dealership technicians as well as a special program to ensure that repair parts are available.

Also, the Allante carries a warranty that the company says is equal or superior in coverage to that of Mercedes-Benz — generally considered to be the most comprehensive in the industry.

Allante service classes are available through General Motors' 34 Product Service Training schools.

GM offers classes in pearlescent paint repair, body fit and alignment, Bosch anti-skid braking system diagnostics, body computer module (BCM) electronics, and aluminum body repair.

Werner Meier, technical service manager for the Allante Core Group, said he believes the training courses will prove valuable for body and bump shop technicians, electrical technicians, and new-car preparation technicians.

Cadillac is paying particular attention to training technicians to service the Allante body. The body is available in pearlescent white, which offers a unique appearance but also requires unique repair techniques.

$54,700 Allante

Pearlescent white has proved to be the most popular Allante color, but Cadillac service personnel were worried that it would be impossible to repair without respraying the entire car. Pearlescent paint appears differently depending upon the angle from which it is viewed and the manner in which it is sprayed.

Meier said the pearlescent paint is applied in a three-coat process — the first coat is white, the second is a coat of mica particles that determines the appearance of the paint, and the third is a clear coat.

Conventional metallic paint techniques do not directly apply to the repair of white pearlescent tri-coat paint. Early efforts at panel-repair and spot-repair were unsuccessful. Because the resulting color is dependent on the thickness and orientation of the mica flakes in the pearl coat, it was virtually impossible to create a uniform color over a large panel using manual application techniques. Since this pearl coat does not achieve "hiding," its color will continue to change as successive coats are applied, making this color difficult to match.

Before Cadillac decided to proceed with this color, special repair techniques had to be developed. A special "zone process" was developed that determines the depth of the mica in the surrounding area and takes advantage of Allante's highly sculptured lines when the repair process is applied.

Cadillac's ultra luxury car also carries what is believed to be the most extensive product assurance plan offered by an American automaker.

The Allante Assurance Plan's limited warranty includes 7-year/100,000-mile coverage of all major and most other components. Included are the engine, transaxle, steering, brakes, front and rear suspensions, air conditioner and engine cooling systems and fuel system. In addition, the electronic instrument panel cluster, electronic climate control systems and fuel data center are covered for the same period.

Unlike warranties that cover only those repairs resulting from defects in material or worksmanship, Allante's Assurance Plan also covers repairs to any specified original-equipment part that does not function during normal service.

Under the basic coverage, Allante is covered in its entirety for 12 months or 12,000 miles, whichever occurs first. Following expiration of the basic coverage, and subject to a $25 deductible, the entire car is covered for up to 7 years/100,000 miles, except for glass, light bulbs and interior and exterior appearance items.

By comparison, Mercedes-Benz offers a four-year/50,000-mile warranty on the entire car. Mercedes however, does not include a $25 deductible on warranty repairs as Cadillac does after the first 12 months or 12,000 miles.

In addition, Allante owners will receive three free oil changes in the first 12,000 miles. When cars come in for an oil change, dealers will extract electronic information from the Allante's onboard computer. From that information, Cadillac's technical center hopes to develop a data base that will enable the division to predict maintenance difficulties down the road, according to Meier.

Cadillac has also taken special measures to ensure that parts are available for the Allante.

The division has set up a special parts stock list for the Allante. In order to encourage dealers to stock those components, Cadillac will buy back unused parts for up to two years.

Cadillac also has set up a warehouse in Lansing, Mich., and has set a goal of delivering any Allante part within 24 hours of an order. A toll-free number has been established for dealers to order Allante parts.

Technicians who run into difficulty in the repair of an Allante may call a toll-free number to discuss the problem with an engineer. In cases of severe problems that cannot be diagnosed over the phone or by experts within the sales zone, Cadillac will fly an engineer to the dealership to fix the car.

SHOP TALK

FROM PAGE 18

repair centers. Also, rental cars and hotel rooms will be provided if necessary. Payment for the services will be handled directly by Cross Country.

Service pays

Dealers and manufacturers pay a lot of lip service to the benefits of satisfying the customer, but they seldom say what a satisfied customer is worth.

The Capital District Automobile Dealers Association, Albany, N.Y., however, says a dealership that resolves 16 customer complaints per week can achieve an added 200 sales per year, according to a recent study.

On the other hand, a customer who has had an unpleasant experience with a company will tell nine or 10 people.

On the importance of handling complaints properly, the group said that 71 percent of completely satisfied people who had previously complained to a dealer, and 54 percent of partially satisfied people said they would return to the dealer. Only 22 percent of dissatisfied customers said the same.

The dealer association also is encouraging customers to complain when they are not satisfied. Customers who do not voice their complaints are not likely to come back to a business, the association said.

The association has established an Automotive Consumer Action Program — AUTOCAP — to encourage customers to complain and to help dealers resolve those complaints quickly.

AUTOCAP receives more than 60 phone calls per month and more than 95 percent of those calls are resolved through the informal mediation efforts of the AUTOCAP staff, the dealer association said.

Cases that cannot be solved informally go to a panel of consumer advocates and dealer representatives. The panel can require participating dealers to make repairs; it can mandate independent technical inspections of new and used cars; and it can provide consumers with loaner vehicles while repairs are made.

Chinese parts

The Koreans have certainly entered the domestic auto industry with a bang. Might the Chinese be far behind?

Shanghai Truck and Automobile Co., a mainland China manufacturer of cars and parts, set up shop at the "Big I" aftermarket parts show in Atlanta. The company wants to market such automotive items as pistons, electrical components and various forgings and stampings.

Andrea Versenyi, marketing assistant for Dynamic Harvesters, a company that represents several companies based in China, Taiwan and Hong Kong, said Shanghai Truck already has some Toyota and Mitsubishi aftermarket parts business in the United States.

However, this was the company's first foray to the "Big I" show. Versenyi said the company is looking for "any type of business."

Hammer parts

AMG owners in the northwestern U.S. can now get parts for their Hammers (and other AMG cars).

AMG is one of the best-known Mercedes-Benz "tuners" and its Hammer is a 300E-based sedan that is said to be capable of 186 mph.

The company, which has U.S. headquarters in Westmont, Ill., recently signed AMG of Bellevue in Kirkland, Wash., as the first authorized AMG parts and installation center in the Northwest.

The owners are Marcus Westermayer and Ralph Bomer. The signing of the parts center is part of a plan to establish a national network of service centers for the exotically tuned sedans.

Service index continues upward

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

The Automotive News Service Index climbed 8.6 percent in March compared with March 1986, indicating a substantial increase in service and parts business at new-car dealerships during the month.

March was the second month in a row to register a gain in shop business. In February, the service index was up 4.0 percent over the same month a year earlier.

The index was down 1.7 percent in January, compared with the first month of 1986.

In the first quarter of 1987, shop business was 3.5 percent higher than in the first quarter of 1986.

A Saab dealer in the Northeast, whose service business increased, said, "February is a short month. March is generally a good service month. Customers often put off jobs (such as exhaust-system and shock-absorber repairs) during the winter and take care of their cars during the spring."

A Southern Chevrolet dealer attributed an increase in business to good weather.

And a Mountain States Buick dealer said his increase was due to a "better job of selling service by the service advisors and technicians."

All indicators were positive in March. Sales of all parts and accessories registered the biggest gain, up 13.1 percent over March 1986. Total labor sales (customer paid and warranty) climbed 11.3 percent; gross profit on all labor, parts and accessory sales rose 9.6 percent; shop parts sales (customer paid and warranty) were up 8.6 percent; and repair orders written were up 0.2 percent.

Parts and accessories sales to off-premises customers climbed 16.7 percent in March.

In the first quarter of 1987, all indicators except repair orders written showed gains.

Sales of all parts and accessories climbed 7.6 percent; total labor sales increased 6.7 percent; gross profit on all labor, parts and accessory sales rose 4.6 percent; and shop parts sales went up 3.3 percent.

Repair orders written were down 4.6 percent in the first quarter of 1987.

Parts and accessory sales to off-premises customers were up 10.8 percent through March.

SERVICE INDEX
108.6★

	March, '87 vs. March, '86	3 mos., '87 vs. 3 mos., '86
Gross Profit on All Labor and P&A Sales	+9.6%	+4.6%
Repair Orders Written	+0.2%	−4.6%
Total Labor Sales (Customer & Warranty)	+11.3%	+6.7%
Shop Parts Sales (Customer & Warranty)	+8.6%	+3.3%
Sales of All P&A	+13.1%	+7.6%

★— Survey by Automotive News shows that dealers' service and parts business in March 1987 was 108.6 percent of business in March 1986. Service business in the first 3 months of 1987 was 103.5 percent of business in the corresponding period in 1986.

BMW: *Shortage of technicians prompts importer to recruit and train non-dealer personnel*

By John A. Russell
MOTIVE NEWS STAFF REPORTER

MONTVALE, N.J. — In an effort to increase the number of trained technicians, BMW of North America has started a new training program for non-BMW dealership personnel.

Hans Duenzl, service vice president, said the program began in February in the San Francisco and Montvale zone offices. It will be expanded nationwide within a year.

Duenzl said BMW inaugurated the program in an effort to ease the shortage of trained technicians. He estimated there is a shortage of 400 technicians at BMW's 425 dealerships in the United States.

When the training program is available in all regions, the company will graduate 80 to 100 technicians a year, said John Staley, national service training manager.

BMW is not limiting this concept to service technicians. In June, the company will launch a six-month body-repair course and, shortly afterwards, a five-month paint course.

The six-month long, Service Technician Education Program is offered free of charge to selected candidates. The classes are small, Duenzl said, and will average no more than eight students per course.

BMW is looking for candidates who have some automotive experience, whether in vocational schools or high schools. Candidates must be high school graduates.

As an example of the selection standards, Duenzl said there were 100 applicants for the course in the San Francisco region and only six were selected. Staley said the company advertised for the first candidates, but in the future it will be recruiting from junior colleges and similar educational institutions.

BMW supplies the training and tools for the course, but the candidates are not paid. While BMW does not guarantee the students jobs, it believes that graduates will be offered employment at BMW dealerships.

Enough engineers today, but future isn't bright

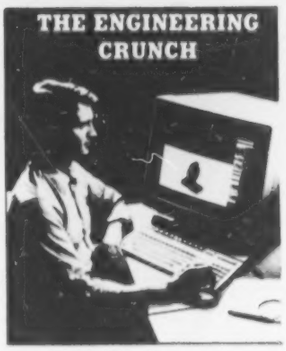
"The thing that just breaks my heart, the best and brightest out of Asia are learning skills that will create jobs. Our best and brightest all want to be Wall Street bankers, consultants and other things that contribute little to the real worth of the country . . ." — H. Ross Perot, Economic Club of Detroit, Dec. 8, 1986.

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Ross Perot's contention that America is becoming a nation of bankers and burger flippers highlights concerns among many in the auto industry that an engineering crunch may be coming.

Today, there is no shortage of engineers to design, develop and manufacture products. The real worry is whether there will be a sufficient number in the future.

The number of advanced degrees in engineering is dropping and is likely to continue to fall as the students of the baby-boom generation move into post-college age.



"The number of people eligible for bachelor's degrees is decreasing and the number of freshmen declaring in science and engineering is decreasing. If that continues, it leads one to wonder."
— COMPTON

Moreover, a disturbing proportion of engineering graduates in the United States are overseas students who take their skills with them when they return home.

And there is a shortage of teaching facilities to train the next generation of engineers for industry.

Frank Walter, immediate past president of SAE and director — corporate timing planning for Chrysler Motors, is clearly worried.

"We in the U.S. have to recognize that if we haven't fallen back to second-nation status, we're on our way," he said. "It's hard to wake people up to that fact."

Yet, as a key manufacturing industry, the automotive sector will become hamstrung in its effort to compete if it cannot attract and retain quality engineering personnel, as more and better-made products come from overseas.

All of which will have a long-term effect on employment.

Perot and other industry leaders fret that today's youth, enamored with making quick fortunes, are eschewing career paths in engineering and science for business and law degrees. This generation, some believe, is more intent on making its mark in corporate boardrooms, trading pits or courtrooms than at CAD/CAM screens or on shop floors.

The number of engineering graduates in the United States, compared with the number being trained in other countries, is a critical measure of what the future may hold.

"Right now, there is an ample supply of engineers," said W. Dale Compton, a senior fellow at the National Academy of Engineering in Washington and a former vice president of research for Ford Motor Co. "I don't think there is any great deficiency in numbers, but there is uncertainty about the future."

Robert Isenhour, senior vice president of United Research Co., a Morristown, N.J., consulting firm, said, "There is tremendous awareness of the pitfalls of the hollow corporation — one that has design, marketing and distribution on-shore and manufacturing off-shore. Manufacturing can be a very dramatic competitive weapon."

The number of bachelor's degrees in engineering rose 72 percent from 1970-71 to 1984-85, increasing from 44,898 to 77,154, according to the U.S. Department of Education. Business and management degrees more than doubled during that period, rising from 114,865 to 233,351.

However, in advanced degrees, the shift in emphasis was apparent. In 1970-71, there were 16,369 master's degrees awarded in engineering. Fifteen years later, the total was 20,926. Master's degrees in mathematics slumped from 5,191 to 2,882, while doctoral degrees in engineering declined from 3,637 to 3,221.

By contrast, master's degrees in business and management more than doubled, climbing from 26,481 to 67,527.

As the demographic bulge of the baby boom moves to post-college age, a downward trend in the numbers is expected, adding to future uncertainty.

"The number of people eligible for bachelor's degrees is decreasing and the number of freshmen declaring in science and engineering is decreasing," Compton said. "If that continues, it leads one to wonder."

Perhaps even more critical than where future students will come from is the question of who will teach them. A 1985 study conducted by the National Research Council on engineering education and practice in the United States concluded, "If there is one immediately pressing problem in engineering education, it is the current shortage of engineering faculty. Estimates of the severity of the shortage range from 1,567 to 6,700."

The report attributed the shortage to "the perceived unattractiveness of a teaching career relative to a career in industry." Contributing factors include pay and basic research facilities in education that are not on par with those found in industry.

The high percentage of foreign students receiving doctoral degrees in the United States also has a great impact on the pool of Ph.D.s available to teach in schools.

Perot, in his appearance at the Economic Club of Detroit, touched on that. "Go to our great engineering schools, go to MIT, go to Cal Tech and they're filled with Asians," he said.

"That's OK if those Asians happen to be U.S. citizens. But if you dig a little deeper, you're going to find that those are Asians from Asia who are going back to Asia, and I think that doesn't bode well for our future ability to invent."

Or to teach, according to the National Research Council study. Its report revealed that 1,179 of the 3,023 doctoral degrees awarded in 1983 went to foreign nationals. In addition, the number of foreign students studying for doctorates on temporary visas was up from 14 percent of all doctoral students in 1970 to 42 percent in 1983.

"Although foreign-born graduates of U.S. doctoral programs tend to go disproportionately into teaching (and in that sense have been the salvation of engineering education in recent years), the increase in the percentage of those who cannot stay in the United States threatens to dilute the advantage gained through increased Ph.D. output," the report said. "On this basis, the committee concludes that the pool of doctoral candidates should include a higher proportion of U.S. residents."

While Chrysler's Walter is impressed with the engineering and technical students of today, he noted, "I feel they are somewhat handicapped because our basic education isn't up to what it should be. They aren't oriented to work hard enough and long enough to be competitive. Other students around the world probably are better educated and used to working harder and longer. To me, it's a scary situation."

In addition to not preparing students properly, Walter faults primary and secondary education for failing to direct today's youth toward technical careers. "We're not attracting enough people to engineering and technical interests because we're not promoting sciences in basic education," he concluded.

Compton agreed: "We should be encouraging people very early in school and providing the opportunity to take more math and to be exposed more to sciences."

"Our great engineering schools . . . are filled with Asians. That's OK if (they) happen to be U.S. citizens. But . . . (they) are going back to Asia, and that doesn't bode well for our future ability to invent."
— PEROT

While basic education in the United States is considered to be lagging behind systems in other countries, there are few who fault the education that engineers are receiving at the college level.

The 1985 National Research Council study on engineering said: "The committee found a widespread opinion within industry that the competence of recently graduated engineers is higher than ever before. There is no evidence of a serious flaw in the basic technical education of entry-level engineers. On the contrary, the new engineers have strong analytical skills and an excellent theoretical base in engineering science."

The report added that industry finds that practical application of that knowledge is lacking. "Although this is not a new problem, it has been exacerbated by the trend toward fewer design or practice courses," the report said. "Often, additional training of six months to a year is required to acclimate the new engineer properly to the requirements of the job."

There is a trend toward refocusing educational programs to a more practical application of the discipline. Manufacturing is the chief beneficiary of that new approach.

"Based on the capital outlays on on-shore capacity, there will be a market for manufacturing and process engineering," United Research's Isenhour said. "Many large corporations have increased funding for engineering schools teaching exotic disciplines like robotics and automation."

David E. Cole, director of the Center for Automotive Studies at the University of Michigan, said that for a long time, manufacturing engineering was not held in high regard. "It was viewed as a second-hand discipline or a dirty-hands discipline," he said. "Emphasis on manufacturing is strong across the entire country. There is a dramatic increase in the process manufacturing role."

Walter said the nation has let itself fall behind in manufacturing. Only now is there an effort to catch up. "We have not totally recognized that design and production are a mutual process," he said.

Compton said part of the problem is that few engineering teachers have spent enough time in industry to develop a feel for the practical application of the discipline.

"Many engineers are graduating with an inadequate understanding of how engineering is done," he said. "Engineering is taught or is easier taught as a theoretical approach as opposed to the practice of a discipline. We have to convey to the student the practice of engineering."

That is especially true in manufacturing. "Academics have a long way to go to make a substantive contribution to manufacturing," Cole said. "It's a little too 'ivory tower.'"

He added that a number of programs, such as University of Michigan's Center for Research on Integrated Manufacturing, have been developed to bridge the gap between educational theory and industrial application.

Even though education and industry seem to be moving in the same direction on training, it has yet to be seen whether or not the United States will continue to turn out enough qualified and capable engineers to keep pace with the rest of the world.

"It's hard to say we need more engineers," said William Coleman, current SAE president and general manager of Eaton Corp.'s research and development center. "I'm sure some of the engineers in the (U.S.) industry aren't being used as efficiently as possible. Japan has many more times the engineers per 1,000 (population) and is using them effectively to catch up."

Compton agreed that the Japanese are ahead per-capita in educating engineers. But he countered, "It's not clear they are being utilized in a way that would be attractive to U.S. engineers."

Compton said he reached that conclusion several years ago after a tour of a Japanese assembly plant. Stopping at the hot test stand where engines are fired up and tested following assembly, he talked to the technician manning the position.

"I asked him how long he had been in the job, since I was interested in the Japanese concept of moving people around," Compton said. "He said seven years. I asked him what was his educational background and he said he was a graduate engineer. But he was doing what a technician would do.

see ENGINEERS, page 26

UNDERGRADUATE DEGREES, 1985

Early exposure to physics appears to be a key factor in choosing engineering

Women shun engineering careers

Ratio of females is 6%, far below other technical professions

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Although women comprise half the U.S. population, less than 6 percent of all engineers are women.

Since engineering is one path up the corporate ladder in the auto industry, it appears that women still have a long way to go before they occupy a significant portion of the top-echelon jobs in the automotive world.

The National Research Council's report on engineering education and practice in the United States noted the deficiency. It said: "The participation of women and minorities in engineering should be matters of continuing concern to the engineering community. There is still much to be done."

The study also said that "the percentage of women is markedly lower in engineering than in other science and technical fields. While some 20 percent of chemists and 29 percent of computer specialists, for example, are women, only 5.8 percent of engineers are women."

The latest figures from the National Science Foundation's Science and Technology Data Update show that the United Kingdom has the greatest percentage of women among scientists and engineers, with a rate of 2.7 percent of the workforce.

The United States was second at 2.4 percent of the workforce. As of 1982, there were 2,655,600 engineers and scientists in the United States. Of that number, 263,100 were women.

In Japan, on the other hand, less than one-half of one percent of the total number of scientists and engineers are women.

The situation is beginning to change, albeit slowly, in the United States, according to the National Research Council report.

"Given the traditional view of the engineering profession as a bastion of white males, the change in composition of the engineering student population in recent years has been dramatic," the report said. "The most noticeable change has been in the enrollment of women students, which has risen steadily in recent years from about one percent (in 1970) to 15 percent (1983-84) of the roughly 400,000 full-time undergraduate engineering students nationwide."

The study noted, however, that the increase in women engineering students appears to have leveled off during 1983 and 1984.

Just as the basic education system overall may be failing to prepare students for careers in engineering, that failure may fall disproportionately on women and minorities as well, the report said.

"For women, early exposure to physics in particular appears to be a key factor in the later choice of engineering as a course of study," the report said. "Poor preparation in science and mathematics limits the appeal of engineering to these groups and increases attrition among those who do study engineering, especially among minority students."

The report noted low enrollment by minorities. But it added, "The one exception to this low participation rate among minorities has been among Asian Americans. This group is represented in engineering schools at a disproportionately high level."

"While they make up one percent of the general population (of colleges), they account for 3.9 percent of engineering students. The group as a whole performs extremely well in engineering studies and tends to continue into graduate education at a higher rate than do other demographic groups," the report found.

Blacks, on the other hand, comprise 12 percent of the population, but accounted for only 4.4 percent of engineering enrollment.

The study concluded that the engineering community "should develop strategies to increase the size of the initial science/mathematics pool of minorities and women."

IF YOU WANT YOUR COMPUTER TO POUR ITS HEART OUT...

SOFTEN IT UP WITH SOFTAC™

Computers specially designed for automobile dealers have taken hard information in. But have been very selective about how they've given it out.

But now SofTac has come up with software that goes straight to the heart of the problem.

Its SofPoll™ spreadsheet communications system, for instance, can talk directly to any PICK-based or PICK-type computer and convince it to transfer information to PC's without any need to rekey.

For those who want their PICK-based computer to work a spreadsheet without downloading to a PC, SofTac offers the CompuSheet + package.

Either way, you can take hard information and determine the profitability of adding more salespeople. Increasing your inventory. You can also compare information between stores. All for the package price of $595. And with no wasteful monthly maintenance charges.*

SofTac has other computer softening packages, too. They include SofList™ report writer, a SofQuery™ information indexing system and SofPal™, an executive time management system. Custom programming is also available.

Until now, automotive computers have been hardhearted about the ways they've given out information. But now they're opening up. And pouring their hearts out with SofTac. To everyone's profit.

ENGINEERS

FROM PAGE 24

Just training more (engineers) isn't necessarily the answer."

The United States continues to lead the world in the absolute number of engineers, but as a percentage of all fields, the popularity of engineering as a major course of study lags behind other countries.

According to the National Science Foundation's International Science and Technology Data Update for 1987, the United States awarded 77,871 bachelor's degrees in engineering during 1985. Japan had 71,396 bachelor's graduates in engineering.

The United States number represented only 6.9 percent of all fields, while in Japan, 19.1 percent of all graduates were engineers. Nearly 1 million bachelor's degrees were awarded in the United States during 1985 compared with 373,302 in Japan.

In West Germany, which recorded 57,153 undergraduate university degrees in 1984 (the latest year available), 8,068 (14.1 percent) were awarded in engineering.

That same year, the United Kingdom registered 10,577 (14.3 percent) of its graduates in engineering. France's 12,700 engineering graduates accounted for 27.5 percent of all degrees.

In a climate in which the auto industry is cutting costs by paring the white-collar workforce, it would appear that engineering would be affected as well. However, conflicting signals are emerging, even within the same organization.

Robert J. Eaton, GM vice president and group executive in charge of technical staffs, told Automotive News recently that GM will reduce spending on new technology and on research and engineering staffs as part of the company's overall cost-saving efforts. He said that the cuts will not be as extensive as in other operating units of GM.

Cole: "Academics have a long way to go to make a substantive contribution to manufacturing. It's a little too 'ivory tower.' "

On the other hand, Robert C. Stempel, executive vice president of GM's Truck and Bus Group and Overseas Group — and a product of GM's engineering ranks — said there will be a need for more engineers despite the cuts.

"The need for engineers is continuing to grow," Stempel said. "Don't confuse headcount with basic needs."

"There is a tremendous need for engineers," Chrysler's Walter said. "There's the perception by executives at the top of some auto companies that all the layoffs and plant closings mean there will be less of a need for engineers. That's the wrong interpretation.

"There is a transition process under way. There are fewer engineering jobs at the OEMs — they're getting lean and hungry. But they also depend more and more on suppliers for technology," Walter said.

"In my mind, the opportunities for engineering students are in the supplier industries. I feel very strongly that there are and will be more technological jobs."

Next week: Is the United States facing an innovation gap?

Design swap to continue — Giugiaro

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Italian car designer Giorgio Giugiaro said the North American public has acquired a taste for European car designs and predicted that the exchange of manufacturing and design ideas between the two continents will continue.

Giugiaro, who has designed such cars as the Audi 4000, Lotus Esprit, Hyundai Pony and Renault Premier, said this exchange has enabled European and American designers to influence each other.

Giugiaro

He is visiting several U.S. cities to promote the new intermediate-sized Renault Premier, which will be introduced later this year.

Giugiaro said Ford Motor Co.'s Taurus/Sable and his own Renault Premier are examples of international cooperation.

Giugiaro, who spoke through an interpreter, said the Taurus/Sable have set a trend toward aerodynamic shapes in the United States just as the new Mercedes-Benz models have done in Europe.

He said the styling of the Premier could be popular in Europe.

Asked about the Premier's future if Chrysler Corp. acquires AMC, Giugiaro said: "I will adapt my design to any request. If Chrysler wants to change it, I would be glad to do it."

Chrysler Corp. Chairman Lee Iacocca has said that the Premier's chassis — which was designed by AMC engineers — was a "good fit" with Chrysler Motors.

Giugiaro said General Motors, which has been criticized for offering look-alike cars, must emphasize creativity in design.

"You must let the creative people do their job," he said.

As for the trend toward more aerodynamic design among other automakers, Giugiaro said he doubts that cars of the future will look alike and lack distinctiveness.

"You can say we're all the same because we have two eyes, a nose and a mouth," he said. "But we all have different personalities."

Domestic sales slip in Japan

TOKYO — Sales of domestically produced vehicles totaled 324,915 in April, a decline of 1.3 percent from April 1986.

It was the first drop in five months.

Import-car sales totaled 7,617 units, up 45.4 percent from the sales volume in same month last year.

According to the Japan Automobile Dealers Association, April's total included 227,225 cars, down 4.3 percent from a year earlier. Sales of trucks grew 6.3 percent and buses climbed 2.9 percent.

JADA said April was the 40th consecutive month that imported-car sales had increased over the year-earlier figure. Sales of imports from the United States totaled 298 units, an increase of 94.8 percent over the year-ago month.

Chrysler lining up European importers

By Knut Moberg
SPECIAL CORRESPONDENT

DETROIT — Chrysler Motors will reveal the names of its European importers at September's international auto show in Frankfurt, West Germany.

David W. Lowsley, director of international sales and development, confirmed that Norway is the only country in Europe where Chrysler products are presently sold. The Norwegian company is U.S. Import and Sales, a member of the Harald A. Moller Group that also distributes Volkswagen and Audi products in the country.

Lowsley reported strong interest in Chrysler products among would-be importers and dealers across Europe. "We have received lots of requests, and we believe we will announce many very interesting importers," he said.

He said it appears that many importers of Japanese cars are seriously looking at other cars to complement their Japanese lines. They will split risk and investment, he said.

Chrysler has everything ready for an aggressive sales start in Europe in the spring of 1988. Chrysler will establish a European liaison office close to Frankfurt, staffed by 8 to 12 people. It will be separate from the German import organization.

Alexander Demuth, of Corporate Communication in Frankfurt, will handle public relations.

Several models are being test-marketed in Europe, though the main volume is expected to be the Dodge Caravan/Plymouth Voyager minivans. In Europe, they will be sold with four-cylinder engines as the T125 and T130i in long-wheelbase and short-wheelbase versions.

Lowsley: There is strong interest in Chrysler products among importers and dealers across Europe.

The Chrysler LeBaron will be introduced as the C522i Turbo and 525i. The cars are to be tested on the market in Norway this year.

Lowsley noted, "We know that the cars are already on the gray market in Europe. But cars not imported by the Chrysler importers will carry U.S. names, so it will be easy to identify cars imported by the Chrysler organization and cars on the gray market. This is one of the reasons we have decided to have new names for the cars in Europe."

When Chrysler confirmed plans in March to return to Europe, it promised warranties "better than anyone else's." While Lowsley admitted setbacks in this area because of the different characteristics of the various national markets, he said Chrysler still hoped to offer "the best guarantee on the market for the drivetrain of the car."

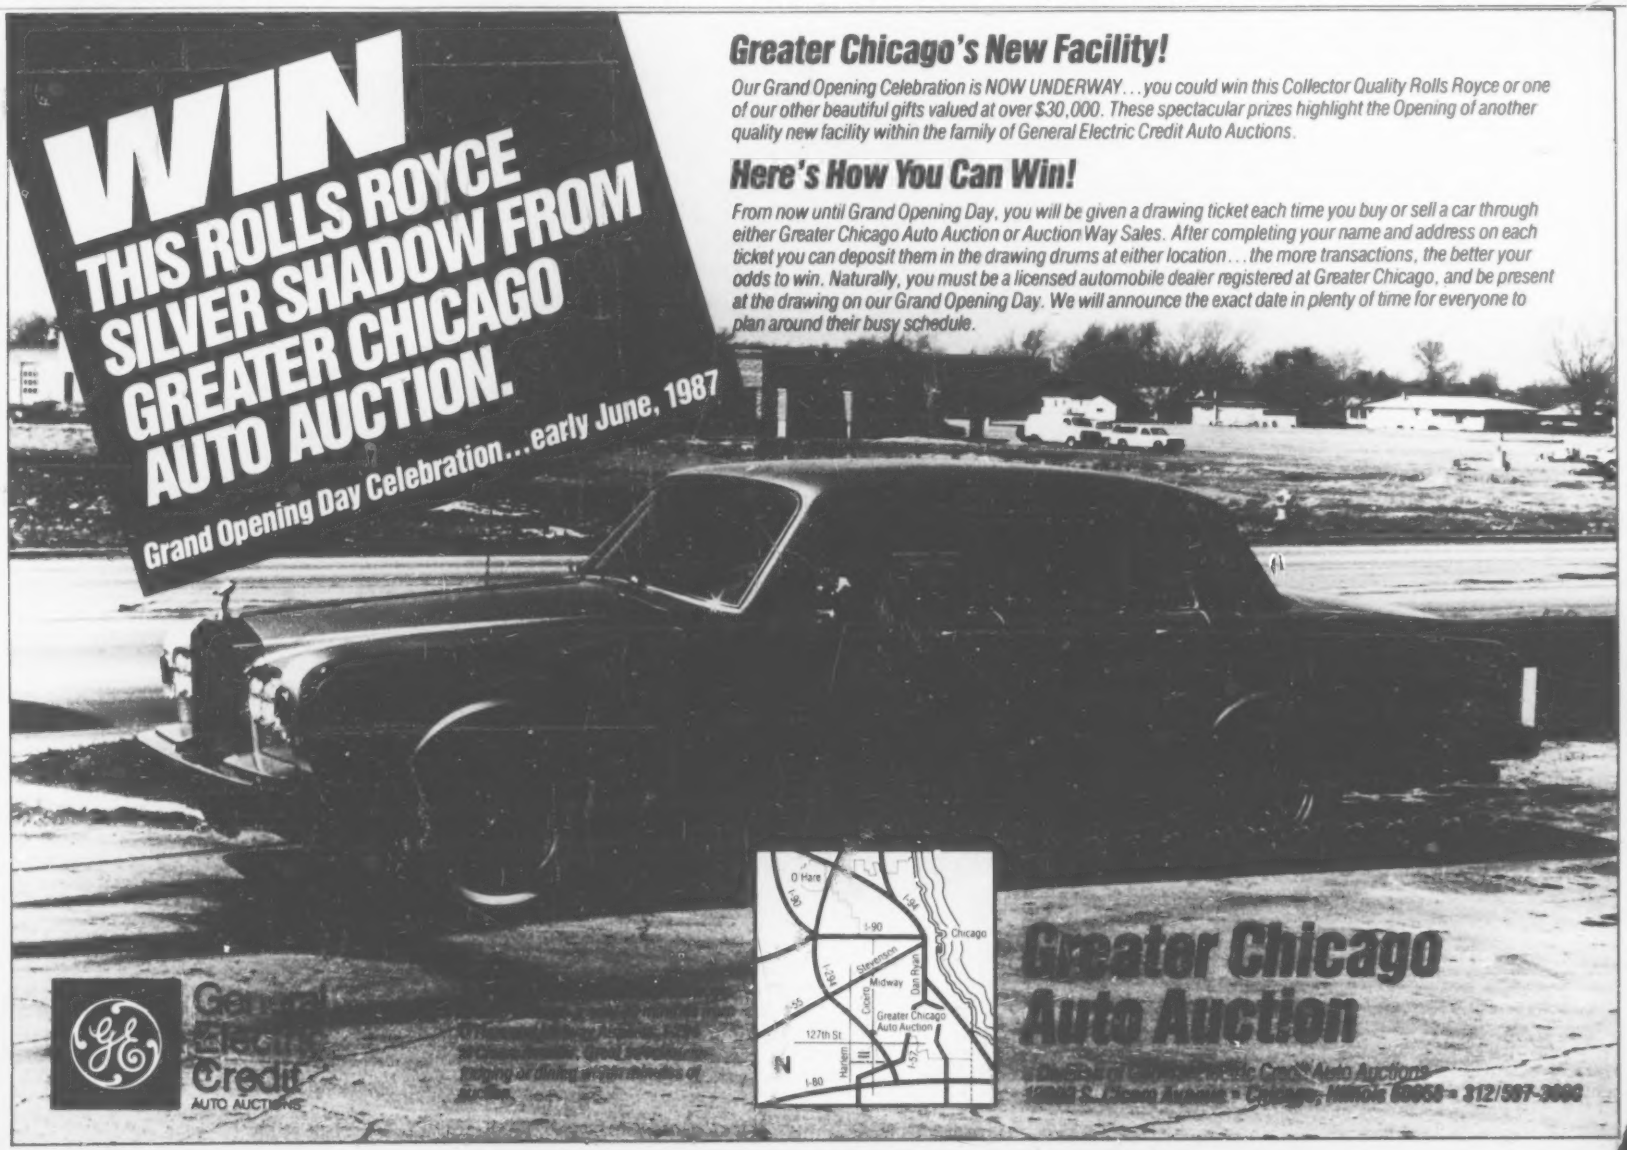
Hildreth to head Tennessee board

NASHVILLE, Tenn. — Gov. Ned McWherter has appointed Frank Hildreth of Lenoir City, chairman of the Tennessee Motor Vehicle Commission. The appointment is for four years and runs concurrently with the term of the governor.

Hildreth has been in the automobile auction business for about 30 years. He owns and operates the Lenoir City Auto Auction.



WIN
THIS ROLLS ROYCE SILVER SHADOW FROM GREATER CHICAGO AUTO AUCTION.
Grand Opening Day Celebration...early June, 1987
Greater Chicago's New Facility!
Our Grand Opening Celebration is NOW UNDERWAY...you could win this Collector Quality Rolls Royce or one of our other beautiful gifts valued at over $30,000. These spectacular prizes highlight the Opening of another quality new facility within the family of General Electric Credit Auto Auctions.
Here's How You Can Win!
From now until Grand Opening Day, you will be given a drawing ticket each time you buy or sell a car through either Greater Chicago Auto Auction or Auction Way Sales. After completing your name and address on each ticket you can deposit them in the drawing drums at either location...the more transactions, the better your odds to win. Naturally, you must be a licensed automobile dealer registered at Greater Chicago, and be present at the drawing on our Grand Opening Day. We will announce the exact date in plenty of time for everyone to plan around their busy schedule.

FUJI-ISUZU: *Japanese makers begin construction of $500 million auto plant in Indiana*

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

LAFAYETTE, Ind. — Construction of a $500 million manufacturing facility to assemble Isuzu light trucks and Subaru passenger cars is under way here after groundbreaking ceremonies last week.

The plant will employ 1,700 workers when construction is finished in 1989. About 120,000 vehicles will be produced at the facility annually. Future plans call for doubling annual volume to 240,000 cars and trucks, depending on market conditions.

The venture is called Subaru-Isuzu Automotive Inc. (SIA). Isuzu Motors Ltd. owns 49 percent of the company and Fuji Heavy Industries Ltd. — maker of Subaru vehicles — owns 51 percent.

Fuji and Isuzu will split financing for the plant 50-50, said Toshihiro Tajima, Fuji president. Fuji will nominate the chief executive officer and oversee the operation, but there will be equal representation on the company's board of directors.

According to John E. Reilly, senior vice president and general manager of American Isuzu Motors Inc., the two companies will divide output equally with parallel assembly lines making trucks for Isuzu and cars for Subaru.

A new version of Isuzu's light utility vehicle will be introduced in 1990 and produced at the plant in addition to the Trooper sports-utility models.

PARTS

FROM PAGE 1

the authors of the report that Japanese parts makers are generally not worried about competition from U.S. parts manufacturers. "They are more afraid of each other," the report said.

It warned that Japanese parts and materials suppliers will move quickly to introduce not only new high-tech auto parts but also non-auto parts products and materials that have either been produced especially to meet U.S. demand or proved successful in the Japanese market.

"They intend to supply across industry lines, to penetrate deeply into sectors like electronics, aviation, machine tools and consumer goods," the report said.

Some of the biggest names in Japan's auto sector have roots in the Japanese pre-World War II military industrial complex. They are not adverse to supplying components and materials to the lucrative U.S. defense industry, the report said.

The study claims that Japanese auto parts firms are convinced that if they act slowly, their market shares will disappear. They feel that restrictive U.S. legislation will be passed, some of it designed to make investment difficult.

The rush to invest in U.S. light manufacturing is being propelled by a number of factors. The report said the factors include yen appreciation, the stagnant Japanese market, increased off-shore auto assembly, the threat of local-content legislation, lower materials costs and, in some cases, lower labor costs.

The study said that U.S. states with offices in Japan report "a flood of inquiries" from Japanese companies interested in U.S. investment. State and local governments from the United States continue to look for those inquiries. They hope for investment from Japanese parts makers while knowing that the excess capacity may well smother local U.S. manufacturers.

The report noted that for investment-desirability purposes, Japanese parts and materials suppliers rank the Northeast/Midwest states into three groupings. Group I (the most preferable): Illinois, Indiana, Kentucky and Ohio. Group II: Michigan, Missouri and Tennessee; and Group III: Pennsylvania and Arkansas.

The report said Japanese companies are increasingly interested in joint ventures with American companies because they provide quick access to the local market and fast introductions to the U.S. Big Three.

"Having a U.S. partner can reduce original investment while utilizing the partner's marketing channels and raw materials purchase know-how," the Commerce Department report said. "American engineering and development capability is still admired. Negative stereotypes of U.S. labor have improved, but U.S. unions and management are not regarded highly."

The report cautioned, however, that the current estimated life expectancy of such joint ventures is between six and eight years.

The Japanese industry view seems to be that U.S. automakers will cede some production capacity to them while maintaining responsibility only for marketing those parts.

"The authors believe it is a mistake to think that many Japanese parts makers are moving to the U.S. just because Japanese assemblers are doing so.

"The key is that they want to supply the U.S. Big Three, who have greater volume, are not as demanding as Japanese assemblers, and will not squeeze them on price," the study said.

The report offered a glimpse of Big Three efforts to source parts from Japanese companies.

- In May 1986, Ford established a special information office to gather technical, engineering, design and other information on Japan's auto industry. Last year, Ford purchased more than $300 million in parts from approximately 80 suppliers in the country.
- GM created the Japan-GM Cooperative Association as early as 1983. Currently, 84 of GM's 90 Japanese suppliers are members, and last year they rang up sales of $350 million in parts to 126 GM operating units.

"GM management clearly encourages outsourcing. Some estimates say that by the early or mid-1990s, GM will produce only about 60 percent of its parts in-house," the Commerce Department report said. It currently produces close to 80 percent of its own requirements.

The Commerce Department believes the big question is not *if* Japan will get the lion's share of GM's business, but *when*.

"There is much speculation in Japan about what will become of certain GM parts divisions," the report added.

The study quoted a leading Japanese business magazine: "GM's Inland Division had retained a leading Japanese bank for expected merger and acquisition activity and had developed a list of over 50 subsidiary firms in the Toyota, Nissan and Honda groups. Since 1986, GM has entered into joint ventures with Nihon Hatsujo, Akebono Brake and Nihon Radiator, while over 10 Japanese firms are considering possible GM relationships."

- A senior Chrysler Corp. executive hosted a gathering at a Tokyo hotel for 150 executives of the Mitsubishi Motors Group, the report said. He reportedly called on them to form joint ventures with Chrysler.

"Chrysler appears to be the most aggressive in seeking out single-sourcing deals for specific parts with individual Japanese suppliers," the report added.

On the MOSS (Market-Oriented, Sector-Selective) talks, the report said that the Ministry of International Trade and Industry and the Japanese auto industry still seem to believe the auto parts initiative is politically motivated, with no economic justification.

"MITI will continue to insist that price, quality and delivery are still the bottom line for the assemblers. They will take every opportunity in future talks to stress with case studies the continued, increasing outsourcing of parts by the Big Three," the report said.

The MOSS talks on auto parts are scheduled to conclude in late August.

New-car sales nosedive

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

Sales of new cars built in the United States plunged 36.45 percent during the first 10 days of May compared to the year-earlier period.

May 1-10 sales totaled 151,131 units compared with 237,800 in the 1986 period.

The daily sales rate tumbled to 18,891 units, its lowest level since mid-January. Daily deliveries during that period were 15,722 units. The daily sales rate was 26,608 units during April.

A market analyst at one of the U.S. automakers said the industry's sales rate on an annualized basis during this period last year was running at a very strong 8.7 million cars. The trend now is 7.3 million U.S.-built cars, he said.

None of the U.S.-based automakers posted a gain during the May 1-10 period. American Motors' sales were off 49.83 percent from last year, and General Motors' sales dropped 46.05 percent. Chrysler Motors dealers delivered 38.93 percent fewer U.S.-built cars this year than last.

Ford Motor Co. dealers, who have had relatively strong sales this year, delivered 21.37 percent fewer U.S.-built cars.

Sales by Volkswagen dealers fell 14.68 percent from year-earlier levels.

Honda sales in the first 10 days of May were 58.84 percent higher than those of a year earlier, and Nissan's were up 359.95 percent.

Toyota, which was not selling U.S.-built cars last year at this time, reported deliveries of 566 units during the 10-day period. Toyota's domestic production of Corollas began in September 1986.

Saab sales dip after 60 records

All winning streaks come to an end and Saab Scania of America's streak was no exception. After 60 months of record sales in the United States, Saab's luck ran out in April.

Saab's April sales were down 1,336 units from the same month in 1986. Sales for the month totaled 3,149 compared with 4,485 last year.

A Saab spokesman was philosophical about the drop, saying the company really expected it to happen sooner or later.

Because of the April dip, Saab's U.S. sales are down 5.26 this year. The four-month total was 13,912, compared with 14,685 in 1986. But the company is still predicting 50,000 sales for 1987, up from 48,181 lat year.

Saab is not the only one down for the year. Most of its European competitors in the higher-priced segment are down, with the exception of Alfa Romeo and Volvo.

Import stocks reach record levels in May

Stocks of unsold new imported cars and trucks in the United States were at record highs May 1.

Inventories of cars in dealers' hands and in transit rose to 567,879 units from 539,759 on April 1, the previous any-month high. The stockpile was the equivalent of a 61-day supply, up from a 57-day supply a month earlier.

On May 1, 1986, the car stockpiles consisted of 346,487 units, equal to a skimpy 38-day supply.

The inventory of imported trucks totaled 238,832 units and, like cars, set a record high for the second month in succession. On April 1, there were 222,158 trucks in stock.

The May 1 truck supply equalled a 67-day supply, compared with 65 days in April and just 48 days on May 1, 1986, when the supply was 156,930 units.

The May 1 car-truck inventory of 806,711 units was equal to a 63-day supply compared with 761,917 units and a 59-day supply April 1.

As of May 1, 65.64 percent of imported-car stocks came from Japan, 20.31 percent from Germany and 14.05 percent from other countries.

PRODUCTION

GM closings cut output

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

With several General Motors plants idle, last week's targeted domestic auto production was the lowest of any five-day work week this year.

Production of 150,378 cars was 7.40 percent below the previous week's 162,404 and 8.61 percent lower than the year-ago week's 164,546.

Last week's scheduled output was shared as follows: GM, 45.40 percent; Ford Motor Co., 28.46 percent; Chrysler Motors, 15.49 percent; Honda of America Manufacturing Inc., 4.46 percent; New United Motor Manufacturing Inc., 2.66 percent; Nissan Motor Manufacturing Co. U.S.A., 1.97 percent; Volkswagen of America, 1.06 percent; and American Motors, 0.50 percent.

Two GM plants closed today (May 18) for inventory adjustment. They are: Pontiac Fiero in Pontiac, Mich., affecting 850 workers, and the Willow Run, Mich., plant affecting 4,800 workers.

Both plants are scheduled to resume operations on May 26.

GM laid off 2,100 second-shift workers at its Doraville, Ga., plant today. The layoff is for changeover to the new GM10 cars. The shift is not expected to be called back until Nov. 30.

Other GM plants down last week were Buick City in Flint, Mich.; Wentzville, Mo.; and Tarrytown, N.Y., all for inventory adjustment; and Arlington, Texas; and Fairfax, Kans., both for model changeover.

GM's Lakewood, Ga., assembly plant resumed production today. The plant had been idle since Dec. 23 for model changeover.

Lakewood previously built the Chevrolet Chevette and Pontiac 1000. It now assembles Chevrolet Caprice sedans and wagons, Buick LeSabre wagons and Pontiac Safari wagons.

Saturday (May 16) overtime was slated for GM's Lansing, Mich. (No. 1) plant.

Ford scheduled Saturday overtime at its Lorain, Ohio, and Kansas City, Mo., plants.

Chrysler's Sterling Heights, Mich., and St. Louis (No. 2) plants were slated for Saturday overtime.

Daily overtime is scheduled this week at Chrysler's Newark, Del.; St. Louis (No. 1); and Sterling Heights plants.

Truck production highest of year

Truck manufacturers scheduled their highest output of the year last week.

Estimated production of 81,960 was 3.05 percent more than the previous week's 79,531 and 5.06 percent more than the year-ago week's 78,013.

Saturday (May 16) overtime was slated at five General Motors plants: Baltimore; Detroit; Lordstown, Ohio; Flint, Mich.; and Pontiac, Mich. (medium-duty line).

Ford Motor Co. scheduled Saturday overtime at its Norfolk, Va., plant.

Canadian auto build moves up

Canadian auto production was estimated at 16,652 cars last week, 38.95 percent more than the prior week's 11,984 but 28.17 percent below the year-ago week's 23,184.

So far this year, 315,138 cars have been built, 29.82 percent below the 449,063 completed last year at this time.

Truck production was scheduled at 17,667 units last week, slightly (0.38 percent) below the previous week's 17,735 but 3.91 percent more than the year-ago week's 17,003.

Year-to-date, 311,697 units have been assembled, 15.19 percent below the 367,537 built last year at this point.

Ford to sell California Ranger in all states

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Ford Division will offer its Ranger GT pickup in all states for the 1988 model and will call it the Ranger STX. The GT now is available only on the West Coast.

The company also is upgrading all its STX trucks and expanding the High Rider Ranger model to several series, according to Beryl S. Stajich, Ford Division compact truck marketing plans manager.

The upshot is that Ford expects its STX models to account for 15 percent of Ranger sales in the 1988 model year, up from 12 percent this year and 10 percent in 1985.

Stajich disclosed the product plans following a press briefing in which General Tire announced that it has been selected to supply its XP 2000H high-performance tires for the 1988 Ranger STX two-wheel-drive pickups.

It is General Tire's first original-equipment contract for its XP 2000 series.

General Tire currently supplies its Grabber light-truck tire line to various OE accounts, according to Joseph J. McCarthy, General Tire vice president, original equipment.

The company supplies 12 percent of all Ford car and truck tires, said Donald L. Botka, the company's account executive on Ford. It also has 17 percent of all General Motors' car and truck business and about 65 percent of Nissan's pickup truck and Sentra car business in Smyrna, Tenn.

Meanwhile, Stajich said that for 1988, Ford Division will make all Ranger GT suspension components (wheels, tires, etc.) available nationally on the new STX model.

"It has a beefed-up stabilizer bar, beefed-up shocks and high-performance tires that we haven't had in the past," Stajich said.

He compared the truck's handling characteristics to those of a Corvette.

The STX currently is offered in 2wd and 4wd versions. The 1988 vehicle will be basically a new 2wd version of the STX.

The STX currently has the appearance, but not the handling, it will have next fall, Stajich said.

All 4wd STX models are essentially High Riders, a new concept that Ford introduced in 1987.

For the 1988 model year, Ford is upgrading High Rider models by going from P215 to P235 tires, which Stajich described as a "quantum leap."

It will also make the High Rider package — which includes a 1½-inch lift, the P235 tires and deep-dish cast aluminum wheels — available on XLT and Custom base-model Rangers, as well as on high-line STX-trim-level models.

"Our concept originally was to take the sport theme that started as test project on the West Coast in 1985 and use it to change the work-truck image of the Ranger," Stajich said.

Ford added two-tone paint on the lower rocker panels on its first West Coast STX test models. In 1987, it made that two-tone paint standard all the way down to its XLT series Rangers and also offered it on the Custom base model.

MG revival a dream of Rover Group

Chrysler solicited, but isn't interested

By Jake Lucas
SPECIAL CORRESPONDENT

LONDON — A plan to develop a modern MG sports car for the North American market has been proposed to Chrysler Motors.

The idea is for the car to be built by Britain's Austin Rover Group, owner of the MG marque and manufacturer of the Sterling sedan. The low-priced two-seater would be designed by the engineering division of Group Lotus, and Chrysler would market it primarily in the United States.

But top Chrysler officials say the plan, revealed last week by The Times, of London, is no longer current. Michael N. Hammes, vice president, international operations at Chrysler Motors, said, "There have been several serious considerations along those lines but they are not going on at this time. Six, eight or nine months ago, there would have been reason to duck (that question)."

He did, however, acknowledge that a joint project is seriously being discussed with "a major European automotive manufacturer." Hammes added, "It would be a vehicle-making venture. They (the discussions) are not along the lines of an equity relationship with the parent company."

Rover Group Chairman Graham Day recently reported a record loss of $1.5 billion for 1986 **(See story, Page 2)**. Capacity is still greatly under-utilized, despite assembly ties with Honda of Japan, and a

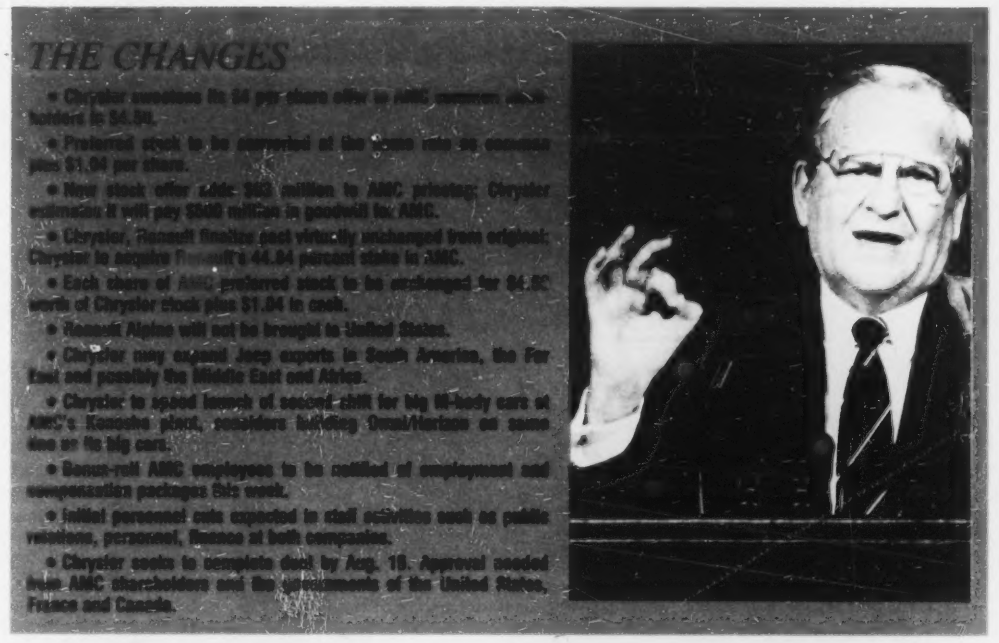
The Chrysler-AMC Deal



THE CHANGES

- Chrysler sweetens its $4 per share offer to AMC common stockholders to $4.50.
- Preferred stock to be converted at the same rate on common plus $1.04 per share.
- New stock offer adds $463 million to AMC pricetag; Chrysler estimates it will pay $640 million in goodwill for AMC.
- Chrysler, Renault finalize pact virtually unchanged from original; Chrysler to acquire Renault's 44.84 percent stake in AMC.
- Each share of AMC preferred stock to be exchanged for $4.50 worth of Chrysler stock plus $1.04 in cash.
- Renault Alpine will not be brought to United States.
- Chrysler may expand Jeep exports in South America, the Far East and possibly the Middle East and Asian.
- Chrysler to speed launch of second shift for big M-body cars at AMC's Kenosha plant, considers building Omni/Horizon on same line as its big cars.
- Bonus-full AMC employees to be notified of employment and compensation packages this week.
- Initial personnel cuts expected to start activities such as public relations, personnel, finance at both companies.
- Chrysler seeks to complete deal by Aug. 19. Approval needed from AMC shareholders and the governments of the United States, France and Canada.

Alpine killed but Jeep rosy

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

SAVANNAH, Ga. — As the Chrysler Motors-American Motors merger nears finalization, Chrysler has aborted plans to import the Alpine sports car and is planning to increase worldwide distribution of Jeep.

Chrysler Vice Chairman Bennett E. Bidwell said last week that Chrysler has cancelled plans by American Motors to begin importing this fall the mid-engine, two-seat Alpine.

In addition, Chrysler Motors Executive Vice President for Manufacturing Richard Dauch said that Chrysler will accelerate introduction of a second shift

AMC, Chrysler dealers to mesh

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

SAVANNAH, Ga. — The financial success of the Chrysler Motors-American Motors marriage depends on Chrysler's ability to cross-breed products and sell them in both sets of dealer showrooms in the 1990s.

Chrysler Vice Chairman Bennett E. Bidwell said such crossbreeding of the Chrysler-Renault-AMC car and truck lines will not immediately follow the acquisition, but will be crucial to long-term success.

Chrysler and Renault last week reached a final agreement on Chrysler's bid to acquire Renault's 44.84 percent stake in AMC. The AMC board of directors

GM trims car build for third quarter

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors has scheduled extended shutdowns for the traditional summer model changeover at nine of its U.S. assembly plants, which will pull third-quarter car production 11 percent below last year's.

In addition, four of GM's U.S. assembly plants are closed now for major retooling for products new to those plants.

GM plans to produce about 740,000 cars in the United States during the third quarter, an 11 percent decline from the 828,299 it produced in the third quarter of 1986.

Production will be cut by extending the changeover periods for the 1988 models at several plants. Some of the model changeovers are scheduled to last four to six weeks. A two-week to three-week changeover period is typical.

The significant cut in third-quarter production is apparently an effort to avoid an inventory buildup before the start of the 1988 model year. Such a buildup would force GM to offer massive sales incentives to clear out the end-of-year models. Late in the 1986 model year, GM dealers had a million cars in inventory and GM offered what it dubbed "The Big One," the across-the-board 2.9 percent financing program.

There is no word on what kind of cleanup program GM will offer

Mr. President

Big Three leaders see sales falling 1.3 million for 1987

By Al Fleming
AUTOMOTIVE NEWS STAFF REPORTER

Presidents of the nation's three largest auto companies agree that industrywide new-car and truck sales in 1987 will drop — by more than 1.3 million units, or some 9 percent, below record year 1986, if their forecasts are averaged.

The forecasts — by General Motors' F. James McDonald, Ford Motor Co.'s Harold A. Poling and Chrysler Motors Corp.'s Harold K. Sperlich — call for 1987 calendar year sales of 15.0 million vehicles, comprised of 10.3 million cars and 4.7 million trucks.

Last year's record total of 16,333,931 sales included 11,463,092 cars and 4,870,839 trucks.

The forecasts by the Big Three's chief operating officers were made during exclusive Automotive News interviews that appear in this week's "The Presidents" Extra, a special section beginning after Page 36.

Other company presidents interviewed were: Noel

Phillips, Volkswagen of America; Kan Higashi, New United Motor Manufacturing Inc. (NUMMI); Shoichiro Irimajiri, Honda of America Manufacturing; and Marvin T. Runyon, Nissan Motor Manufacturing Corp. U.S.A.

McDonald, whose forecast is the most optimistic of the Big Three, said, "We haven't changed our outlook for this year. We still think it's going to be a 15.2 million to 15.4 million total vehicle year — 10.6 million cars and 4.7 million trucks."

see PRESIDENTS, page 36

GM names new president; Stempel takes job Sept. 1

Robert C. Stempel, who kept a low profile while methodically cleaning up General Motors' truck, bus and international operations, was rewarded by being named GM president, effective Sept. 1.

Stempel will succeed F. James McDonald, who will be 65 Aug. 3.

GM Chairman Roger B. Smith chose Stempel over Executive Vice President Lloyd E. Reuss after the two had twice been promoted together and had been obvious rivals for top spots at GM. Now Reuss will add Stempel's Truck and Bus duties to his North American Passenger Car Operations and Reuss will report to Stempel.

GM also named Donald J. Atwood, 63, vice chairman, effective immediately. The post had been vacant since last December.

Stempel, a 53-year-old engineer, ran Chevrolet and Pontiac and the Buick-Oldsmobile-Cadillac Group before becoming executive vice president — Truck, Bus and International in 1986.

As executive vice president, Stempel presided over GM's withdrawal from the money-losing bus and heavy-truck businesses. Light-truck sales and international operations have gained.

Conversely, Reuss may have been hurt by GM's lackluster performance in the U.S. car market, where sales and market share have slipped and GM has been criticized for look-alike cars.

Atwood will continue to head several technical staffs. Elmer W. Johnson was elected executive vice president and a director. Harry J. Pearce succeeds Johnson as general counsel.

Angry shareholders blast GM's leaders

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors shareholders last week expressed strong dissatisfaction with the manner in which GM leaders are conducting the corporation's business.

The unrest was evidenced in the vote on several shareholder proposals at the annual stockholders' meeting here, especially one relating to the buyout of H. Ross Perot last December.

That proposal opposed the payment of "greenmail." It was backed by 20.1 percent of the shares voted, the highest vote for a shareholder proposal since GM began keeping such records in the 1940s. A "yes" vote of 5 percent on a shareholder proposal is considered above average.

But that wasn't all. Four other shareholder motions received 9.2 percent to 10.9 percent of the shares voted. The affirmative vote on each of those proposals equaled or exceeded the previous record of 9.2 percent that favored a 1986 motion that GM get out of South Africa.

It was a lively meeting. As expected, GM Chairman Roger B. Smith faced tough questions relating to the $700 million buyout of Perot, plant closings and alleged mismanagement of the company.

Stockholders entering the Fisher Theater for the meeting last Friday encountered a group of about 15 picketers — mostly UAW members — chanting "Jobs, jobs, jobs," and "Stop layoffs, stop the payoffs, fire Roger Smith."

Inside, union members and representatives of consumer advocate Ralph Nader called for Smith's resignation for closing plants, the Perot buyout and for the $169 million in bonuses paid to GM executives when workers received no profit sharing.

The Perot affair culminated last December. He had joined the GM board of directors in 1984 when GM bought his Electronic Data Systems for $2.5 billion. Perot became a critic of GM management, and was asked to resign from the board last December. Perot did so and received $700 million for his GM Class E stock; some of his EDS associates received another $50 million. The payout was about twice the market value of the stock.

The shareholder resolution at last week's meeting asked that no "greenmail" payments be made at prices more than 5 percent above the market value of GM stock unless the same offer was made to all shareholders.

As noted, four other shareholder proposals received a much higher than normal share of the votes cast.

One called for restoration of limited pre-emptive rights to shareholders. It was favored by 9.2 percent of the shares voted. Two asked GM to cease dealings in South Africa because of that nation's apartheid policies. Each won 10.8 percent of the votes. The other sought that changes in GM's by laws be approved by a majority of shareholders. That position was backed by 10.9 percent of the shares voted.

A company proposal changing the terms of the GM incentive compensation plan for executives was approved by 95.2 percent of the shares voted.

At the meeting, shareholders elected 19 directors, including 12 non-employee directors, six GM officers and former GM chairman Thomas A. Murphy, who was asked to stay another year beyond the retirement age of 70. No replacement was nominated for Catherine B. Cleary, who reached the mandatory retirement age.

Nominations for the board from the floor of the meeting included Perot and former presidential candidate Gary Hart.

In response to shareholder questions, Smith disclosed that 1986 worldwide advertising expenditures were was $1.12 billion compared with $1.04 billion in 1985; 1986 fees paid to directors were $766,000; and 1986 charitable contributions were $61.5 million.

In has address to the stockholders, Smith praised GM's dealers. "Our dealers are partners in our business — along with our suppliers — and their success is absolutely vital to our own," he said.

Smith said GM's 10,200 U.S. dealers have total assets of about $30 billion.

He said GM's "dealer-partners" are the company's "crucial connection" to its customers and GM wants its customers "to be more satisfied" than any others in the world, because "satisfying the customer is fundamental to our business."

Smith told the meeting that GM is "moving forward on a number of programs" to help it improve the quality of service they (dealers) provide and that in 1986 GM "provided 300,000 man-days of training, an average of three days' training for every service technician in our dealerships."

Three times in his address Smith referred to GM's dealers as partners and emphasized that GM and its dealers "working as a team," are gearing up to battle the toughest competition ever.

"Together we represent the strongest force in the industry," Smith said.

Smith said GM is redirecting its expenditures from plant facilities to automotive products. He said that automotive capital expenditures, which totaled $10.6 billion in 1986, will be reduced to less than $8 billion in 1987 and about $6 billion in 1989 and beyond.

Product spending in the 1986-89 period "will be higher than any other four-year period in recent GM history," he said.

Salesfolk earn cash on Corsica

$5,000 is top prize for each delivery

By Michelle Krebs and Laura Clark
AUTOMOTIVE NEWS STAFF REPORTERS

Chevrolet has added yet another incentive to its new Corsica and Beretta. The latest one is aimed at dealership salespersons.

At the same time, Chevrolet and GMC placed incentives on their all-new C/K series pickup trucks. Chevrolet also extended and sweetened existing incentives on some other models.

Ford joined the fray with an incentive on its Ranger STX and extended incentives on selected cars and trucks until June 15.

Chevrolet launched the "Corsica/Beretta Cash Play" program last Monday. When a salesperson delivers a 1988 Corsica or Beretta through a retail sale, he or she wins $25 to $5,000 in a computerized random drawing. The dealership finds out how much the salesperson has won by calling an 800 phone number.

The program runs through June 21.

Chevrolet recently put a $500 cash rebate on the Corsica/Beretta, only two months after its official March 12 introduction. Last week, Chevrolet extended the rebate through June 12.

"The cars didn't come out of the box as well as we thought they would," Chevrolet General Manager Robert Burger said last week.

The Corsica and Beretta went on sale in January but the official introduction was in March when national advertising began.

The cars' best month was April, when 13,500 were sold.

Chevrolet said it placed incentives on Corsica and Beretta on May 1 to "level the playing field." Chevrolet officials said that customers who might have bought a Corsica or Beretta selected a Cavalier, Celebrity or Camaro instead because those cars carried incentives.

Nevertheless, May 1-10 sales were lower than sales for April 21-30, even though Chevrolet began offering a $500 cash rebate on the cars May 1. In the first 10 days of May, Chevrolet sold 4,095 Corsicas and Berettas compared with 6,073 in the last sales period of April.

Goodyear chief to address World Congress

What's it like to face a hostile takeover by a corporate raider?

Ask Robert E. Mercer. He'll tell you.

"A hostile takeover amounts to telling you I'm going to rape your wife because it'll improve your marriage," said Mercer, chairman and chief executive officer of Goodyear Tire & Rubber Co.

Mercer's company waged a bruising battle against an unfriendly takeover attempt last year.

The fight sent Goodyear billions of dollars into debt, forcing the company to close several plants, sell off some profitable subsidiaries and cut its payroll by about 10 percent.

Mercer will deliver the "State of the Supplier Industry" address at the 12th Annual Automotive News World Congress, to be held July 26-29 at the Hyatt Regency Hotel in Dearborn, Mich.

He's ready, willing and able to address this year's Congress theme, "Facing Up to Competitive Times."

He will be co-speaker on Sunday evening, July 26, with keynote speaker Gerald Greenwald, chairman of Chrysler Motors Corp.

In addition to Mercer, three other top speakers are scheduled to talk on supplier industry issues.

They are: Rene C. McPherson, former chairman of Dana Corp. and at one time dean of the Graduate School of Business at Stanford University; Allen F. Jacobson, chairman and chief executive officer of 3M Co.; and James McAlpine, executive vice president, Magna International Inc.

McPherson and McAlpine will speak on Monday, July 27, when the day's theme will be "Recoveries and Strategies for the Domestic Industry."

McPherson, whose topic is "The Importance of People" in successful competition is a director of Banc One Corp., Dow Jones & Co., Mercantile Stores Co., Milliken & Co. and Westinghouse Electric Corp.

McAlpine will address the issue of growth as a supplier in the face of intense competition among North American suppliers and offshore competitors.

Jacobson will speak on Wednesday, July 29, when the daily theme will be "Coping With Change." His topic will be "What America's Cup Technology Means to the Auto Industry."

A chemical engineering graduate of Iowa State University, Jacobson joined 3M in 1947 as a product engineer in the tape laboratory.

The four-day World Congress will have more than 30 speakers, sharing their knowledge and viewpoints.

For further information, write: Automotive News World Congress, 1400 Woodbridge Ave., Detroit, MI 48207, or call (313) 446-6047. Overseas inquiries cable: 810-221-5122 AUTNEW.

Class 1-3 sales data reported by individual manufacturers; Class 4-8 data reported by Motor Vehicle Manufacturers Association.

Class 8 sales climb; April total is 12,749

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Retail sales of Class 8 heavy trucks were up sharply in April, as were those in the medium-duty Class 4, 5 and 6 segments.

Class 7 sales, although down slightly from a year ago, showed continuing improvement, according to figures compiled by the Motor Vehicle Manufacturers Association.

There now are 27 truck companies reporting U.S. retail sales in the light, medium and heavy market segments.

Western Star reported sales for the first time last month. No year-ago comparison figure was available.

Since last fall, when Automotive News devised its retail sales table for medium and heavy-truck manufacturers, a number of new companies have either entered the market or have begun reporting sales for the first time.

They include Iveco, Scania, Mitsubishi Fuso, Nissan Diesel and Hino.

Total truck industry retail sales in the United States for April were a record 451,757, up 7.9 percent from a year ago.

For the first four months of calendar 1987, total retail truck sales of 1,571,355 were also a record, up 3.8 percent from last year's previous high.

During April, Class 8 truck manufacturers retailed 12,749 units, up 22.3 percent from the same month a year ago.

For four months of calendar 1987, Class 8 sales of 40,294 were up 11.1 percent over the same period in 1986.

Class 7 truck sales of 10,059 last month were slightly below the 10,202 retailed a year earlier. Class 7's four-month calendar year total of 33,375 was slightly below sales of 33,531 for the same period in 1986.

Class 4, 5 and 6 sales totaled 4,229 in April, up from 4,051 a year earlier. The calendar year-to-date total of 16,688 for those segments was up 11.6 percent from last year.

Most of the medium and heavy-truck manufacturers are off to a strong start this year, and Kenworth is having an exceptional year. Its Class 8 sales of 1,212 trucks in April were up 39.3 percent over last year. For the first four months, its Class 8 sales of 4,246 units were up 39.2 percent over the same period in 1986.

Kenworth also sold 30 of its new Brazilian medium-duty models in April.

Freightliner also had a strong April, with Class 8 sales of 2,108, up 27.8 percent over last year.

For the first four months, Freightliner's sales of 6,775 trucks were up 20.8 percent over the same period a year ago.

Volvo White, GMC's future heavy-truck partner, had Class 7-8 retail deliveries of 1,322 trucks in April, up 8.2 percent over last year.

For the first four months of 1987, Volvo White's sales of 3,930 were a shade below 3,933 for the same period a year earlier.

Ford's new medium-duty Cargo due in dealerships this summer

By A.S. Plotkin
SPECIAL CORRESPONDENT

BOSTON — Ford Motor Co.'s latest entry in the medium-size-truck sweepstakes, the CF-8000, has more horsepower and a higher GVW rating than other trucks in the company's two-year-old Brazilian-built Cargo series.

The CF-8000 debuted at the New England Truck Show here and will show up in Ford dealerships early this summer, according to Kenneth F. Smith, heavy-truck general operations manager for Ford Truck Operations.

With its greater size and muscle, Smith said, the CF-8000 "should have strong appeal to operators seeking to maximize capacity in a Class 7 chassis."

Ford has increased its calendar-1987 North American retail sales projection for medium and heavy trucks to 275,000 from an earlier 270,000.

Smith pointed out that the industry is off to a good start this year, but he said he didn't think the current rate would hold up for the balance of 1987.

"We are not looking for a barnburner, but it will be better than last year (265,000 retail sales). Canada started out really strong, but has started to soften. It is still a very competitive marketplace, and changes are taking place. The dealers are concerned about the long term, much as they were last year," Smith added.

Although Ford is facing tough competition, Smith said he felt the company is "working on the right things. We will be expanding the Cargo line again this year."

Smith: CF-8000 "should have strong appeal to operators seeking to maximize capacity in a Class 7 chassis."

The Brazilian-built Cargo line was introduced two years ago. It replaced Ford's old CF series and accounted for 2,000 North American retail sales in its first partial year on the market.

Smith said that Ford has begun "winding down" on older-style C-series models, but "they're still so strong that we would be killed by our customers unless we had an adequate replacement."

In 1986, Ford retailed 3,200 Cargos in North America, with its biggest problem being lack of availability to meet market demand, according to Thomas J. Steckel, medium-truck product manager.

The Cargo is now available in five wheelbases and with a choice of three Ford engines, ranging up to 210 horsepower.

The new CF-8000 will be available in four wheelbases, from 171 inches to 225 inches.

New options available will include a suspended driver's seat for smoother ride and an exhaust brake that, according to Smith, "contributes to a reduction of service-brake lining wear and helps minimize the possibility of brake fade."

Study charts Japanese invasion of U.S. parts industry

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Japanese companies will soon be manufacturing everything from antifreeze to air conditioners in the United States.

The Original Equipment Division of the Motor and Equipment Manufacturers Association lists 126 facilities owned or partly owned by Japanese companies that are now manufacturing in this country or will be by 1990.

An internal Commerce Department study (Automotive News, May 18) places that number around 300 companies, including materials suppliers.

According to the report, Japanese firms rank states in three groupings in terms of investment desirability. The most desirable is Group I (Illinois, Indiana, Kentucky and Ohio), followed by Group II (Michigan, Missouri and Tennessee) and Group III (Pennsylvania and Arkansas).

The study elaborates on the selection of investment locations, saying, "Firms use weighted ratings for various factors, to evaluate the degree of investment desirability, but, of course, much subjectivity and 'gut feeling' is employed in the final decision."

The report said Japanese companies are increasingly interested in joint ventures with American companies, thus providing the Japanese with quick access to the local market and fast introductions to the U.S. Big Three.

Merger and acquisition — known as M&A — has become the new buzzword in Japan, the report said.

According to the authors of the report, "Some strategists suggest that savvy and competitive U.S. parts suppliers should cut price and costs and increase R&D immediately to maintain market share and put severe pressure on the newcomers. Of course, most Japanese believe there is only a slim chance that U.S. suppliers will take such strong action."

The Commerce Department report said it seems to be the view of Japanese industry that U.S. automakers will cede some production capacity to the Japanese while maintaining responsibility for marketing Japanese-manufactured goods. According to the study, "Japanese are aware that some U.S. analysts envisage U.S. automakers relegating themselves to the role of marketing organizations."

"It is a mistake to believe that many Japanese parts makers are moving to the states

PARTS

FROM PAGE 18

just because Japanese assemblers are going. The key is that they want to supply the U.S. Big Three, who have greater volume, are not as demanding as Japanese assemblers, and will not squeeze them on price," the study said.

"Of course they also want to supply the lucrative U.S. aftermarket. Roybi is an example of a non-auto parts firm in Japan which supplies die cast molds to GM and Ford in the U.S., but does not supply U.S.-based Japanese assemblers. In fact, it was one of the Big Three which first urged Roybi to produce in the U.S., and apparently such 'suggestions' from the Big Three are common."

The report went on to mention an unnamed medium-sized Japanese parts firm that was offered free land and guaranteed orders for five years if it would establish U.S. production facilities.

Japanese automakers such as Nissan, Toyota, Honda, Subaru, Isuzu, Mazda and Mitsubishi are on the MEMA list. So are Japanese component manufacturers such as Tokyo Seat Co., Asahi Glass Co., Yuasa Battery, Nippondenso, Showa Manufacturing Co., Nippon Light Metal and Bridgestone.

Thus far, 19 states have been selected by the Japanese and their U.S. partners for automotive manufacturing. The most popular location is Ohio, with 23 facilities either operating or planned. Kentucky is second with 16 Japanese manufacturers, followed by Michigan with 15.

Other states on the list include Illinois (12), Indiana (11), Tennessee (8), California (8), Texas (5), Pennsylvania (5), Georgia (4), Missouri (3), Alabama (3), Arkansas (2) and New York (2). States that have attracted one Japanese automotive investor include South Carolina, Florida, Virginia, Oregon and Nebraska.

Total employment by Japanese automotive manufacturing businesses in the United States is expected to total approximately 35,000 by 1990, according to MEMA.

According to the Commerce Department study, Japanese parts manufacturers are coming to the United States because of the appreciation of the Japanese yen, a stagnant Japanese market, increased offshore auto assembly, and the threat of local-content legislation. Other advantages of producing in the United States are lower materials costs and, in some cases, lower labor costs.

The internal study said that states with offices in Japan report "a flood of inquiries" from Japanese companies interested in U.S. investment.

"Of course, U.S. state and local governments continue to look for these inquiries. They hope for Japanese parts maker invest-

ment, while knowing that the excess capacity generated may well smother local American manufacturers — but perhaps these will be in some other state," the study said.

The report concluded that the U.S. auto parts industry is in for a big shake-out, but that there is still much opportunity.

The study offered the following advice: "In order to profit, U.S. firms must realize that, whether going it alone or in joint ventures with Japan, the concept of a unilateral vendor relationship is obsolete. Japanese values, expectations, new technology, and the market itself will not permit unilateral vendor behavior. One needs to be introduced and indicate a willingness to work together. Even though a vendor meets quantifiable criteria such as price, quality, and delivery, one must also demonstrate an attitude of cooperation and flexibility. To expect the Japanese buyer's attitude to change quickly is ill-advised. They expect sellers to adapt."

State legislators oppose pre-emption of lemon laws

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The National Conference of State Legislatures has passed unanimously a resolution opposing federal preemption of state lemon laws.

The action follows the recent adoption of a similar resolution by the National Association of State Attorneys General. The National Association of Civil Administrators is expected to take a similar position at its annual convention next month in Atlanta.

Both domestic and foreign automakers prefer a single federal rule or uniform state laws. They are concerned over differences among the 40-some state lemon laws. Lemon laws specify consumer rights in settling complaints about defective cars.

Automakers say they doubt they can get a federal rule that will pre-empt state lemon laws. Instead, the makers are trying to get some relief through a proposal made to an advisory group considering changes in a Federal Trade Commission rule governing informal dispute settlement procedures. A decision is expected in a month or two.

The legal headaches stem indirectly from passage of the 1975 Magnuson-Moss Act, which defined certain consumer rights if manufacturers offered written warranties. It also encouraged establishment of informal dispute settlement procedures.

The FTC, as required under the law, wrote a rule (known as 703) spelling out obligations of manufacturers and consumers in settling warranty complaints out of court.

Many automakers now use national arbitration programs such as the National Automobile Dealers Association's AUTOCAP or the Better Business Bureau's Autoline. But the FTC has never said whether those programs meet the federal rule's guidelines.

The FTC 703 rule, which does not pre-empt state lemon laws, is now the subject of discussions by an independent advisory group set up by the FTC. The group includes representatives from the auto industry (manufacturers and dealers), consumer groups (Center for Auto Safety, Motor Voters, Consumers Union) and state legislators.

It is to those groups that the automakers are proposing a solution less sweeping than federal pre-emption.

They suggest making the FTC rule effective only after states with two-thirds of the nation's population have enacted lemon laws that:

- Require a consumer to use the manufacturer's arbitration program before going to court.
- Does not place any new obligations on the manufacturer.

In effect, that would mean uniformity in states with two-thirds of the population. But it also would mean that states with tough lemon laws could not qualify as part of the necessary two-thirds.

Connecticut's lemon law, for example, with its own state-run arbitration program, would appear not to qualify. Neither, apparently, could the lemon laws of Florida or Wisconsin.

The FTC staff has scheduled a final meeting in June for the rulemaking group to decide whether agreement can be reached on changing the federal informal dispute settlement procedures rule. The FTC staff has stated no desire for its rule to pre-empt states' rights to legislate or regulate consumer rights for repair/replacement under warranty, but the staff stressed it could not speak for current or future commissioners.

FTC Chairman Daniel Oliver has refused to say whether he favors having the FTC rule pre-empt state laws, and his position has made state legislators and consumer activists somewhat concerned.

The pre-emption issue was recently debated by David A. Collins, a General Motors attorney who has been serving on the FTC advisory committee, and John J. Woodcock, the Connecticut lawmaker most responsible for the strict Connecticut lemon law that has its own state-run arbitration programs.

They debated before the National Conference of State Legislatures prior to a vote opposing pre-emption of lemon laws.

After reviewing some of the court decisions on pre-emption, Collins said, "The bad news from your perspective, and from our perspective, too, is that the laws are taking new and different shapes and forms."

Some of those new varieties, he added, put lemon laws on a "self-destructive collision course with federal law, sooner or later."

Collins said the original lemon laws — allowing a dealer four attempts to repair a car and requiring a manufacturer to buy back the car if it is in a dealer's hands for 30 days — are very hard to assail as a matter of fairness. Collins said it is hard to say "four cracks at a serious problem isn't enough, and we aren't saying that any more."

But, said Collins, it is the new details cropping up in lemon laws that are unfair, sometimes to manufacturers and sometimes to consumers.

He said that one form of lemon-law unfairness insulates dealers from accountability for the poor service they may have provided. Collins admitted some defective cars defy repair. Dealers should not be responsible for fixing them.

But the bulk of the lemons, which the automakers are buying back, according to Collins, are cars that the dealer has let sit for 30 days, or cars for which the dealer has failed to order the necessary parts, or cars with a problem the dealer just has not diagnosed.

Making the dealer accountable under the lemon laws, added Collins, is an incentive to do the job right. Moreover, the consumer should not be caught between the dealer and the manufacturer. Dealers and automakers ought to be the ones to argue it out, according to Collins. As it is now, in some states dealers claim the unsuccessful repair is the manufacturer's fault.

Woodcock, taking his turn in the debate, said the states have taken a leadership role because the FTC failed to do so. He said the Connecticut attorney general has been waiting for four years for FTC to tell him whether the Better Business Bureau arbitration program meets the federal guidelines spelled out in rule 703.

State enforcement is necessary, said Woodcock, because the FTC has been in a "deep coma."

Woodcock said he is concerned that the potential for a pre-emptive initiative is real, and he said he thinks Congress should be warned because that is where the auto industry is going next for help. Woodcock said he believes the automakers have already been to the White House, and Congress is next.

Woodcock warned that pre-emption would create a moratorium on what states have done to supervise and monitor industry arbitration programs. And he viewed that as a big problem because of the track record of the FTC.

In addition, he said pre-emption would create a moratorium on further state initiatives, and by creating a precedent, it would have a chilling effect on what states may want to do.

NHTSA won't require makers to label auto lights

WASHINGTON — NHTSA will not require manufacturers of automobile lighting equipment to label their products with the name of the manufacturer, the function of the product and the letters "DOT" signifying compliance with government standards.

The agency proposed the requirements on Jan. 24, 1986, after receiving a petition from Peterson Manufacturing Co., Grandview, Mo. Peterson said the labeling requirements would identify off-shore manufacturers that had been exporting counterfeit products to the United States.

NHTSA said it decided not to approve the request after comments were filed with the agency indicating the proposal would impose significant cost increases on a number of manufacturers.

NHTSA said the comments also suggested that a marking requirement would not deter a counterfeiter from copying the markings of a reputable manufacturer.

Auto patent race heats up, but are all ideas important?

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

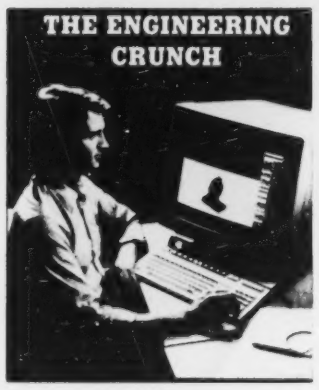
WASHINGTON — The conventional wisdom is that the United States is at the leading edge of technology, while the Japanese lack originality but build good products.

This ability to invent — viewed as a competitive advantage over the rest of the world — does not hold up when the number of patents issued is examined.

Between 1970 and 1986, the number of patents issued in the United States grew from 64,429 to 76,862. But the number of patents awarded to U.S. inventors during that period declined from 47,077 to 42,003. Patents granted to foreign nationals, on the other hand, doubled from 17,352 in 1970 to 34,859 last year.

While the U.S. continues to lead in patents for materials, computers and pharmaceuticals, Japan recently took the lead in a class critical to the auto industry — the internal combustion engine.

Between 1981 and 1985, 2,007 patents issued by the United States, or 38.2 percent of this category, went to the Japanese. U.S. inventors and companies received 1,802 patents, or 34.3 percent, during the same period.



Although the total is higher than the 1,615 engine patents issued to the U.S. inventors and companies between 1976 and 1980, the share of total patents issued is down from the 41.3 percent during the earlier time period.

According to Francis Narin, president of Computer Horizons Inc., a research firm that compiled the data for the National Science Foundation, "The U.S. share has gone down substantially, while the class as a whole is growing, since the U.S. was able to take a larger share of the class with fewer patents in 1976-80."

In total number by class, the internal-combustion-engine category ranks 15th on the list of U.S. patents awarded to American inventors. Japanese individuals and companies, however, have their greatest number of U.S. patents in this category.

For West Germany, the number of U.S. patents for the internal combustion engine ranks second behind pharmaceuticals, while it ranks fifth for those from Great Britain.

Some, however, dispute those numbers as an accurate measure of competitiveness.

"The Japanese tend to patent all over," said David E. Cole, director of the Center for Automotive Studies at the University of Michigan. "Our tendency is to be a little more cautious. When you patent, you disclose."

W. Dale Compton, a senior fellow at the National Academy of Engineering in Washington, agreed: "I don't think that the numbers mean that much."

Compton, a former vice president of research for Ford Motor Co., noted: "A large number of those patents are for ideas for which we would say we know what's in there, and we didn't think it was worth patenting."

Computer Horizon's Narin conceded the point but added that Japanese patents in general are the most often cited in the U.S. patent system — an indication of the strength of their ideas. "I think it's a pretty good reflection," he said. "If there are an enormous amount of carburetion and combustion patents that are being cited, then those patents are not token patents by any means."

Frank Walter, director of corporate timing planning for Chrysler and immediate past president of SAE, said, "We've been producing engines for essentially a century. However, we know relatively little about combustion. The Japanese realize we don't know much about combustion, and they participate more in writing papers and patenting the result of their research."

If a nation cannot apply those innovations to the products it manufactures, the triumph of technology is a hollow victory.

"Where they (the Japanese) are strong in patents, you will see that they are strong in products," Narin said. "If you go down the list of Japanese patents and walk down any good shopping street, you'll see the same things."

Narin concluded, "Given that, I find it hard to dismiss the connection between patents and competitive products."

"The three most important factors in the auto industry are product, product and product," said John Schnapp, an industry analyst with Temple, Barker & Sloane. "A company with strong product and a weak everything else can be successful, while a company with lousy product and strong everything else will have problems."

M. Carl Ziemke and James K. McCollum, of the University of Alabama in Huntsville, feel strongly that there is a gap in mechanical innovation between U.S. products and those produced by foreign makers.

Writing in the spring 1987 issue of Massachusetts Institute of Technology's Sloan Management Review, the pair contended, "Foreign automobiles' superior mechanical design features are the significant factor in their strong competitive position.

"Japanese superiority in mechanical innovation has developed largely over the last decade — often because Japanese manufacturers resurrected American breakthroughs that were once ahead of their time."

Indeed, many of the people who say the number of patents is a poor measure of U.S. engineering competitiveness also say that many of the innovations currently or about to be marketed by the Japanese — such as multi-valve technology and four-wheel steering — are familiar to U.S. makers. Some are being pursued, others have been discarded by the domestic industry.

Chrysler's Walter said the competition "is finding the technology that we produced but haven't followed up on."

"Four-wheel drive, four valves per cylinder, four-wheel steering, infinitely variable transmissions — we have all done these things before," Walter said. "I worked on an infinitely variable transmission in 1952-53-54. We didn't stay with it long enough to solve the technical problems. Part of it is being willing to take enough risks and fail in order to be successful."

Compton maintained that engineering prowess is not the issue, but rather marketing and management decisions on whether a particular technology will be introduced. That decision, he added, is based on cost more often than not.

"The Japanese, by offering these innovations, are saying 'this is how we protect our market share,' " Compton said. "With the devaluation of the dollar, can they now afford to bring on these ideas? Now they are competing head-to-head (with the United States) and the question will be what value is it to the customer, how well will it work?"

Ulrich Seiffert, executive director of research for Volkswagen AG, said he feels that the Japanese, while formidable competitors in manufacturing, put innovations on cars just for innovation's sake rather than for any need demonstrated by the consumer.

"A typical example is one Japanese company that offered an electronically controlled spring damping system," he said. "The car was nearly undriveable at 110 kph (69 mph) on the autobahn.

"We never could do that at Volkswagen. People expect proven technical solutions," he said. Seiffert said the European emphasis is on what he called honest engineering.

"The car owner is a very clever customer. He will find out very soon whether something that was promised by the designer or developer is really a benefit in his own experience."

As a result, Seiffert questioned the benefit of such innovations as voice warning systems, four-wheel steering and ceramic adiabatic diesel engines.

"We did our first tests (on 4ws) back in 1976 at Volkswagen with an Audi 100, and we still have our doubts that in a car with good handling characteristics you have really an observed improvement," he said. Seiffert believes most automotive innovations, from antilock braking to electronic fuel injection, have come and will come from Europe.

The cost/benefit view is shared in the United States. Cole said one of the reasons U.S. makers seem to be behind in bringing four-valve technology and small four-cylinder, high-output engines to the market is that simpler, larger engines could do the same job at lower cost.

Robert Isenhour, an auto industry consultant for United Research, charged that the fault lies with aging management and engineering communities.

"When you consider the demographics of the American car com-

PATENT

FROM PAGE 38

panies, if you look at management, you're basically looking at the class of 1938," he said. "There is a striking compression of 50- to 60-year-old men running the companies. They tend to be conservative and resistant to change."

Although Detroit's automakers insist that things have loosened quite a bit in recent years, Walter feels that "NIH" (not invented here) remains a factor.

"The competition starts with a worldwide survey of knowledge and builds from that base," he said. "We still are tied up a little with 'not invented here.' We tend to re-invent the wheel rather than start with existing knowledge."

As a result, he said, "We don't go forward fast enough. We tend to strap ourselves."

Kim Clark, a professor at the Harvard Business School, recently told the Detroit section of the SAE that the ability to bring innovation to the market will become increasingly important.

"Not only is cost and quality an entry ticket that you've got to have, but the growing fragmentation of the marketplace and growing technical diversity means you've got to achieve that cost and quality at the same time your product structure and the structure of your technology becomes more complex," Clark said.

"It's not just a simple question of really working cost and quality in terms of meeting customer needs, but meeting the growing diversity of customer needs," he said.

Comptom believes U.S. industry has responded to those needs, especially in the area of electronics. He noted that during his tenure at Ford "we developed the first onboard electronic computers that led to the electronic engine control systems."

Ziemke and McCollum in their paper for the Sloan Management Review agreed, to a point. "The automobile industry has benefited greatly from microelectronic advances such as the invention of the microprocessors in 1970," they said. "Such developments, produced primarily for the computer and defense industries, make possible the digital ignition, emission and fuel system controls found on most American cars since 1981," they said.

However, they criticized the industry for using electronics on "gadgets — so-called electronic dashboards and other options that, though advertised intensively, are not important to the safe, efficient operation of the car."

They also said that many of the engineering innovations that came about in the 1970s — of which electronic-engine controls played an important part — were in response to government standards on emissions and fuel economy. While most of those requirements have been satisfied, Ziemke and McCollum maintained that this freed manpower should be devoted to "matching or exceeding the technical quality of the foreign competition."

While some observers believe the industry needs to rethink its attitudes toward the basic product, there is still room for leading-edge technologies to have a tremendous impact on the business. General Motors' new Magnequench process of developing a new supermagnet material that will lead to smaller starters and alternators is a step in the right direction.

But some observers believe the industry cannot rely solely on those types of breakthroughs to keep pace with the competition, especially when the competition can run faster and farther with those developments. As their own developments come on stream, they will leave the United States farther and farther behind.

"It was a seller's market for the U.S. industry for the past 60 years. Then it changed for the last 10 to 15 years," according to United Research's Isenhour.

"The U.S. industry has tried to adapt to these changes. We will never have a domestic industry where they sell 95 percent of the cars to the public. However, the auto industry is in a better position to recapture a significant share as compared to the textile or the electronics industry."

Automakers in U.S. lag in r&d funds

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The United States is keeping pace with other countries in the expenditure of funds for research and development as a percentage of gross national product.

But the automotive industry lags behind other countries in the cash it devotes to r&d as a proportion of overall spending.

According to the National Science Foundation's International Science and Technology Update for 1987, an estimated 2.7 percent of the country's GNP was spent on research and development last year. This compared with an estimated 2.8 percent each for France and the United Kingdom and 2.4 percent for West Germany. Japan spent 2.8 percent in 1985, the latest year for which figures are available.

In total dollars, however, the United States — because of the size of the economy — outspent Japan in 1984 by $47 billion. It devoted more than $77 billion to r&d compared with Japan's $30 billion. West Germany spent half as much as Japan, and France and France spent $11.5 billion.

Research and development spending on motor vehicles as a share of total spending remained relatively constant in the United States between 1970 and 1984, according to the National Science Foundation. In 1970, it amounted to 8.8 of total spending and in 1984 it was 8.6 percent.

Japan, on the other hand, significantly increased its share of motor-vehicle r&d funds, moving from 9.5 percent in 1970 to 15.7 percent in 1984. The share of motor-vehicle r&d in France and West Germany remained relatively stable. France's increased from 9.7 to 11.1 percent, while Germany's moved from 14.7 to 14.8 percent. The United Kingdom's decreased from 7.2 to 5.8 percent.

Adjusted non-defense r&d as a proportion of GNP in 1985 amounted to 1.9 percent in the United States, compared with 2.7 percent in Japan, 2.6 percent for West Germany and 2 percent for France. The United Kingdom's non-defense r&d amounted to 1.6 percent of GNP.

One factor in the smaller percentage of funds devoted to motor vehicles in the United States is undoubtedly related to the high expenditures for aerospace.

PRODUCTION

Output sub-par again

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Four General Motors plants were idle last week and auto production fell below 150,000 for the second straight week.

Last week's output totaled 149,777 cars, 1.79 percent more than the previous week's 147,143.

The week's build was 11.03 percent below the year-ago week's 168,337.

Companies split last week's estimated build as follows: GM, 46.86 percent; Ford Motor Co., 27.39 percent; Chrysler Motors, 14.96; Honda of America Manufacturing Inc., 4.47 percent; New United Motor Manufacturing Inc., 2.50 percent; Nissan Motor Manufacturing Co., U.S.A., 1.98 percent; Volkswagen of America, 1.34 percent; and American Motors, 0.50 percent.

GM's Fiero plant in Pontiac, Mich., and its Willow Run, Mich., plant are expected to resume output Tuesday (May 26). Both plants were idle last week for inventory adjustment.

As previously reported, GM's Arlington, Texas, and Fairfax, Kan., plants are down for model changeover.

The Arlington plant is expected to resume operations Sept. 14, and the Fairfax facility is slated to return Oct. 19.

GM will close plants for one week in Willow Run (June 15); Wentzville, Mo. (June 1); Norwood, Ohio, and Tarrytown, N.Y., (June 8); and Oklahoma City (June 22) to adjust inventories.

No Saturday (May 23) overtime was scheduled because of the Memorial Day weekend.

Saturday (May 30) overtime is scheduled for Ford's Kansas City plant.

Daily overtime is slated this week at Chrysler's Newark, Del.; Sterling Heights, Mich.; and St. Louis (No. 1) plants.

All assembly plants are closed today (May 25), Memorial Day.

Trucks slip from 17-month high

After reaching a 17-month high, U.S. truck production slipped to 78,280 units last week. It was 4.47 percent below the previous week's 81,941, which was the highest total since the week ended Dec. 14, 1985, when 83,892 trucks were assembled.

Last week's output was 3.64 percent more than the year-ago week's 75,528.

Saturday (May 30) overtime is scheduled for Ford Motor Co.'s Norfolk, Va., and Louisville, Ky., plants.

No overtime was slated last Saturday, and all plants are closed today because of Memorial Day.

Holiday cuts Canadian schedules

Production of cars and trucks in Canada dipped last week as assembly plants worked only four days because of Victoria Day (May 18).

Scheduled production of 14,237 cars was 12.33 percent below the prior week's 16,239 and 28.33 percent below the year-ago week's 19,865.

So far this year, 328,962 cars have been produced, 29.84 percent less than the 468,904 completed last year at this point.

Truckmakers scheduled production of 15,440 units last week, 6.55 percent below the prior week's build of 16,522 and 6.16 percent below the year-ago week's 16,454.

Year-to-date, 325,992 trucks have been built, 15.12 percent less than the 384,075 assembled last year at this time.

General Motors' Ste. Therese, Quebec, plant resumed operations May 19. The plant had been idle for model changeover to A-body cars.

GM contract at Van Nuys beats threat

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

VAN NUYS, Calif. — Production of Chevrolet Camaros and Pontiac Firebirds under a Japanese-style contract began here last week, despite efforts by dissident UAW workers to obtain an injunction preventing implementation of the work-rule changes.

UAW Local 640 President Peter Beltran and three others, acting as individuals because the membership had ratified the local agreement, had sought a permanent injunction against implementing team-concept methods. A Superior Court judge denied the request.

Joe Garcia, the local's financial secretary, said the injunction was sought in connection with "GM's breach of contract." Garcia said General Motors promised a new product for Van Nuys in exchange for the agreement but the plant has not been awarded a new product.

Garcia said the judge did did not rule on the merits of the suit. A hearing is scheduled for May 28.

The work-rule changes reduce the number of job classifications from more than 60 to four and give workers more responsibility to maintain and improve quality.

A joint-training committee composed of hourly and salaried employees worked on the changes for 12 months, a GM spokesman said.

Garcia said the state of California gave GM $20 million to retrain about 4,800 hourly and salaried workers for team production at Van Nuys.

He said that team production here is patterned after the system at New United Motor Manufacturing Inc., the GM-Toyota joint venture in Fremont, Calif.

GM has recalled the second shift at the Van Nuys plant, as it had pledged to do if the team-concept contract was approved.

Stamping plant for Mazda due in Michigan

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

Mazda Motor Corp., of Hiroshima, Japan, is forming a joint venture with three Japanese suppliers to build a stamping plant in southeastern Michigan. The facility will serve Mazda's new auto assembly plant in Flat Rock, Mich.

The assembly plant, operated by Mazda Motor Manufacturing (USA) Corp., is scheduled to begin production this fall.

The stamping plant will supply a broad range of small stampings in late 1989, a Mazda Motor Manufacturing spokesman said. The initial supply of small parts such as body-side pillars and cross members will come from Japan.

Mazda altered its original plans to import small stampings from Japan because of the yen's appreciation, the spokesman said.

The three suppliers entering into the joint venture with Mazda are Yamamoto Kozai, Ondo Kosakusho and Miura Kogyo. Mazda owns 33 percent of Miura. Those firms already supply Mazda in Japan.

When full capacity is reached at the Flat Rock assembly plant, it will produce 240,000 cars a year. The volume will be split between Mazda and Ford Motor Co.

GMC, Chevy to combine marketing

GMC takes reins on medium trucks

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

General Motors in an unprecedented move is streamlining its medium-duty truck operations by having GMC Truck Division take over all the sales and marketing responsibilities of those vehicles for Chevrolet.

Specifically, GMC will handle the marketing, sales promotion, advertising, service and warranty, sales and service training, dealership contacts, order processing, truck distribution, fleet sales and used-truck programs, dealer leasing and financing programs and dealer organization and planning activities for both Chevrolet's and its own medium-duty models.

As part of the reorganization, McCann-Erickson, GMC's advertising agency, reportedly will also assume the medium-duty ad account previously handled by Chevrolet's Campbell-Ewald agency.

The moves affect 966 Chevrolet and 660 GMC medium-duty truck dealers and are being phased in over the next month.

Saturn details dealer plans

100 by 1990 intro; pact gives retailers strong voice

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

TROY, Mich. — General Motors' Saturn Corp. will select a limited number of dealers for each geographic territory, and those dealers will be allowed to have multiple locations, including sites in shopping centers and office complexes.

Saturn President Richard LeFauve said the division will have 100 dealers in 30 major markets when the Saturn car is launched in 1990. The initial markets will be primarily on the East and West coasts and major cities in between, including Houston, Dallas, Chicago, Detroit and Atlanta.

Saturn will add dealers as production at the Spring Hill, Tenn., assembly plant increases. A second shift will be added at the end of the first six months of production. The plant will be able to produce 250,000 units a year. Two-door and four-door models are planned.

At the end of the first six months of production, Saturn is expected to have 200

Toyota plans new division, upscale cars

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER
Copyright, 1987, Automotive News

LOS ANGELES — Toyota Motor Sales will announce later this year a second, upscale U.S. car-sales division. It will be similar to American Honda's Acura line, though there will be differences.

Toyota has already identified 100 key Toyota dealers who will get first shot at the unnamed new franchise. It will open the 1989 model year with three luxury-performance car lines, said sources within the industry and Toyota. Formal announcement could come as early as this summer.

Like Acura, Toyota will establish a separate marketing and advertising entity, staff the new division from within, introduce larger, more powerful and more expensive products, and eventually set up about 250 to 300 new dealer franchises.

Unlike Acura, Toyota may drop requirements that new dealers establish separate facilities in favor of shared service and different showrooms because of widespread dealer concern over costs.

Nissan Motor Corp. in U.S.A., which has been studying a similar move for years, is considered likely to follow quickly, although some sources believe Nissan does not need a second distribution channel yet and is less financially prepared than Toyota and Honda.

"Every company in the industry periodically looks at its distribution network to see what efficiency improvements it can make," a Nissan spokesman said. "No decision has been made yet. Whatever we do, we already have a good dealer network. We wouldn't want to undercut that."

Nissan Motor Co. is planning to market a low-volume car jointly developed and produced by Zagato S.p.A. of Milan, Italy, and Autech Japan, a Nissan subsidiary. The car is expected to sell for more than $70,000; annual production will be less than 100 units.

At least one, and possibly two, of the new Toyota division's models will be equipped with V-8 engines under development by Toyota. The division, with prices likely to start about $15,000 to $17,000 and go to the high-$20,000 range, will be positioned slightly above Acura but aimed more at European and American luxury cars.

Toyota's second channel is unlikely to slow Acura's progress toward an announced sales goal of 250,000

PART WARS

U.S. automakers blast gains by aftermarket sheet metal

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

"Parts is parts" says the character in a recent fast-food television commercial. But when it comes to the sheet metal body parts used to repair wrecked autos, auto manufacturers claim theirs are better than those manufactured by independents overseas.

Distributors of the aftermarket sheet metal counter that the auto manufacturers are complaining only because low-priced aftermarket parts are cutting into a lucrative OEM monopoly.

The sheet metal aftermarket has grown from virtually nothing to five percent of the crash-parts industry in three years.

Auto manufacturers claim its rapid ascent is the result of unfair pressure from insurance companies demanding that body shops use cheaper, inferior, "imitation" crash parts.

Insurance companies, on the other hand, claim the lower priced aftermarket sheet metal has forced automakers to cut their prices on crash parts as much as 60 percent.

At the heart of the controversy is one question: Are OEMs trying to maintain a monopoly in this lucrative segment, or do they have a legitimate beef against the pricing and quality of the newcomers?

The OEMs say they cannot compete with low costs due to shoddy production techniques used by aftermarket manufacturers — mostly based in Taiwan,

GM, dealers try regional rebate

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

In a 10-week pilot program, selected owners of General Motors cars and light trucks in four market areas are receiving cash rebates of $200 to $1,500 in addition to other incentives if they purchase a 1987 or 1988 GM car or truck.

GM is evaluating the program for a national rollout if it is successful. GM said it wants to determine how consumers respond to a direct-mail incentive program.

Although some dealers speculated that the new program might be the basis for a cleanup incentive on the 1987 models, a GM spokesman replied "absolutely not" when asked if that were the case.

GM also has extended all other incentive programs — both rebates and low-interest loans — until June

Hail and farewell at Ford Design

Kopka details a 'golden era' after 3 decades of evolution

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

While Donald F. Kopka views the 1980s as the launch of a golden era of automobile design, the last three decades have marked an evolution he's glad he witnessed.

The 60-year-old vice president steps down from his job as head of Ford Motor Co.'s Design Staff today. And though the automaker and its designers are riding a crest of success, Kopka says he'd rather be ending his career now than starting it.

"The era that I came through was probably the most exciting," says Kopka, who began his career as a styling trainee with Chrysler in 1950 and joined Ford in 1964. "There was so much change. It was kind of wild and fun in the old days, and I wouldn't have traded that for anything."

He concedes that the U.S. auto industry created some abominations in the name of styling during the era of chrome and tail fins, but it turned out some gems too. In Ford's case, he points to the 1949 Ford and the first Thunderbirds and Mustangs of the following decades.

The 1970s, in comparison, were hostile to design, he says. The art of shaping a car was sacrificed to the demands of fuel economy, emission controls and crash regulation. But the period also paved the way for Ford's current prosperity when the automaker first began using wind tunnels to improve fuel efficiency, Kopka says.

Ford's aerodynamic design had its roots in the demands for a car that would meet less resistance as it cut through the wind. And in Kopka's view, further refinements of that shape will lead to landmark changes in the way cars are built.

"I've called it a gold mine, and the fact is, we've hardly gotten into the thing," he says. "For the next 15 to 20 years, there's going to be gold mined through the application of aerodynamics."

He ticks off some other advantages: Aerodynamics will virtually eliminate noise. Cars will hold the road better when angled toward the ground. Even glass will stay cleaner.

With the changes will come some new ways of building cars. Radiators will be moved to the rear so

Telnack, apostle of aero look, pledges more styling advances

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Jack Telnack, the designer credited with bringing the aerodynamic look to Ford Motor Co. cars, promises that the company will be nudging conventional thinking about design for years to come.

The 49-year-old Telnack takes over as head of Ford's worldwide design staff today (June 1). As chief design executive for Ford's North American Design Department since 1980, Telnack has his signature on such models as the 1983 Thunderbird and the Ford Taurus and Mercury Sable — cars that have played a big role in reviving Ford's image and its fortunes.

His new job "will be a continuation and expansion of what I've done in North America," said Telnack, who replaces the retiring Donald F. Kopka. "My main role and mission has been to build a design environment that will allow our design teams to express themselves creatively. That is my whole reason for being — I must stimulate the creative spirit throughout the entire organization."

Such ambitions for a design chief are a far cry from Telnack's earlier days at Ford, which he joined in 1958. "I was turning into a vegetable," he said, recalling the era when designers were known for decorating with chrome. Telnack moonlighted as a boat designer to keep himself challenged.

Now design has been elevated to new heights at Ford, and Telnack is relishing the chance to stay in the limelight at a new peak in his career.

He will be overseeing the work of Ford's 1,000 design employees in eight centers worldwide, in England, West Germany, Italy, Japan, Australia, Brazil and two centers in the United States.

He, Chairman Donald Petersen, President Harold Poling and Vice Chairman William Clay Ford put their stamp of approval on designs as they make their way toward production. Although Ford management is considered unusually receptive to innovation, Telnack's job will be to condition their thinking and make sure that new ideas get a fair shake.

Telnack also plans on being a catalyst to increase the flow of ideas between design centers. As the company and the industry become more global, Ford can profit from "cross-pollinating" concepts and design-

Italian design house IDEA eyes U.S. site

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

TURIN, Italy — IDEA, Italy's rapidly growing design and engineering house, may establish a branch and possibly a production facility in the United States before the end of the decade.

Unlike two of its main Turinese competitors, Bertone and Pininfarina, nine-year-old IDEA (Institute for Development in Automotive Engineering) is not currently a specialist producer.

But coachbuilding may be in the company's future. President Franco Mantegazza said IDEA had studied the possibility of acquiring two different Italian body builders, though ultimately it rejected both.

He said the company also has been encouraged by an unnamed American client to set up a factory in the United States. "I'm more interested in building up a facility to produce cars in the States than in Italy for a lot of simple reasons," said Mantegazza. He cited higher taxes in Italy and more difficult relations with Italian labor unions.

The relatively unknown IDEA has been instrumental in styling Fiat's upcoming Type 2/3 replacements for the Ritmo hatchback and Regata sedan, and has been heavily involved in other future Fiat and Alfa Romeo products. With Fiat and Alfa Romeo now joined, the majority of IDEA's business is with the Fiat group.

Though none of IDEA's styling creations are yet on the road, it is expected to have nine of its designs in the market by 1990, including six Fiat models and three Alfa Romeos. The company has also styled the Ferrari 408 4x4, a concept car which Ferrari has said is not scheduled for production.

IDEA officials say entering the coachbuilding realm will not be a high priority for the next two years. "We have enough trouble to keep pace with a company growing 40-50 percent a year than to add the other big problem of forming a manufacturing capability," said Marzio Raveggi, head of business development. "I think we should stabilize a little bit."

"I am still fishing around for the right solution," Mantegazza added.

Of the two Italian bodybuilders IDEA considered buying, Mantegazza said he was skeptical about the organizational strength of one and said the other was rejected because of limited manufacturing capacity.

"It was too small and too big at the same time," he said. "The maximum you could make was 2,000 bodies per year and it is not enough. But it is too big to begin slowly and to develop."

Mantegazza, whose family is sole owner of IDEA, said he halted earlier consideration of a U.S. production facility after it no longer fit the needs of the client that suggested it. Furthermore, he said IDEA was not sure whether to buy an existing company or build up a new operation.

IDEA is also interested in forming an operating arm in the United States "if business will pick up," Raveggi said.

Neither Pininfarina nor Bertone has styling or engineering centers in the United States, preferring to remain based in Turin.

On the advice of "some of my American friends," Mantegazza said he considered locating an IDEA branch in California. Several automakers have established styling studios in southern California, site of most key American design schools. But Mantegazza is now convinced that such an operation should be in Detroit.

The company is looking to boost its American business substantially in the very near future. It currently has a three-person sales office in Warren, Mich., that serves as a liaison with IDEA's Detroit clients, including General Motor's Buick-Oldsmobile-Cadillac and Chevrolet-Pontiac groups, Fisher Body and Chrysler Motors .

"We are now speaking about new products with General Motors but we have to wait for an answer from Detroit," Mantegazza said. He declined to elaborate on the pending deal.

Beyond styling, IDEA's range of services include body and chassis engineering, manufacturing engineering (including die design and alternative materials activity), computer-aided design, electronics applications, and model and prototype construction.

IDEA would like to increase its North American revenues to 10-12 billion lire ($7-9 million) by 1989-90, thereby reducing dependence on Italian revenues to 30-35 percent of the total.

With a workforce of 190, IDEA's sales revenue in 1986 totaled over $12 million, up from about $7 million the year earlier. The company expects sales of more than $18 million in 1987.

Six import execs to address World Congress

So far this year, imports have accounted for more than 28 percent of the U.S. new-car market.

Imports will also get their share of attention at the 12th annual Automotive News World Congress, to be held July 26-29 at the Hyatt Regency in Dearborn, Mich.

This year's overall Congress theme is "Facing Up to Competitive Times."

Six speakers with import ties are scheduled to appear on this year's program: Robert J. Sinclair, president, Saab-Scania of America Inc.; Norman Braman, chairman, Austin Rover Cars of North America; William Prior, president, Global Motors Inc.; John E. Reilly, senior vice president, American Isuzu Motors Inc.; Charles Hughes, president, Range Rover of North America Inc.; and Michael Kimberley, managing director and chief executive officer, Group Lotus.

Sinclair, who is also board chairman of Saab-Scania of Canada Inc., will speak at the Tuesday Evening Gala dinner on July 28.

Prior, Reilly and Kimberley will be general session speakers on Tuesday morning, when the day's theme will be the "Impact of a Global Perspective."

In addition to his responsibilities as president of Global Motors, Prior is president of its subsidiaries Yugo America Inc. and Proton America, which plans to import the Malaysian-built Proton Saga early next year.

On Monday, July 27, when the day's theme will be "Recoveries and Strategies for the Domestic Industry," Braman will address a General Session on the topic, "Bringing a New Car to Market." Hughes, whose Range Rover also is new to U.S. shores, will speak at an afternoon workshop, focusing on "How Specialty Vehicles Fit in the U.S. Market."

Braman's company is importer-distributor of the Sterling, a British luxury sedan.

In all, the Congress will have more than 30 speakers, sharing their knowledge and viewpoints on where the auto industry stands today and where it is headed.

GM narrows CAD/CAM candidates

By Jake Haas
SPECIAL CORRESPONDENT

General Motors is attempting to consolidate its computer aided design/computer aided manufacturing (CAD/CAM) hardware base by standardizing its design systems around three "strategic partners."

GM is in final negotiations with the five finalists of a 27-company field. To select the partners, GM and its Electronic Data Systems subsidiary have written a 400-page specification detailing the automaker's CAD/CAM requirements. Despite its length, the document is considered an excellent and realistic detailing for a large integrated CAD/CAM system.

GM-EDS and the finalists are mum on the final talks, except for a comment by an EDS spokesman that two more firms will be eliminated.

The five finalists are Cadam Inc., a subsidiary of French aircraft builder Dassault based in Burbank, Calif.; Catia, Los Angeles; Computervision Corp., Bedford, Mass.; Intergraph Corp., Huntsville, Ala.; and McDonnell Douglas Corp., St. Louis. IBM is involved indirectly: It distributes both Cadam and Catia software for its computer products.

GM already has one of the largest and most sophisticated CAD systems in the world with approximately 22,000 workstations. A CAD system of GM's own design accounts for about 35 percent of the stations. However, products from a wide variety of other vendors, including the finalists, are scattered throughout the company.

GM is seeking compatibility and integration of those diverse systems and its home-grown system. The CAD/CAM systems are also expected to be compatible with GM's manufacturing automation protocol/technical-office protocol (MAP/TOP) plant/office networks as the automaker continues its automation drive toward computer integrated manufacturing based on company-wide database and engineering exchange.

$7 million HFX Ghia Aerostar

AUTOMOTIVE NEWS/JOE WILSSENS

An Aerostar for future

Concept vehicle loaded with electronics

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — Ford Motor Co. and 17 of its outside suppliers have created a $7 million concept vehicle, called the HFX Ghia Aerostar.

It is a test bed for determining the "feasibility and practicality" of a variety of new electronic safety, performance and comfort features for future light trucks.

Donald F. Kopka, who retires today (June 1) as vice president — Design, predicted that many of the concept vehicle's features will be "standard equipment in light trucks of the future," but he wouldn't hazard a guess as to which ones will show up when.

Charles A. White, chief engineer, Ford light-truck chassis engineering, said that "four-wheel steering bears watching and investigating, and Ford Motor Co. is working on that."

He also said that, with rear anti-lock brakes on 700,000 Ford trucks in the 1987 model year, "expansion to a four-wheel anti-lock brake system would, I think, be an easier thing to do than some of the things farther down the road, such as sonar."

The vehicle has a sonar system that alerts drivers to adjacent vehicles and is a help in parking.

The concept vehicle, a joint effort by the Ford Design Staff in Dearborn and its Ghia Studios in Italy, took 27 months to complete and incorporates 26 on-board computers monitoring various functions.

Its features include a "driver personality key" that automatically sets the driver's seating position and the positions of the mirror, brake and accelerator pedals and safety-belt shoulder strap when the driver inserts the key in the door lock.

The brake and accelerator pedals can be adjusted as much as four inches to accommodate shorter- or longer-legged drivers.

The Ghia Aerostar also has an air suspension system similar to that on the 1987 Lincoln Mark VII and Continental.

The vehicles' grille louvers react automatically to engine temperature. They're closed during cold starts and they open as the engine coolant heats, providing air flow.

Special inside and outside mirrors, with an electrochromic cell, adjust automatically to different light conditions to eliminate glare.

Liquid crystal technology allows the driver to adjust the rear and side windows from clear to dark for privacy.

The vehicle also has four-wheel disc anti-skid brakes, a sonar system and "run-flat" tires and wheels.

Other features include a liquid crystal diode liftgate message display with pushbutton controls. A driver can run seven different messages, like "send help" and "do not pass" across the back of the tailgate.

Ford officials said they plan to display the vehicle at an auto show in Chicago and also at the show in Frankfurt, West Germany.

Top officials at AMC to get year's pay if not hired by Chrysler

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

American Motors' top 125 executives will be guaranteed one year's salary if they are not hired by Chrysler Corp. after Chrysler acquires AMC.

Other AMC salaried employees set adrift by the merger will receive separation packages ranging from several months' pay to one year's salary, depending on length of service, according to an AMC spokesman.

AMC would not disclose the formula it will use to compensate those employees.

No employee will receive more than one year's salary under AMC's Salaried Retention Program, eliminating any "golden parachutes" for high-ranking AMC executives not retained by Chrysler, according to an AMC spokesman.

Golden parachutes are multifaceted separation packages that provide salaries, benefits and even bonuses for several years. They are common in mergers.

All 5,700 AMC salaried employees will receive information packets this week detailing what options are available to them if they are not offered jobs at Chrysler. An AMC source said the packets will detail the dollar compensation, based on length of service, that all salaried employees not retained by Chrysler will receive.

According to an AMC spokesman, the automaker's 1986 payroll for salaried employees totaled $231.5 million and the payroll for all employees was $610 million. AMC had 5,715 salaried employees and 15,765 hourly employees as of April.

At a meeting of AMC's 125 bonus roll employees last Wednesday, Chrysler Motors Chairman Gerald Greenwald said the impending Chrysler buyout of AMC is a "merger, not a dismantling" of the company. The meeting was held at a New Hudson, Mich., conference center and was closed to the press.

One attendee, who wished to remain anonymous, said Greenwald took a very "humanistic" approach to the AMC employees' feelings about the impending merger and "helped to put everything (about the merger) into perspective." Greenwald, according to the source, discussed what events typically take place in a merger, but did not detail how many AMC employees would be retained by Chrysler.

The AMC acquisition comes as Chrysler is trimming its own white-collar workforce through attrition. Chrysler said it plans to institute a white-collar hiring freeze, limit merit pay for its top 1,800 executives and cut overtime pay for 5,200 salaried employees.

Those steps are part of a plan to slash Chrysler's expenses by $500 million by the end of 1987.

Those attending Wednesday's AMC bonus-roll meeting were told that employment opportunities at Chrysler would not be discussed until after the merger is consummated — or in about 90 days. Chrysler said it would like to complete the $1.5 billion buyout by Aug. 15.

No outplacement firms have been hired by AMC to locate new jobs for employees not retained by Chrysler, according to the AMC spokesman. However, AMC has hired R.E. Harrington Inc., Columbus, Ohio, to handle its unemployment compensation accounts with state agencies. The firm oversees the company's unemployment compensation account with individual states to be sure claims are handled correctly.

Robert Parker, Harrington president said compensation packages received under a merger situation may delay the payment of unemployment benefits to a non-retained employee. He added that the domestic automakers have adequate unemployment funding with the states to cover large layoffs or terminations when needed.

Study says import breakdowns top domestics

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

A researcher says European and Japanese cars are breaking down on New York-New Jersey highways at a rate nearly 50 percent higher than domestic makes.

Amar Dev Amar, associate professor of management and industrial relations at Seton Hall University in South Orange, N.J., said his study of comparative breakdown rates by make "indicates that certain makes had much higher rates of highway breakdowns than others." An independent analysis of Amar's data conducted by Automotive News supports those findings.

Comparing all makes of cars — domestic and foreign — Audi, Volkswagen and Nissan topped the list for highway breakdowns, according to Amar. Renault, Ford and Toyota were next.

Amar's study, which searched New York and New Jersey highways for vehicle breakdowns in 1985 and 1986, found Audi breakdowns five times as often per 100,000 vehicles registered in those states as the rate for Mazda and Subaru.

Imports did not fare well in the overall study. On the average, Japanese cars had a breakdown rate 25 percent higher than that of domestic vehicles. European cars broke down 30 percent more often than Japanese cars and nearly 70 percent more often than domestic cars.

Oldsmobile had the lowest breakdown ratio of all vehicles in the survey — 4.7287 per 100,000 registrations — and was used as the index by which comparisons with other vehicles were made. (Mazda showed a slightly lower rate of breakdowns than Oldsmobile, and Subaru showed the same rate, but they were not used as the standard because of their low penetration in the marketplace.)

According to the study, when compared to Oldsmobile, Honda had a 48 percent greater likelihood of breaking down; Mercedes-Benz, 56 percent; and Fiat, 90 percent.

In the domestic-car sampling, Ford fared the worst with a 119 percent greater likelihood of a breakdown than Oldsmobile. Cadillac followed at 97 percent, Pontiac at 94 percent and Lincoln at 86 percent.

Buick was less likely to break down than either Plymouth or AMC. And in the luxury class, both BMW and Mercedes were less likely to break down than Cadillac.

Amar said he undertook the study because the probability of a highway breakdown should be a consideration when consumers buy a new car. He said the survey was not financed by any outside organization. Data was gathered by Seton Hall University personnel.

Researchers collected data on 953 highway breakdowns of passenger cars on New York and New Jersey highways during 11 months from the summer of 1985 to the spring of 1986.

The study consists of 33 domestic and foreign makes of cars and more than 100 car models.

Findings are based on a comparative study of make, model and country of origin for passenger cars discovered disabled on the highway by the data collectors. Breakdowns caused by flat tires or running out of gas were not included.

Amar calculated the number of breakdowns for a specific make of car against the number of registered vehicles of that make in New Jersey and New York, then converted the number to a ratio per 100,000 registered vehicles.

The study does not measure or compare vehicle maintenance, age of the vehicles, mileage, or engine and component wear.

Amar said his findings should be relevant nationally because the New York-New Jersey area has a car population 79.4 percent domestic and 20.6 percent foreign, compared with a similar nationwide population of 78.8 percent domestic and 21.2 percent foreign.

The American Automobile Association in Washington said it was not aware of any similar studies. But Amar said he plans another identical study this summer.

HIGHWAY BREAKDOWN INDEX

	SAMPLE SIZE	INDEX
Audi	15	5.42
Volkswagen	59	3.99
Nissan/Datsun	67	3.35
Renault	3	2.96
Ford	137	2.19
Toyota	49	2.16
Cadillac	89	1.97
Pontiac	71	1.94
Fiat	8	1.90
Lincoln	11	1.86
Chevrolet	189	1.79
Dodge	47	1.76

All-leather trail blazer
Concepts Automotive, Mishawaka, Ind., has introduced a Custom Leather Edition of the Chevrolet S-10 Blazer, a package also available on the GMC S-15 Jimmy. For a dealer cost of $2,800, the package features full-leather front and rear seats; leather door inserts and rear-quarter trim panels; leather-wrapped steering wheel; and special wheels, tires and paint design.

Van Masters' new mini conversion package
Van Masters, Columbus, Ohio, offers its new Star Van luxury conversion on Dodge, Chevrolet and Ford minivans. The conversion features an American Sunroof Corp. electric, retracting and venting sunroof; compact disc player; and lower body molding. Van Masters, a consignment pool company, said it can finish a Star Van within 10 days of receiving the raw unit from a manufacturer.

New Vixen model
Vixen Motor Co., Pontiac, Mich., has introduced a 1988 Vixen XC model. The new vehicle, although sharing the aerodynamic outward design and engineering components of the Vixen 21, is more of a "grand touring" vehicle. It does not have cooking or shower facilities and, although it can be slept in, the internal design is geared toward executive and salesperson-type transportation and tailgate-party use. The new model, with a manufacturer's suggested retail price of $34,990, is designed to compete more in the luxury van conversion market than the motor home market.

Cozy Craft revamps van line
Cozy Craft Vans, a division of Travelcraft Industries, Elkhart, Ind., redesigned the interiors of its All Star and Tourist van conversions with touches like plush highback recliner-swivel chairs, a rear overhead console and oak decoration. It also has a new Elegante model, featuring six-way power driver's seat, Euro-style highback recliner-swivel chairs and designer door panels.

RV shipments increase 11%

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Wholesale shipments of recreational vehicles climbed 11.1 percent in March, continuing a steady, strengthening trend.

March shipments totaled 39,100, up from 35,200 in the year-earlier period, according to the Recreation Vehicle Industry Association.

First-quarter shipments of 102,200 were up 4.0 percent from 98,300 last year, according to the RVIA.

Customized van shipments are beginning to rebound. Shipments of 17,700 in March were up 4.1 percent from 17,000 in the same period of 1986.

For the first three months of this year, customized van shipments totalled 46,400, off 4.1 percent from 48,400 in the same period last year.

Ford dealers have stocked a record number of customized vans for the retail market, reflecting their optimistic outlook, according to Dave Tarrant, Ford Division RV/OEM sales manager.

Wholesale shipments of other RVs also were up in March.

Truck camper shipments totaled 1,200 in March and were particularly strong, showing a 71.4 percent increase. Their three-month tally of 2,500 was up 56.3 percent from a year earlier.

Similarly, van camper shipments totaled 500 in March and were up 66.7 percent from a year earlier. Their three-month total of 1,600 was up 23.1 percent from a year ago.

Meanwhile, industry suppliers, such as ITT Commercial Finance Corp., of Clayton, Mo., see a strong market for the balance of the decade. ITT Commercial, one of the larger companies specializing in RV dealer floorplanning, monitors retail and wholesale liquidation and volume.

The company cited such positive factors as tax reform, which is expected to create more discretionary income; baby boomers entering the prime RV-buying years; stable or declining RV manufacturing costs, which are expected to hold down new-vehicle prices; and increased acceptance of the RV lifestyle.

ITT considers RV dealers and manufacturers to be generally prudent and financially sound. The RV industry accounts for about 10 percent of its total commercial lending.

Recreational Vehicle Wholesale Deliveries

	March 1987	March 1986	% change	3 months 1987	3 months 1986	% change

RVIA schedules space drawings

RESTON, Va. — The Recreation Vehicle Industry Association has set exhibitor space drawing dates for its two biggest shows and also has scheduled meetings to discuss new manufacturing standards.

The drawing for exhibit space at the RVIA's 1987 National RV Trade Show in Louisville, Ky., will be held June 30 at its headquarters here.

Manufacturer space assignments will be made through a lottery system, starting at 9:30 a.m., according to Steve Krivian, director of corporate marketing services for Thor Industries, Jackson Center, Ohio, and chairman of RVIA's 1987 Louisville Show Committee.

The first draw will go to RVIA members with six years' seniority as participants in the show, the second draw to all other RVIA members and the third to non-member exhibitors.

Due to heavy demand, space will be allocated to manufacturers.

Each manufacturer's allocation will be based upon the amount of its contribution to the total revenue RVIA received in fiscal 1986 for membership dues and on the purchase of seals and manufacturer certificates of origin which RVIA sells.

Non-RVIA members and new members are limited to 1,000 net square feet of space under the allocation system.

Supplier space assignments will be made immediately after all manufacturer space is assigned, using the established seniority system combined with the lottery system.

RVIA's National RV Show, now in its 25th year, is expected to draw more than 12,000 RV dealers and other industry officials to the Kentucky Fair and Exposition Center in Louisville, Dec. 1-4.

Meanwhile, drawings for supplier and manufacturer exhibit space at the RVIA's 35th annual RVIA Recreation Vehicle Show in Los Angeles will be held July 29 and 30, respectively.

Both drawings will be held at RVIA's Western region office in Orange, Calif., beginning at 9 a.m. each day, according to Bob Lee, president of Country Coach Inc., Junction City, Ore., and chairman of the Los Angeles show committee.

As for the Louisville show, supplier and manufacturer space assignments will be made through a lottery system, with RVIA members with six years' seniority as show participants getting the first draw, other RVIA members the second and non-member exhibitors the third.

Suppliers and manufacturers who plan to exhibit in the show must send a completed application and 50 percent deposit to RVIA's Western region office by July 23 to be included in the space assignments on July 29-30.

Firms whose applications with deposits are received after that date will be assigned space after all other requests for space have been filled.

Meanwhile, the RVIA will hold a series of meetings in Indiana and California in June to discuss forthcoming changes in the American National Standards Institute's 1987 edition of the National Standard for Recreational Vehicles and the 1987 National Electrical Code.

In both Indiana and California, the association has scheduled a one-day standards seminar, followed by a general membership meeting, reception and dinner, according to RVIA chairman Don Cuzzocrea, president of Starcraft, a Lear Siegler Co. in Topeka, Ind.

The Indiana meetings will be held June 16, beginning with a standards seminar in South Bend and a later general membership meeting and reception in Elkhart.

The California meetings will be held June 18 in Anaheim.

NEW LOOK: *Dealer 'professionalism' to be stressed at RVDA convention in New Orleans*

FAIRFAX, Va. — In an era of tough selling and scarce service personnel, the Recreation Vehicle Dealers Association is planning a "new look" at its convention and exposition.

The event will be staged Sept. 27 to Oct. 1 in New Orleans.

The event's theme, "A new look in New Orleans," is designed to emphasize the growing professionalism of dealers in accommodating customers in what has become a $12 billion industry.

For the first time, RVDA will provide a showcase for manufacturers and distributors of products (other than rolling stock) that are required to operate an RV dealership professionally.

Jerry Harrison, RVDA show chairman, said the event is planned to assist not only dealer owners, but second-level management as well, including sales, service and parts managers.

Two educational sessions and a new exposition will emphasize merchandising and marketing of RV parts, accessories and service.

Nearly 1,000 aftermarket dealers not previously included in RVDA conventions are being invited to attend the New Orleans meeting.

The exhibition, which includes rolling stock, will give exclusive attention to parts and accessories, office systems and shop tools and equipment.

Engine toll is heavy at Indy 500

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

The echoes of powerful Indy 500 race engines had hardly faded over Speedway, Ind., when at least two broken powerplants were being flown back to their builders for diagnosis and repairs.

Those two were Chevrolet mills from the cars of Rick Mears, who finished 75 laps, and Danny Sullivan who finished 160 laps. The preliminary diagnosis on both engines was "massive lower end failure," which meant troubles in the crankcase area.

Mario Andretti's Chevy engine experienced failure of a component in its fuel metering unit after 180 laps of the 200-lap race. He was leading at the time. Andretti reported the problem caused extremely erratic fuel delivery. Chevy engines in cars driven by Kevin Cogan and Emerson Fittipaldi failed after oil pump castings cracked. Cogan completed 21 laps and Fittipaldi 131.

In the Chevy Indy engine, each of the eight cylinders has its own oil pump. A car driven by George Snider and powered by a stock-block Chevy engine, experienced a fire before completing a lap.

Honda powerplants were in two racers but neither had factory support, either technical or financial, Honda said.

Jeff MacPherson drove one of the Honda-powered cars to finish in eighth place with 182 laps. Geoff Brabham in the other finished 71 laps before pulling off the track when instruments indicated the engine was about to fail.

Later, it was determined the instruments were wrong and no failure was approaching.

There were four six-cylinder Buick engines in the race and none completed the Memorial Day classic.

One was in the racer driven by Rick Sneva, which crashed after 143 laps.

Gordon Johncock and Rich Vogler over-revved their Buick engines, valves broke and the cars were out of the race. Tachometers peg at 10,000 rpm and aren't built to take more than that, Buick engineers said.

Johncock said his over-revs came at 76 laps when the throttle stuck. Vogler's occurred on lap 109 when the tires suddenly lost their traction. Before the driver could hit the clutch, the damage had been done.

Derek Daly completed 132 laps with Buick power. Early in the race, one of his car's twin turbochargers stopped working. That caused an increase in pressure and rising heat and a piston cracked.

Al Unser Sr. won the race in a March-Cosworth. He finished 4.4 seconds ahead of Roberto Guerrero in another March-Cosworth. Unser averaged 162.175 mph.

Iacocca, Shelby share pace-car duties
Lee Iacoeca, left, Chrysler Corp. chairman, and Carroll Shelby, performance-car builder and former race driver, shared pace-car duties at the Indianapolis 500. Shelby drove the official pace car, a 1987 LeBaron convertible with a 2.2-liter intercooled turbocharged engine. Iacocca rode in the LeBaron convertible that was the first parade car.

Sales dip 15% for May 11-20

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

Sales of new cars built in the United States fell sharply from the year-earlier total in mid-May.

Retail deliveries for the May 11-20 period tumbled to 221,127 units, down 15.50 percent from 261,680 last year.

The fall occurred despite widespread sales incentive plans. At the same time, there were reports of mounting buyer and seller disenchantment with those plans. The plans are being called too complex, confusing and stale.

American Motors reported that mid-May sales fell 58.18 percent from last year. General Motors said sales dropped 30.05 percent, and Volkswagen said sales were down 19.68 percent. Chrysler Motors' sales were off 14.20 percent.

Nissan reported that it sold 22 times as many cars this year as it did last year. Nissan's U.S. car assembly line was down for model changeover at this time last year.

Honda said its sales were up 71.44 percent in mid-May, and Ford Motor Co.'s sales increased 6.75 percent. Toyota sold 1,259 cars; it was not building cars in the United States last May.

There were nine selling days in mid-May this year and eight last year.

The domestic industry's daily-selling rate in the period averaged 24,570 units, up 30.06 percent from 18,891 in the first 10 days of May. In mid-May last year, the daily selling rate was 32,710.

GM employees earn $14 million in perfect-attendance bonuses

DETROIT — About 277,000 of General Motors' 379,000 U.S. hourly employees have received first-quarter perfect-attendance awards of $50 each. The awards totaled $13.9 million.

GM's contract with the UAW provides attendance bonus payments of $50 for hourly employees with perfect attendance in any quarter. Perfect attendance in three quarters is worth $50 per quarter plus a special award of $150 for a total of $300. Perfect attendance for four quarters earns employees $50 per quarter and a bonus of $300 for a total of $500.

The program was negotiated in 1984 and went into effect Jan. 1, 1985. GM paid $132 million in perfect-attendance awards in 1986 and $125 million in 1985.

GM also said it paid increased retirement benefits totaling $1 million during April to 35,000 hourly and salaried persons who retired on or after Oct. 1, 1984, or to their surviving spouses.

The payments were made in accordance with GM's various pension plans.

Employees who retired prior to Oct. 1, 1984, had received lump-sum payments totaling $41 million as of December 1985 and $40 million more through December 1986.

During April, GM paid $181 million in retirement benefits to almost 300,000 retirees and surviving spouses.

AUCTION NEWS

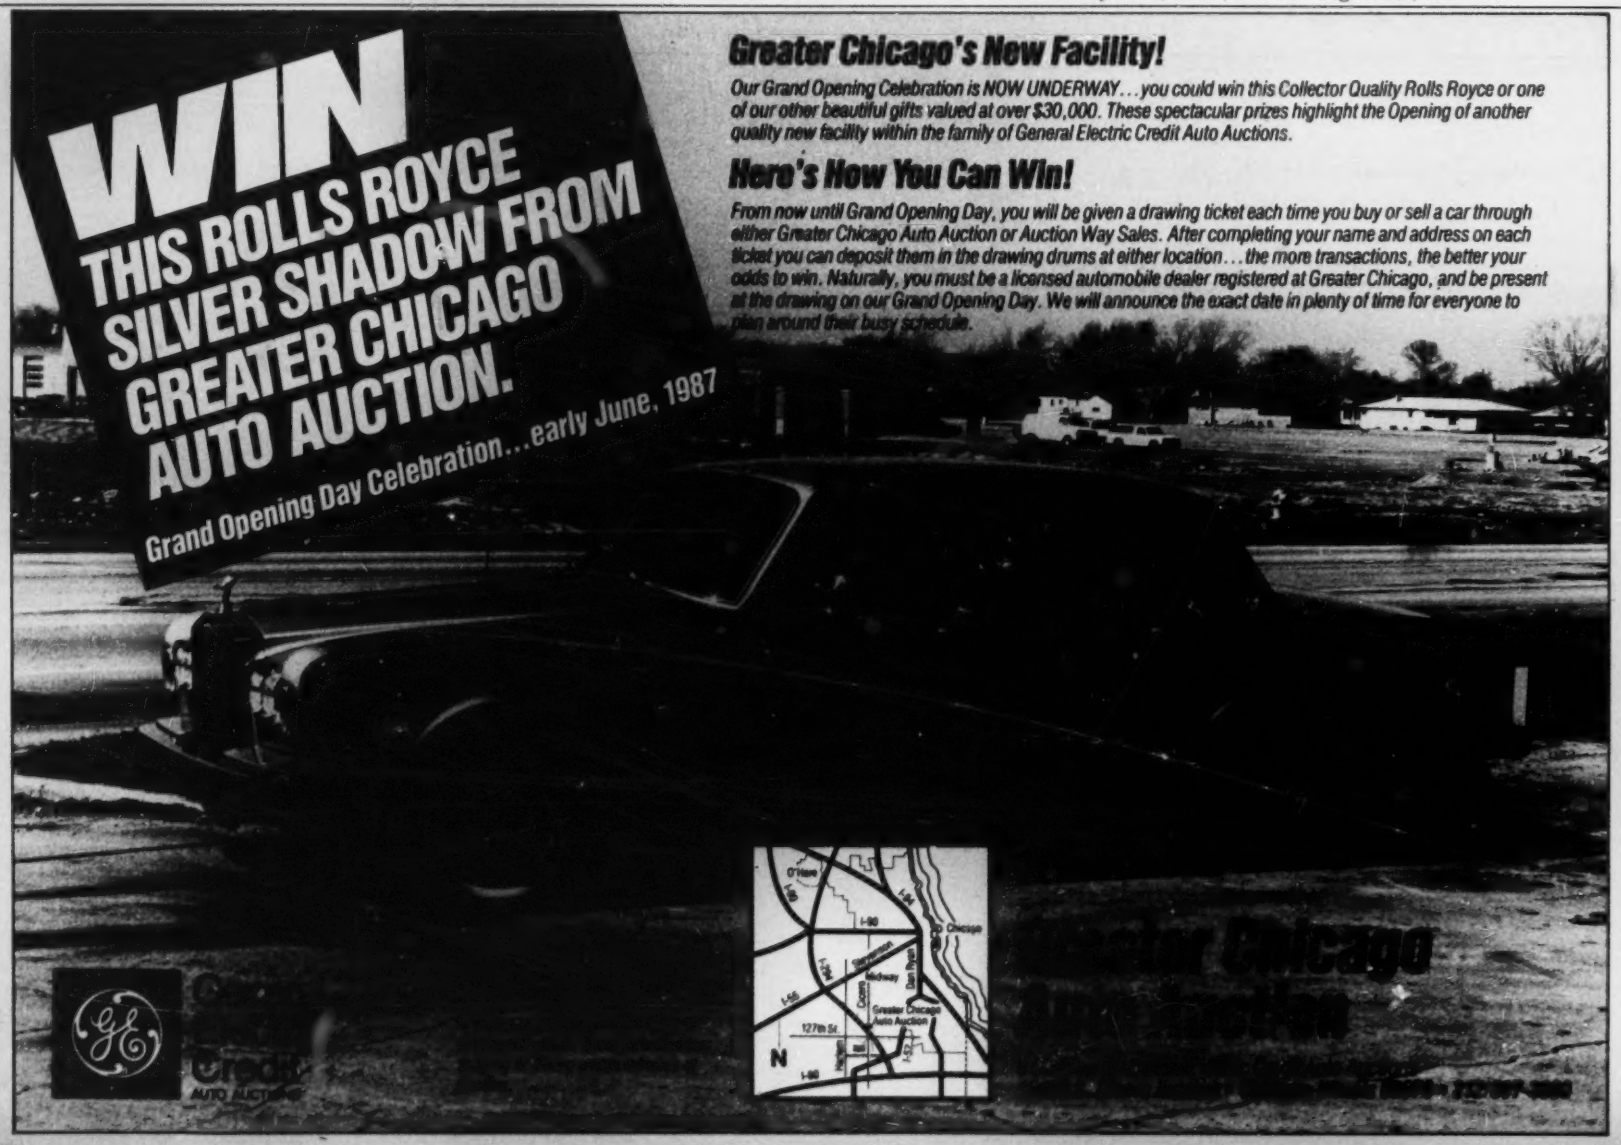
Lakeland Auto Auction's annual Marathon Eight Sale moved 67 percent of the 3,366 cars entered. Ford Motor Co. offered 845 cars and trucks and sold them all. The auto auction is in Lakeland, Fla.

The **Portland Auto Action**, Portland, Ore., co-owned by Don Kennedy and Roger Sheik, has been sold to General Electric Credit Auto Auctions Inc., of Chicago. The purchase included the company's headquarters, an 18-acre site on Hayden Island and a 10.5-acre site adjacent to the auction facility. A Spokesman for General Electric Credit, which owns 11 auto-auction facilities in the United States, said that William Tiedemann, sales manager for the Kennedy-Sheik facility, will be general manager and Kennedy's son, Brian, will be operations manager. Kennedy and Sheik have been operating the auction since 1965. Currently, the venture has 104 full-time and part-time employees. Approximately 700 cars are sold at each auction, the company said.

An auction will be held exclusively for fleet, lease and rental car administrators on the first Wednesday of every month at the **Greater Lansing Auto Auction** facilities in Dimondale, Mich.

Winnipeg Auto Auction Inc. has opened in Winnipeg, Manitoba. Michael B. Lawrence is president.

Forty-two students from 12 states graduated recently from the **Mendenhall School of Auctioneering**, High Point, N.C.



WIN
THIS ROLLS ROYCE SILVER SHADOW FROM GREATER CHICAGO AUTO AUCTION.
Grand Opening Day Celebration...early June, 1987
Greater Chicago's New Facility!
Our Grand Opening Celebration is NOW UNDERWAY... you could win this Collector Quality Rolls Royce or one of our other beautiful gifts valued at over $30,000. These spectacular prizes highlight the Opening of another quality new facility within the family of General Electric Credit Auto Auctions.
Here's How You Can Win!
From now until Grand Opening Day, you will be given a drawing ticket each time you buy or sell a car through either Greater Chicago Auto Auction or Auction Way Sales. After completing your name and address on each ticket you can deposit them in the drawing drums at either location... the more transactions, the better your odds to win. Naturally, you must be a licensed automobile dealer registered at Greater Chicago, and be present at the drawing on our Grand Opening Day. We will announce the exact date in plenty of time for everyone to plan around their busy schedule.

PRODUCTION

Memorial Day cuts output; 135,810 cars built for week

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

The Memorial Day holiday cut last week's scheduled auto production to 135,810, down 8.80 percent from the previous week's 148,911 and down 1.10 percent from the year-ago week's 137,316. The 1986 week also included the holiday.

So far this year, 3,264,474 cars have been assembled, 8.40 percent below the 3,563,683 completed last year at this point.

Companies split last week's targeted output as follows: General Motors, 50.05 percent; Ford Motor Co., 24.86 percent; Chrysler Motors, 15.54 percent; Honda of America Manufacturing Inc., 3.95 percent; New United Motor Manufacturing Inc., 2.21 percent; Nissan Motor Manufacturing Co., U.S.A., 1.74 percent; Volkswagen of America, 1.18 percent; and American Motors, 0.47 percent.

GM's Fiero plant in Pontiac, Mich., and its Willow Run, Mich., plant resumed production last week (May 26). Both had been idle for one week for inventory adjustment.

As previously reported, GM's Arlington, Texas, and Fairfax, Kan., plants remain down for model changeover.

No Saturday (May 30) overtime was slated for any GM car plants.

Ford scheduled Saturday overtime at its Kansas City, Mo., plant.

All Ford plants are slated for daily overtime this week (June 1).

Chrysler's Sterling Heights, Mich., plant was scheduled for Saturday overtime. That plant and the Newark, Del., and St. Louis (No. 1) facilities are scheduled for daily overtime this week.

Truck production dips to 66,884

Scheduled truck production dropped to 66,884 units last week because of plant closings on Memorial Day.

Last week's targeted output was 15.76 percent below the prior week's 79,397 and 8.44 percent below the year-ago week's 73,050.

Year-to-date, 1,586,337 trucks have been assembled, 2.90 percent more than the 1,541,679 built last year at this time.

General Motors slated Saturday (May 30) overtime at its Baltimore and Detroit plants.

All Ford Motor Co. plants are scheduled for daily overtime this week (June 1).

Big week for trucks in Canada

Last week, Canadian truckmakers' scheduled 19,002 units, their highest production since the week of June 21, 1986, when 19,807 trucks were built.

Estimated output last week was 28.26 percent more than the previous week's 14,815. That week included the Victoria Day holiday. Last week's total was 14.00 percent above the year-ago week's 16,668.

So far this year, 344,369 trucks have been assembled, 14.09 percent below the 400,865 completed last year at this point.

Carmakers scheduled output of 17,609 units last week, 26.06 percent more than the previous week's 13,969 but 20.70 percent below the year-ago week's 22,206.

Year-to-date, 346,303 cars have been produced, 29.90 percent below the 493,994 assembled last year at this ...e.

As reported earlier, General Motors' Oshawa (No. 2) plant in Ontario remains idle for model changeover. When the plant resumes output later this summer, it will assemble the new GM10 cars.

The Oshawa facility previously built the Chevrolet Celebrity.

Early Regals to be put in rental fleets

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

LANSING, Mich. — The first batch of all-new Buick Regals will go to dealers and daily rental companies for evaluation.

Edward H. Mertz, Buick general manager, said he hopes about 500 Regals will be available in midsummer for dealers and their preferred customers to test drive before the cars officially go on sale Oct. 1. Another 500 will then go to daily rental fleets for feedback and exposure to the public.

The approach is similar to that used by Chevrolet to introduce Corsica and Beretta. As the assembly plants slowly accelerated production, Chevrolet got the initial 10,000 to dealers — who used them as service rentals — and to daily rental companies.

The new Regal is the first of the GM10 cars, the front-wheel-drive mid-sized cars which replace the previous rear-wheel-drive Regal, Pontiac Grand Prix, Oldsmobile Cutlass Supreme and Chevrolet Monte Carlo.

The Pontiac Grand Prix and Oldsmobile Cutlass Supreme will be introduced next spring. The Chevrolet version of the GM10 debuts in 1988.

Mertz said the new Regal is expected to draw the higher demographic buyers of the previous Regal. It will be positioned in marketing and price between Century and LeSabre, Mertz said. The two-door Century has a base price of $11,003 and the two-door LeSabre has a base price of $13,616.

U.S. engines eyed by Mazda; Ford is key

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Mazda Motor Mfg. (USA) Corp. could consider U.S. production of engines for cars built its new Flat Rock, Mich., plant if Mazda were to share a common engine with Ford Motor Co.

Osamu Nobuto, president of Mazda's U.S. manufacturing arm, told the Detroit Auto Writers Group last week that a volume of 500,000 units is necessary for engine production to be cost-effective. When full production is reached at the Flat Rock plant in the fall of 1988, it will build 240,000 vehicles, half of them for Ford.

Nobuto said previously that Mazda might consider U.S. production of engines.

About 1,200 workers are now running pilot production at Flat Rock. The plant will eventually employ 3,500 workers on two shifts.

The plant will initially build the next-generation Mazda 626. Beginning next year, it will add a version that will be marketed by Ford.

Asked the status of contract negotiations with the UAW, Nobuto said that "timing has not been clearly established" for submitting the question of union representation to the workforce. He said he expects workers will be approached sometime after the start of production in September.

Nobuto said that former UAW members make up 10 percent of the plant's current workforce, selected from a pool of about 100,000 applicants.

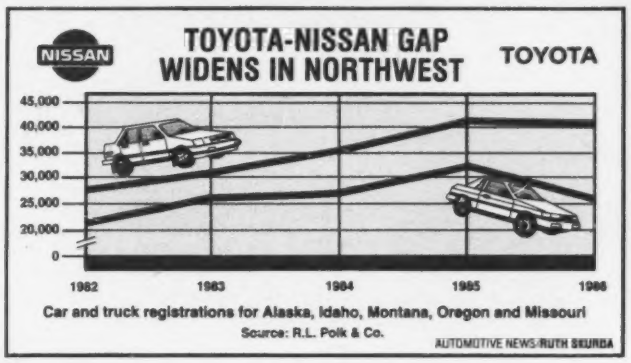
Dealers rip tactics at Nissan

Northwest retailers claim strong-arming

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER



Car and truck registrations for Alaska, Idaho, Montana, Oregon and Missouri
Source: R.L. Polk & Co.
AUTOMOTIVE NEWS/RUTH SKURDA

Nearly a dozen former Nissan dealers in the Pacific Northwest say they were forced out of business in the last three years by unfair Nissan tactics — including short inventories, pressure to relocate dealerships or build new facilities, and intimidation by manufacturer representatives.

Nissan dealers elsewhere say they, too, were pressured to relocate and replace aging facilities or lose their franchises — as Nissan sought to upgrade its dealer body in the face of growing competitive pressure from other Japanese importers. But that pressure apparently didn't compare with the tactics used in the Pacific Northwest.

"These were some of the oldest dealers in the country," recalled a former Nissan manager in the Portland region, which includes Washington, Montana, Idaho, Oregon, Alaska and part of Nevada. "Nissan was being chewed up by Subaru, Toyota and even Mazda. There wasn't a warm pulse in the Portland region. Sales had to improve."

But it was the way Nissan chose to boost its sales that came to light last month when one Portland region dealer, whose franchise was terminated by Nissan in March, filed suit in federal court and wrote to his 1,100 fellow Nissan dealers inquiring about how Nissan might have pressured them. As for the Portland region, dealers interviewed by Automotive News — dealers not involved in litigation — tell tales of woe and heavy-handedness on the part of Nissan.

By most accounts, the Portland region situation has improved since personnel changes in the last nine months, but the case of what transpired there between the spring of 1984 and the end of 1986 provides a rare glimpse into what can happen when a manufacturer pushes hard — maybe too hard — to upgrade its retail outlets in the face of heavy competition and the fallout on individual dealers.

To piece together the story, Automotive News interviewed more than 25 people, including dealers in Washington, Oregon, California, Montana, Idaho and the District of Columbia, and several past and present Nissan officials. But current Nissan executives declined to respond specifically to charges by the Portland region dealers because of the pending lawsuit.

The irony in the case is that Portland appeared to be one of Nissan's U.S. success stories. A decade ago Nissan even outsold Toyota in the region — something it couldn't do nationally. But that trend began to erode as Toyota and other Japanese importers opened new dealerships in prime locations in the re-

Sales decline 18%; imports, domestics share steep fall

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

DOMESTIC CAR SALES FALTER IN 1987

	1987	1986	% Change
Jan.	427,678	535,904	−32.74
Feb.	556,953	612,632	− 9.09
Mar.	682,117	649,351	+ 5.05
Apr.	691,803	719,563	− 3.86
May	622,303	786,268	−20.85

New-car sales continued to slump in May. Retail deliveries were off almost 18 percent from last year and were the poorest for any May since 1982.

The falloff left few makers or market segments unscathed, and it came in a prolonged period of frenetic marketing effort that includes reduced finance rates and cash-back offers.

May sales of domestic and imported cars totaled 882,817 units, down 17.69 percent from 1,072,537 in May 1986.

In May 1982, industry sales totalled 773,864 cars.

Domestic sales in May this year were 622,303 units, off 20.85 percent from 786,268 sold a year ago.

There were 260,514 imported cars sold in May this year compared with 286,269 last year, a dip of 9.0 percent.

The selling rate in May this year averaged 24,892 units per day compared with 30,241 a day a year earlier.

On an annualized basis, a Ford researcher said, the sales rate for cars in May was 9.8 million units — 6.8 million domestics and 3.0 million imports. In May 1986, the seasonally adjusted annualized sales rate for the industry was 11.5 million units — 8.4 million domestics and 3.1 million imports.

American Motors had a sales decline of 43.65 percent in May; General Motors was down 33.94 percent; and Chrysler Motors was off 24.94 percent. Ford Motor Co., which has enjoyed a long string of gains, said May sales were off 3.63 percent.

Nissan sales rose to 14,923 units from 943 a year earlier when its U.S. car plant was down for model changeover.

Honda had a gain of 61.20 per-

BMW to limit growth in U.S. after long rise

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

MUNICH, West Germany — BMW has decided to limit growth in its single most important export market — the United States — despite the recent addition of badly needed production capacity.

The new strategy is being invoked after a dozen-year span in which BMW sales have increased some 500 percent in the United States.

Gunter Kramer, BMW sales and marketing chief, also predicted a flat year or a slight downturn in the U.S. luxury/performance market in 1987, but he said the segment will expand 25 percent by 1993.

Though a new plant in the Bavarian city of Regensberg was brought on line last fall, Kramer expects BMW production to increase by an average of less than 5 percent annually during the next six years.

He outlined a sales growth pattern that would bring BMW output in 1993 to about 550,000 units, which is lower than the current level for arch-rival Daimler-Benz.

"We certainly will not have a

U.S. automakers are pushing to sell their North American-built products overseas. Chrysler LeBaron, Buick LeSabre and Ford Taurus are shown at the Holmenkollen ski jump in Oslo, Norway

EXPORTS: *U.S. makers embrace a neglected field: Selling their cars in overseas markets*

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

U.S. automakers, who over the years have shown little lasting spirit for the export side of the business, are once again making a push to sell their North American-built products overseas.

The effort itself is nothing new. U.S. car companies have traditionally driven into international markets on the back of a weak dollar and withdrawn whenever a strong U.S. currency makes their products too expensive. But this time, company and industry observers say, the Big Three appear poised to make a longer commitment to exporting.

The center for their combined activities is Europe. General Motors, while hoping to revive its export sales there, is taking steps to eliminate the peaks and valleys that have marked its record in the past. Ford Motor Co. will begin rebuilding its network by appointing distributors in six European countries. And

Incentive maze a big puzzle for dealers, buyers

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

In their effort to boost sales, domestic automakers have managed to confuse customers and dealers by constantly extending, sweetening and shuffling incentives.

"It's just as confusing to the office as it is to the sales personnel, and if the girl in the office forgets that the incentive has been changed, you might lose hundreds of dollars," said Martin Sullivan, president of M.J. Sullivan Chevrolet, New London, Conn.

Dealers contacted by Automotive News said the proliferation of incentives during the last four months has made buyers disinterested in and confused about the sales gimmicks. But some dealers said that sales may slide if incenitives are eliminated.

"I try to challenge the customers by saying 'This incentive ends tommorow,'" said Gene McHarris, a salesman at Avis Ford, Southfield, Mich. "But they say: 'You'll have an incentive when I'm ready to buy.' There's no great need to buy right now."

Sales numbers reflect that wait-and-see attitude. Domestic new-

Kenosha getting $200 million for Omni/Horizon

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Motors announced it plans to invest $200 million in American Motors' plant in Kenosha, Wis., to prepare for expected production of Omni/Horizon models this fall.

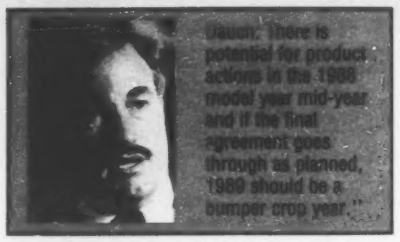
Meanwhile, Chrysler Motors will complete its review of AMC's car and truck lines and powertrains within six months, but expects to make no product changes at the start of the 1988 model year.

Richard E. Dauch, Chrysler Motors executive vice president — manufacturing, said, however, that "product actions" could occur midway in the 1988 model year as a result of the proposed acquisition. He declined to specify. Chrysler expects to complete its takeover of AMC by Aug. 15.

Dauch, in an interview, said Chrysler's product programs have not been placed on hold as a result of the pending acquisition.

"Chrysler Motors' product programs are on full green-light go," Dauch said. "What has to be done is a rationalization review of trucks, cars and powertrains. They have four-cylinder engines. They have six-cylinder engines. Why would we duplicate all those things? There has to be some rationalization.

"Certainly there is nothing we can do as it relates to the 1988 start of production," Dauch said. "Obviously, the big thrust would be in 1989. That does not preclude something in the midyear. There is potential for product actions midway in the 1988 model year, and if the final agreement goes through as planned, 1989 should be a bumper crop year."



Dauch: There is potential for product actions in the 1988 model year mid-year and if the final agreement goes through as planned, 1989 should be a bumper crop year."

Dauch said that the Omni/Horizon America subcompacts will go back into production in September at the AMC Kenosha, Wis., assembly plant if remaining "loose items" are finalized within 20-30 days.

Dauch said 120,000 to 130,000 L-body subcompacts will be produced annually if plans to use the Kenosha plant are finalized. Chrysler sold 208,726 Omni and Horizon units in 1986. The cars were taken out of production at the Belvidere, Ill., assembly plant in March to make way for Dodge Dynasty and Chrysler New Yorker Brougham.

"We will be short for the market needs," Dauch said of the subcompacts. "We know we can sell more than that. But we also know the consumer wants the M-body."

Chrysler is building the M-body Chrysler Fifth Avenue, Dodge Diplomat and Plymouth Gran Fury under contract at the Kenosha assembly plant, which has an annual capacity of about 235,000. A second M-body shift will be launched at the end of the month, boosting production from 366 units daily to nearly 600. If the L-body is added, daily production is expected to be 950 cars.

The subcompact Renault Alliance is built in Kenosha. The Alliance has been considered vulnerable because of the success of the America subcompacts.

In six days, Milton Honda attracted 10,000 people and called it . . .

Honda deal offers real incentive: A lion tamer complete with lion

By Jim Kenzie
STAFF CORRESPONDENT

MILTON Ontario — This small town west of Toronto recently witnessed an unusual car dealership promotion: Baron Julius von Uhl presented his lion-taming act in the parking lot of Milton Honda.

The Florida-based baron — "If I'd made up the name, I would have made myself at least a count!" — had been stranded in Canada after a deal with a circus fell through.

Stuck at a truck stop with neither gas for his truck nor funds to buy any, the baron was directed to Milton Honda's Peter Duffus, who in his 10 months in business has developed a reputation for crazy promotions.

An agreement was reached over lunch, and the baron conducted three shows daily for six days.

. . . a roaring success

Popcorn and balloons for the kiddies were added attractions.

"It drew over 10,000 people through the store," said Duffus. "I have put the baron in touch with other Honda dealers in southern Ontario, and he is also appearing at shopping malls in the area before heading to Quebec for his regular summer tour."

AMC discloses separation pay

By Laura Clark and Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTERS

American Motors officials expect the company to report a full year of profits and a "blockbuster fourth quarter" just as it is being integrated into Chrysler Corp.

Top AMC executives told bonus-roll employees that second quarter profits will nearly equal the $23 million AMC earned in the first quarter. They said AMC will be in the black for the third quarter and will have a strong fourth quarter when its 1988 intermediate Renault Premier debuts.

AMC has not shown a full-year profit since 1984 when its 12-month net income was $15.5 million.

AMC said last week that it will provide separation benefits to its employees who are hired by Chrysler but later lose their jobs because of the merger.

AMC employees who are hired by Chrysler but lose their jobs before Jan. 1, 1989 — other than for cause — will be entitled to the same separation benefits as those employees not hired by Chrysler.

Options for the AMC salaried employees were detailed in a six-page Salaried Employee Retention Program bulletin distributed to all eligible employees last week. The employee plan, along with Chrysler's $4.50-per-share bid for the automaker, was approved by AMC's board of directors on May 20.

Under the plan, AMC salaried employees not retained by Chrysler will receive two weeks' to one year's salary.

Employees could lose all separation benefits if they reject a "comparable" job at Chrysler or if they are retained and leave the company voluntarily before Jan. 1, 1989.

All AMC salaried employees are eligible for the program except those covered by union contracts plans and those working for AMC subsidiary companies with independent benefit packages. An AMC spokesman said separation packages for the company's officers — including AMC President Joseph Cappy — will be detailed in the AMC proxy statement that is due to be issued in 35 to 45 days.

Under the plan, management employees with 10 years of service will receive four months' salary for a year of service or less, five months' salary for two years and six months' salary for three to 10 years. For 11 to 20 years' service, they receive 60 percent of a month's salary per year of service for a maximum of one year's salary for 20 years' service.

Administrative employees receive 60 percent of a month's salary per year of service up to a maximum of one year's salary for 20 years' service.

Richard Calmes, AMC vice president of personnel and industrial relations, said the sliding scale favored less-senior management over administrative employees because of the low availability of those kinds of positions in other companies and the longer job search that may be required.

Bonus-roll employees will be guaranteed one year's salary regardless of service history.

An early-retirement option will be available to employees who are at least 55 years of age and have 10 years of service, or employees of any age with 30 or more years of service.

Group health insurance benefits will continue up to 24 months for terminated employees with 10 or more years of service, up to 12 months for those with one to nine years of service and up to two months for those with six months to one year of service.

Although several AMC executives interviewed by Automotive News last week said they considered the plan generous, there was some concern about the types of jobs AMC employees would be offered by Chrysler.

"A lot of people are worried that they'll be offered jobs that they don't find interesting," one bonus-roll employee said, because Chrysler has more specialized employees who do not have the wide-ranging responsibilities of persons in the leaner AMC organization.

"I figure our sphere of responsibility is 50 percent more than what you'd find in comparable positions at Chrysler," another executive said.

The letter did not specify how many employees Chrysler will retain or which AMC departments will suffer the heaviest cuts. However, AMC President Joseph Cappy told employees in the letter that some of AMC's operations will be relocated or terminated under the merger, while others will be unaffected.

In other news, four AMC shareholders have filed three class-action lawsuits demanding that a U.S. District Court review the sale price of AMC. The suits were filed in the U.S. District Court, Southern District of New York.

An AMC spokesman said that shareholder lawsuits are common in corporate acquisitions and that AMC does not expect the lawsuits to delay the acquisition of the company by Chrysler.

61st year—No. 5184

AUTOMOTIVE NEWS (ISSN 0005-1551) is published weekly except semiweekly the fourth week in April at 965 E. Jefferson, Detroit, MI 48207. Second-class postage is paid at Detroit, MI and at additional mailing offices. Postmaster: Send address changes to AUTOMOTIVE NEWS, Circulation Department, 965 E. Jefferson, Detroit, MI 48207.

Truck executives to address World Congress

Ford Motor Co. and Navistar International Transportation Corp. accounted for 29.8 percent of new-truck sales in the United States in 1986.

In piling up 1,381,438 sales, Ford led all manufacturers in light trucks (Classes 1-3) and nosed out Navistar in Class 7.

Navistar, whose sales totaled 71,022 units last year, was No. 1 in the Class 8 heavy segment.

The top executives of those heavy-hitting truck operations will speak at the 12th Annual Automotive News World Congress, to be held July 26-29 at the Hyatt Regency Hotel in Dearborn, Mich.

This year's Congress theme is "Facing Up to Competitive Times."

Edward E. Hagenlocker, vice president of Ford Motor Co. and general manager of Ford Truck Operations, will speak in a general session at 10:30 a.m. Monday, July 27. That day's Congress theme will be "Recoveries and Strategies for the Domestic Industry."

Neil A. Springer, chairman, president and chief executive officer of Navistar International Transportation Corp., will address a general session at 10:30 a.m. Wednesday, July 29, when the daily theme will be "Coping With Change." His topic will be "The Future of the Heavy Truck Industry and the Reshaping of Navistar."

Prior to being named head of Ford Truck Operations in June 1986, Hagenlocker was director-president of Ford of Brazil.

He joined Ford as a research scientist in 1964 and has held engineering management positions with the Product Development Group, Chassis Division, Body and Electrical Product Engineering, Climate Control Division and Truck Operations.

Springer was elected to his present position on April 1, 1987.

Navistar is the North American market-share leader in combined medium and heavy-duty truck sales and is a producer of diesel engines.

Springer started his career in 1960 with International Harvester Co., Navistar's predecessor, at a truck assembly plant in Fort Wayne. He became vice president-general manager of heavy-duty trucks in December 1979, holding that position until July 1981 when he assumed responsibility for all North American truck operations. He became president of the Truck Group in August 1982.

This year's World Congress will have more than 30 speakers, sharing their knowledge and viewpoints on where the car and truck industry stands today and where it is headed.

For further information, write: Automotive News World Congress, 1400 Woodbridge Ave., Detroit, Mich. 48207, or call (313) 446-6047. Overseas inquiries cable: 810-221-5122 AUTNEW.

Pininfarina: sole production-Ferrari stylist?

By Richard Johnson

TURIN, Italy — An apparent threat to Industrie Pininfarina S.p.A.'s long-time role as exclusive stylist of Ferrari cars is sending tremors through this city's closely knit automotive design community.

Shock waves were touched off by a March 30 report in *Automotive News*, which noted that I.D.E.A. (Institute for Development in Automotive Engineering), a little-known but fast-growing design and engineering firm headquartered here, had styled a four-wheel-drive Ferrari prototype.

Ferrari S.p.A. general manager Giovanni Razelli told *Automotive News* in March that I.D.E.A. was involved in styling a two-seat, mid-engine, four-wheel-drive prototype that was unlikely to go into production.

Following that, an apparently strong reaction from Pininfarina, which has designed every Ferrari production car except one, prompted Ferrari officials to reassert that Pininfarina would continue as the company's sole production-car stylist.

Razelli recently told a select gathering of the American press in Maranello that "no market analyst would suggest that we dissolve our marriage with Pininfarina, which has given such great satisfaction to both sides...and neither would that analyst believe certain items of news that have appeared in some newspapers."

A Testarossa designed by anyone but Pininfarina? No way, says Ferrari.

Razelli said Ferrari is conducting research on 4wd, four-wheel steering and active suspension in an experimental car he referred to as the 408 4wd.

He also revealed that Ferrari has two additional "laboratories on wheels."

One is the Scaglietti Spyder, a cabriolet prepared by designer Sergio Scaglietti, that is now undergoing fatigue tests with particular focus on the use of composite materials for a large part of the basic structure.

The other is the GTO Evoluzione, a study of engines and components for racing applications.

Razelli's latest account does not differ from that reported earlier. But long-time industry observers in Turin say the turmoil resulted from the underlying suggestion of a crack in Pininfarina's legendary Ferrari armor.

The Ferrari work is a jealously guarded foundation of Pininfarina's worldwide prestige as a coachbuilder and stylist. Indeed, a report a few years ago that Ital-Design Sirp S.p.A.'s Giorgio Giugiaro had authored a new Ferrari met a similar reaction.

In a mid-May interview, the head of Pininfarina himself, Sergio Pininfarina, stated: "Mr. Razelli said the new cars are laboratories on wheels and that the (production) styling will always be developed by Pininfarina. We have been very successful with Ferrari in the last four or five models.

"The only project which was designed and not produced was the Pinin, the four-door car. But Ferrari announced (in 1985) it was their intention not to make a four-door — not that it would make a four-door with another man."

I.D.E.A. president Franco Mantegazza acknowledged in an interview that his company has been involved in Ferrari's 4wd project. He declined to comment further on Ferrari, but Turin sources close to the Ferrari-I.D.E.A. dealings say the 408 4wd, which is about to begin road-testing, is more than a concept car. They say it is a model intended for production, with the American market targeted in particular.

"It's not just a prototype," said an insider. "They would be spending their money in a very bad way if it was not put into production."

Sources further said that the order for the design work came directly from Ferrari, and not from its 50 percent partner, Fiat Auto S.p.A., which has been I.D.E.A.'s biggest customer.

Although no car designed by the nine-year-old company has ever reached production, that will change soon. I.D.E.A. has been heavily involved in styling Fiat's upcoming Type 2 and Type 3 replacements.

By 1990, I.D.E.A. is scheduled to have nine of its designs in production, including six Fiats and three Alfa Romeos.

Meantime, Pininfarina is expected to lose at least one aspect of its Ferrari business by the end of the decade. Ferrari's Maranello facility will take over production of bodies for the successor to the current top-line Testarossa when the new car appears in three years.

Pininfarina currently builds bodies for both the Testarossa and 412 sedan at its Grugliasco plant, and trucks them to Maranello for final assembly. Ferrari's Scaglietti plant in nearby Modena supplies bodies for the Ferrari 328 and Mondial lines.

Although Pininfarina will continue to build bodies for the sedan replacement, Razelli declared in March: "In the future, the (new) Testarossa will be built by Ferrari." ■

WORLD NEWS BRIEFS

Taylor exits Austin Rover

Trevor Taylor resigns as director of international operations for Britain's Austin Rover Group Ltd. He had been sales and marketing chief at the government-owned company until his reassignment in the wake of a major shakeup last fall that included the dismissal of chairman Harold Musgrove. Taylor, with the company 17 years in various sales and marketing positions, was instrumental in launching the Rover Sterling in North America this year. He is succeeded by Brian Fuller, 41, who had been managing director of Leyland South Africa since June 1986.

New plant for new engine

A British subsidiary of Litton Industries is awarded a $60-million contract to supply a new machining plant for Austin Rover's forthcoming K-series engine. Lam-Technicon will build the facility at the automaker's engine complex in Longbridge, England. Construction begins immediately, with completion expected in 1989. The K-series engine will go into Austin Rover's subcompact Metro replacement, scheduled to appear about 1990, and possibly some versions of larger models.

Fiat studies China

Fiat Auto S.p.A. is considering a joint automaking venture in the People's Republic of China. The Italian company is preparing what it calls a "pre-feasibility" study for potential Chinese partners. Fiat has not disclosed details of the agreement under study, but reports several cars have been tested. Currently, American Motors (U.S.), Peugeot S.A. (France) and Volkswagen AG (West Germany) are involved in carmaking ventures in China.

FIRE is ignited

Fiat will expand its state-of-the-art FIRE (fully integrated robotized engine) small-car engine plant in Termoli, Italy. The company will spend the equivalent of $39 million to increase capacity at the highly automated plant, which began operations in late 1984. Output will climb from about 2,400 units daily to 2,800, or about 500,000 engines annually, for use in some Fiat Panda and Uno models and the Lancia Y10.

Agnelli story in the works

Fiat chairman Giovanni Agnelli signs a contract with Random House Inc. to publish his memoirs. Agnelli, grandson and namesake of Fiat's founder, has served as chairman of the Italian industrial giant for more than 20 years. Royalties from the book will be donated to the Metropolitan Museum of Art in New York for restoration and display of Italian frescoes of the Pompeii period. The co-author will be *Wall Street Journal* reporter Roger Cohen.

Navistar drops Daf

Navistar International Corp., which as International Harvester Co. once sought to forge a broad partnership with Daf Trucks of the Netherlands, sells its remaining 14 percent interest in the Dutch company. International bought into the company in 1975, but disposed of most of its stake in the midst of its own severe financial troubles in 1983. At that time the American company also sold its interests in two other European truckmakers — Spain's Enasa S.A. and Britain's Seddon Atkinson Vehicles Ltd. Earlier this year, Daf took controlling interest in Leyland Trucks (now Leyland-Daf Ltd.) and Freight Rover Ltd. from Britain's state-owned Rover Group P.L.C.

Reliant cuts losses

Reliant Motor P.L.C., England, producer of the Scimitar two-seat sports car and Rialto three-wheeler, continues its comeback during the first six months of its 1987 fiscal year. Its pre-tax loss for the six-month period beginning Oct. 1, 1986 is reduced from $327,600 (195,000 pounds sterling) to $48,720 (29,000 pounds). Reliant reported a net loss of $278,400 in the fiscal year ending Sept. 30 1986, compared with a loss of $1.03 million after taxes in 1985. Company officials are weighing possible entry into the U.S. market with Scimitar, but say they won't come to America without first lining up a partner.

Opel still spending

Adam Opel AG, Russelsheim, West Germany, will spend 50 million deutschmarks ($28 million) to upgrade production facilities at its main plant in Russelsheim, West Germany. A major part of the General Motors company's investment will be used to expand its K130 body plant, as well as door and cockpit-module assembly areas. The expenditure, part of an overall 7-billion mark investment program at Russelsheim from 1984 through 1987, is not expected to have a direct effect on production capacity at the plant, which is currently turning out about 1,000 Omegas and 100 Asconas daily.

Scotland hosts IISRP

A new thermoplastic elastomer and new butadiene-based rubber will be revealed at the 28th annual general meeting of the International Institute of Synthetic Rubber Products Inc., held in Edinburgh, Scotland, June 8-12. According to sources at Japan's Asahi Chemical Industry Co. Ltd., the company used "original and unique technology" to develop a new high-performance thermoplastic elastomer "with excellent weatherability and heat resistance." West Germany's Dr. Karl-Dieter Hesse, head of Huels AG's product development and technical service department, says his company has developed a new rubber that shows it is an "excellent" component for blends. Huels is building a pilot plant to develop the process for commercial production, and will market the material under the name Vestenamer.

Bridgestone keeps rolling

Bridgestone Corp., Tokyo, and West German automaker Porsche AG continue to strengthen their bonds as the Japanese tire producer reports its 16-inch RE71 is selected as the on-line original-equipment tire for a 1987 production Porsche model, starting last month. It marks the first time Bridgestone is selected as an on-line tire for a high-volume Porsche model. About 160 tires will be delivered monthly to Porsche for OE on-line application.

New coat: Shape no object

Mitsubishi Metal Corp., Tokyo, develops a technique that makes it possible to form a uniform coat, even on round objects or objects with more complicated shapes. The part to be treated is coated with a special resin by a process similar to electroplating, and the resin is then hardened by heating. The coat, said to be highly resistant to corrosion, can be applied to iron, steel, stainless steel and copper alloy.

Toyota sells Simoniz

Toyota Motor Corp., Toyota City, Japan, will sell seven car-care products, including wax and cleaners, made by U.S. Simoniz International. They will be sold through Toyota dealers and parts distributors throughout Japan. It marks the first availability of Simoniz products in the country. The items include four kinds of wax (soft paste, liquid, spray and pad) and three kinds of cleaners (wheel, seat and glass).

Japanese gain in Europe

By Richard Johnson

After a sharp drop in 1987 first-quarter sales, Japanese makes have begun to regain lost market share in Western Europe.

Industry new-car sales estimates also show Renault and Peugeot, helped by a buoyant French market, made the biggest gains among Europe's volume automakers through the first four months of 1987.

Sales in Spain, the fastest-growing national market, should top 900,000 in 1987, 12 percent higher than previously forecast.

Overall, European industry sales of 4,2866,700 this January-April were 4.6 percent above a year earlier, despite forecasts of a slight downturn this year. Western Europe set an all-time record in 1986 with 11.7 million new-car sales. At the current pace, 1987 sales will top 12.8 million.

Fiat Group held first place in January-April, although Volkswagen Group, the 1986 leader, was No. 1 when Alfa Romeo sales are deducted from Fiat's total.

Sales of Japanese makes were 3.6 percent below their record 1986 pace, but are coming back. The combined Japanese share was 10.3 percent for the first quarter, but the Japanese snapped up 11.8 percent in April, pushing their year-to-date penetration to 10.7 percent. ■

C-P-C speeds birth of vehicle

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

PONTIAC, Mich. — General Motors' Chevrolet-Pontiac-Canada Group has implemented a new process for developing vehicles in an effort to get them to market faster.

Donald L. Runkle, former Chevrolet chief engineer, now directs C-P-C's Advanced Vehicle Engineering where Chevrolet and Pontiac production cars and concepts cars are born.

Advanced Engineering and Advanced Manufacturing are responsible for Phase 0 of the four-phase process. Phase 0 is the technology development and preliminary design phase.

The idea, Runkle said, is to do as much preliminary planning and engineering as possible to prevent problems later in the development process and to avoid doing the final design work more than once.

In the past, Runkle said, a vehicle went from concept to design with little of the preliminary planning that is done today. Lack of planning and definition of the vehicle meant two or three designs might be necessary.

"The problem was, you might discover something in there that you didn't like," he said. "Then you got a little late on your design. Then you got a little late on the testing. Then you either delayed the production or the car wasn't exactly as good as you could have made it.

"That shouldn't happen," he added. "What happened is, you defined the product too late. You have to define the product early and spend a lot of time in Phase Zero. This allows for doing it once."

Runkle said a new vehicle is conceived in two ways: It is born from a demand from the market or it is pushed into existence by technology.

He said the market pull approach means that Chevrolet or Pontiac has asked for a new vehicle described in general terms — a four-wheel-drive, subcompact coupe, for example.

Technology may push the development of a vehicle. The technology involving a product or a new process may come from Advanced Engineering, GM Research or a supplier. Advanced Engineering tests the technology on a vehicle. It calls in the marketing divisions to see if the technology will sell.

Once the car is initiated, Advanced Engineering develops a Level 1 specification, intially a two-page description.

At that point, Advanced Engineering may pursue more than one version of the vehicle, Runkle said. For example, it may initially be done in front-wheel-drive, rear-wheel-drive and four-wheel-drive versions.

The vehicle is then narrowed down to one version. Through communication with the marketing divisions, the specifications grow into a book describing every detail of the vehicle. The book describes the content, the approximate price, options, engines, transmission, wheels and wheel covers.

AUTOMOTIVE NEWS/JOE WILSSENS

Runkle stresses preliminary planning and engineering

Runkle tells his staff that an outsider familiar with automobiles should be able to read the book and know exactly what the vehicle is like.

Once the book is written, Advanced Engineering does a preliminary design, a clay model and, ultimately, a running prototype.

Along the way there are checkpoints that list page after page of things that must done before the vehicle goes on to the next stage.

"Meanwhile," Runkle said, "the calendar is moving, and we'll change the production date if it has not passed the exit critiera."

The final check for Phase 0 is to show the vehicle to the division executives and determine if engineering interpreted the marketing group's desires properly.

"In our final check," Runkle said, "we say 'OK, Bob Burger (Chevrolet general manager), this is what we think it is, and we can go for a ride in it.' Hopefully, if we've had good tight simultaneous communication, he's not surprised. It is exactly what they had in mind and everybody is happy."

If the division likes the vehicle, it goes to the corporation for concept approval. A business plan projecting sales and the rate-of-return on the vehicle has been made during the preliminary design.

At a two- to three-day session, the vehicle is explained in minute detail to GM executives.

If approved, the vehicle moves into Phase 1, the detailed design phase; followed by Phase 2, the validation and testing period; and, ultimately, Phase 3 — production.

As the vehicle passes through the four phases, the people who worked on the original concept, including the chief engineer, often accompany it.

The other guiding philosophy in the process is the "car focus," as Runkle called it. Some of his staffers called it "esprit de car."

For a particular car, Advanced Engineering pulls people from advanced body, advanced chassis, advanced electrical, advanced powertrain, advanced manufacturing and advanced development into an organization that reports to the chief engineer of the car.

"That team then speaks only Celebrity or speaks only Fiero," Runkle said. "I think then we have the esprit de car."

While the engineering of the product is going on, C-P-C Advanced Manufacturing, housed in the same office building as C-P-C Advanced Engineering, is formulating the process to build the vehicle.

The idea is to have product and process engineers in the same building so they can develop the process at the same time that they develop the product. The procedure is known as simultaneous engineering.

In the past, a car was developed sequentially, Runkle said. The preliminary engineering work was done and then the vehicle was passed along to design. Design, in turn, passed it along to product engineering, which sent it to manufacturing engineering.

Runkle likened the new method of developing a car to the way a house would be renovated.

"If you're renovating a house, you plan the whole thing out and work together on it," he said. "It goes better and ends up costing a lot less money."

The process engineers can tell the product engineers if a part they are designing can be made, he said. The process engineer can show the product engineer the machines to tool the parts so the product engineer can design the part to be made easier.

Rolls sniffs up new ad gimmick

LYNDHURST, N.J. — What does the interior of a $100,700-plus Rolls-Royce smell like?

Few Americans can afford to find out, but the readers of the July issue of Architectural Digest can experience the sensation through the importer's latest ad campaign.

In a four-page ad insert, Rolls-Royce Motor Cars is using strips of paper scented like the leather upholstery in its cars. The ad says, "This in essence is Rolls-Royce."

"Rolls-Royce appeals to one more of the five senses than most cars — the sense of smell," said Robert Wharen, marketing vice president of Rolls-Royce Motor Cars Inc., the importer of the British luxury cars.

Rolls-Royce got the idea for the ad from customers who commented on the distinctive smell of the cars' leather interiors. Wharen said the importer spent two months developing the right scent for the ad. The "chief nose" at a specialty printing and technology company sat in a Rolls-Royce and compared the scent with a machine-generated fragrance, he said.

A group of Rolls-Royce executives then compared variations of the scent.

"It was rather like a wine tasting," Wharen said. "After experiencing each sample, we had to breathe fresh air to clear our sense of smell," he said.

Della Femina, Travisano & Partners, New York, created the campaign.

SALES

FROM PAGE 1

cent and Volkswagen was up 4.59 percent because sales of U.S.-built Jetta models are being reported as domestic sales for the first time.

In May's final 10-day sales period, deliveries of domestic cars totalled 250,045 units, off 12.81 percent from the 286,788 sold in the closing period of May 1986.

AMC had a decline of 30.44 percent in the period; General Motors dipped 27.44 percent; and Chrysler Motors was down 0.22 percent. Ford was up 2.43 percent.

Nissan sales climbed to 7,174 units from 284 a year earlier. Volkswagen had a rise of 31.24 percent on a unit increase to 4,516 this year vs. 3,414 in the final period of May 1986. Honda's sales in the period rose 58.30 percent.

Toyota sold 2,638 units in the May 21-31 period and 4,463 units in the month. It was not selling U.S.-built cars last year.

Incentives in May were widespread among the traditional domestic-make vehicles, Subaru cars and on most Japanese light trucks. European makers, in general, have been eschewing retail sales incentives. Exceptions are Volkswagen with financing specials and Audi, which offers a hefty rebate deal to current Audi owners.

In terms of share of the market for May, GM took 34.52 percent; Ford Motor, 20.43 percent; and Chrysler, 9.17 percent. Honda's share was 2.95 percent; Nissan's was 1.69 percent; and Volkswagen's was 0.89 percent. Toyota had 0.51 percent of the domestic market and AMC had 0.33 percent. Imports accounted for 29.51 percent.

The Ford analyst said Ford continues to expect industry sales for this year to amount to 15.0 million units, consisting of 10.2 million cars and 4.8 million trucks. Last year the industry's sales total was a record 16.3 million units. It consisted of 11.4 million cars and 4.9 million trucks.

INCENTIVES

FROM PAGE 1

car sales in May plunged 20.85 percent below the 1986 total.

Automotive analysts say there are too many incentive programs and manufacturers do not have a consistent approach to their programs.

"It's incredibly disorganized out there," said Thomas O'Grady, president of Integrated Automotive Resources, Wayne, Pa.

"There hasn't been a consistent marketing approach to incentives. When marketing executives find one incentive doesn't work, they say, 'Oh my God, what are we going to do next?' " O'Grady said.

According to the analysts, consumers are confused by the number and the complexity of the programs and find it hard to determine what incentives apply to a specific model.

Cash rebates, low-finance rates and option discounts vary by nameplate. National advertising stresses product, not the availability of an incentive on the product. The constant changes in incentives confuse both dealership personnel and customers, analysts say.

"The confusion arises because the customer knows that there are incentives all over the place," said Michael Luckey, senior automotive analyst, Shearson Lehman Brothers, New York.

"The consumer wants to know that he's getting the best deal," Luckey said. "For instance, what's better — a cash rebate or low financing?"

Chris Cedegren, senior automotive analyst with J.D. Power & Associates, Westlake Village, Calif., said the incentives would be less confusing if manufacturers (or their divisions) offered one incentive for their entire line.

Dealers interviewed said the programs have become so complex that sales personnel are often unable to keep up with the details. A single model could have a consumer cash or financing option, an option discount, a salesperson incentive and a dealer incentive. It could even have all of them.

For instance, the Ford Tempo offers a $600 consumer cash rebate on models equipped with manual transmission, $300 for models with automatic transmission, $100 cash to the salesperson, 3.9 percent to 9.9 percent financing and group discounts on power equipment. And there's an extra $500 rebate on Tempos with air bags.

One dealer began writing the details of each incentive program on three-by-five index cards for his sales staff but gave up after several changes in the programs.

Manufacturers admit that past programs have been confusing. Chevrolet and Buick dealers recently received brochures clarifying each sales incentive offered by the divisions and by General Motors Acceptance Corp.

A GM dealer in the Tampa Bay, Fla., area said his field representative recommended that he hire an employee to keep up with incentives and process the paperwork to avoid costly mistakes.

"If I'm confused and I'm in the business, I can imagine the customer is pretty confused right now," said Roland McGinnis, owner of McGinnis Cadillac, Houston, and chairman of the Cadillac National Dealer Council.

In an effort to give incentives the punch they lost, automakers are revamping their standard cash-back and finance incentives.

General Motors divisions dropped incentives on option packages in May in order to simplify their programs. GM is also experimenting with regional incentives.

Stiff words on Japan for U.S. parts makers

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

U.S. parts makers must make an effort to supply Japanese auto plants in Japan and the United States or risk being squeezed out of business.

That is the finding of a study released by the University of Michigan's East Asia Business Program.

That strategy is needed as Japanese suppliers broaden their presence in the United States and as U.S. automakers outsource more parts from abroad, the study says. The study is entitled "Japanese Auto Parts Companies in the U.S. and Japan: Implications for U.S. Competitors."

But to make the move, U.S. suppliers will have to confront a range of cultural and economic barriers that have made it difficult to get business with Japanese original-equipment manufacturers.

In the meantime, life for U.S. suppliers won't be any more comfortable, even though Japanese transplants, with the help of a weakening dollar, are stepping up their purchases of U.S. parts.

"There can be no doubt as to the substantial threat to the U.S. supplier industry posed by the accelerating movement of Japanese parts suppliers locating in the United States," say the study's authors, Peter J. Arnesen, Robert E. Cole and A. Rama Krishna.

The study traces the strength of the Japanese supplier to that country's postwar industrialization strategy. Until the 1970s, controls on Japan's economy severely restricted imports and investment by foreign firms, resulting in a self-sufficiency and the forging of close ties between manufacturers and suppliers.

Today, those links are reflected in the way OEMs scrutinize their suppliers and the long-term relationships they hold with members of their supplier associations. The unity is further reinforced by equity ties between OEMs and suppliers.

Those features pose an intimidating front for U.S. suppliers trying to do business with Japanese automakers, either in Japan or in the U.S., the study say. Toyota, for example, has dealt with all but 7 percent of the firms in its supplier association since the 1950s.

There are other elements at work against U.S. companies. Japanese OEM demands that suppliers take an early role in product design might require U.S. makers to set up a technical office in Japan before signing a contract. The authors question whether U.S. parts firms will be willing to disclose their expected costs and profit margins, as Japanese OEMs require. They also ask whether U.S. suppliers will submit to the rigors of Japanese just-in-time inventory systems and demands for flexible production.

The study points out that while U.S. automakers are adopting some of those same systems, they are not as well developed as those practiced by the Japanese.

It doesn't surprise the authors, then, that U.S. firms have opted for joint ventures as a way to break into the Japanese business. The Japanese, on the other hand, have viewed those ventures as a way to gain access to unfamiliar markets and as a way to defuse threats of protectionism.

But there are some risks. Typically, the authors say, the U.S. partner in a joint venture offers the bulk of financial, marketing and assembly support but doesn't share in the research efforts. The higher value-added jobs — those tied to product design and production — may be kept in Japan. That trend could hamper U.S. suppliers' ability to innovate.

Ideally, U.S. firms should view joint ventures as a means to absorb the skills of the Japanese partner while protecting their distribution and marketing advantages.

"The joint venture should be looked upon as much as an 'educational experience' as a business proposition," the study says. "At a bare minimum, the U.S. joint venture should increase the American partner's understanding of what it takes to supply Japanese OEMs in Japan."

While U.S. parts suppliers face the biggest challenges, the prosperity of Japanese suppliers in America will also be threatened if trends continue, the study says. If the Japanese become too much of a force in America, they will likely run into a stiff protectionist reaction.

The study recommends that American parts makers attempt to do more business with Japanese OEMs in Japan. In that way, they will be able to combat the Japanese by creating some of the economies of scale and other strengths that Japanese suppliers have built by expanding overseas themselves.

While few U.S. parts makers will become part of the first tier of Japanese suppliers from the start, they could find spots on the second and third rungs of the ladder. From there, the study concludes, U.S. firms will have the best chance of making it into the first group.

Pontiac LeMans on sale this week
Pontiac LeMans models are being loaded on haulaway trucks at the Jacksonville (Fla.) Port Authority in preparation for distribution to Pontiac dealers across the United States. The subcompact LeMans, imported from Daewoo Motors in South Korea, goes on sale nationwide June 11. Prices start at $5,995.

VW, Renault lead 1986 production gains

By Theodore G. Coutilish
SPECIAL CORRESPONDENT

Most leading motor-vehicle manufacturers posted slight production increases for 1986. Only Renault and Volkswagen had major gains.

After a lull in 1985 following two strong years, Renault rebounded with an increase of 370,034 vehicles in 1986. That was a 22 percent improvement.

Volkswagen showed the biggest advance, with an increase of 411,000 over 1985, due to its acquisition of Spanish carmaker Seat during the year. VW's production jumped 17 percent.

General Motors, Ford and Toyota retained the top three positions. Of the three, Ford posted the biggest production gain at 365,245, followed by Toyota at 119,521 and General Motors at 40,966.

In the ranking of leading manufacturers last year, Volkswagen moved ahead of Nissan into fourth place and Renault passed Chrysler to take sixth place. Chrysler's production increased marginally at 14,201.

DOWNTURN: *GM economist expects '87 sales dip; blames tax reform, 1986 incentives*

By Julie Whitmore
SPECIAL CORRESPONDENT

CHICAGO — General Motors believes a decline in domestic automotive sales during 1987 is a "virtual certainty" given the aggressive manufacturer incentives and tax reforms that shifted sales of approximately 400,000 1987 units back into 1986.

E.J. Sullivan, director of North American macroeconomics for GM, told economists here that 1987 U.S. vehicle sales will fall nearly 8 percent to 15.1 million units, including 10.5 million cars and about 4.6 million trucks.

For 1988, Sullivan projects domestic sales of 15.7 million, including 10.9 million cars and 4.8 million trucks.

While car sales fell off sharply at the start of 1987, they picked up to a 10-million annual rate by the first 20 days of May, Sullivan said.

Sales of foreign-sponsored cars are expected to total 4.1 million this year and 4.4 million in 1988, the latter essentially unchanged from 1986. In the first quarter of 1987, foreign-sponsored car sales took about 30 percent of the market versus 28.5 percent in 1986, Sullivan said.

Foreign-sponsored truck sales meanwhile accounted for about 19 percent of the market last quarter, compared with 20 percent in the year-earlier period.

Sales this year will remain above 15 million units for the fourth consecutive year. This suggests that auto and steel manufacturing will continue to be sustaining forces for the U.S. economy, despite the enormous competitive challenges faced by both, Sullivan told The Conference Board's annual mid-year economic outlook meeting May 29 in Chicago.

Sullivan concurred with other economists at the session that the U.S. gross national product will grow modestly this year, in the 2 to 3 percent range, thus sustaining an unprecedented five-year expansion.

They said autos and steel continue to play a pivotal role in the U.S. economy, accounting for 4 to 5 percent of the GNP. Sullivan cited a recent Federal Reserve Board report that found that changes in auto output account for nearly 30 percent of quarterly changes in GNP growth.

In general, 1987 is expected to be only a "so-so" year for the consumption and nonresidential fixed components of GNP. Real consumer spending is projected to decelerate to about a 2-percent rate of increase this year, down from 4 percent growth in 1986, Sullivan said.

Vehicle sales in unit terms have increased about 1.5 percent since 1965, or about the same as the growth trend for licensed drivers.

Inflation-adjusted dollar sales have increased about one percentage point per year above the growth in unit demand, because increasingly affluent consumers are demanding more conveniences and amenities.

Auto inventories are beginning to retreat from the unusually high levels of the first quarter, he said. Domestic stocks are currently equivalent to less than 90 days, down from a peak of 133 earlier in the year, Sullivan said.

GM would like inventories of about 90 days, he said.

At nearly 50 days supply currently, stocks of Japanese cars also have risen to their highest level since the imposition of the voluntary export quotas by the Japanese government, Sullivan said.

During the Japanese 1986 fiscal year, which ended April 30, Honda was the only Japanese manufacturer with sales equivalent to its allowable quota, Sullivan said, declaring, "At long last the sharp depreciation of the dollar is starting to have an impact on the sales of Japanese and European imports."

Still, the increases in the price of imported cars have been proportionately much smaller than the changes in exchange rates, Sullivan said. Between the first quarters of 1985 and 1987, Japanese car prices increased by 20 percent, while the yen appreciated nearly 70 percent. Similarly, German car prices increased by 18 percent while the deutschemark rose 80 percent.

In part this is because almost 50 percent of the sticker price of a Japanese car is denominated in non-yen currencies, principally the dollar, so that a substantial portion of the U.S. price is not affected by exchange rate changes. Moreover, Sullivan suggested, most importers built up substantial profit margins during the period of the dollar's high valuation, enabling them to absorb part of the initial currency appreciation. But that leeway is diminishing, he said.

On a per-vehicle basis, the price of Japanese cars have increased by more than $1,800 since the start of the 1986 model year, while prices of Mercedes-Benz passenger cars are up $4,500. Domestic price increases have averaged about $600 during the same period, he said.

With regard to petroleum prices, Sullivan predicted a 12 pecent increase, to $16.50 per barrel, in the average refiner's oil price this year.

Samuel Schwartz, senior vice president at E.I. du Pont de Nemours & Co., also predicted modest increases in oil prices over the next three years. The next major jump in prices is not likely to occur until the mid-1990s, he said. Demand also is due for only modest increases of about 1.5 percent to 16.5 million barrels per day for the United States in 1987 and 1988, Schwartz said.

With regard to the general economic outlook, The Conference Board's research director, Eric J. Kruger, was the most optimistic. While Kruger noted some major vulnerabilities that could prevent the continued modest expansion — including declines in construction, industrial production, income and consumption growth — he pointed out that there are some countervailing signs of strength.

These include continued growth in services and in overall employment, and a 17 percent increase in corporate earnings during the first quarter of this year, according to Conference Board data.

Likewise, the industrial production index for the first quarter is still 3.4 percent above where it was during the first quarter of 1986, he noted.

Kruger also cited the real increase in U.S. exports during April. Any expansion pushed by export growth is likely to be stronger than one fueled by domestic consumption, he suggested.

May car output slides

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Domestic auto production in May was 623,236, the lowest for that month since 1982 when 499,242 units were built.

The month's total was 4.98 percent below April's 655,892 and 10.59 percent below the year-ago month's 697,077.

Last week's targeted auto production of 156,645 was 18.14 percent more than the previous holiday week's 132,594 but 9.07 percent below the year-ago week's 172,270.

So far this year, 3,417,903 cars have been assembled, 8.44 percent below the 3,733,117 completed last year at this point.

Companies split last week's scheduled output as follows: General Motors, 49.17 percent; Ford Motor Co., 26.14 percent; Chrysler Motors, 14.30 percent; Honda of America Manufacturing Inc., 4.27 percent; New United Motor Manufacturing Inc., 2.39 percent; Nissan Motor Manufacturing Co. U.S.A., 2.02 percent; Volkswagen of America, 1.28 percent; and American Motors, 0.43 percent.

GM's Tarrytown, N.Y., and Norwood, Ohio, plants are closed this week (June 8) for inventory adjustment. Both are expected to resume operations June 15.

GM's Arlington, Texas, and Fairfax, Kans., plants remain idle for model changeover. Chrysler's Belvidere, Ill., plant also is down for model changeover. It is expected to resume production in mid-July.

Saturday (June 6) overtime was slated at GM's Lansing (No. 1), Mich., plant.

Chrysler's Newark, Del., and Sterling Heights, Mich., plants were scheduled for Saturday overtime.

Those plants and Chrysler's St. Louis (No. 1) plant are slated for daily overtime this week.

Truck total in May best since '79

U.S. truckmakers' May production of 329,216 was the highest for that month since 1979 when 338,961 units were assembled.

Last month's output was 0.49 percent below April's 330,826 but 2.99 percent more than the year-ago month's 319,666.

Scheduled production of 79,106 trucks last week was 20.56 percent more than the previous week's 65,616 (which was affected by the holiday), and 3.37 percent more than the year-ago week's 76,530.

General Motors slated Saturday (June 6) overtime at three plants: Baltimore; Lordstown, Ohio; and Pontiac, Mich. (medium-duty line).

Canada cars dive to 23-year low

Canadian automakers' May output was the lowest total for that month in 23 years.

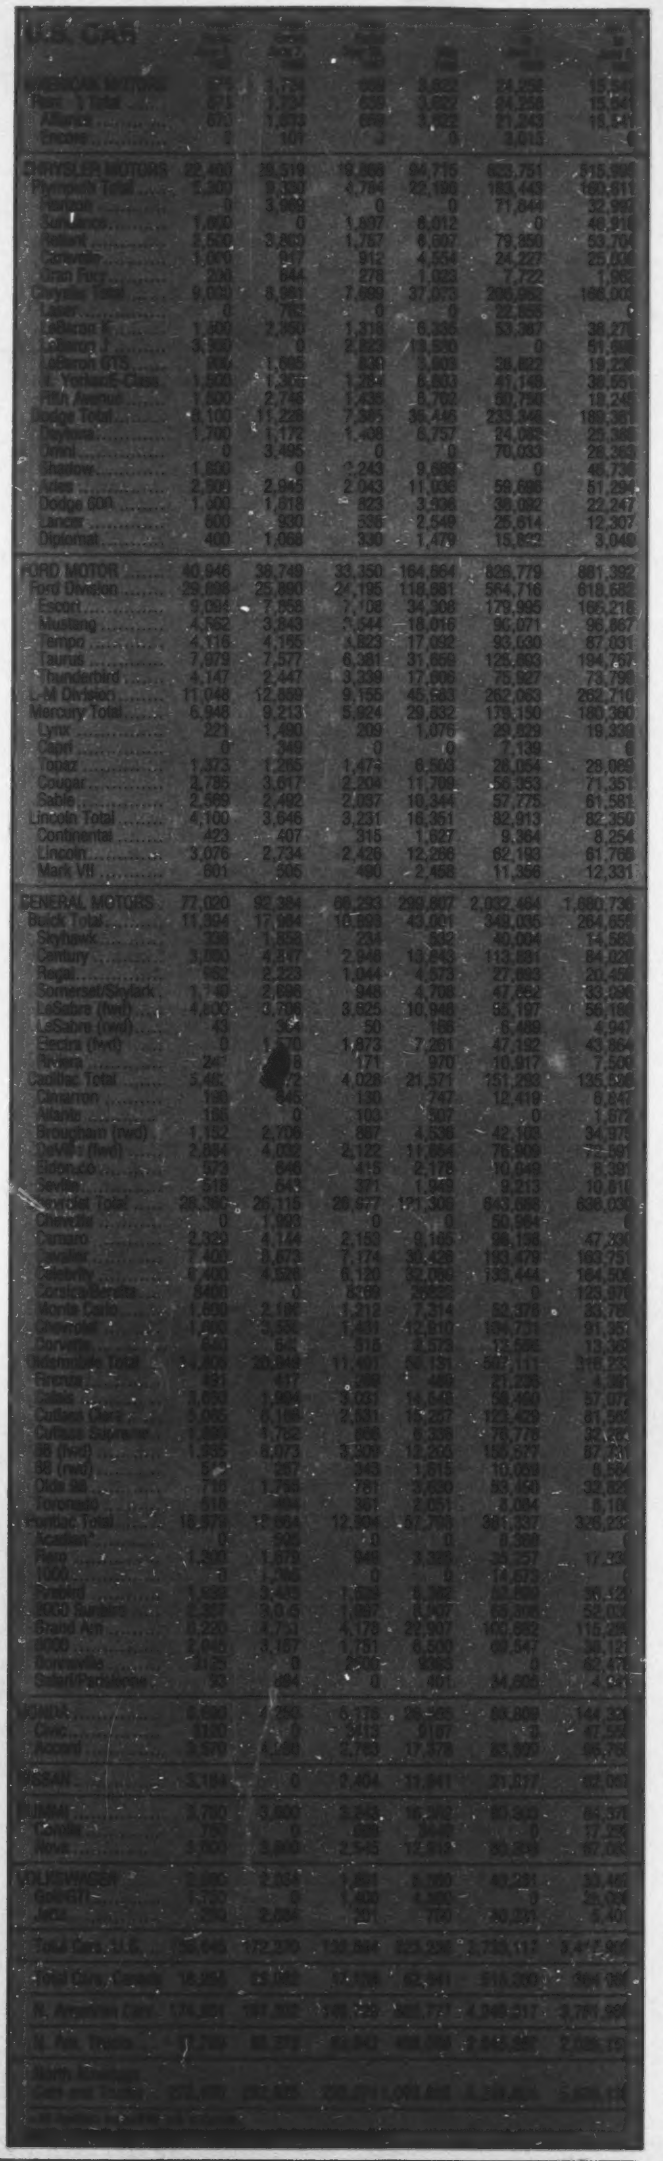
With General Motors' Ste. Therese, Quebec, plant and one of its Oshawa, Ontario, plants down for model changeover, last month's car output dipped to 62,541, the lowest May total since 1964 when 59,682 cars were built.

May's car production was 9.43 percent below April's 69,052 and 38.45 percent lower than the year-ago month's 101,618.

Last week's targeted auto output of 18,256 was 6.54 percent more than the previous week's 17,135 but 27.21 percent below the year-ago week's 25,082.

Truck output during May was reported at 78,872, slightly below (0.86 percent) April's 79,555 but a bit higher (0.80 percent) than the year-ago month's 78,243.

Scheduled production of 18,683 trucks last week was 4.22 percent more than the prior week's 17,926 but 0.32 percent below the year-ago week's 18,743.



GM to trim seat-cover operations

DETROIT — General Motors will close one of its Inland Division component plants and phase out part of a second plant next year.

GM will close the Inland Division plant in Tecumseh, Mich. The plant produces seat covers and employs 900.

Work now done at the plant will be moved to other Inland operations in Euclid, Ohio, and Grand Rapids, Mich. Some employees will be transferred, some may be considered for other GM jobs and others will be laid off.

Meanwhile, GM will seek a buyer for the plant.

GM also said it will phase out seat-cover operations next year at its Inland plant in Livonia, Mich. The plant will remain open to make door-panel trim and other trim pieces.

The Livonia plant employs 2,900 but it is not known how many employees will be affected by the announcement.

The moves, which had been the subject of speculation in recent months, are the result of a study of Inland's seat-cover capacity. The study concluded that Inland has excess production capacity and consolidation was advised.

GM is conducting similar studies of all of its component operations. GM executives have said that about 10 percent of the dollar volume of its component business is non-competitive and is unlikely to become competitive. Those non-competitive operations, not all of which have been disclosed, will be closed or sold, GM executives have said.

So far, GM has said it will close a Fisher Guide plant in Detroit by 1989 and it has completed the sale of another Fisher Guide plant in Elyria, Ohio, to Johnson Controls, of Milwaukee. The plants employ 2,000 workers each.

In November, GM announced the closing of nine assembly and body plants and the closing of portions of two others.

GM workers get COLA increase

DETROIT — General Motors' approximately 379,000 hourly employees have received a quarterly Cost-of-Living Adjustment increase of 15 cents per hour, effective June 1.

The increase raises COLA payments for GM hourly employees to 86 cents per hour for all hours worked through August. COLA payments had been 71 cents during the previous quarter. COLA is adjusted every three months in accordance with the Consumer Price Index, as determined by the U.S. Department of Labor's Bureau of Labor Statistics.

Under GM's current labor agreements, eligible employees receive a one-cent-an-hour raise for every 0.26-index-point rise in the index.

With this increase, COLA payments amount to about $1,790 on an annualized basis for an average hourly employee. Including COLA payments, GM hourly employees in 1986 averaged more than $37,000 in cash compensation. The average labor cost for wages and benefits for hourly employees exceeded $50,000 in 1986.

Since 1984, COLA payments have risen from 5 cents per hour to the current 86 cents per hour.

Ford plays it tough at glass unit

Concessions sought to save U.S. work

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

CHICAGO — A preliminary document detailing Ford Glass Division's bargaining plans said the company will push for wage cuts and revamped work rules, and if it is unsuccessful may "be forced over time to abandon the business entirely."

The document said the UAW will be given a chance to man a new glass fabrication plant the company plans to build next year, but that if the union does not grant wage concessions and work-rule changes, the plant will be built in Mexico.

The document belies the widespread notion that Ford Motor Co., unlike General Motors, has virtually completed its cutbacks, having laid off more than 100,000 workers and closed or sold a score of plants since 1979.

The plans in the internal document, obtained from a union source, likely reflect those of other Ford Diversified Products Operations, which include 10 component businesses. The document said the plans are "likely common goals for all components" but were "intensified for the Glass Division because of our particular non-competitive situation."

A Diversified Products spokesman declined to comment on de-

Elmer Johnson

GM's mystery man moves into limelight

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Elmer Johnson, a tenacious lawyer with a penchant for Plato, brings a fresh face — and fresh ideas — to the General Motors boardroom.

Four weeks ago, he was one of the two biggest newsmakers — only time will tell which — to emerge from GM's annual stockholders meeting and the board meeting that followed. The other was Robert Stempel, who was elected GM's new president.

But while Stempel received the lion's share of the attention, it was Johnson's election as executive vice president — operating staffs and a member of the board that formally brought a new face into GM's highest echelons.

In fact, Johnson had been in and around such ranks for years, but in tapping him for the big promotion, GM Chairman Roger B. Smith admitted that Johnson — along with Stempel, Executive Vice President F. Alan Smith and Executive Vice

New-car glut: 2.5 million clog dealers' lots

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

In spite of continuing Herculean retail sales efforts, the industry's June 1 stockpile of unsold new cars remained at glut levels.

For the second month in a row, the domestic industry's inventory consists of nearly 2 million cars at dealerships and in transit as buildouts loom and new-model introductions approach.

Imports fared no better: Stockpiles of both cars and trucks hit record high levels for June 1.

Stockpiles become especially worrisome at this time of the year because, ideally, dealers should be emptying their lots in anticipation of new models and the traditional hoopla that goes with them.

It was General Motors' huge inventory last summer that triggered that company's across-the-board 2.9 percent financing that quickly spread through an industry plagued by high stockpiles.

June opened with a stock of 1,910,805 United States-built cars, a 77-day supply. On May 1, the total was 1,912,132, or 72 days.

On June 1 last year, stocks totaled 1,866,853 units, equal to a 62-day supply. June 1985, opened with a total of 1,546,188 units, or a 50-day supply.

There was a record high number of imported cars in inventory June 1 at ports of entry, in transit and at dealerships. The combined stockpile totaled 606,583 units compared with 387,911 on June 1 last year and 297,000 on June 1, 1985.

The combined total of unsold new U.S.-built and foreign-built cars June 1 was 2,517,388. A year before, the total was 2,254,764.

The inventory, when placed in a days-supply frame, looked a bit less grim for the imports.

As of June 1 this year, the imported-car stockpile was the equivalent of a 58-day supply compared with 37 days last year and 29 days as of June 1, 1985.

Stocks of imported trucks June 1 this year also were at a record high — 230,562 units, a 67-day supply. A year earlier the truck figure was 177,788 units, or a 51-day store. On June 1, 1985, it was 92,815, a 31-day supply.

A 55-day or 60-day supply of cars or trucks is considered optimal.

Reports have been prevalent that domestic dealers — particularly GM's — have not been ordering buildout cars in their usual numbers.

Jim McDonough, sales manager at Jones Chevrolet in Whittier, Calif., perhaps was typical of GM retailers. He said, "My inventory is in good shape. I'm right where I want to be."

He was echoed by Bob Nolan,

TALKS: *Conflicts loom large as UAW faces GM, Ford*

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

As they step up to the bargaining table next month, negotiators for the UAW, General Motors and Ford Motor Co. face an unusually complicated task: Reconciling the union's major priority of job guarantees with the companies' top goal of increased competitiveness.

"I think GM used to like to have enough business to argue with us about money," said UAW Vice President Donald Ephlin, who heads the union's GM department. "Those were much better days."

Further complicating bargaining are differences in finances and employee morale at Ford and GM. The gap might mean that traditional pattern bargaining will not work this time around.

But no matter who is the strike target, this year's talks will be conducted in an atmosphere ringing with accusations. The philosophical differences between the corporations and the union have been keenly articulated in recent months.

In one example, UAW President Owen Bieber called GM's decision to shift some production of the Chevrolet Celebrity, Buick Century and Oldsmobile Cutlass Ciera to Mexico "a slap in the face of the American workers and consumers who have made GM successful through the years."

In another, UAW Vice President Stephen P. Yokich, who heads the union's Ford department, called a Lincoln-Mercury Division letter to Ford employees urging them to use their profit-sharing checks to buy new Lincoln-Mercury cars "insensitive" and "huckstering." The letters also were sent to employees of the Rouge Steel Division, who do not receive profit sharing because they are covered by a different labor agreement.

U.S. car share seen sinking as capacity grows

By A.S. Plotkin
SPECIAL CORRESPONDENT

CAMBRIDGE, Mass. — Excess North American production capacity of more than 4 million cars a year and a sharp decline in market share for U.S.-based makers by 1990 are the gloomy forecasts of a prestigious group studying the industry.

The leaders of a four-year study by the Massachusetts Institute of Technology expect the share of the new-car market held by U.S.-based automakers to decline to 52 percent by 1990. In 1986, it was 67 percent.

At the same time, sales of cars from transplant manufacturers in the United States are expected to take 18 percent of the market in 1990, and sales of cars by non-Japanese or European producers are predicted at 5 percent. The re-

New tax bite no disaster for dealers

CRAIN NEWS SERVICE

New-car dealers are likely to avoid a little-noted provision in last year's tax law that requires companies to allocate a portion of their pension — and other benefit — costs to inventory costs.

"The big thing is that dealers meet the important exceptions," said Jeffrey Eckles, of Plante & Moran, certified public accountants. "They must have a terrific lobbyist."

Eckles specializes in dealership tax returns. He said the provision, known as the uniform capitalization rules, will have "a very insignificant impact" on dealers, perhaps raising taxes a maximum of "a few thousand dollars at most."

He said dealers can elect to use a simplified resale method of accounting that will allow them to take advantage of exceptions not available to all segments.

"Warehousers and wholesalers are going to get clobbered this year," Eckles said.

The 1986 Tax Reform Act requires companies to include normal pension costs in inventory as an indirect cost. Companies must revalue their inventories for tax years beginning Jan. 1. However, companies can spread the effect of that change over four years.

Pension costs now must be capitalized during the period it takes to sell the manufactured items.

Therefore, inventories will be boosted by the amount of the includable pension costs. Because gross income equals net sales plus changes in inventory, companies with expanding inventories will face rising tax bills.

The change in treatment of pension costs may result in short-term increases in taxes and deferral of pension deductions for numerous companies, particularly manufacturers and retailers.

Because of that revaluation requirement, the Treasury Department will reap a "one-shot" gain where those changes boost the value of inventories, said Ethan Kra, principal and actuary at William M. Mercer-Meidinger-Hansen Inc., New York.

The uniform capitalization rules are expected to raise $4.1 billion in new revenue this year; $7 billion in 1988; $7.4 billion in 1989; $7.7 billion in 1990; and $6 billion in 1991. A breakdown of how much revenue the pension provisions will raise was not available.

Auto TV spending up

First-quarter total climbs to $641 million

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Spending for automobile television advertising rose 25.71 percent to $641.1 million for the first quarter of 1987 from $510.0 million for the same time period a year ago.

The figures were supplied by the Television Bureau of Advertising.

Total spending includes carmakers and their dealer associations. The bureau analyzes data supplied by Broadcast Advertisers Reports.

Automakers outpaced other industries in spending, including food and food products, which spent $637.8 million for the most recent quarter.

"This is the first time I can remember that the auto industry has spent more than the food industry," said Dick O'Donnell, marketing director for the Television Bureau of Advertising.

But another reason could be that the food industry, whose TV ad spending increased only one percent over the first quarter of 1986, is shifting its ad dollars to coupons and promotions.

Fred Danzig, editor of Advertising Age, said, "It's no secret the food industry has been switching from media to promotions for the past year."

General Motors boosted TV spending to an estimated $60.8 million in national and regional spot ads for the first quarter. The total was the highest of any advertiser. GM's spending was up 26.96 percent over the $47.9 million reported for the 1986 quarter.

National and regional spot ads include company and dealer associations and all products and services.

In spot ads, Ford increased spending 58.99 percent to $31.3 million from $19.6 million a year ago; Nissan was up 53.64 percent to $29.9 million from $19.4 million; Toyota was up 14.58 percent to $25.0 million from $21.8 million; and Chrysler was up 29.14 percent to $20.1 million from $15.6 million.

Spending by Hyundai leaped 144.69 percent to $11.6 million from $4.8 million. Hyundai began exporting cars to this country in the first quarter of 1986.

GM led other automakers in network ads (company only) for the first quarter, hiking buys 27.06 percent to $80.1 million from $63.0 million a year ago.

Chrysler boosted its network buys 95.79 percent to $41.5 million from $21.2 million.

A Chrysler spokesman said heavy spending in the first quarter was due to the launch of the LeBaron coupe and convertible, the V-6 Grand Voyager and Grand Caravan stretch minivans and the Dakota mid-size pickup.

Ford's network advertising dipped 29.45 percent to $36.9 million from $52.4 million a year ago.

The Taurus/Sable launch in the first quarter of 1986 could account for this year's decline.

However, there has been a trend within the industry to divert television advertising dollars to regional spot ads from network advertising.

Mitsubishi to expand U.S. product lineup

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Recchia: Mitsubishi plans to boost its dealer count from 160 in 39 markets this year to 328 in 150 markets by 1991.

DETROIT — This fall, Mitsubishi Motor Sales of America will begin a product push that will put a new model into dealer showrooms every six months for four years.

The expanded product lineup accompanies the company's move to penetrate the top metropolitan markets in the United States by boosting its dealer count from 160 in 39 markets this year to 328 in 150 markets by 1991.

The company plans to limit the number of dealers franchised in each market.

Mitsubishi's strategy calls for use of 50 "limited-product dealers" carrying only trucks in 1987 and 1988 as the company readies a dealer network that will handle an expected increase in volume from 135,500 cars and trucks this year to 287,206 in 1991.

Richard Recchia, executive vice president of Mitsubishi Motor Sales of America, described the company's three-tier product strategy. It will rely on serving the low end with the Hyundai-built Precis, filling the mid-range with vehicles assembled in the United States by its Diamond-Star joint venture with Chrysler and importing more upscale products from Japan.

Mitsubishi is the only Japanese vehicle importer to post a sales gain in the first five months of 1987. It reported sales of 26,392 cars in the first five months of 1987 compared with 19,771 in 1986.

Recchia said a restyled Galant with a V-6 engine will be introduced this fall to compete with models like the Acura Legend.

He also described the replacement for the Tredia as a "much more upscale, Euro-type sedan." That model is scheduled for a spring 1988 introduction.

"The replacement for the Mirage will also be coming next year," Recchia said. "And all of our engines are going into multi-valves, even in smaller cars."

Mitsubishi has no plans to add a convertible to its passenger-car lineup, according to Recchia. The introduction of a convertible sport utility-vehicle is a possibility, he said.

The truck lineup will receive an extended-cab pickup this fall and under consideration is a V-6 four-door sport-utility that may be imported in the 1989 model year.

Recchia said no date has been established for the U.S. introduction of a vehicle with four-wheel-steering. However, Mitsubishi will offer the Galant equipped with 4ws in Japan next spring, he said.

The company's product push took a major step in March with the introduction of the Precis, a Mitsubishi-badged version of the Hyundai Excel. Recchia said plans through 1991 call for a volume of 30,000 Precis units annually.

The next thrust will come when Diamond-Star begins production of a two-door sports specialty coupe in late 1988. Diamond-Star is a joint venture of Mitsubishi Motors Corp. and Chrysler Motors in Bloomington-Normal, Ill.

Will 'Eagle' fly as AMC name?

There are lots of loose ends in Chrysler's planned takeover of American Motors — not the least of which is what the AMC unit will be called.

Several names are under consideration, sources say, and no firm decision has been made. But one popular choice for the new subsidiary is the name Eagle.

AMC has a four-wheel-drive automobile by that name. And what could fit better with Chrysler's American theme than an American Eagle?

But nothing is certain.

After all, some thought Lido (the first name of Chrysler Chairman Lee A. Iacocca) was a shoo-in name for Chrysler's new Maserati sports car last year. But the idea was shot down almost as soon as it surfaced publicly and the car's name is now the Chrysler TC by Maserati.

3 auto analysts to address World Congress

Three prominent analysts will share their insights on auto manufacturers, marketers and consumers at the 12th annual Automotive News World Congress, to be held July 26-29 at the Hyatt Regency Hotel in Dearborn, Mich.

They are: J.D. Power III, president, J.D. Power and Associates; Maryann Keller, vice president, Furman, Selz, Mager, Dietz & Birney Inc.; and Jay Houghton, manager of marketing, Audi of America Inc.

This year's overall Congress theme is "Facing Up to Competitive Times."

Power and Houghton will speak Monday, July 26, when the day's theme will be "Recoveries and Strategies for the Domestic Industry."

Keller will speak Wednesday, July 28, when the daily theme will be "Coping With Change."

Power has spent 25 years in the automotive industry, the last 19 as president of what has become one of the most prestigious automotive marketing research firms in the world.

His company, headquartered in the Los Angeles suburb of Westlake Village, has numbered among its clients virtually every auto manufacturer and importer serving the U.S. market.

Power's previous auto industry experience included stints at Ford Motor Co. and with Marplan as a marketing consultant for Buick and GMC Truck & Coach.

Before joining Audi, Houghton was vice president — account supervisor at DDB Needham Worldwide Inc., Troy, Mich. The subject of his World Congress address is "The Discipline of Semiotics."

He calls semiotics "a general philosophical theory of signs and symbols that deals with their function in both artificially constructed and natural languages."

At Audi, Houghton and his group have analyzed design elements of automobiles — such as grilles, taillights, instrument panels and wheels — for their influence on consumers.

Before joining her present firm, an investment house, Keller was director and portfolio manager at Vilas-Fischer Associates, and prior to that was first vice president at Kidder, Peabody & Co. Inc.

Keller, whose World Congress topic will be "A Critique and Update of the Industry," often appears on television as a commentator on automotive industry conditions.

She has testified before the Senate and House Banking committees and has served on advisory panels of the Office of Technology Assessment of the U.S. Congress in areas of automotive technology and international competition within the industry.

This year's World Congress will have more than 30 speakers, who will share their knowledge and viewpoints on where the car and truck industry stands today and where it is headed.

TRUCK INDUSTRY

Ford expects to benefit from change in buying patterns

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

The heavy-truck market's shift toward smaller vehicle classes favors Ford.

That was the message delivered by John Merrifield, heavy-truck sales manager, to the Ford Truck Operations field sales force at its annual meeting in Atlanta.

Ford has traditionally been strongest in the Class 6-7 segments, which have been growing, partly at at the expense of Class 8, Merrifield said.

But the Class 8 market, like the medium segment, has been strong thus far this year, according to sales data compiled by the Motor Vehicle Manufacturers Association.

Some industry analysts wonder how long it will continue. But for now, truck manufacturers are making the most of it.

Ford sources said the Kentucky plant where it builds medium and heavy trucks has been on weekday overtime and Saturday overtime is scheduled this month.

The medium segment though, while strong, is still very competitive.

Hino, which is breaking into the U.S. market, currently has a big salespeople/sales manager incentive, for example.

Such incentives and cutthroat pricing actions have their effect all through the medium-duty market, including models like Ford's F series and Chevrolet's C series.

Meanwhile, Merrifield pointed to strengthening acceptance of Ford's mid-range diesel engine, the growing popularity of its Cargo model and the shift in Class 8 to conventionals such as Ford's LTL-9000 and "baby eights" like the LN-9000 as favoring company sales.

Ford recently introduced a higher-powered, higher-GVW-rated CF-8000, and it is expected to introduce a new "aero-max" version of its L-9000 this fall.

Ford will join Navistar, Volvo-White, Kenworth and Peterbilt, which now offer such aerodynamic versions of their heavy trucks.

Merrifield told the Truck Operations field force that Ford's development of its own diesel engine and Premium Supplier Team concepts are enabling it to hold down costs while improving quality.

He also noted that the company's Work-Ready pre-spec'd truck program is continuing to gain acceptance, now representing about 18 percent of the production mix at the Kentucky truck plant.

Merrifield said the market's shift toward smaller Class 8 and medium-duty vehicles was due primarily to the U.S. shift away from an industrial-based economy.

"More and more goods are coming into the country already fabricated and are distributed through a hub-and-spoke distribution system," he said.

"With the emphasis now on distributing finished products, rather than raw materials, bulk-out is a more important factor than gross-out. Now, trucks can have lower GVWs and lower horsepower," he added.

Other changes forcing the market shift to lower truck classes, according to Merrifield, are deregulation, increasing insurance costs and greater rate competition.

Ford is pushing increased dealer participation in customer satisfaction programs to buoy future sales.

Merrifield cited dealer certification programs for sale and service of the Cargo and the Ford diesel engine as two major examples of programs aimed at meeting customer needs for sales, parts and service.

Those programs require dealers to meet specific company standards for stocking levels in order to handle its Brazilian-built imported trucks and engines.

6% decline in May cuts '87 edge for light trucks

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Light-truck sales tumbled in May, reflecting a general softening in market demand.

May sales were off 5.9 percent from a year ago, though they still showed a narrow 1.3 percent gain over last year for the first five months.

In May, light-truck dealers retailed 409,391 units compared to 435,386 in 1986.

For five months, they retailed 1,888,344 units, up from 1,863,257 a year ago.

Dodge, Jeep, Isuzu, Mitsubishi and Suzuki managed to buck the May trend.

Dodge sales, aided by the availability of new truck lines like the Dakota and Raider and a firmer demand for the high-volume minivans, were up 15.2 percent in May.

Dodge retailed 63,288 trucks last month compared with 54,921 a year ago.

For the first five months, its sales of 276,587 light trucks were up from 236,102 a year earlier.

Jeep is being helped by its Comanche, whose sales were up 68.1 percent over last year and 29.3 percent for the first five months of the year.

Jeep posted a 7.3 percent gain in May on sales of 17,146 trucks and a 5.7 percent gain for five months on sales of 81,186.

Ford's sales are holding at a high level, though they showed some early signs of weakening last month.

Ford retailed 125,460 light trucks in May, slightly below 127,384 a year ago.

For five months, Ford's total of 574,903 was 8.1 percent higher than a year ago.

Chevrolet is continuing to struggle.

Its May sales of 99,413 units were off 19.8 percent from a year ago, and its five-month tally of 464,892 was off 10.1 percent.

The 1988 Chevrolet C/K and GMC Sierra pickups, introduced in April, are building momentum, though they're still not a major factor in General Motors' overall full-sized pickup sales.

Chevrolet retailed 9,807 of the new C/K models in May, up from 6,080 in April. They accounted for 27.3 percent of Chevrolet's full-sized pickup sales in May.

So far, including sales in March before the introduction, Chevrolet has retailed 19,694 C/K models.

GMC sold 2,644 Sierra pickups in May, up from 1,831 in April. They accounted for 28.1 percent of GMC's full-sized pickup sales. GMC has retailed 5,613 Sierras so far.

GMC's overall light-truck sales of 24,577 last month were off 15.5 percent from last year, while its five-month sales of 122,169 were off 3.6 percent.

Import sales totaled 79,507 in May, down 5.4 percent from last year. The imports' five-month total of 368,607 was off 1.6 percent from 1986.

Navistar dealer unit grows as tax law spurs leasing

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

The tax reform act is buoying the truck rental and leasing market and dealers' participation in it.

Proof of that is the growth of dealer-leasing associations, like Chicago-based Idealease Inc.

At the Truck Rental and Leasing Association convention in Las Vegas earlier this year, officials of leasing companies and leasing-related businesses said the Tax Reform Act has increased customers' interest in leasing and will benefit the full-service leasing industry.

Similarly, officials at Idealease attribute recent strong membership gains in part to a heightened interest in leasing by both dealers and their customers.

The association, which consists of Navistar-only dealers, had been growing rapidly even before the changes in the tax law.

Idealease grew out of an idea by 11 Navistar dealers in 1982 to band together to provide reciprocal services for their out-of-town truck customers.

If a customer of a member dealer has an out-of-town truck breakdown, he can get service through a toll-free telephone number and be back on the road within an hour or two, without paying any outside fee.

Aside from the reciprocal dealer services, the association also provides marketing and warranty programs for dealer members.

Ted Bertram, Idealease executive vice president and general manager, credits the success of the association to the fact that it helps dealers provide the full service required by today's customers.

Idealease also gets its dealer members the best prices available for trucks they put into rental and leasing from five to seven different pricing structures that Navistar reportedly has, according to industry sources.

At any rate, at the end of last year, Idealease had 249 heavy-duty truck dealers.

They placed more than 2,000 vehicles into operation in 1986, bringing their North American total to 9,000 units in service. That was up 27 percent from the year earlier.

This year, the association is adding another 50 to 100 dealers who already lease vehicles, which is expected to bring total membership to over 300 by September. That will represent more than 40 percent of Navistar's 700 heavy-truck dealers.

The association's dealers now have just over 10,000 vehicles in service, with a goal of 15,000, including tractors and trailers, by September.

The association operates autonomously from Navistar, which is more of a vendor than anything else, according to a spokesperson.

Idealease competes with other truck-leasing companies like Ryder, Hertz and Gelco as well as dealer associations like National Lease and AMTRA Lease.

Competitive dealer associations, though, are open to all manufacturers' dealers, while Idealease is restricted exclusively to the Navistar group.

Volvo GM building Canada home

MILTON, Ontario — Volvo GM Canada Heavy Truck Corp. has broken ground for its new headquarters in this small community near Bramalea.

Construction began earlier this month. The new facilities are expected to be ready by Nov. 6.

Kurt R. Beyeler, president of the company formed by the merger of the Volvo and GM North American heavy truck operations, was highly optimistic about the future, based on the strong dealer support.

He said dealers have already placed more than 300 truck orders with the new company, a total that is well ahead of company projections.

Dealer response, in fact, has been so strong the company has had trouble filling orders, he added. He called it "a pleasant problem."

Located adjacent to Highway 01, close to major airports and the metropolitan Toronto area, the headquarters facility will include a 55,000-square-foot warehouse and a 9,000-square-foot training area. In addition, it will have 16,000 square feet of office space.

Situated on an 8.8-acre tract, it will offer parking for 100 cars, a 150-truck depot storage area and service bays. When completed, it will have 100 employees.

DiversiTech building in Indiana

AKRON, Ohio — Work has begun on a $50 million plastic components manufacturing facility in Shelbyville, Ind., that will be operated by the Reinforced Plastics Division of DiversiTech General.

The 260,000-square-foot plant is expected to be completed in mid-1988. It will create 500 new jobs and will produce reinforced plastic components for the automotive industry. It will house molding, assembly, painting and shipping operations.

According to company officials, the Shelbyville plant will set a new standard for the industry — from the equipment used, to the design of the manufacturing process, to the way the employees are managed. They said the plant will use organizational concepts based on a participative management style.

The manufacturing process will use short-stroke compression molding presses, as well as robotics for loading, unloading and handling materials.

DiversiTech General is a custom molder of reinforced plastic components for the automotive industry. Its Reinforced Plastics Division also has manufacturing facilities in Marion, Ind., and Ionia, Mich.

Those plants provide a variety of parts, including major body panels for the Chevrolet Corvette, Pontiac Fiero hoods and headlamp covers and Chevrolet Blazer roofs.

DiversiTech General is a subsidiary of Gencorp.

Some makes happy with May results

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

New car sales in May slumped almost 18 percent from the year-earlier total, but the news wasn't all bad. Some makers had favorable comments on their performance during the month.

For example, Yugo America Inc. used reports of rising sales and its 60,000th retail delivery last week to do a bit of horn blowing.

"The figures reinforce the fundamental premise of the Yugo. That is that Americans need and appreciate the great value in the economical, reliable transportation the Yugo offers," said Yugo America President William Prior.

Jaguar sales of 2,304 cars in May set a record for the month. The previous peak was 2,191 in 1986.

Graham W. Whitehead, president of Jaguar Cars Inc., said his company has had a smooth sell-out of the XJ-6 Series III in the United States. He said virtually all of the remaining Series III cars will be sold in the next month.

Dealers report that orders for the new 1988 XJ-6 sedan are strong, and Whitehead said he expects that, after a slow period, sales will accelerate in the final quarter of this year as supply improves.

Hyundai Motor America said May sales were in line with its plans to sell 250,000 cars in this country this calendar year.

"Our strong performance, which quickly propelled us to the fourth position among importers, demonstrates the Hyundai Excel's continuing appeal even with the increased competition in the U.S. market," the company said.

Supply also figured in sales comments from Range Rover of North America, which entered the U.S. market with its four-wheel-drive Range Rover March 16.

"We created a market niche — luxury sport-utility — with the Range Rover," said President Charles R. Hughes. "But the demand reported by our dealers makes me think we may have one of the most successful launches ever of a European luxury vehicle.

"We have targeted an average monthly selling rate of 250 Range Rovers, which we will hit during June. Meeting our full-year target of approximately 3,000 units depends primarily on getting them from the factory, which is enjoying a 50 percent sales increase in Europe," he said.

William E. Enockson, American Motors group vice president, North American sales and marketing, said incentives are paying off.

"Consumers are saying yes to our return to zero percent, two-year financing on selected Renault and Jeep models," he said. "Buyers have the choice of the financing programs or rebates ranging from $300 to $700. In addition, the 1988 Renault Medallion is available with a $100 rebate, or 3.9 percent, two-year financing."

Audi of America opens new Western area office

PLEASANTON, Calif. — Audi of America has opened its new Western region office in this city 40 miles east of San Francisco.

The office employs 28 and handles the wholesale sales and service operations for 58 Audi dealers in Alaska, Idaho, Montana, Oregon, Washington, northern California and western Nevada.

Keller: import sales may dip 10%

By Susan Luce
SPECIAL CORRESPONDENT

DETROIT — For the first time in many years, foreign automakers will experience decreased U.S. sales — perhaps as much as 10 percent in 1987 — as the auto business begins its cyclical decline.

Auto analyst Maryann Keller said that despite record 1986 sales, consumers are tapped out and today's car market is in the mature stage of its cycle. With demand decreasing and more nameplates entering the U.S. market, both foreign and domestic manufacturers will have to fight to maintain market share.

Keller, a vice president with Furman Selz Mager Dietz & Birney, told the Women's Economic Club here last week that 1988 will likely parrot 1987.

So what will happen by 1990, Keller asked, with more than 40 firms selling some 200 nameplates? Because "consumer brand loyalty has basically evaporated," she said, niche marketing will become a way of life, and competition will be based on specialization.

Automakers will have difficulty maintaining a market share. But the next few years will be an "era of disappointment" after which the strongest will emerge in the mid-1990s, she said.

During this period, Japan will be vulnerable, especially because cars are its prime source of profitability, Keller said. But the Japanese

Keller: Niche marketing will become a way of life, and competition will be based on specialization.

automakers can't be dismissed as competitors — even with the fluctuations in exchange rate.

The stronger manufacturers, likely to be Toyota Motor Co. and Honda Motor Co., will be selling cars into the mid-segment of the American car market. Pushing medium-sized cars priced like full-sized American cars might be difficult, she noted, but success such as that Honda has had with the Acura Legend could spur the manufacturers to try.

Japanese manufacturers will be increasing U.S. parts procurement, Keller said. And she sees possible Japanese investment in Eastern Europe, with cars being built in countries such as Romania or Czechoslovakia, and exported to the United States in the next five years or so.

Domestic auto manufacturers are developing strategies for the future market, she said. Ford Motor Co., for example, will probably not make much new investment in the United States. Keller called this global strategy Ford's attempt to balance its domestic skills with its capital requirements.

Chrysler Motors's future hinges on its ability to consolidate and improve the efficiency of American Motors operation when its acquired. Greater exposure in the truck market will help Chrysler, she said, especially as trucks likely become the best performers in the future.

General Motors has had a different philosophy toward the future, she said. GM has not cut costs to the extent Ford and Chrysler have. The jury's still out on GM's major acquisitions and reorganization, she said. But the cost cuts the manufacturer is now making lead Wall Street analysts to believe that GM is developing a more vigorous spirit.

Keller said that she, more than some analysts, tends to look at sales. While GM's performance is still not up to par, she believes that Corsica and Beretta mark a change in both design and philosophy.

"I can only hope that this is just the start and that in the end, by 1990, all the divisions have created for themselves the distinctiveness that they're going to need," Keller said.

To succeed in the 1990s, she said, an auto manufacturer will have to offer quality, but cost, performance, image and the value a car presents will be vital.

Hertz says U.C. sales jumped 3% in '86

NEW YORK — Over a half-million more used cars were sold during 1986 than in the previous year, according to a yearly study prepared by Hertz Corp.

The nation's consumers bought an estimated 16,524,000 used cars last year compared with 15,931,000 in 1985.

The study said the average used car sold in 1986 was 4.5 years old, had 41,140 miles and cost $5,833. In 1985, the average age was 4.6 years, the car had 45,270 miles, and the cost was $5,431.

By contrast, a typical unit in 1979 was just 2.8 years old, had 29,090 miles and cost $3,602.

Overall used-car revenues jumped 11.4 percent to $96.4 billion from $86.5 billion the prior year, the Hertz study shows.

Typical ownership and operating costs for used autos bought last year rose 1.8 percent to 25.52 cents a mile compared with 25.07 cents in 1985. The amount is for a five-year-old compact that is expected to be driven another five years at 10,000 miles annually.

By contrast, a typical new 1986 compact cost 48.48 cents to own and run the same mileage, up from 47.64 cents in 1985, as the company reported in a study earlier this year.

The average 1986 new-car purchase price was $11,010, 89 percent above the typical $5,833 used-car outlay last year.

Combined new- and used-car sales in 1986 came to 27,660,000 units, up 3.1 percent from 26,820,000 in 1985 and 4.3 percent below the 1978 unit record of 28,900,000, the Hertz study said.

Owing to higher purchase prices, however, combined new- and used- car buying in 1986 aggregated a record $219 billion (averaging $7,918 per vehicle), 11 percent ahead of the prior top of $197.2 billion ($7,353 a unit) in 1985.

The used-car unit record was 1980 when 18.664 million were sold for $70.3 billion ($3,794 per vehicle). The new-car unit high came in 1973 when 11.376 million were bought — for $41 billion ($3,596 per unit).

The 1986 poll shows direct purchases account for 44 percent of all used cars sold — 23 percent from relatives, neighbors, friends or business associates and 21 percent from strangers. New-car dealers' used-car lots account for 45 percent of sales and independent used-car-only outlets, 11 percent.

Hertz poll respondents said that used cars bought from new-car dealers in 1986 were younger than average (2.7 years old), had lower mileage (31,694) but cost more ($7,696). Those bought from used-car dealers averaged 5.7 years of age, had 51,060 miles and cost $4,579.

Direct buys from strangers averaged 5.8 years old, had run 50,302 miles and cost $4,137, while purchases from acquaintances were 7 years old, had run 51,900 and cost $3,732.

Typical 1986 purchase prices for used compacts versus new cars ranged from 21 percent less expensive for a one-year-old car to 95 percent less expensive for a nine-year-old car. Savings on owning and operating used compacts ranged from 18 percent to 58 percent.

Despite the increase in expenses as mileage grows, the average used car's ownership and operating expenses usually drop in its later years. Lower depreciation, interest, insurance, taxes and fees, as well as the lower purchase price, more than offset maintenance, Hertz said.

"Last year, typical used car buyers saved some 68 percent on purchase prices under new car sticker charges on comparably sized units. Ownership and operating expenses in comparable driving averaged 47 percent lower," the 1986 analysis said.

The average 1986 family income of used-car buyers was $35,200 — 30 percent lower than the $49,791 reported by new-car families. Used-car-buying families owned 2.2 cars each, while new-car families had 2.1, the study said.

The latest Hertz nationwide poll also showed the following:

- Since 1979, the average used-car age at purchase time rose 57 percent, or 1.69 years.
- Since 1979, mileage at purchase rose 41 percent, or 12,050 miles; average purchase price rose 61 percent, or $2,231; and operating costs climbed 47 percent — to a typical 25.52 cents a mile from 17.4 cents a mile for cars driven more than five years at 10,000 miles a year.
- Purchase prices of a typical new compact soared 106 percent to $10,439 in 1986 from $5,079 in 1979. Ownership and operating costs rose 70 percent in 1986 — to 48.48 cents a mile from 28.55 cents a mile in 1979.
- Cars that are traded first change hands at 4.5 years of age after 41,140 miles, then are run another 5.4 years until they have been driven 106,603 miles.
- Some 20 percent of used-car buyers had never bought a new car before, and 10 percent said they had never previously bought a used car, the Hertz poll said.
- Buyers of used cars are about the same age as new-car buyers (44.1 years versus 45 years). Some 71 percent of used-car buyers are men, 29 percent women. In 1979, that figure was 84 percent men, 16 percent women.
- Fewer than half (46 percent) of used-car buyers financed their cars in 1986, down from 60 percent in 1979. That compares with 75 percent of new-car buyers who take out loans.

new-car manager at Coast Cadillac, Long Beach, Calif.: "We don't have a stockpile. We are where we try to be at this time of the year."

Roger Gill, new-car sales manager at Van Drunen Ford, Homewood, Ill., just south of Chicago, spends a good deal of his time these days trying to locate cars that are in short supply. "Mustangs have been hard to get for a couple of months," he said. "Everybody wants them. Crown Victoria is moving very well and we're starting to get short of them. The truck line is short, especially those with automatic transmissions. On the other hand, everyone has plenty of Tauruses and enough Tempos to last through buildout."

A dealer who handles Volkswagen and Mazda said, "On balance and in general, I'm not really in any inventory trouble. With Mazda, we're continually trying to get more cars and with Volkswagen things are a litle softer."

"There could be some dealers who are over-inventoried but we are not. In fact, we're running out of some automobiles — Horizon and the LeBaron coupe, for example" said Max Kester at Chicago's Beverly Chrysler-Plymouth.

The June 1 domestic car inventories were split this way: GM, 55.24 percent; Ford Motor Co., 26.62 percent; Chrysler Motors, 13.84 percent; Nissan, 1.50 percent; Volkswagen, 1.00 percent; American Motors, 0.97 percent; Honda 0.44 percent and Toyota 0.39.

Shares by size class June 1 were: Intermediate, 40.50 percent; compact, 18.87 percent; subcompact, 17.85 percent; standard, 12.47 percent, and luxury, 10.31 percent.

The 77-day supply of U.S.-built cars consisted of an 87-day supply of intermediates, an 81-day supply of both standard and luxury models and a 58-day supply of subcompacts.

The inventory of imported cars by country of origin stood this way on June 1: Japan, 65.64 percent; Germany, 20.31 percent, and other 14.05 percent.

GM eyes $100 million debt swap

By Marci Baker
CRAIN NEWS SERVICE

General Motors is considering a $100 million swap of Latin American debt for equity to further capitalize its Mexican operations.

If it carries out the swap, GM would join a growing list of U.S. companies that are taking advantage of the secondary trading market for Latin American debt to build up operations there.

"We've been looking seriously at (LDC debt conversions) for some time," said a GM spokesman, who declined to comment on anything more specific.

Sources said, however, the company is working with Manufacturers Hanover Trust Co. on a $100 million debt-for-equity swap of Mexican loans.

Corporate officials and investment bankers say the transactions often offer the cheapest, most attractive mechanism to finance activities in developing nations.

Ford, Chrysler and Nissan have used the same technique to increase their equity investments in Third World countries.

The debt-for-equity swap opportunity presented to Chrysler last year "was instrumental in our decision to increase our production and export capabilities out of Mexico," said W. Frank Fountain, assistant treasurer.

Chrysler launched a $100 million swap of Mexican debt last fall, buying the debt at less than 60 cents on the dollar from a group of European and U.S. banks.

Chrysler since has completed another $10 million swap deal.

CAPACITY

FROM PAGE 1

maining 25 percent of the market is expected to be composed of Japanese imports.

Those were among the forecasts recently presented at the first International Policy Forum, held at Niagara-on-the-Lake, Ontario. The closed-door session was attended by senior industry executives, government officials and union leaders. Approximately three forums will be held during the four-year-study period.

It was sponsored by the International Motor Vehicle Program, which is the second major study of the future of the automobile under the auspices of MIT. The current venture, which began last year, will involve 15 nations — including a number of Third World countries. The four-year project will cost about $5 million.

James Womack, the program's research director, said a major implication of the study for the U.S. industry is that automobile production capacity of the U.S.-based makers "should be reduced by 2 to 3 million units." He said that is based on conservative assumptions that import and transplant sales will be fixed at an annual level of 5.5 to 6 million cars in a market of about 12 million.

Based on the study's predictions, he said, North American-based automakers will be operating at a capacity utilization rate of 63 percent in 1990. In 1986, capacity utilization was 75 percent.

The results of the study on U.S. plant overcapacity were presented by John O'Donnell, of the Department of Transportation's Transportation Systems Center in Cambridge, Mass. He is a research affiliate at MIT with the International Motor Vehicle Program.

In an interview, O'Donnell said he and his research assistant, Laurie Hussey, assumed a U.S. auto market of 12 million units in 1990 — a figure he insists is conservative even though other analysts think it is too high.

He made these other points:

- Sales by transplants and Korean and other imports will capture almost two-thirds of the U.S. small-car market by 1990. "The Japanese and transplant share of the mid-size and sports-car markets will increase by almost 50 percent (over 1986)," he said. "The Japanese are expected to make significant gains in the luxury-car market."
- In terms of manufacturing facilities, "the permanent elimination of 2 to 3 million units of assembly and parts production capacity is equivalent to 7 to 10 final assembly plants; 2 to 3 stamping plants; 3 to 4 engine plants; 2 transmission plants; 20 materials plants, and scores of plants making minor parts."
- A permanent reduction of 2 to 3 million units of capacity "would also result in the elimination of 100,000 to 150,000 hourly and salary jobs with the U.S. automakers."

Womack outlined and commented on some of the other industry analyses presented at the three-day session in Ontario. Among them:

- The U.S. industry, especially General Motors, has been spending a "tremendous amount" of money on research and development — contrary to what some critics have said. But the Japanese, who have also spent large amounts on R&D, "seem to be getting more for their money. We have seen a tremendous amount of patenting" by the Japanese, in the United States as well as in their homeland.
- The U.S. carmakers seem to be "standing still" on patenting, compared with the Japanese. "We see this is as an ominous trend for the U.S. industry."
- Much of the same kind of cost-benefit picture applies to big U.S. expenditures on automation. "There isn't much evidence that we are getting a lot to show for it," he said.

For all the negative aspects of the U.S. picture, "not all is doom and gloom," Womack said. "That is out of date. I'm bullish in the long run." The reason is that the "best of the U.S. car plants are world-class — in terms of productivity and quality." He declined to identify them.

But as for the worst U.S. plants, "there are a lot!" Womack said. And between the best and the worst, "there is an enormous gap." Considering what the productivity-quality picture was only five years ago, he said, the improvements in the best U.S. plants are "amazing," while the worst are simply not competitive.

International Motor Vehicle Project teams will step up intensive inspections of European plants this summer, Womack said, "but we already know that at least a few of the big producers in Europe are really no better than the worst of the Americans."

As for the transplant car makers here, "the popular media says that they're all alike," Womack said. "Our information indicates that there are really big differences between the best and the worst. Some are terrific; some just average. The best are almost as good as the best in Japan."

Womack said there are also widespread popular misconceptions here about the automakers in Japan: "There is a big difference between the best and the worst of them. . . . We've been looking at how much effort it takes to get the job done, and what is the quality of the effort . . . Toyota is clearly the best in the business there. Some of the others are not in the same league."

He said that in the United States, it takes about five years to bring a new product to the market; in Japan, it is 3½ years.

"The new players in the world export market — among them Mexico, Korea and Taiwan — seem to be right up there now," Womack said. "Some of the stuff from these Third World countries is dynamite. . . . Our assumption had been that they could compete on cheap wages, but that they couldn't do it on quality. They are building super quality, with low effort. . . . We're seeing evidence that these new entrants can build a world-class car."

Investing enormous amounts in high technology, including automation, is no guarantee of commensurate improvements in quality, Womack said. "We have found high-tech plants, especially in the U.S., with poor results.

The important thing, he said, is the difference in social systems. "It is so striking. It isn't just space. It's a matter of philosophy. In some Japanese plants, you can hardly move around.

"It's a matter of organization. They really know how to make the teams work. Americans for the most part are running 'dedicated' factories — dedicated to one product. How long does it take to convert to a new product?"

Stated another way, it's a matter of philosophy. "You really have to have a manufacturing philosophy and a system of organizing people which makes sense in terms of the new technology that you are trying to use," Womack said.

"We see here a lot of examples of new technology just being dropped into an old manufacturing philosophy and an old system of organizing people. Not surprisingly, that doesn't work very well. So, it is possible to spend a lot on new tools and get little to show on improved quality."

Womack said that the "big push" in the newest MIT study is on "the emerging best practices to operate in the U.S. We have been going around the world looking at people's R&D practices." About 30 plants around the world have already been inspected, and 15 to 20 more inspections are scheduled.

Also being analyzed are supplier systems and distribution. "In the U.S., distribution is not much different today than it was 50 years ago," Womack said. "We suspect there will be some spectacular movements in this area. Among them may be dealers trying to go public and chain dealer outfits."

The earlier MIT-sponsored study, "The Future of the Automobile," concentrated on cars in the United States, Japan and five European countries. It involved the efforts of some 130 researchers, cost about $8 million and was completed in the summer of 1984.

A co-director of that project, MIT Professor Daniel Roos, is the director of the new one. The current program is under the aegis of MIT's Center for Technology, Policy and Industrial Development.

PRODUCTION

Auto production slips

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

With several assembly plants idle, last week's targeted domestic auto production fell below the week-earlier and year-earlier totals.

Automakers scheduled 154,207 cars last week, 1.49 percent below the previous week's 156,545, which was also affected by plant closings.

Last week's output was 7.43 percent below the year-ago week's 166,588.

So far this year, 3,572,010 cars have been assembled, 8.48 percent below the 3,903,104 completed last year at this point.

Companies split last week's estimated production as follows: General Motors, 48.76 percent; Ford Motor Co., 25.95 percent; Chrysler Motors, 15.37; Honda of America Manufacturing Inc., 4.28 percent; New United Motor Manufacturing Inc., 2.43 percent; Nissan Motor Manufacturing Co., U.S.A., 1.91 percent; and Volkswagen of America, 1.30 percent.

American Motors ended production of its 1987 Alliance models June 5. Output of the Alliance is not expected to resume until preparation for the Chrysler L-body (Omni/Horizon) is completed at AMC's Kenosha, Wis., plant.

GM's Willow Run, Mich., plant is down this week for inventory adjustment, idling 4,800 workers. The plant is expected to resume production June 22.

GM's Tarrytown, N.Y., and Norwood, Ohio, plants resumed output today (June 15). Both were closed for one week to adjust inventory.

Chrysler's Belvidere, Ill., plant remains down for model changeover until mid-July.

Saturday (June 13) overtime was slated for GM's Lansing (No. 1), Mich., plant.

All Ford assembly plants except Edison, N.J., are scheduled for daily overtime this week.

Chrysler's St. Louis (No. 2), and Sterling Heights, Mich., plants are slated for daily overtime this week.

Week's truck build holds steady

Scheduled domestic truck production totaled 77,478 units last week, slightly below (0.71 percent) the previous week's 78,035 but 3.34 percent more than the year-ago week's 74,973.

Year-to-date, 1,740,582 trucks have been built, 2.30 percent more than the 1,701,428 assembled last year at this time.

Ford Motor Co. closed its Michigan Truck facility in Wayne, Mich., today for four weeks. The plant will be down the first two weeks for model changeover and the second two weeks for vacation.

The plant is expected to resume output July 13.

General Motors' Lordstown, Ohio, plant was scheduled for Saturday (June 13) overtime.

All Ford plants except Wayne, Mich., are slated for daily overtime this week (June 15).

Cars, trucks on a par in Canada

Canadian automakers scheduled production of 18,135 cars last week, 1.19 percent more than the previous week's 17,921 but 29.17 percent below the year-ago week's 25,603.

So far this year, 381,885 cars have been assembled, 29.45 percent below the 541,282 completed last year at this point.

Last week's truck output was targeted at 18,337, 4.74 percent more than the prior week's 17,507 but 5.98 percent below the year-ago week's 19,504.

Year-to-date, 379,137 trucks have been built, 13.58 percent below the 438,691 assembled last year at this time.

Ford leads GM in use of passive belts

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Ninety-nine percent of drivers of Ford Escort and Mercury Lynx models with passive belts report they are belted at all times.

But the General Motors-designed automatic belt, which is as easy to disconnect as a manual belt, is being used less, and almost half the drivers say they do not even know the belts are automatic.

Those are among the findings of an Insurance Institute for Highway Safety survey of more than 1,000 drivers of two very different passive-belt designs used in 1987 cars.

Ford's is a two-point, non-detachable motorized shoulder belt with manual lap belt and knee bolster. Ford uses them on some Ford Escort and Mercury Lynx models. The belt is made under license from Toyota, which includes it as standard equipment on all 1987 Cressida and Camry models.

GM's three-point, non-motorized design is used on the Buick LeSabre, Skylark and Somerset; Oldsmobile Calais and Delta 88; and Pontiac Bonneville and Grand Am.

The institute found that in Wisconsin, which does not have a seat-belt-use law, fewer than 40 percent of GM drivers used the passive belt at all times. But in North Carolina and Maryland, which have belt-use laws, more than 75 percent of GM drivers reported using their belts all the time.

Brian O'Neill, president of the Insurance Institute for Highway Safety, said: "The design Ford is using is superior. It's easier and more convenient, so more Ford motorists are buckled in. More of them are protected in crashes."

Overall, 25 percent of GM drivers surveyed knew their belts were automatic and used them sometimes. The others, when they used them, treated them as manual belts.

Addressing some expressed concerns that two-point belts may not prevent ejection as well as three-point belts, O'Neill said the institute's research showed that was not a serious problem.

In a separate study, the institute compared the percentage of fatally injured occupants ejected from cars with both systems. It found a lower percentage with the two-point belt than with the three-point belt system.

A recent NHTSA report to Congress revealed that other cars using a two-point motorized belt at some time during the 1987 model year are: Alfa Romeo Spider, Isuzu Impulse, Jaguar XJ series, Mazda 626 LX series, Chrysler Conquest (made by Mitsubishi), Mitsubishi Starion, Nissan Maxima, Saab 900-S three-door and Subaru XT.

NHTSA revises warning of anti-lock brake failure

WASHINGTON — NHTSA will allow the use of "ABS" (for Anti-lock Brake System) as an alternative abbreviation to "Anti-lock" for the warning that indicates failure of some portion of the anti-lock-braking system.

This revision required changing two safety standards: 101 (controls and displays) and 105 (hydraulic brake systems).

Chrysler pushes AMC sales

Plans call for C-P, Dodge dealers to maintain market share

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Motors' strategy through the end of the decade calls for its Chrysler-Plymouth and Dodge dealer network to maintain current car market share in the face of mounting competition while the car share for the American Motors network increases.

Chrysler Corp. Chairman Bennett E. Bidwell said in an interview that Chrysler does not anticipate a "huge" growth in car-market share if Chrysler acquires AMC, but that Chrysler will try to build car share through the AMC channel.

He also said that the AMC field organization will be disbanded when Chrysler takes over. Changes in Chrysler's marketing organization also are expected, he said.

Asked about the concern of Chrysler Motors dealers that Chrysler products will be used to strengthen the AMC franchise, Bidwell said, "There is something called equality of sacrifice, equality of gain.

"If we can bring some good AMC products into our network and a few of ours into their network, I think everybody will benefit, as long as the products are good — and I think Jeeps and minivans are good products. We've got to do it very carefully.

"If, in the face of all the doom and gloom with 38 competitors in there, we can do the job of holding Dodge and Chrysler-Plymouth penetration between 10 and 12 percent, I think we'll have a damn good franchise on both sides of the house," Bidwell said.

"Building share at AMC is just doing *anything*. They are at two-tenths or three-tenths of a point. That's just selling a few cars."

Chrysler's share of the U.S. car market was 11.1

Bidwell: AMC field organization will be disbanded when Chrysler takes over

PORTS

Imports clog ports amid slow sales, possible dock strike

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Imported cars and trucks are languishing at the nation's leading ports — some for more than a month — before being routed to dealers, say port authorities and car processors.

The buildups apparently are due to lagging sales nationwide and concern by foreign automakers over contract talks between West Coast shippers and stevedores.

The International Longshoremen and Warehousemen Union's contract, covering 9,500 dock workers on the West Coast, expires June 30.

"Traditionally, there is a lot of movement of cargo prior to a deadline because some exporters like to hedge their bets, but work levels so far appear to be normal," said Charles Young, labor relations administrator for the Pacific Maritime Association.

Dock workers have not struck in nearly a decade, but a truck haulers' strike in 1985 — idling 20,000 drivers and maintenance and warehouse employees — virtually shut off the flow of new cars and trucks to dealer showrooms. Vehicles piled up at docks and railheads, but there were no production cutbacks.

As of June 1, the combined inventories of import dealers, port stocks and vehicles in transit stood at a record for the month of 837,145 units, up sharply from 565,699 a year earlier and 389,815 two years earlier.

As of June 1, inventories of import dealers, port stocks and vehicles in transit were a record 837,145

New sales networks prepared

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — A race toward announcement of a second U.S. distribution channel is developing between Nissan Motor Corp. in U.S.A. and Toyota Motor Sales U.S.A.

Both are expected in the next month or two to make formal announcements of separate franchises to market larger, upscale models intended to compete against European imports in the booming high-end market (Automotive News, June 1).

Insiders say Nissan may beat Toyota to the announcement punch, but Toyota has a clear lead in product and dealer development for its new division, expected to start operations for the 1989 model year.

"Toyota is gearing up for a 1989 launch in force," one industry source said. "Nissan hasn't started yet on selecting which of its dealers will get a second franchise and it doesn't have its ducks in a row on a full line of models, so the only thing left for Nissan is to beat Toyota in making the announcement.

"Nissan has too many internal problems to have a full-fledged second franchise by next fall, but it probably could patch something together in a pinch. It doesn't want to be too far behind both Toyota and (American Honda's second division) Acura."

Nissan President Yutaka Kume confirmed last week in Tokyo that Nissan is considering a new luxury car for U.S. export.

Japanese press reports quoted Kume as describing a three-model lineup for the new division as a widened V-8 sedan version of the redesigned Cedric, a sporty model

Soviet automotive plans include U.S. export in '91

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

MOSCOW — The Soviet Union's AZLK auto factory in Moscow — using new independence from central industrial planning — will export its new front-wheel-drive Moskvich 2141 compact to the United States beginning in 1991.

AZLK President V.P. Kolomnikov said Moskvich plans to enter the American market after preparing a new U.S.-specification engine that could be developed in tandem with a Western automaker.

During a series of interviews with Soviet auto industry officials in Moscow and at the huge Volga Automobile Togliatti, it was also learned that:

- The Avtoexport arm of the Soviet Foreign Trade Ministry has revived dormant talks with Volkswagen for cooperation on development of the new Moskvich engine.
- Plans for Western introduction of the 2141 model at the Frankfurt Auto Show in September have been canceled. The new Moskvich will debut at the Brussels show in January, thus delaying the car's Canadian launch several months.
- The first Canadian-bound shipment of the new front-drive Lada Samara models was scheduled to leave Leningrad last week — nearly a year behind the original schedule.

Chrysler expands in aerospace

DETROIT — Chrysler Corp. has announced plans to buy Electrospace Systems, a Texas-based defense electronics contractor, for $367 million.

Under a merger agreement, Chrysler will pay $27 a share for all of the stock of Electrospace Systems, Richardson, Texas. Chrysler already has been granted options by Electrospace Systems' four founding shareholders to acquire their 38 percent of the company's outstanding shares.

The Electrospace Systems business will be teamed with Chrysler's Gulfstream Aerospace Corp., which makes executive jets.

Chrysler has said that it was shopping for a defense and/or electronics firm as part of its effort to diversify from the cyclical automotive business.

In a statement, Chrysler Chairman Lee Iacocca said Electrospace Systems will make a real contribution to Chrysler in the high-tech area, especially teamed with Gulfstream.

Iacocca said there are no plans to merge Gulfstream and Electrospace Systems. Rather, they will operate as "sister companies within Chrysler Corp."

Electrospace Systems had net income of $10 million on sales of $191 million for its fiscal year that ended April 3. About 92 percent of its sales were to the military. Over the past 10 years, the company has achieved a growth rate of 33 percent in revenue and 31 percent in net income, compounded annually, Chrysler said. It employs 2,500 people at three major locations.

Electrospace Systems designs, develops and installs state-of-the art communications and electronic systems and equipment for specialized needs of military and commercial customers worldwide.

The largest of Electrospace Systems' five business areas is its Command-Control-Communications Systems (C3), which accounts for about 40 percent of sales.

Electrospace Systems' other four major business areas are: aircraft modification, switching and intelligence systems, technical services and commercial telecommunications equipment.

The tender offer is expected to begin by June 25 and will be managed by First Boston Corp.

Lotus is active in Detroit AUTOMOTIVE NEWS/JOE WILDERS

Satoru Nakajima drove the Honda-powered Lotus with computerized active suspension through the streets of Detroit in a practice session for the Detroit Grand Prix, June 19-21. In addition to Lotus, auto manufacturers demonstrating their Formula One racing wares before peers in Detroit included Alfa Romeo, BMW, Ford, Honda, Ferrari and Porsche. The new Lotus suspension is of particular interest to automakers because it has production-car applications.

Makers extend incentives; some models off the list

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

Domestic automakers fine-tuned incentive programs last week to reduce the 2-million-car inventory.

Both General Motors and Ford Motor Co. had programs that expired June 15.

Ford indefinitely renewed the cash rebate or optional 3.9 annual percentage rate finance incentive on some models. Ford dropped Taurus, Sable, Tempo, Topaz, Club Wagon and the F150/250 pickups from the program.

That left automatic transmission Escort and Lynx models with a $300 rebate option and manual transmission Escort and Lynx models with a $600 rebate option. Ford also offers $800 on two-wheel-drive Ranger models and $1,000 on four-wheel-drive Rangers and Bronco II and 1987 Merkur XR4Ti models.

Chrysler Motors, with a 24-month 3.7 percent loan program that has been running since April without a closing date, added the Mitsubishi-built Dodge Ram 50 pickup truck.

GM's divisions late in the week extended their programs, with some modifications, making them retroactive to June 16.

GM's cash rebates range from $300 on Spectrum Express to $500 on Corsica, Beretta, Cavalier, Nova and most other Spectrum models to $1,000 on Camaro, S-10 Blazer and most S-10 pickups.

Low GMAC finance-rate options range from 3.9 percent for 24 months or less to 9.9 percent on 60-month paper.

Pontiac extended its program to Aug. 3, with the same interest-rate schedule, but dropped Grand Am, 6000 and 6000 STE. That left Sunbird and Fiero with a $500 cash rebate option, Bonneville with $800 and Firebird with $1,000.

Buick also left its program open-ended, but dropped Century, Skylark, Somerset and Skyhawk from the program. Electra and Park Avenue have 3.9 percent financing or a $1,200 cash rebate option and LeSabre has 3.9 percent financing with an $800 rebate option.

The Oldsmobile program, also without a closing date, dropped Firenza, Calais and Cutlass Ciera, leaving the 3.9-percent loans or $800 cash on Delta 88 and 3.9 percent or a $1,200 rebate on 98 Regency.

American Motors' program has no closing date. AMC increased its cash option on Medallion to $500; the loan options range from 3.9 percent for 24-month contracts to 9.9 percent for 60-month contracts.

The program offers zero-percent financing for 24-month contracts, up to 9.9 APR for 60-month paper, or rebates of $500 on 1987 Renault Alliance and GTA models, 1986 Alliance and Encore models, and 1986 and 1987 2wd Jeep Comanche models except shortbed, and $1,000 on 4wd models.

For Jeep Cherokee, the option is 3.9-percent loans or $1,000 on 1986 and 1987 two-door models and 5.9 percent or $600 on four-door Cherokees and Jeep Wagoneers. Dealer participation is required.

Chrysler expected to sell its minivans through AMC dealers

By Laura Clark and Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — Chrysler is expected to will sell its minivans through American Motors dealers once Chrysler's takeover of AMC is completed.

Documents filed by Renault with the Securities and Exchange Commission show Chrysler Corp. will not be required to make a contingency payment to Renault if it sells Jeep-branded minivans through AMC dealers. Such a contingency payment will be required if it cross-sell other models.

Chrysler must pay a fee to Renault if a current Chrysler model replaces an existing model in Jeep's lineup and is sold under the Jeep brand name, according to the documents. The provision excludes the Chrysler minivan but includes the Dodge Raider, imported from Mitsubishi.

Chrysler also will make contingency payments to Renault for each Premier and Jeep model sold through Chrysler's distribution network, according to the documents.

The fees are based on a formula outlined in the the documents and will apply to vehicles sold through Dec. 31, 1991.

Chrysler Vice Chairman Bennett Bidwell said "good" AMC products will be brought into the Chrysler distribution network and "good" Chrysler products will be sold through the AMC network. "And I think Jeeps and minivans are pretty good products," he said.

The SEC documents list the names of AMC executives and former executives that are "protected" employees with employment and severance agreements. The details of those agreements will be outlined in the upcoming proxy statement, expected to be filed this week.

The "protected" employees are: Geoffrey Banks, president of American Motors Financial Corp.; Richard A. Calmes, vice president; Joseph E. Cappy, president; Francois J. Castaing, group vice president; Joseph A. Chama Srour, controller; Tod O. Clare, vice president; William E. Enockson, group vice president; Thomas J. Foley, vice president; Gerard Gastaut, vice president; and Kenneth A. Lawton, vice president.

Also, John W. Mowrey, vice president; Jesus Peon, vice president; Pierre Semerena, chairman; John M. Sheridan, secretary; Jerry L. Sloan, vice president; Marvin W. Stucky, vice president; John P. Tierney, vice president; Paul Tippett, former chairman and president; Gerald D. Meyers, former chairman; A. Keith Ebersole, former vice president; George A. Maddox, retired vice president; Peter G. Guptill, former group vice president; and Royston Lund, retired vice president.

Potamkin, Penske talking

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — The Penske Group is negotiating with Victor Potamkin, the largest Cadillac dealer in the nation, to acquire control of the Potamkin Cadillac operation in New York City.

The negotiations were confirmed by various sources, but a price was not disclosed.

Potamkin has two Cadillac locations in Manhattan.

If the negotiations result in Penske taking over the Cadillac franchise, Potamkin will retain three dealerships in the city, handling Chrysler, Dodge, Plymouth, Sterling, Mitsubishi, Toyota and Volkswagen.

The Penske Group has two Cadillac franchises in California but no dealerships in New York state.

Both organizations are billion-dollar operations. Potamkin, with 41 dealerships in five states, had $1 billion in sales last year.

The Penske Group, headed by Roger Penske, has seven dealerships; a truck leasing company, Hertz-Penske; and other businesses. Last year, it purchased Longo Toyota, El Monte, Calif., the largest Toyota dealership in the country.

Automotive News

61st year—No. 5186

AUTOMOTIVE NEWS (ISSN 0005-1551) is published weekly except semiweekly the fourth week in April at 965 E. Jefferson, Detroit, MI 48207. Second-class postage is paid at Detroit, MI and at additional mailing offices. Postmaster: Send address changes to AUTOMOTIVE NEWS, Circulation Department, 965 E. Jefferson, Detroit, MI 48207.

World Congress slates marketing specialists

As a 16-year-old car hobbyist, Rick Cole judged his first concours d'elegance.

Today, at 32, he is president of Rick Cole & Associates, a collector-car auction house based in Studio City, Calif., that has been averaging more than $10 million in gross sales annually.

Cole will join with five other retail-market pros in sharing their expertise with attendees at the 12th annual Automotive News World Congress, to be held July 26-29 at the Hyatt Regency Hotel in Dearborn, Mich.

The others are: Mary Falvey-Fuller, a management consultant and president of Falvey Motors of Troy (Mich.) Inc.; John J. Ferron, vice president, National Automobile Dealers Association; Jayne Hamilton, president, Market Development Associates Inc.; D. Forbes Ley, executive director, Sales Success Institute Inc.; and Michael Wayne, chairman and president, Durakon Industries.

In addition to Falvey Motors of Troy, which sells Jaguar, Saab and Sterling cars, Falvey-Fuller has two other dealerships in the Detroit suburb: Falvey Toyota Inc. and Falvey Volkswagen Inc. She also is a management consultant — and will use that experience to address how dealerships can operate more effectively.

She is the Detroit Metropolitan Area Dealers' representative on the Toyota Regional Advisory Council, and Jaguar rep for Michigan of the American International Automobile Dealers Association.

Falvey-Fuller has served on President Reagan's Transition Task Force on Social Security, the National Commission on Social Security Reform and the National Advisory Council on Social Security.

Ferron supervises NADA's government, industry and dealership relations activities. As NADA's second-ranking staff executive, he coordinates policy positions for the largest retail automotive consulting group in the industry.

Hamilton founded Market Development Associates, a market research, training, publishing and consulting firm in Bloomfield Hills, Mich.

The author of "How to Sell Cars and Trucks to Women," Hamilton's expertise on issues related to women, cars and trucks is recognized industrywide. Her World Congress topic will be "Changing Global Views on the Women's Market."

Before founding Durakon in 1979, Wayne was national and international manager of the General Motors account for IBM and developed a number of innovative sales concepts and marketing tools for the company.

Under his leadership, Durakon, based in Lapeer, Mich., has become the world's largest producer of pickup truck-bed liners.

Ley, head of the Sales Success Institute, will speak on the topic, "America Has Lost Its Ability to Sell," at this year's World Congress.

This year's Congress will feature more than 30 speakers, who will share their knowledge and viewpoints on where the car and truck industry stands today and where it is headed.

For further information, write: Automotive News World Congress, 1400 Woodbridge Ave., Detroit, MI 48207, or call (313) 446-6047. Overseas inquiries cable: 810-221-5122 AUTNEW.

Heavy trucks strong in slow May market

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Total truck sales, including light, medium and heavy trucks, were off 5.1 percent in May, but the five-month count was 1.7 percent ahead of last year's.

The industry retailed 434,655 trucks in the United States in May, down from 458,081 in May 1986.

For five months, total truck sales of 2,006,161 were marginally ahead of last year's 1,972,347.

The medium and heavy truck segments continue to be strong, with some manufacturers enjoying particularly robust gains.

Class 8 retail sales of 11,448 in May were up 13.6 percent from 10,077 last year, according to the Motor Vehicle Manufacturers Association.

For five months this year, Class 8 sales of 51,892 were up 12.0 percent over 46,330 last year, according to MVMA.

Within Class 8, Freightliner, Kenworth and Peterbilt had a particularly strong month.

Freightliner retailed 2,000 Class 8 trucks in May, 28.9 percent more than last year.

It retailed 8,775 heavy trucks during the first five months of this year for a 22.5 percent gain over 1986.

Similarly, PACCAR's Kenworth and Peterbilt had sales gains of 35.0 percent and 25.2 percent, respectively, last month.

Kenworth's sales of 1,172 were up from 868 last year. Peterbilt's sales of 1,073 were up from 857 in May 1986.

Class 7 sales of 9,443 trucks in May were up 12.8 percent from 8,370 last year. Through May, Class 7 sales of 42,818 units were up 2.2 percent over 41,901 a year earlier.

Class 6 sales of 3,323 units last month were off 6.5 percent from 3,555 a year ago. Year-to-date through May, their total of 16,671 was down 2.8 percent from last year's 17,149.

Class 5 sales of 420 trucks in May were more than double the 185 retailed last year, due largely to the influx of import firms.

For five months, the 3,540 Class 5 sales also more than doubled the 1,551 units sold in that medium-duty segment last year.

Class 4, although small, also is growing. There were 61 retail deliveries reported in the segment during May and 281 for five months, compared to none reported last year.

The light-duty, Class 1-3 category accounted for 409,960 retail deliveries in May, off 5.9 percent from 435,386 last year.

For five months, the light-duty total of 1,890,959 was a record, topping the previous high of 1,865,416 in 1986 by 1.4 percent.

Rockwell forms clutch venture, boosts stake in Brazil axle firm

TROY, Mich. — Rockwell International has put together several deals to enhance its truck operations.

Rockwell and Daikin Manufacturing Co., of Japan, formed a joint-venture company called Rockwell Clutch Co., designed for entry to the North American truck clutch market.

Rockwell Clutch will design, develop and manufacture clutches for medium- and heavy-duty trucks for North America. Rockwell International will hold majority interest in the firm.

Daikin will provide the clutch manufacturing expertise, and Rockwell will contribute an established field-sales force and original-equipment marketing network in North America.

Arthur P. Ronan, president of Rockwell's Automotive Operations, said the deal would enable Rockwell to enter the North American medium/heavy truck clutch market from a position of strength and furthered its objective of providing customers with an integrated powertrain system.

James D. Clifford, previously Rockwell director of purchasing, was named president of the new company. Keisuke Fujimoto, previously a director of Daikin and manager of its international projects, was named executive vice president.

Rockwell Clutch Co. expects to supply its first clutch products by late 1988 from a U.S. facility.

Separately, Rockwell said it acquired an additional 51 percent of Braseixos SA, an axle manufacturing firm in Sao Paulo, Brazil, from the Cobrasma Group. The purchase gives Rockwell 99 percent ownership of the company.

Braseixos builds axles for cars; light, medium and heavy trucks and tractors; buses; and off-highway equipment.

Rockwell also announced that it has expanded its on-board truck computer system.

The company predicted that the new system will enable drivers to obtain a waiver from federal laws requiring them to maintain annual driving logs.

Rockwell is offering a new automatic driver logging option for its Tripmaster Plus on-board computer system.

The option is designed to simplify and automate the motor carrier's entire log-keeping process and reduce operating and clerical costs.

The Logtrak option will also enable motor carriers to apply to the Federal Highway Administration for a waiver on manual driver logging, according to Stephen M. Humphrey, vice president and general manager of Rockwell's Transmissions and Automotive Electronics business.

The Auto Carrier Division of Leaseway Transportation Corp. has asked the Department of Transportation to waive the requirement of manual log-keeping for its 3,400 drivers in favor of data collected and stored electronically by Rockwell's Tripmaster Plus system with the Logtrak option.

The FHA is reviewing Leaseway's waiver request. Leaseway said that the electronic recording of information is more accurate and comprehensive, is less costly to administer and is a faster method of identifying unsafe driving habits.

SERVICE MANAGEMENT

Ford has diagnostic computer for '88 Continental

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

When computers in the new 1988 Lincoln Continental chatter, a computerized diagnostic system will listen.

Ford Motor Co.'s new Service Bay Diagnostic System will be introduced to Lincoln-Mercury dealers in a pilot program starting late this year. It is a computer that guides technicians through the repair of Ford's electronic engine control (EEC-IV) unit and the many components with which that unit interacts.

The system will initially be programmed to link with the 1988 Lincoln Continental, but will also contain some service information relating to Taurus/Sable models.

Ford plans to market the system to dealers nationwide by the "third or fourth quarter of 1988," according to Robert A. Rechul, supervisor of service systems design for Ford Parts and Service Division.

By the early 1990s, Ford expects to be able to link all of its models into the Service Bay Diagnostic System. All Ford automobiles currently use the EEC-IV system but the new Lincoln is the first Ford to include additional "Data Communication Link" circuitry that allows the engine computer to "talk" to the diagnostic computer.

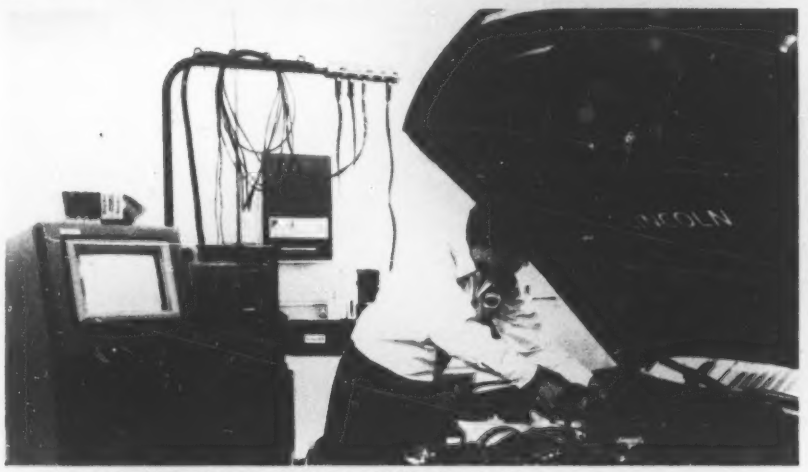
When the diagnostic computer is introduced nationwide, plans call for additional Ford vehicles to be equipped with the Data Communication Link circuitry.

The Service Bay Diagnostic System was developed in conjunction with Hewlett-Packard Co. and incorporates a touch screen Hewlett-Packard computer and printer.

The diagnostic system taps into the EEC-IV system through the Data Communication Link and listens to the EEC-IV "talk" to other electronic modules in the system, Rechul said. Those other modules include the electronic instrument cluster and the message center.

The diagnostic system can also download programs through the EEC module to activate sensors and actuators.

In order to detect intermittent problems, the Service Bay Diagnostic System has a portable engine analyzer that can be operated during a road test.



The Service Bay Diagnostic system will soon aid Lincoln technicians

Rechul said the system was designed to attack repair diagnostics in three ways. The system extracts data from the EEC-IV system and sets up an automatic diagnostic procedure.

The system can communicate with Ford's OASIS (On-Line Automotive Service Information System) to receive technical information from a central data bank in Dearborn, Mich.

Finally, the system can show the technician service bulletins and technical drawings on its video touch screen and printer.

Donald Morgan, supervisor of advanced service engineering for Ford Parts and Service Division noted that the computer controlled actuators and sensors on current cars are seldom placed in a standard location and often differ in appearance. It is important for a technician to see what the parts look like, especially on newly introduced cars, he said.

Rechul said that a technician using the Service Bay Diagnostic System selects an area where the suspected problem lies, be it ignition, fuel system or EEC module. The system guides the technician through a diagnostic "tree." If the technician needs additional assistance — to see what a part looks like, for example — he can ask for help by pressing a button on the touch screen.

In a case where a problem is narrowed down to a sensor, for example, the technician can plug the machine into the part and simulate the voltage it is supposed to receive. In that way, the technician can determine if the problem lies in the part or the wiring.

Ford is also developing "artificial intelligence" programming for the Service Bay Diagnostic System.

Rechul said that "artificial intelligence" would allow the machine to initiate a strategy for attacking a problem. In other words, the machine would determine which area to attack — ignition, fuel or EEC module. Artificial intelligence would also allow the Service Bay Diagnostic System to track the problem automatically to a specific component. At that point, the technician might be asked to connect the machine directly to the component to test for a flaw in the component, the connection, or the wiring.

Some artificial intelligence capability will be available in the pilot system and still more will be incorporated by the time of the national rollout.

The artificial intelligence capability is under joint development by Ford and the Carnegie Group, of Pittsburgh.

Ford also is developing a "Read Only Memory" compact disc system for the Service Bay Diagnostic System that could hold about two years of shop manuals — 40,000 pages — for the complete Ford line. That system should also be in place at the time of the national rollout. Currently, only Lincoln Continental and Taurus/Sable information is stored.

Ford officials noted that the new Lincoln can be repaired by conventional means, but the Service Bay Diagnostic System is designed to raise the skill level of the average mechanic to an expert level.

No price has been set, but Rechul said the diagnostic system will be priced comparably to high-end test equipment — $15,000 to $25,000.

General Motors has a diagnostic computer that is similar to Ford's in its IBM PC-based Computerized Automotive Maintenance System, currently in use at Buick dealerships.

Chrysler's diagnostic strategy reportedly is concentrated on developing sophisticated on-board diagnostics that can be read by hand-held diagnostic equipment.

Most Big Three vehicles can be diagnosed using hand-held equipment. The Chrysler strategy calls for improvements in that technology.

Shop volume shows gain of 4% for April

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

The Automotive News Service Index rose 4.1 percent in April compared with April 1986. It was the third monthly gain in a row.

In March, service and parts volume at new-car dealerships was up 8.6 percent over the 1986 figure.

In the first four months of 1987, shop business showed an advance of 3.7 percent over the same period in 1986.

A Western Buick dealer attributed his increase in service volume to an added franchise and to a "better job of selling labor by service advisers and technicians."

A Chevrolet dealer in the Northeast said, "The use of a team system has helped utilize space and increase productivity."

A Ford dealer in that area attributed his increase to a change in service management.

And a Midwest Ford dealer tied his increase to strong fleet sales (and service) and summer tuneups.

All indicators, with the exception of repair orders written, showed gains in April. Repair orders, which were down 3.2 percent from last year, often lag slightly behind the other indicators.

Sales of all parts and accessories registered the biggest gain in April, up 6.6 percent over April 1986.

SERVICE INDEX
104.1*

	April '87 vs. April '86	4 mos. '87 vs. 4 mos. '86
Gross Profit on All Labor and P&A Sales	+8.2%	+5.1%
Repair Orders Written	−3.2%	−4.2%
Total Labor Sales (Customer & Warranty)	+5.6%	+6.4%
Shop Parts Sales (Customer & Warranty)	+5.3%	+3.8%
Sales of All P&A	+6.6%	+7.3%

* Survey by Automotive News shows that dealers' service and parts business in April 1987 was 104.1 percent of business in April 1986. Service business in the first 4 months of 1987 was 103.7 percent of business in the corresponding period in 1986.

Gross profit on all labor, parts and accessory sales climbed 6.2 percent; total labor sales (customer paid and warranty) rose 5.6 percent; and shop parts sales (customer paid and warranty) were up 5.3 percent.

Parts and accessories sales to off-premises customers climbed 7.6 percent in April.

Sales of all parts and accessories also showed the biggest gain through the first four months of 1987, up 7.3 percent.

Total labor sales climbed 6.4 percent; gross profit on all labor, parts and accessory sales rose 5.1 percent; and shop parts sales increased 3.8 percent.

Repair orders written fell 4.2 percent in the four-month period.

Parts and accessory sales to off-premises customers were up 10.0 percent through April.

Dealers accent summer specials

Sometimes, all it takes to build business is a gentle reminder to customers that service is available.

In an informal Automotive News survey of auto dealers on summer service specials they are promoting, the responses were hardly unique — air conditioning and oil change services were quite common.

Dealers also said they offered body repair service specials, transmission and alignment work and free safety checks.

For example, a Western Oldsmobile dealer said he offers coupons redeemable in the body shop, a free car wash with any service job and a free lubrication with an oil change. He advertises the promotions weekly in local newspapers.

A Midwest Ford dealer said he promotes transmission and wheel alignment service in addition to the summer standards of air conditioning, oil changes and belt and hose specials.

And a Western Chevrolet dealer said he also promotes front-end alignment as well as tire rotation and balancing service and a free safety check.

Toyota service

Toyota Motor Sales, U.S.A., is offering its dealers a "while-you-wait" service program to compete with aftermarket quick-service operations.

The program is called "Express Lane Service." It also enables dealers to spot additional malfunctions and suggest repairs to the customer.

Although Toyota dealers may offer any type of quick service, Toyota Motor Sales is recommending that its dealers start with oil and filter changes.

More than 300 Toyota dealers currently offer Express Lane Service, and plans call for additional dealers to offer it.

SHOP TALK

ARTHUR FLAX

Hispanic marketing

Chief Auto Parts, an auto parts retailer, has developed special store sites, advertising and community involvement with Hispanic communities.

Hispanic communities are a fast growing segment of the population, Chief noted. The communities are segmented — Mexicans, Puerto Ricans and Cubans are the large groupings — yet all Hispanics share a desire to maintain their cultural and linguistic identity.

Along those lines, Chief contributed to a renovation project on the West side of San Antonio, Texas, by building a store designed like other buildings in the area.

Store patrons may pick up bilingual comment cards that ask about the quality of service received.

Since Hispanics comprise 21 percent of Chief's customer base, customers may call a toll-free number and receive assistance in English or Spanish.

An advertising campaign also began in May. Television and radio ads, in addition to in-store point-of-sale material, are directed to Hispanic conssumer in selected markets.

Krex anniversary

Krex Inc., maker of a graphite oil additive, is celebrating its 40th anniversary of exclusive sales to new-car dealers.

The company noted that before it found a market with new-car dealers, the lubricant was used to help increase production of airplane engines during World War II.

During the war, a serious rejection rate developed on Rolls-Royce Merlin airplane engines that were being produced at the Packard Motor Car Co. plant in Detroit.

A lubrication problem was suspected, and the graphite treatment apparently solved the problem. It became a standard treatment at the plant.

SALES

Cars slip, trucks rise in Canada

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Sales of North American-built cars in Canada dropped 14.36 percent in May from the year-earlier total, but truck sales climbed a bit.

Canadian dealers delivered 69,430 North American-built cars in May, compared to 81,076 in May 1986. Truck sales totaled 36,993 in May, up 1.36 percent over 36,496 a year ago.

General Motors, Ford Motor Co. and Chrysler Motors offered low finance rates or cash incentives on selected vehicles during the month. GM offered 3.9 percent financing on 24-month loans or $750 cash rebates on several cars and light trucks. Ford offered loans from 3.9 to 9.9 percent or $750 cash on selected cars and light trucks. Chrysler offered cash rebates between $500 and $1,500 on some cars and trucks.

Five of the six domestic carmakers suffered declines in car sales compared to the year-ago month. Honda, Canada's sixth automaker, began producing four-door Accords in its Alliston, Ontario, plant in November 1986 and began importing its Acura sedan and coupe to Canada in March. Sales for May were 1,267 Canadian-built Hondas, 604 Japanese-built Acuras and 5,883 Japanese-built Hondas for a total of 7,554, compared to 6,409 last year. The 1986 sales were all imports.

GM's car sales dropped 18.56 percent in May. It sold 33,783 North American-built cars compared to 41,481 in May 1986. Ford car sales declined 9.12 percent. It sold 19,840 in May compared to 21,831 a year ago. Chrysler car sales were also down, falling 19.07 percent to 13,824 from 16,551 in 1986.

Sales of American Motors' Eagle dropped 50 percent to 22 units from 44 in May 1986. Deliveries of North-American built Renault cars fell 47.97 percent to 475 compared to 913 a year earlier. Canadian-built Volvo sales dropped 14.45 percent to 219 from 256 in May 1986.

GM was the leader in truck sales in May, although its sales were off a fraction from 1986. GM sold 14,454 trucks, down 0.24 percent from 14,803 a year earlier. Ford, with the second largest May sales volume, showed a 1.24 percent dip with 13,107, compared to 13,272 last year.

In addition to North American-built cars, GM in May sold 1,104 Suzuki-built Chevrolet Sprints, 966 Suzuki-built Pontiac Fireflys, 39 Isuzu-built Chevrolet Spectrums and 62 Isuzu-built Pontiac Sunbursts. Ford sold 874 Mercury Tracers, 31 Merkur Scorpios and 34 Merkur XR4Ti models. The Tracer is built in Taiwan; the Scorpio and XR4Ti in West Germany. Chrysler sold 1,356 Mitsubishi cars 17 Peugeots. As mentioned, Honda sold 604 Japanese-built Acura models and 5,883 Japanese-built Honda models.

Volvo sold 508 Swedish-built cars in May, and AMC sold 411 imported Renaults.

In the imported truck category, GM sold 37 Isuzu medium-duty trucks and Chrysler sold 430 Mitsubishi trucks.

SKY-TOP® POWER MOONROOF, BOASTING THE INDUSTRY'S MOST COMPREHENSIVE WARRANTY.

Your customers receive warranty service no matter where they travel in the United States and Canada.

SKY-TOP warrants both the power moonroof and the installation, and pays for both parts and labor, with no mileage restriction, for one year.

- **Fast**...prompt service is guaranteed with a personalized warranty plate sent to every registered SKY-TOP owner—our practice since 1971.
- **Simple**...direct access to our national warranty system provided via our toll-free 800 number found on the back of the warranty plate.
- **Expert**...qualified service is coordinated by our warranty headquarters through a North American network of SKY-TOP authorized installation and service centers.

Another reason why car dealers and their customers agree...
Nothing else is a Sky-Top!

Early-June deliveries drop

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

Sales of United States-built new cars for June 1-10 were off almost 10,000 units from even the depressed year-earlier count.

Sales dipped 4.41 percent, or 9,637 cars, to total 208,699, compared with 218,336 last year.

The daily selling rate of 23,189 units was down 15.03 percent from the average of 27,292 in the comparable 1986 period. There were nine selling days in the period this year and eight days last year.

Sales slipped despite widespread retail sales incentives.

Dealers said customers have grown accustomed to rebates and reduced financing charges. As a result, even as incentive expiration dates approach — as they did in the most recent sales period because many plans were to expire June 15 — there was no jump in sales as some might expect.

In the period, American Motors dealers delivered 58.97 percent fewer cars than they did a year earlier. Volkswagen dealers saw a dip of 49.85 percent. Ford Motor Co. dealers retailed 20.57 percent fewer cars, while General Motors dealers reported a decline of 16.71 percent. Sales dipped 10.83 percent for Chrysler Motors dealers.

Nissan's retail sales in the June 1-10 period totaled 3,341 cars, up from 89 last year when Nissan's U.S. plant was done for model changeover.

Honda reported a sales gain of 114.10 percent in the period.

Toyota, which did not begin selling U.S.-made cars until last September, reported deliveries of 160 units in early June.

SERVICE MANAGEMENT

Our annual survey reveals pessimism among managers

By Al Fleming

The mood of the nation's new-car dealership service managers is trending toward pessimism.

Not down-in-the-dumps pessimism.

More like, business-just-can't-stay-as-good-as-it's-been pessimism.

Still and all, those in charge of service operations for franchised domestic and import dealers in the United States are less confident about future business than at any time in the five years *Automotive News* has conducted its annual Service Management Survey.

Only half of those questioned about the outlook for the U.S. auto industry generally, and their dealerships specifically, indicated they expected business to improve this year and next.

That 50-percent level was down from 61.2 percent who anticipated improvement last year, 64.9 percent in 1985, 89.7 percent in 1984 and 89.1 percent in 1983.

In contrast, 22.1 percent said they expect slowdowns in 1987 and 1988. That compares to only 6.2 percent in 1986, 9.4

percent in 1983.

Granted, the industry was just shaking out of the recession doldrums in '83 and '84, and there was almost no way to go but up, because it was almost impossible for things to get worse.

Conversely, the industry has enjoyed back-to-back 11-million-plus retail sales of new cars (domestics and imports combined) in the U.S. in 1986-'85, including an all-time high 11,463,092 units last year.

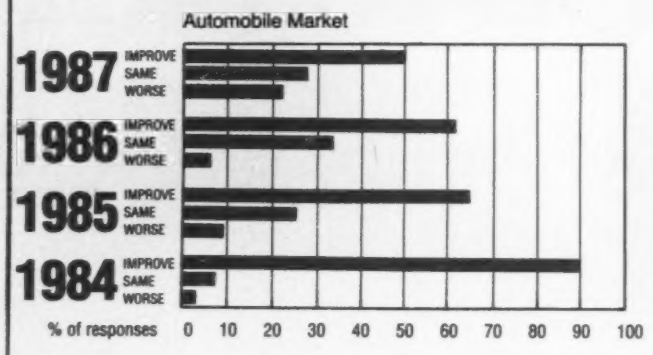
Apparently, half the service managers surveyed believe that robust pace can't be sustained for three or four years in a row.

However, there are those who see continued good times.

A service manager in LaSalle, Ill., notes: "The market should improve for two-three years as late-model buyers roll over into newer products with extended powertrain warranties. These same long warranties tie the owner to the dealer. The real question is: Can the 'fixed operation' remain profitable as the percentage of warranty repairs increases?"

Another in Beaumont, Texas, expects business to keep getting better "because of a much-improved product, the manufacturer's commitment to build a quality vehicle and the dealership's commitment to service after the sale...I think the economy will be more stable, leading to more people with stable incomes being able to afford automobiles or service."

Question 1: What do you consider the business outlook to be for the automobile market in general and your dealership specifically for the next two years?



Automobile Market
1987 IMPROVE SAME WORSE
1986 IMPROVE SAME WORSE
1985 IMPROVE SAME WORSE
1984 IMPROVE SAME WORSE

A number of other findings are indicated by the 1987 survey, covering new-car dealership service managers throughout the U.S.

While managers continue to retain a high level of confidence regarding potential for increased profits by their operations (only 5.6 percent anticipate a decline), the negative response was the greatest in the survey's five-year history.

The vast majority expressing confidence in future-profit boosts listed such reasons as the increasing complexity of new cars, extended warranties, improved marketing and merchandising of service operations by dealerships and a reduction in competition from independent service stations.

Those foreseeing profit declines cited as the main reasons the improving quality of new cars and a falling new-car market in the next two years.

There apparently is growing sentiment among service managers that dealerships must step up spending to promote service operations. Of those responding, 37.5 percent — the highest count in the survey's history — said their dealers are not spending enough on these activities.

Among the 62.5 percent indicating such spending is sufficient, many said they have responsibility of and control over their service budgets.

Many also say they are using in-house computerized data bases to devise and track the effectiveness of their direct-mail, advertising and promotional campaigns.

The survey also indicated growing control of their operations by service managers.

Of those surveyed, 91.7 percent, the highest number ever, said they participate in hiring dealership mechanics, while only 2.7 percent, the smallest number ever, said dealership managers participate in that function.

For the third straight year, 100 percent of the service managers surveyed said they are involved with service-equipment purchases at their dealerships.

Although 59.2 percent said their dealerships planned to buy new service equipment in 1987 — up somewhat from last year (55.0 percent) — intent-to-purchase this

JOE WILSSENS

A manager in Benson, N.D., says, "Increased interest rates on car loans and less tax incentives, along with increased new-car prices, will cause a drop in sales. We hope to maintain profits by increased service and parts sales."

Another in Cincinnati says: "I believe increases in inflation and the cost of bank loans, labor hours and foreign cars will influence a decline in the auto industry. The price of automobiles is too high. We have taken a large segment of working-class people out of the new-car market. This in turn has driven up the cost of used cars."

Some are less bullish, however.

Among other optimistic observations concerning the business outlook in 1987-'88 are these:

An Orlando, Fla., service manager: "The national economic trend does not appear to have changed much in the last 16 months. I see nothing to change that, and feel our position will improve because of positive steps to improve customer relations."

A service manager in southeastern Pennsylvania: "New models with electronics will be more appealing to the public, and service at the dealer level will be necessary. As cars become more complex, owners are almost forced to return to the dealership. A longer warranty and better guarantees insure customer return."

COVER STORY

Continued from page E2

year is below that indicated in 1985 (61.5 percent) and 1984 (69.4 percent).

Leading the list of purchases this year will be tune-up equipment, as indicated by 30.9 percent of the service managers, an all-time high for any equipment group in the history of the survey.

Other types of equipment indicated as showing sales increases this year are those used for wheel balancing, brakes, transmissions, engine overhaul and refinishing. Heading for a decline are sales of equipment used for wheel alignment and frame-body straightening.

A number of trends relative to service department operations are noted in the 1987 survey.

For one, their departments are working more hours per day, according to service managers.

Only 11.1 percent said they are operating fewer than 45 hours a week this year, down from 18.0 and 18.6 percent the previous two years. Also showing a decline this year (54.2 percent compared to 60.0 percent last year) are shops operating 45 to 50 hours a week.

In contrast, those open 51 to 55 hours, 56 to 60 hours and more than 60 hours, as a group, were reported by 34.7 percent of those surveyed, up from 22.0 percent a year ago.

Meantime, a trend to so-called megadealerships in the United States does not appear to be accompanied by a move to mega-service operations.

Those with fewer than 30 employees were cited by a record 86.2 percent of service managers surveyed, while those with more than 30 employees (13.8 percent) continued a three-year decline (18.0 percent in 1986 and 30.0 percent in 1985).

As for the most-profitable service operations in 1987, more than half (50.7 percent) of those surveyed — a five-year high — indicated tune-ups as their biggest profit-generator.

The only activity to register a decline as most-profitable service operation this year is "engine overhaul" (10.1 percent).

Meantime, new-car warranty work continued at the same pace as a profit contributor, 40.3 percent of those surveyed saying it is a "significant" factor in profitability, compared to 40.8 percent in 1986.

Extended service contracts went upward for the third year in a row as a solid profit contributor, 34.3 percent of those surveyed calling them "significant" this year, up from 27.0 percent in 1986, 17.1 percent in 1985 and 8.6 percent in 1984.

As for service managers themselves, the profile of "Mr. Typical," as indicated by the 1987 survey, is: 35 to 39 years old, eight to 11 years of experience as a service manger, was a mechanic just prior to becoming a service manager, and was paid more than $50,000 last year (mainly salary plus incentives).

A record 21.1 percent indicated their compensation in 1986 topped $50,000.

Of those surveyed, exactly 50 percent said they believe the salaries and benefits they received in 1986 were commensurate with their experience. ■

Statistics for this story were compiled by Stacey LoPrete.

Automotive News Survey of Dealer Service Managers

Note: Figures indicate percent of total responses for each question, each year; in some cases, totals add to more than 100 percent because of multiple responses to a question.

Question 1: What do you consider the business outlook to be for the automobile market in general and your dealership specifically for the next two years?

Automobile Market	1987	1986	1985	1984	1983
Improve	50.0	61.2	64.9	89.7	89.1
Same	27.9	32.6	25.7	7.6	8.6
Worse	22.1	6.2	9.4	2.7	2.3
Dealership	**1987**	**1986**	**1985**	**1984**	**1983**

Same	20.0	8.0	10.2	5.3	10.5
Worse	5.7	4.0	2.9	2.6	2.9

Question 2: Do you as a service manager feel your service department offers the potential for increased profits in the future?

	1987	1986	1985	1984	1983
Yes	94.4	98.0	98.6	97.2	96.1
No	5.6	2.0	1.4	2.8	3.9

Question 3: Do you feel your dealership management believes the service department offers the potential for increased profits in the future?

	1987	1986	1985	1984	1983
Yes	90.0	96.0	97.1	94.4	95.2
No	10.0	4.0	2.9	5.6	4.8

Question 4: Do you as a service manager believe your dealership is spending enough on advertising and promotion to improve your service business?

	1987	1986	1985	1984	1983
Yes	62.5	74.0	72.3	74.3	66.4
No	37.5	26.0	27.7	25.7	33.6

Question 5: Who hires the mechanics in your service department?

	1987	1986	1985	1984	1983
Dealership owner	18.1	15.5	15.7	17.8	12.3
Dealership manager	2.7	2.9	5.7	6.7	6.2
Service manager	91.7	88.9	87.6	85.7	85.1

Question 6: When your dealership buys new service equipment, are you involved?

	1987	1986	1985	1984	1983
Yes	100.0	100.0	100.0	97.2	98.4
No	0.0	0.0	0.0	2.8	1.6

Question 7: Which statement below best describes your involvement in buying new service equipment?

	1987	1986	1985	1984	1983
Original purchase request	53.5	62.0	62.9	39.9	38.1
Approve make selected	39.4	48.0	38.6	24.3	24.0
Negotiate terms	19.7	28.0	22.9	3.7	5.4
Give advice on needs	42.2	58.0	37.1	53.5	57.7

Question 8: Does your dealership plan to buy any new service equipment this year?

	1987	1986	1985	1984	1983
Yes	59.2	55.0	61.5	69.4	—
No	40.8	45.0	38.5	30.6	—

Question 9: What type of service equipment does your dealership plan to buy this year?

	1987	1986	1985	1984
Tune-up	30.9	24.5	21.4	27.7
Wheel alignment	21.4	26.4	18.6	21.3
Wheel balance	14.3	11.8	10.0	14.9
Brakes	11.9	7.1	5.6	10.6
Transmissions	9.5	2.9	1.8	4.3
Engine overhaul	9.5	3.7	2.9	2.1
Refinishing	9.5	1.8	—	—
Frame-body straightening	7.1	10.8	10.0	12.8
Other	40.5	30.0	29.7	26.3

Question 10: Are new model cars more profitable to service than those of previous years?

	1987	1986	1985	1984	1983
Yes	12.5	13.7	11.4	11.8	14.6
No	40.3	50.9	54.3	52.9	67.4
Same	47.2	35.4	34.3	35.3	18.0

Question 11: How many hours per week is your service department open?

	1987	1986	1985	1984	1983
Less than 45 hours	11.1	18.0	18.6	11.1	23.5
45 to 50 hours	54.2	60.0	38.6	47.2	40.7
51 to 55 hours	20.8	14.0	27.1	19.4	19.5
56 to 60 hours	9.7	6.0	11.4	8.3	9.3
More than 60 hours	4.2	2.0	4.3	14.0	7.0

Question 12: How many employees are there in your service department including parts and service personnel?

Number of employees	1987	1986	1985	1984	1983
1 to 10	25.0	28.0	25.7	33.3	27.4
11 to 20	27.8	18.0	28.6	27.8	25.7
21 to 30	33.4	36.0	15.7	13.9	19.5
31 to 40	6.9	8.0	17.1	11.1	13.3
More than 40	6.9	10.0	12.9	13.9	14.1

Question 13: What is your most profitable service operation?

	1987	1986	1985	1984	1983
Tune-ups	50.7	24.0	40.3	39.8	39.1
Brakes	34.8	25.3	20.4	25.6	23.5
Transmissions	15.9	6.6	10.4	8.4	10.3
Wheel alignment	14.5	6.6	9.0	11.3	8.5
Body shop	11.6	9.3	6.1	7.7	5.9
Engine overhaul	10.1	13.3	3.3	1.8	4.4
Wheel balance	8.7	4.0	1.8	2.7	3.0
Other	13.0	10.6	8.7	2.7	5.3

Question 14: How much do the following contribute to your service profits?

1987	Significantly	Some	None
New car warranty work	40.3	54.2	5.5
Extended service contracts	34.3	62.9	2.8
1986	**Significantly**	**Some**	**None**
New car warranty work	40.8	48.9	10.2
Extended service contracts	27.0	66.6	6.4
1985	**Significantly**	**Some**	**None**
New car warranty work	44.3	48.6	7.1
Extended service contracts	17.1	67.3	15.6
1984	**Significantly**	**Some**	**None**
New car warranty work	48.8	43.9	7.3
Extended service contracts	8.6	74.3	17.1
1983	**Significantly**	**Some**	**None**
New car warranty work	38.2	52.3	9.5
Extended service contracts	23.4	60.9	15.7

Question 15: What is your age?

	1987	1986	1985	1984	1983
18 to 24	2.9	4.0	0.0	0.0	0.7
25 to 29	9.7	16.0	15.7	9.8	8.5
30 to 34	15.3	16.0	11.4	19.5	13.3
35 to 39	26.4	26.0	18.6	29.3	22.8
40 to 44	20.8	16.0	22.9	7.3	19.8
45 to 49	8.3	10.0	12.9	4.9	10.9
50 to 54	6.9	2.0	11.4	12.2	14.1
55 to 59	6.9	4.0	4.3	14.6	7.8
60 to 64	1.4	6.0	2.8	2.4	2.3
65 or over	1.4	—	—	—	—

Question 16: Before becoming service manager at your present or any other dealership, what job did you have?

	1987	1986	1985	1984	1983
Write-up man	30.6	24.6	31.4	24.4	16.9
Mechanic	43.4	43.4	37.2	44.1	38.1
Parts manager	7.3	8.6	5.7	9.8	12.2
Other	18.7	23.4	25.7	21.7	32.8

Question 17: How many years have you been a service manager (including time as service manager at previous dealerships)?

Number of years	1987	1986	1985	1984	1983
1 to 3	20.8	19.6	22.9	22.9	20.3
4 to 7	19.4	33.3	21.4	26.6	21.6
8 to 11	26.4	17.6	15.7	11.4	15.6
12 to 15	13.9	5.8	12.9	15.7	14.1
16 to 19	8.4	9.8	11.4	9.2	10.1
20 or more	11.1	13.9	15.7	14.2	18.3

Question 18: What was your total compensation last year for being a service manager?

	1987	1986	1985	1984	1983
Less than $15,000	2.7	4.1	2.9	2.7	3.1
$15,001 to $19,999	11.3	4.1	10.0	8.1	14.0
$20,000 to $24,999	14.1	18.7	14.3	16.2	15.6
$25,000 to $29,999	7.0	10.4	24.1	27.0	22.1
$30,000 to $34,999	9.9	8.3	11.4	13.5	12.5
$35,000 to $39,999	12.7	20.8	10.1	10.8	14.8
$40,000 to $44,999	11.3	14.5	8.7	6.8	3.9
$45,000 to $49,999	9.9	6.2	10.2	9.5	5.5
$50,000 or more	21.1	12.5	8.3	5.4	8.5

Question 19: What was your total compensation for being a service manager based on?

	1987	1986	1985	1984	1983
Salary only	15.3	9.4	8.6	11.8	14.1
Salary + overtime	—	1.8	1.9	2.9	2.3
Salary + bonus	31.9	26.7	38.6	41.2	29.7
Salary + incentive	41.7	43.6	45.2	35.3	42.2
Salary + stock	1.4	—	—	—	—
Salary + other	9.7	18.5	5.7	8.8	11.7

Question 20: Do you believe your salary and benefits are commensurate with your experience?

	1987	1986	1985	1984	1983
Yes	50.0	48.9	54.2	63.6	59.7
No	50.0	51.1	45.8	36.4	40.3

FEATURE

The underhood revolution

Can service equipment makers stay in step with technology?

American automakers expect the value of electronics in the average new car to reach $1,400 in 1990 from $25 in 1970 and $900 in 1985. What will this mean to the automotive service industry?

Anthony J. Zack, vice president of sales and marketing, Sun Electric Corp., Crystal Lake, Ill., answers that and other service-related questions. Sun primarily is engaged in the design, manufacture and marketing of diagnostic, test and service equipment for the motor-vehicle service industry and motor vehicle manufacturers in more than 100 countries.

■ Mr. Zack, automakers are predicting giant strides in electronic content in cars in the next three years. How does the service-equipment industry view that?

There's a quiet but significant revolution going on under the hood. Elements of the revolution don't seem to get their share of popular attention because many of them are inventions born of necessities to meet government-mandated fuel and emission requirements.

■ Could you cite an example?

Take distributorless engines. There aren't too many around yet; only about one new car in 10 in the U.S. had one last year. Next year we expect the ratio to climb to better than one in three. By 1990 almost two out of every three new cars built will have distributorless ignition systems. That's fast and pervasive. It's also good, because distributorless engines burn fuel more efficiently, boosting fuel economy and lowering emissions.

■ Why do you call this a quiet revolution?

Have you seen many ads incorporating this as a feature? I haven't, and I understand why.

Anthony J. Zack, vice president sales and marketing, Sun Electric Corp.

Buying your next car because it *doesn't* have something — in this case, a distributor — isn't a very compelling reason, is it?

■ So what does that mean to the car-service industry?

Just that service shops can't work on distributorless ignition in the same way they do conventional systems. You can't — or, at least, shouldn't — take those cars just anywhere for service. Yet few owners have even a clue that their cars' engines are distributorless.

■ What growth are you projecting for on-board computers?

Back in 1984, one-quarter of all cars on U.S. roads had them. This year that will climb to almost one-half. By 1990 the car without an on-board computer managing its engine will be on the endangered species list. To most of the automotive world, I guess, on-board computers have become rather *passe*. That's probably true with car owners, as well.

■ Has the service industry had any problems with on-board computers?

There was concern about how those black boxes would be handled — and mishandled — in service facilities. But life goes on, and everyone finds newer things to worry about. The problem is there's no standardization among automakers, and as each sends out cars with more variations of their individual on-board systems, the potential for service confusion grows.

■ Are there any other elements in the quiet revolution?

The least quiet of all, actually, and not entirely limited to under-the-hood, is anti-skid brake systems. Right now they're fairly limited in use to top-of-the-line luxury cars. We've pegged them currently at just 2 percent of the world new-car market. But we think they'll be in 41 percent of all new cars in about three years. Again, we're talking major technological change.

It may sound like these changes are unrelated — one deals with brakes, one with engines, one's computer-like. But there's a common thread running through them. They all involve electronics, and that's why electronic content is going through the roof.

■ What does this mean to the auto-service business?

As one Sun engineer remarked, "The new cars make TV technicians feel more at home under the hood than they do most automotive service personnel." What's more, surveys of automotive service-personnel skills invariably conclude that electronics is the least-developed skill of all.

■ Does this mean we're in big trouble?

No, emphatically. The answers to these automobile changes I've cited are being developed right alongside the changes themselves. For example, a Sun Adaptor was devised in 1986 to bring the technician up-to-speed on testing and repairing distributorless-engine systems. It's called the D.I. Link. It measures power and "wasted" stroke spark to determine how well the engine is doing its job. "Wasted" stroke readings are a new concept that helps even a less-than-aver-

Now, System D111 . . . like an alignment instructor in your shop.

The new D111 is the only system on the market with built-in vehicle specifications, step-by-step instructions, and vehicle adjustment graphics.

Now, anyone can be an alignment expert, because the System D111 shows you how.

- Alignment information is displayed on a 19-inch, color CRT screen. Instructions and graphics on the screen guide you through the alignment process.
- The system stores alignment specifications for over 95% of the cars sold in the U.S. in the past 10 years. That's approximately 900 listings.
- Specifications are recalled and displayed in a matter of seconds. No paging through a bar-code book or fumbling with a special pen.
- The system automatically compares the vehicle specifications to the actual condition of the car, and displays the results on the CRT screen.
- During vehicle adjustment procedures, illustrations and instructions on the CRT show how to make adjustments on the car, just like a service manual.
- A wireless remote control lets you operate the unit from anywhere in the alignment bay.
- A pre-alignment check list, helps merchandise your under-car services.
- An 8½ x 11 sheet-size printer provides a hard copy of the pre-alignment check and the alignment results.

These, and a host of other features, combine to make the new System D111 the most advanced system on the market today.

HUNTER engineering company

Praising the paperless office

Dealer parts department tests new electronic parts catalog

"Something had to be done about the sea of paper we were in, and we wanted to be the first."

That's why Chuck Hutton Chevrolet, in Memphis, Tenn., is one of the first General Motors dealers testing a new Bell & Howell electronic parts catalog system that eliminates the need for printed catalogs.

"The sheer size of paper (catalogs) is a major problem in our department," says Harry Bogard, manager of an $18-million department selling parts for all makes of GM cars and light trucks.

Bogard agreed to test the new system because it stores on very small optical and magnetic disks all the catalog information his 100-person staff needs, and does away with printed catalogs.

Called the IDB2000 (for image data base), the system allows clerks to call onto a screen all the detailed diagrams, photos, illustrations and exploded views that are printed in book form, plus related numerical information.

A single "personal computer-sized" workstation allows instant access to pictorial and numerical information for every GM car and light truck built in the last 10 years. In printed form this much information takes 16 running feet of counter space.

At Hutton Chevrolet, pairs of clerks at standard desks used to share one set of Chevy catalogs and an order computer. They had to leave their desks to look up parts in catalogs for other makes, wasting time. Bogard's goal was "to reduce all this paper and put everything needed at every desk."

Last January, all parts for a decade of GM makes and models were put on the electronic system.

A three-workstation IDB2000 system began test in June 1986 with parts for 1982-'86 Chevrolets and Oldsmobiles. Bogard says access to just the test catalog information "was an advantage to us."

He says he would like to have one workstation for every salesperson, but he started in March with the first production models in a 12-workstation system, and will work toward expansion.

Two of the test workstations were at the retail sales counter and one was at a phone desk. Two of the salespeople using them had only 12-18 months of parts experience; the third had worked in parts for 35 years. Each "adapted well" to the system, Bogard says.

Bogard says training on the system is faster and easier than paper catalogs, taking his people only two months to become "very proficient."

They learned the system using its touch screen, a feature which provides new users with "helps" in illustrated menus.

Users actually touch logos on the screen to make selections. Touching a part illustration, for example, retrieves its name and number in less than a second.

The touch screen is also helpful since illustration clarity is "very good," says Bogard, "and some customers like explaining what they need by looking at the diagrams and touching the screen."

Yet, early in their training, says Bogard, Hutton people started switching to the system's keyboard to find parts, because it's faster.

Bogard also likes the message feature, which alerts users to special bulletins. Some parts, for instance, are available only in kits, says Bogard, and the bulletins save time by calling special attention to these details.

The system communicates part numbers directly to the dealership's order-management computer system, saving time and reducing errors that sometimes occur during manual transfers.

Bogard believes the system will increase his parts sales and reduce costs, with 25 percent potential time savings for a trained user working with the entire GM parts line.

"Electronic look-ups are the way it's going to be. Might as well get used to it," Bogard says. "A couple years from now it will be such an accepted product that paper will go by the wayside." ■

REVOLUTION

Continued from page E24

age serviceman learn what is or isn't happening with a distributorless engine.

As for on-board computer-system proliferation, we've devised a software-intensive repair tool, called Test Link, that uses floppy disks to interface and converse with the various systems and each of their variations. Repairs that on-board systems require are amazingly simple if and when you know where to look. Usually it's something like replacing a sensor or reconnecting a wire.

But the on-board computer is just one of the advanced and exotic electronic components being built into cars today. There are a dozen systems in production today, above and beyond commonplace electronic controls such as power windows, doors and locks. These include automatic climate control, headlight delay system, keyless entry and illumination system, electronic message center, entertainment system with electronic stereo search, electronic instrument cluster, non-volatile memory module, automatic-dim day-night rearview mirror, electronic anti-theft system, air suspension and level control system, and anti-skid brake system.

■ That's quite a load for a car's electrical system.

But there's new service equipment to deal with it. It's called VAT-60. VAT is short for volt-amp tester, and it's intelligent, providing its own good-bad judgments on the condition of the car's battery, starting system and charging system. It can also do pinpoint tests on the various electronic components, providing information on their condition based on standard electrical specifications. It has a microprocessor brain that's programmed to reject improper testing procedures, such as not achieving the proper engine speed to conduct a valid test, or not holding that speed for a sufficient amount of time. It will also not permit skipping of test procedures. It's an example of how new, sophisticated technology is being matched by sophisticated testing tools that can be operated by technicians of average and below-average skills, and can still be counted upon to find the correct repair answers.

■ What about servicing anti-skid brake systems?

We believe we have another service answer of significance, and now under development. ABS looks like it will best be tested dynamically, rather than in the static manner that's generally proved satisfactory in this country for conventional brake systems. We've been building a computerized dynamic tester in Europe for some time already, and we're writing software to enable it to put anti-skid systems through their most revealing paces.

■ What's coming down the road?

Our latest piece of equipment, the Sun MCA, was introduced in January. It will test a car in any fashion its operator chooses — by symptoms, engine systems, even by what we call "rapid test," which can produce preliminary diagnostics in as little as two minutes. Imagine telling a car owner what the trouble is in just two minutes.

The MCA does pointed-results printouts and expansive explanations of the situation for the motorist. Car-owner printouts are so complete they even project what to expect regarding improvements upon completion of prescribed repairs. It examines every engine from more than 40 individual parameters stored on a disk. The disk carries all those limits and all the associated diagnostic messages for virtually every car model built in the U.S. in the last 20 years. ■

EMERGING TRENDS IN AUTOMOTIVE TECHNOLOGY

The Automobile Red Book is a service no person dealing with used vehicles should be without.

Eliminate costly valuation errors.

Incorrect valuations can cost you thousands.

Since 1911 the Automobile Red Book has been serving dealers, leasing agencies, banks, insurance companies and finance companies with reliable, up-to-date used vehicle valuations.

The Automobile Red Book is the only book that gives you **all** the facts on used car and light-duty truck values. For example, the Automobile Red Book is the only book to give you VIN breakdown for conversion into model number — which means NO MORE WRONG MODEL INDENTIFICATION AND APPRAISAL ESTIMATES.

It's also the only book that lists engine size by cubic inches or liters, including type of carbureation/injection system, number of cylinders and type of transmission.

In addition, you get a complete listing of standard equipment **and** a complete listing of all common options — plus, full technical specifications on all vehicles. It's information like this that sets the Automobile Red Book apart as the industry's most complete and most accurate information source on used car and light-duty truck values.

Tax change brings no lease boom

Business growing, but retail incentives make buying attractive

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The boom in vehicle leasing that was predicted as a result of changes in the U.S. tax code has yet to materialize.

A number of leasing industry sources reported that growth is continuing among both fleet and retail customers, but industry representatives indicate that the slow market for new cars is dampening what many had expected to be a great year for leasing.

Leasing managers for Ford Motor Credit and Toyota Motor Sales U.S.A. said retail incentive programs seem to be steering consumers away from leasing.

On the fleet side, major lessors such as Petersen, Howell & Heather Inc. and Gelco Corp. report continued growth in business, but no radical upturn.

The vehicle leasing industry was very optimistic when President Reagan signed an overhaul of the U.S. tax system last year. Groups like the American Automotive Leasing Association predicted a boom.

AALA and others argued that the phased-out elimination of consumer interest deductions, coupled with the loss of the sales tax deduction, would make leasing more attractive to car buyers.

That may still happen, according to Don Esmond, Toyota's fleet and truck manager, but "it is too early to tell."

"Low APR (annual percentage rate) programs are diverting some customers from leasing," he said. As for fleets, "We are having success with some of the large leasing companies that are writing leases for corporations."

Overall, "Our leasing is not down, but it has not gone up radically either," he said.

The situation is the same at Ford Motor Credit Co. Cliff Damaska, retail lease manager, said, "It is almost impossible to assess what impact the tax changes are having on leasing. Low-interest financing is bringing customers into the dealership and they want to take adavntage of those programs.

"Interest in leasing has increased and will continue to increase," he said, but for now "if a customer reads those ads, he wants the incentives."

Damaska said there are absolute advantages to leasing, especially for businesses. What is needed, he said, is for customers to look at the retail programs and leasing and then compare the advantages. "Right now, it is still a discussion that must be begun by the dealer rather than the customer," he said.

Andrew Strauss, president of LMV Leasing Inc., said changes in the tax code have generated "a great deal of interest in leasing as companies re-evaluate leasing vs. buying." Strauss said he expects that interest to result in an extremely hectic fourth quarter, since most fleets place orders for new vehicles in the fall.

Strauss said LMV believes consumer leasing will continue to increase as the deduction for consumer interest is phased out. It ends in 1991. Until the loss of that deduction hits home, consumers will continue to view leasing as a way to afford a vehicle rather than as a tax move, Strauss said.

Petersen, Howell & Heather reported expanded interest in leasing.

Donna Startel, vice president of communications and marketing support, said, "Changes in the tax laws have eliminated some of the rationale for ownership, especially among employee-owned fleets." The loss of the interest deduction is an important change for employee-owned fleets to consider, she said.

"I don't know if it is just PH&H, but the industry seems to be doing more leasing business. We have had no experience going the opposite direction, moving from leasing to buying," Startel said.

Consumer leasing is doing "very, very well," she said.

Gelco Corp. has done well during the last six months, according to Elin Schomaker, vice president of communications. "New-order activity is up and reaching record levels," Schomaker said. She said Gelco believes the tax law has had a real positive effect on orders.

Security Pacific Credit Corp., of Woodland Hills, Calif., the nation's largest bank in vehicle leasing, reported that leasing activity is down. According to Daryl Smith, senior vice president of credit, "Dealers don't seem to be pushing (leasing) right now."

Smith said that as an industry leader, Security Pacific is moving toward more conservative leasing terms. "Although we no longer have some of the large tax incentives like accelerated cost recovery and investment tax credit, much of the industry seems to be operating as though they still exist," he said.

He added, "Logic says that can't continue."

Smith said banks and leasing companies will have to adjust their leasing packages to the new tax environment and that could actually dampen leasing activity, depending upon how the packages are structured.

Rental giants poised for surge in profits

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Control of Hertz Corp., the world's largest car-rental company, is up for grabs just as profits and stability have begun to return to the industry.

The ownership of Hertz is in question because of a shakeup in the management of its parent Allegis Corp. earlier this month. It follows widespread changes in the car-rental business during the past two years.

As a result of the changes, all rental companies are generally leaner and more prosperous than they were two or three years ago, according to Fred Mudgett, president of Fred A. Mudgett & Associates Inc., a leading car rental consulting firm.

Mudgett said rental volume has been growing about 10 percent a year for the past several years and that the trend will continue.

He said two factors are fueling the growth. "Deregulation of airlines has put in the air an awful lot of people who need vehicles," he said. And the aging of the baby-boom generation has created a "tremendous increase in the age group that has to have a car everywhere they go."

According to Mudgett, the industry can look forward to revenue growth of nearly 15 percent in 1987. That follows a gain of about 10 percent in 1986.

"The years 1984 and 1985 were very bad because the industry was in a very, very competitive fight," Mudgett said. "The majors didn't increase rates, and in some cases rates went down."

That happened while costs were going up because of unfavorable car depreciation and a dramatic increase in insurance rates.

Mudgett said that in 1986, the car-rental companies "finally got the message that they had to produce profit, and rates started to work up."

"The industry ought to feel the whole effect of higher rates on their bottom lines in 1987," he added.

Mudgett said poor profitability was the primary reason for a number of ownership changes in the industry during the past two years. Hertz Corp., Avis, National Car Rental System, Budget Rent A Car Corp. and American International Rent A Car Corp. all changed hands.

Sources close to Hertz say management is exploring a buyout and that Allegis may be receptive to the plan. The new chief executive officer of Allegis is former Hertz Chairman Frank A. Olson. Allegis bought Hertz from RCA Corp. in June 1985.

Olson took over as CEO of Allegis two weeks ago after the company's board of directors approved a plan whereby Hertz and other Allegis subsidiaries will be sold. Allegis intends to concentrate on its core business, United Airlines. Adoption of the plan caused the resignation of Allegis chairman Richard J. Ferris, who was responsible for the purchase of Hertz.

Hertz had estimated revenue of $1.02 billion in 1986 and a U.S. fleet of approximately 150,000 vehicles. In 1986, Hertz controlled an estimated 32 percent of daily on-airport car rentals in the United States, according to Automotive Fleet magazine. Hertz has an estimated 350,000 vehicles world-wide.

Avis was purchased by Wesray Capital Corp. in July 1986. Avis is the second largest car-rental company with 125,000 vehicles in the United States and 25 percent of the market for daily on-airport rentals. Avis had estimated revenue of $850 million in 1986.

National Car Rental System was purchased from Household International last December by an investment group led by Paine Webber Inc. National is the third largest car-rental company with 110,000 vehicles in the United States and 21 percent of on-airport daily rentals. National had estimated revenue of $650 million in 1986.

Last September, TransAmerica Corp. sold Budget to a consortium headed by the investment firm Gibbons, Green and VanAmerongen and Budget's top management. Budget is the fourth largest cart-rental company with 100,000 vehicles in the United States and 18 percent of daily on-airport rentals. Budget had estimated revenue of $650 million last year.

American International Rent A Car Corp. was purchased by Abbey North Corp., of Boston, in May of this year. American International has 12,000 vehicles and ranks 12 in number of vehicles operated. The company had estimated revenue of $62 million in 1986.

PRODUCTION

Car output trailing '86

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Last week's scheduled domestic auto output increased over the prior week's build, but the weekly totals have been trailing the 1986 figures during the second quarter.

The reason for the lag is plant downtime because of slow sales and long model changeovers.

Automakers targeted 152,485 units last week, 3.54 percent more than the previous week's 147,277 but 15.36 percent below the year-ago week's 180,166.

So far this year, 3,717,565 cars have been assembled, 8.82 percent below the 4,077,381 completed last year at this point.

Last week's estimated output was shared as follows: General Motors, 49.83 percent; Ford Motor Co., 25.29 percent; Chrysler Motors, 14.99 percent; Honda of America Manufacturing Inc., 4.19 percent; New United Motor Manufacturing Inc., 2.46 percent; Nissan Motor Manufacturing Co. U.S.A., 1.93 percent; and Volkswagen of America, 1.31 percent.

As announced earlier, American Motors has ended production of 1987 Alliance models.

GM announced it will reduce its line rate by five units per hour at its Janesville, Wis., plant, effective Aug. 11. The reduction affects 350 workers. The Janesville plant assembles the Cadillac Cimarron and Chevrolet Cavalier.

On Aug. 24, GM will reduce line speeds at its Lordstown, Ohio, plant by six cars per hour and will lay off about 500 workers. The plant produces the Chevrolet Cavalier and Pontiac Sunbird.

GM's Oklahoma City plant is idle this week (June 22) for inventory adjustment, resulting in the layoff of 5,500 workers. Output is expected to resume June 29.

GM's Willow Run, Mich., plant resumed production today. It had been down one week for inventory adjustment.

As previously reported, Chrysler's Belvidere, Ill., plant is down for model changeover.

Ford slated Saturday overtime last Saturday at its Norfolk, Va., plant.

All Ford plants are scheduled for daily overtime this week.

Chrysler's St. Louis (No. 1 and 2), and Sterling Heights, Mich., plants were slated for Saturday overtime.

Week's truck production slips

Domestic truckmakers' scheduled production of 74,603 units last week, 1.04 percent below the previous week's 75,389 and 1.67 percent below the year-ago week's 75,871.

Year-to-date, 1,813,096 trucks have been assembled, 2.00 percent more than the 1,777,561 built last year at this time.

General Motors slated overtime last Saturday at three plants: Baltimore; Detroit; and Pontiac, Mich.

All Ford Motor Co. plants except Wayne, Mich., are scheduled for daily overtime this week. Wayne is idle for model changeover.

Canada assembles 400,000th car

Canadian automaker's built their 400,000th car of the year last Friday, 48 days behind 1986.

So far this year, 400,183 cars have been assembled, 29.46 percent below the 567,325 completed last year at this point.

Last week's targeted auto production totaled 18,318, 1.12 percent more than the previous week's 18,115 but 28.87 percent below the year-ago week's 25,753.

Truckmakers estimated last week's output at 18,537 units, 1.70 percent more than the prior week's 18,228 but 6.41 percent below the year-ago week's 19,807.

Mercedes to withdraw 3 diesels

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Mercedes-Benz will shelve three of its turbodiesel cars in 1988, blaming a trap-oxydizer emission-control device that the company wants to study further.

The models are the 300-D four-door sedan, the 300-TD four-door wagon and the 300-SDL four-door sedan. All have six-cylinder engines.

The company also said it will notify 9,000 owners of 1985-model 300-D, 300-CD, 300-TD and 300-SD cars that have the device and urge them to contact dealers for an improved version at no charge. The cars have five-cylinder diesels and were sold in California and other Western states.

"This is another maintenance step and should be done every 30,000 miles," said a company spokesman.

Since the device can damage the turbocharger, Mercedes also will inspect and replace it at no charge, if necessary.

The trap oxidizer is an advanced diesel emission device that reduces particulate matter emissions. It was developed by Mercedes and is used only on cars sold in North America.

Field inspections of 1985 models sold in California and other Western states revealed that the device flakes small ceramic particles from its core, which can lead to premature tubocharger wear.

A Mercedes-Benz of North America spokesman said it does not affect compliance with emissions standards and that most drivers do not experience a difference in the response of the automobile.

Mercedes engineers are monitoring 1986- and 1987-model 300-D, 300-TD and 300-SDL turbodiesels with an improved trap oxydizer.

Company officials decided to suspend production of those models at the close of the 1987 model year until further research on the device is finished. The company will add two gasoline models to its 1988 lineup.

Five of the 14 models in Mercedes' current line are diesel-powered and account for 20 percent of sales. The company will continue to market 190-series diesels, which are not equipped with the trap oxydizer.

Discontinuing the three diesel models will adversely affect the company's Corporate Average Fuel Economy ratings, a company spokesman said.

"We are not certain how much it will affect CAFE ratings, but it will most likely result in higher penalties," he said.

Lucas purchases aerospace firm

TROY, Mich. — Lucas Industries Inc., the U.S. subsidiary of Lucas Industries PLC, a United Kingdom-based aerospace, automotive and industrial systems group, has purchased Western Gear Corp. for $88.8 million.

Western Gear is an aerospace firm with facilities in North Dakota and California. The company produces actuation systems, auxiliary gearboxes, helicopter transmissions, weapon rails and other products.

The acquisition of Western Gear gives Lucas' U.S. operations annual sales of $500 million.

Chrysler talks with China on engine, car

By Laura Clark and Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTERS

Chrysler Corp. is negotiating with China's government-owned First Autoworks to supply the Chrysler 2.2-liter four-cylinder engine as well as tooling for the Dodge 600.

If the deal is successful, a version of the 600 would become the next-generation flagship car in First Autowork's line. It is unclear whether Chrysler would sell the tooling outright or work with First Autoworks in a joint venture.

A Chrysler spokesman said a decision on the engine is close to being finalized. The American automaker has been discussing with First Autoworks for more than a year the possibility of providing its 2.2-liter engine as the base engine for the Chinese automaker.

Chrysler is competing with Citroen and a Japanese automaker to supply an unspecified number of four-cylinder powerplants to be used in a variety of First Autowork's products, the Chrysler spokesman said.

Chrysler is also conducting feasibility studies with First Autoworks on building the Dodge 600 as a replacement for the Red Flag, a sedan currently offered in the Chinese market.

The spokesman said no agreement has been reached on the car project.

"The engine deal is a whole lot closer to fruition," he said.

"China is certainly one of the great world markets of the future, and some say the greatest market of the future," said the spokesman. "If we can get in with the Chinese and provide the base engine for

NEW LEADER

Ford overtakes Chevy in domestic-car sales

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

An automotive tradition in this country is changing. Ford Division is leading Chevrolet in sales of North American-built cars.

Ford hasn't topped Chevrolet for a full year since 1959.

Ford has outsold Chevrolet in six of the last eight months. Ford leads Chevrolet for the 1987 calendar year and for the 1987 model year in sales of North American-built autos.

At one point in American history, one of every four cars sold wore the bow-tie emblem of Chevrolet. The division was, without question, the industry volume leader.

In today's sales sweepstakes, however, Chevrolet has been limping with increasing severity as its competitor in Dearborn forges ahead.

Just last month, for example, Ford Division outsold Chevrolet by 2,504 units with deliveries of 125,062 domestic cars to Chevrolet's 122,558.

Ford's feat appears even more noteworthy in light of the new mid-size Corsica and Beretta launched by Chevrolet while Ford has no brand-new domestic cars this model year.

Ford's lead may not last through the end of the year, however. Ford's projection calls for domestic sales of 1.34 million units for the calendar year. Chevrolet's own forecast is for 1.60 million.

But even that difference of something better than a quarter of a million cars may not materialize. General Motors and its car divisions in the past frequently have missed projections by wide margins as sales fell short of overly optimistic early forecasts.

Ford's advantage over Chevrolet widens considerably when light trucks, vans and imports are added. Ford last month sold 20,359 more vehicles in total than did Chevrolet, 251,624 to 231,265. And for the first five months of the year, it beat Chevy by 64,441 vehicles, selling 1,160,058 vs. Chevrolet's 1,095,617. One year ago, Chevrolet was ahead of Ford in total vehicle sales, both for the month and for the year.

In contrast to last month's performances, in May last year, Chevrolet outsold Ford Division on a domestic-car basis by a hefty 31,113 units with deliveries of 158,897 cars to Ford's 127,784.

The difference in the first five months this

Car output will drop in 3rd quarter

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Most industry watchers have figured by now that the U.S. car production forecast for the third quarter would be lower than that of last year.

Their expectations were fulfilled as third-quarter production schedules were obtained by Automotive News, forecasting a build of 1,464,905 cars — a dip of 10.36 percent from the 1,634,205 completed in the third quarter of 1986.

THIRD QUARTER AUTO PRODUCTION
1987 forecast vs. 1986 actual

	1987	1986	% change
GM	723,610	828,269	−12.64
Ford	363,000	383,668	−5.38
Chrysler	220,000	259,581	−16.96
AMC	0	12,491	—
Honda	74,855	64,559	+15.95
NUMMI	48,000	49,520	−3.06
Nissan	29,640	10,066	+194.49
VW	5,800	15,721	−63.11
Industry	1,464,905	1,634,205	−10.36

The questions now are: Is the decrease going to be enough? How long will incentives carry on? How many plants will extend downtime? And, will there be strikes?

Ronald Glantz, Montgomery Securities analyst, thinks that the third-quarter forecast is at least 200,000 units more optimistic than what the makers actually will end up building.

"My calculation is that domestic dealers should end the second quarter with 1,965,000 cars in inventory, which is equal to a 77-day supply. This means that inventory is 419,000 units higher than average," he added.

The average from 1970 to 1986 for the end of June was 60.9 days, he said. That means the third quarter schedule is 200,000 units too high, he calculated.

Glantz thinks second-quarter production is running high in anticipation of a strike. That means the makers are going into the third quarter with plans to purposely build too many cars.

Contracts at General Motors and Ford Motor Co. expire Sept. 14, and a strike is almost certain, Glantz said. Ford and GM want a high inventory to avoid being hurt by a strike, he said.

Mazda plant nears Job One

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

FLAT ROCK, Mich. — Workers at Mazda Motor Manufacturing (USA) Corp. have completed the first 100 cars of pilot production at a new $550 million plant on the site of Ford Motor Co.'s defunct Michigan Casting Center. Commercial production begins in September, once 200 more pilots are assembled.

The Flat Rock plant — like New United Motor Mfg. Inc., the General Motors-Toyota partnership — will produce two different cars to be marketed separately by Mazda and Ford. Ford owns 25 percent of Mazda, but this is not a joint venture.

Observers believe Flat Rock will allow Detroit automakers — particularly Ford — a closer look at Japanese management methods and team production. Both are practices the Big Three want to incorporate to make their own plants more productive.

Dennis Pawley is vice president of manufacturing for Mazda's U.S. manufacturing operation. He left the position of plant manager at GM's Pontiac Fiero assembly plant to join Mazda.

"In my 20 years with GM, we tried many different ways of team building, but I found when I got down here that it's much deeper and much more complex in a Japanese plant," he said.

The plant's automation will also be of interest to other automakers. According to Mazda Motor Manufacturing President Osamu No-

Chrysler, dealers react to indictment for odometer fraud

By Helen Kahn, Charles M. Thomas, Theodore G. Coutillish and Kathleen Hamilton
AUTOMOTIVE NEWS STAFF REPORTERS

Chrysler Motors dealers reported late last week that the federal indictment of Chrysler Corp. and two executives on odometer tampering charges had not adversely affected their business.

But the dealers' reaction ran counter to the general trend: Related lawsuits were filed by individuals following the criminal charges; Chrysler was answering customer queries on whether their cars had been driven before the odometers were connected and was tracking down those damaged; print and electronic

Advanced system to revise GM global manufacturing

By Jake Haas and Michelle Krebs
AUTOMOTIVE NEWS STAFF

General Motors plans to revolutionize its worldwide manufacturing operations through its newly instituted GM Production System.

The goal of the new production setup is to create a common manufacturing system for GM globally, thus reducing costs drastically and boosting productivity "by light years," as one GM executive described it.

The program simplifies product design and product offerings as well as simplifying the GM organization, the manufacturing process and every worker's job.

The program alters activities in practically all associated areas, including methods of engineering, vehicle design, marketing, material control, plant arrangements, supplier agreements and labor relations.

It will change and standardize the automation that the automaker uses to build its vehicles and could make obsolete many of its current technologies, developed for systems such as robotics, vision and inspection.

"When you talk about a production system in these terms," said Elmer Johnson, GM executive vice president in charge of the operating staffs, "you're talking about bringing together all kinds of disciplines — materials management discipline, manufacturing and engineering discipline. It involves how you lay out the plant, how you deal with suppliers, how the material flow takes place."

The new production system also involves simplifying bureaucratic procedures among the salaried ranks and simplifying the worker's task, all accomplished in large part by listening to the workers who actually do the job. Participative management and the team concept of production play heavily in the new production system.

"The more you simplify the worker's task so he or she doesn't have to have these big boxes of parts around them trying to make the car, the higher-quality car you're going to have and the lower you can price it because your costs are low," Johnson said.

An end result of the new production system, Johnson said, is increased productivity and tapping more of the potential of GM employees, hourly and salaried.

"It's all geared toward getting much more zest, energy and participative play out of the employees at every level," he said.

Johnson used as an example of the new production system the cataloging of available parts within GM. Johnson said in some cases, distinctiveness has been pursued to excess and GM now should seek commonality of invisible parts.

"You don't have to have 45 different brake pedals," he said. "The trick is to catalog those parts that don't have to be engineered and specified with a new set of specs."

Johnson believes cataloging parts represents the area in which GM can realize the most significant cost savings.

The new production system is based in part on the second-generation Americanization of Japanese manufacturing techniques picked up through GM's California partnership with Toyota in New United Motor Manufacturing Inc. and others.

The program already is being installed on the Detroit-Hamtramck Allante body assembly lines. Sources indicate that GM intends to expand the production system to other areas in the Hamtramck plant once its current installation is debugged and running full time.

The program is really an outgrowth of GM's long search for some kind of generic manufacturing approach that all units can adopt.

GM, which has practically every piece of manufacturing machinery made, has been looking over the manufacturing processes offered by its vendors and partners. One corner of that effort is GM's drive to standardize its computer-aided design and engineering systems (Automotive News, May 25).

GM is currently winnowing the five surviving vendors of 27 down to three in an effort to integrate its 22,000 computer-aided-design workstations, 35 percent of which are in GM's home-brewed system.

The Toyota Production System, as much a manufacturing strategy as a technology, is a key element of the new GM production system. It encompasses such elements as reducing labor classifications, expanding operator responsibility, just-in-time parts and materials delivery and manufacturing and assembly process enhancement.

The Toyota manufacturing principles GM is attempting to pass through its system include:

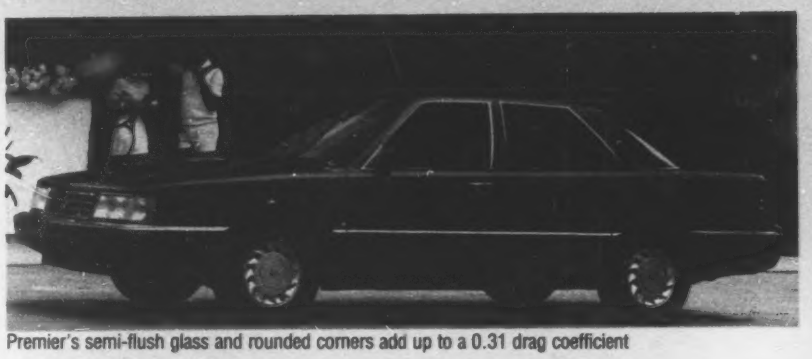
- Profit is guaranteed only through cost cutting.
- Elimination of any activity that does not add value to the product will reduce costs.
- Increased quality justifies stopping the line.
- Worker-hours needed to make a product should be reduced progressively.

The company feels the new system will keep its cost and quality competitive with other car builders worldwide.

GM isn't the only American automaker to foster such hopes. Chrysler Corp., for example, has similar feelings about its new Simplex automated production system at its Belvidere and St. Louis No. 1 plants, which has produced some startling savings and process flexibility.

GMPS was kicked off last December in a memo signed by Robert C. Stempel, executive vice president and soon-to-be GM president; Lloyd E. Reuss and Donald J. Atwood, also executive vice presidents.

In part the memo stressed, "Development and implementation of this new production system will be a major effort, ultimately requiring involvement of most functions within every operating unit in North America. Because of the scope and complexity of this undertaking, the coordinated all-out efforts of all units is imperative, and it is essential that all operating units give this program top priority."



Premier's semi-flush glass and rounded corners add up to a 0.31 drag coefficient

AMC takes on new class

Premier gives dealers luxury intermediate to sell

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

MANITOU, Ontario — With a $337 million (U.S. funds) plant and $263 million in its tooling and product budget, American Motors is ambitiously entering the intermediate-car segment with its 1988 Premier.

The four-door luxury sedan will be assembled at AMC's new Bramalea assembly plant in Brampton, Ontario, and will represent the most ambitious vehicle project in AMC's history.

AMC hopes that Premier will become the company's weapon against such competitors as Ford Motor Co.'s Taurus/Sable, Pontiac 6000, Oldsmobile Ciera and Audi 5000. It is to be introduced in early November.

But more importantly, the Premier will provide a potentially profitable product for AMC's dealer network which has not had an intermediate-sized car since AMC discontinued Matador in 1977.

AMC is currently working with Bendix to develop anti-lock brakes for Premier. They are expected to be offered by the end of the 1988 model year, at least on a coupe version that will debut as a 1989 model. Engineers are also considering active suspension for a future model.

Designed by Giorgio Giugiaro

Chrysler Corp., which plans to acquire AMC in August, also has the right to cross-sell Premier and its derivatives in its own dealer network.

Premier, which sources say will be priced between $12,000 and $16,000, will be offered in three trim packages: the basic DL, sporty ES and luxury LX.

A five-speed manual transmission will be standard on the DL, while the LX and ES will be equipped with a four-speed automatic transmission with overdrive.

see PREMIER, page 46

Ford to test CIM at Ontario plant

By Jake Haas
SPECIAL CORRESPONDENT

Ford Motor Co. is installing a computer-integrated-manufacturing system at its Markham, Ontario, electronics and instrumentation plant.

Gary VanderHaagen, strategic planning manager for Ford's Electrical and Electronics Division, said that if the Markham CIM system, one of the auto industry's first, is successful, it could be the pattern for companywide implementation.

"We are not only focusing on this plant, but on other divisions as well," said Ken Hitchmough, CIM project manager at Markham.

"We hope to create generic software that can be transferred. There are people working on this full-time," VanderHaagen said. "It has a lot of corporate support."

CIM requires that all phases of manufacturing, design and marketing be tied together to reduce costs and produce better-quality products.

The Markham project resulted from the efforts of a team of managers with a variety of jobs who analyzed how Ford builds cars.

The first products to be put on line will be electronic instrumentation and radio products. VanderHaagen said.

CIM is expected to reduce product cost by 10 to 35 percent, cut leadtime 10 to 25 percent and improve quality.

"We are looking at standards and simplification," Hitchmough said. "We have to manage with data and information to be able to control our processes better."

However, the Ford engineers expect quality, productivity and the time needed for assembly operations to improve once the system is in place.

The CIM system is being installed gradually so that the way the Markham plant makes its products will not change markedly over the near term, Hitchmough said.

The pilot CIM system at the plant is expected to be up and running this year with the entire plant on CIM by the end of 1988.

Car disciplines converge at World Congress

The convergence of engineering, design and safety will be highlighted at the 12th annual Automotive News World Congress, to be held July 26-29 at the Hyatt Regency Hotel in Dearborn, Mich.

The integral relationship between the three areas is exemplified by the careers of three prominent speakers who will address the gathering.

They are: Michael J. Kimberley, Group Lotus managing director; Helen O. Petrauskas, Ford Motor Co. environmental safety and engineering vice president; and Carl L. Olsen, chairman of transportation design at Detroit's Center for Creative Studies.

The overall theme of this year's World Congress is "Facing Up to Competitive Times."

Kimberley will address a general session on Tuesday, July 28, when the daily theme will be "The Importance of a Global Perspective."

Olsen will speak that evening at the gala banquet, and Petrauskas will address the group at the Wednesday morning finale, when the day's theme is "Coping with Change."

Kimberley, 48, was educated, trained and apprenticed as a mechanical engineer in England. He was with Jaguar for 15 years before starting at Lotus Cars in 1970.

His World Congress speech topic is "Lotus' Plans for Getting Bigger in the United States."

Petrauskas was born in Lviv, Ukraine. She joined Ford's Office of the General Counsel in 1971 as a staff attorney on emissions and safety. She is a supporter of air bags as passive restraints and has been active in the promotion and marketing of Ford's current crop of air-bag-equipped Tempo and Topaz models. The topic of her address to the World Congress is "Perspectives on Highway Safety."

Olsen, 53, began his career with General Motors in 1957 at the Warren, Mich., styling center. In 1960, he moved to Europe and spent the next 27 years working for various design studios before coming back to the United States earlier this month to take the job at the Detroit school.

Olsen, who spent the last five years as design director at Automobiles Citroen in Paris, will speak on "What's New in Automotive Design."

This year's World Congress will feature more than 30 speakers who will share their expertise, experience and opinions on the status of the automobile business and its future.

RECREATION ON WHEELS

Vixen may seek growth funds; ad campaign set

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

PONTIAC, Mich. — Vixen Motor Co. is shifting into a higher gear in the RV market, though company officials are still circumspect about how far or fast they expect to go.

Vixen is talking to Goldman Sachs, the investment firm, about a potential debt offering to private investors to raise extra cash, Gerald S. Bryce, Vixen president confirmed.

The private placement is only in the conversational stage. Bryce said it would be aimed at funding the company's growth, rather than buying out controlling interest from the city of Detroit police and firemen's pension fund and the state of Michigan employees pension fund, which are majority investors in the firm.

Vixen is also seeking other ways to broaden its market horizons.

Aside from introducing a new "touring" version of its motor home, the company is gearing up for its first bona fide national ad campaign, through Scharfberg & Associates, of Jenkintown, Pa.

That agency replaced Vixen's previous ad agency, R.J. Baker, in early May.

Bryce said Vixen has relied mainly on media publicity and limited ad efforts up to now.

"There are a lot of people in lots of areas who don't know us," he said.

The $750,000 ad campaign will use national magazines and some local media, in line with the company's feeling that "our job is to set the Vixen image, and it's the dealer's job to sell in local market," Bryce said.

In its dealer recruitment, Vixen is now drawing prospects from both the automotive and RV fields.

Vixen currently has 52 dealers in 28 states, about a third as many dealers as it needs, according to Bryce.

The company's goal is to get 158 dealers and be in the 48 contiguous states by the end of its fiscal year that ends Sept. 30, 1988.

Bryce: "There are a lot of people in lots of areas who don't know us. . . . Our job is to set the Vixen image, and it's the dealer's job to sell in local market."

Vixen's dealers now include car-only dealers, car dealers with RV departments and RV-only dealers of all sizes.

It currently has 300 dealer prospects; but Bryce doesn't anticipate that the yield from them will be all that large because of the company's concern about signing the wrong dealers.

Bryce pointed out that "our vehicle is not the bread-and-butter franchise at a dealership. It's a second or third franchise," which means it is in no way critical to a dealer's survival.

And that means that unless a dealer likes motor homes or the RV lifestyle, he could end up doing little to push it.

Bryce noted that it's not something that can be sold simply as transportation, as many car dealers are used to doing, but has to be sold on the basis of fun as well.

He said he expects the new Vixen XC to account for roughly half the company's sales mix, based on current orders. The XC replaces some of the motor home features of the alternate Vixen 21 model with seating for eight people.

The company has a 45-day backlog of orders, split almost evenly between the XC and the 21, Bryce added.

He said he anticipates selling 300 Vixens in the current fiscal year that ends in September, up from about 185 last year.

Current assembly is at the rate of two units a day.

Bryce said the company is making an in-depth study of its longer-range sales potential, using Innovative Ventures, of Dallas and Lansing, Mich., as an outside market research consultant.

He said it would be "premature" to give any longer-range sales projections until the study is completed.

Bryce wouldn't disclose the company's break-even point for profitability, but said it has outlined a plan for profitability and is "marching to" it.

He predicted, though, that the company would break into the black within two years, barring any unforeseen catastrophe in the national economy.

Bryce said the biggest concern of RV manufacturers is not the price of fuel — which has been edging up — but its availability.

An increase in fuel prices wouldn't affect the vehicle's popularity, he said, because its high fuel efficiency is one of its strong points.

As part of its expansion, the company now has "completely staffed" its six sales zones with zone managers, Bryce added. Their job is to prospect for new dealers as well as call on old ones.

The company met with its dealers in mid-April, he added, and openly discussed its plans, its strengths and some of its previous errors.

Some of the changes it has made to strengthen its distribution include setting up a new operation to process warranty claims more quickly and doing more sales and service training of dealership personnel.

Proper servicing is particularly important to the company, since it is one of relatively few RV firms that assumes total responsibility for the warranties on its vehicles, Bryce said.

Typically, unless a motor home manufacturer tampers with the chassis or chassis components in some way, the chassis warranty is covered by manufacturers like Chevrolet or Ford that supply it.

Vixen plans to offer a gasoline engine and automatic transmission for California models first, beginning this fall.

It currently uses a 2.4-liter BMW turbodiesel 4-cylinder and manual transmission for all its vehicles.

The company will likely offer a 2.7-liter 6-cylinder BMW gas engine, but it is still exploring other possibilities as well.

It is also looking at a couple of suppliers for its automatic transmission, including ZF.

The Vixen Motor Company plant employs more than 150 people.

RV market strong, but '88 lag seen

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

The RV market continues to look strong, though not quite as strong as previously predicted.

That is the finding of a report by John DeWolf, economic consultant, for the Recreation Vehicle Industry Association.

Seperately, the RVIA reported that April wholesale shipments were the highest in nearly three years.

DeWolf projected slightly fewer wholesale shipments of towable RVs and motor homes in calendar 1987 than he had foreseen earlier, but higher shipments of van conversions than he had forecast previously.

He also said he anticipated the start of a mild slowdown in industrywide shipments in 1988.

DeWolf's revised estimate calls for 222,000 RV shipments in 1987, excluding van conversions.

That would represent a 12 percent gain over last year, but is slightly below the 14 percent increase he previously projected.

He sees shipments of towable RVs rising 12.8 percent this year, motor homes rising 7.8 percent and truck campers rising more than 40 percent.

At the same time, DeWolf's forecast calls for a substantial increase in van conversion shipments.

He sees van conversion shipments climbing 18 percent in 1987 over 1986, compared to a small decline projected previously.

He also expects van conversion shipments to stay at that level in 1988.

Shipments of other RVs, excluding vans, are expected to decline to 210,000 in 1988 and rise slightly to 212,000 in 1989.

Recreational Vehicle Wholesale Deliveries

	April 1987	April 1986	% change	4 months 1987	4 months 1986	% change
Travel trailers	10,900	10,100	+ 7.9	35,800	32,900	+ 8.8
Folding camping trailers	4,100	3,700	+10.8	14,500	13,600	+ 6.6
Truck campers	1,200	800	+50.0	3,700	2,400	+54.2
Towable RV total	16,200	14,600	+11.0	54,000	48,900	+10.4
Conventional (type A)	3,800	3,300	+15.2	13,300	11,400	+17.5
Van Campers (type B)	700	700	0.0	2,300	2,000	+15.0
Chopped vans (all)	3,000	2,900	+ 3.4	9,800	9,100	+ 7.7
Motor home total	7,500	6,900	+ 8.7	25,500	22,500	+13.3
Van conversions	16,700	18,200	- 8.2	63,100	66,500	- 5.3
TOTAL ALL RVs	40,400	39,700	+ 1.8	142,600	138,000	+ 3.3

Meanwhile, RV manufacturers wholesaled more than 40,000 units in April, reaching that level for the first time in nearly three years.

April shipments of 40,400 units were up 1.8 percent over a year ago, according to RVIA.

For the first four months of 1987, industry shipments totaled 142,600 units, up 3.3 percent over last year.

All categories except van conversions showed increases in April, RVIA said.

Van conversion shipments totaling 16,700 units were off 8.2 percent from their year-ago total in April.

Their four-month total of 63,100 was off 5.3 percent from 1986.

Van chassis with seat-delete options, shipped by the four major domestic van suppliers to their pool accounts, continued to rise, though, portending a future upturn in conversion shipments.

Van converters typically order such units for the work they do.

In April, the four domestic van manufacturers shipped 3,300 compact vans without seats to converters, 17.9 percent more than the 2,800 shipped last year.

For four months of 1987, manufacturers shipped 13,000 compact vans with the seat-delete option to converters, a 22.6 percent increase over the 10,600 shipped last year.

Similarly, manufacturers shipped 16,300 standard-size vans without seats to converters in April, 46.9 percent more than the 11,100 units they shipped a year earlier.

For four months of this year, van manufacturers shipped 58,900 full-sized vans without seats to converters, 25.6 percent more than they shipped last year.

Van manufacturers shipped 19,600 seatless vans to converters in April, 41.0 percent more than last year. And they shipped 71,900 vans to converters for the first four months of the year, a 25.0 percent increase over last year.

In RVIA's tally of wholesale shipments by manufacturers to dealers, truck campers continue to stand out.

RV manufacturers wholesaled 1,200 truck campers in April, 50 percent more than last year. And they shipped 3,700 truck campers for the first four months of the year, up 54.2 percent over the year-earlier total.

Truck campers are part of the "towable" segment of RVs, which also includes travel trailers and folding camping trailers.

Towable RV shipments in April totaled 16,200, up 11.0 percent from a year ago. For four months of this year, towable RV shipments of 54,000 were up 10.4 percent from a year ago.

Motor home shipments, totaling 7,500 in April, were up 8.7 percent from a year ago. For four months, their total of 25,500 was up 13.3 percent from a year-earlier.

Ford studies more sharing of light platforms, parts

RV TRENDS

JOSEPH BOHN

Cost containment being the key to success in the truck business, Ford is studying common platforms and parts for some of its future light-duty products.

Ray Pittman, compact business planning and vehicle engineering program director for Ford Division, said a simplified "bag of parts" could be used to build a number of base vehicles and derivatives.

Pittman said that Ford's F-series pickups, which have the highest sales volume in the industry, share common parts.

"We thought, then, how can we expand that concept to include vans and utilities and have only what we call 'meaningful complexity?' "

Meaningful complexity, Pittman said, would mean only necessary appearance and functional differences.

Currently, the Ranger and Bronco II share a platform and body-on-frame construction.

The Aerostar, which was Ford's first unibody-construction truck, uses a different platform.

Platforms for Ford pickups and sport-utility vehicles generally are the same; while Ford vans have their own platforms. Ford is studying the idea of using a common platform for all its compact trucks, including vans.

A body-on-frame design is the most natural for trucks, Pittman said, pointing out that it "gives you a lot more flexibility in ride, handling and quietness."

In its future product plans, Ford also appears to be leaning toward a new extended Aerostar model.

It might be argued that a maxi version of Aerostar would overlap with the smallest of Ford's current full-sized Econoline vans/wagons.

But, as Pittman pointed out, "Customers see it quite differently. We thought the small van would substitute for the full-sized vans, but that hasn't been the case.

"Nothing is 100 percent; but the drawdown from Econoline, from our standpoint, hasn't been visible at all," he added.

Some 90 percent of Aerostars are being produced as people carriers, with 60 percent of the drivers being women who typically haul children and groceries. The small Econoline van appeals mainly to contractors and other kinds of commercial users.

So, "the logical thing is to expand it (Aerostar)," Pittman added.

With all the interest in front-wheel-drive and multipurpose vehicles, Ford is also continuing to look at a new, smaller, front-drive van. "The next time we make a major change in the van, it's a very serious consideration," Pittman said.

Officials expect value-equipped and priced trucks to become hot marketing items in the 1988 model year, particularly if the market softens and competition continues to heat up.

Fruehauf moves to reduce debt

Firm aims to cut $1 billion load incurred in balking takeover

By Theodore G. Coutilish
SPECIAL CORRESPONDENT

TROY, Mich. — At its annual shareholders' meeting, Fruehauf Corp. revealed consolidation and divestiture plans designed to reduce its debt of $1 billion.

The company took on the debt in a leveraged buyout last year that thwarted a hostile takeover bid by New York corporate raider Asher B. Edelman.

In December 1986, a group of Fruehauf managers and Merrill Lynch & Co. bought the company.

Since then, Fruehauf has cut its debt by $450 million by selling off a finance subsidiary and two truck-trailer operations.

Although the Detroit-based company posted a $61 million loss in 1986 and a $5.7 million loss during the first quarter of this year because of interest expense from the buyout, Fruehauf's management is optimistic.

T. Neal Combs, president and chief administrative and financial officer, told stockholders "the new Fruehauf is alive and well."

"The key to success in the long run is not a shrinking company but rather growth through focusing on the core businesses," he said.

Those core businesses — truck trailer and automotive operations — will continue to operate no matter what, he promised.

To reduce debt, Combs said Fruehauf is considering selling inventory, real estate and equipment.

"The name of the game at this point is positive cash flow so that we are in a position to reduce the (debt) levels and the accompanying interest cost," he said.

Calling 1986 a year of restructuring, Leon Alexander, president and chief executive officer of trailer operations, said the company saved $35 million by merging departments and divisions, restructuring branch sales and service networks and permanently closing assembly plants in Fort Wayne, Ind., and Milan, Mich.

Looking ahead, Alexander said he sees a bright future for the 84-year old company.

"We expect business to remain strong through 1987 and 1988," he said. "We've increased our share of the market by 15 percent, and our international trailer operations improved in 1986. We have an excellent order backlog and there has been an upturn in demand for our construction-related dump, platform and tank trailers."

The 1990s look even brighter, he told shareholders.

New product lines in sensors, domestic containers and aluminum wheels are on the drawing board, he said.

Growth prospects include upgrading of current facilities, an improved dealer development program and emphasis on research and development.

Fruehauf recently announced plans to build a new automotive parts plant. Although a site has not been selected, the plant will produce electronic automotive sensors through Fruehauf's Kelsey-Hayes subsidiary. The sensors use computer technology to gauge such factors as oil temperature and speed in cars.

Kelsey-Hayes President Bob Siefert said the company has been the leader in designing products such as anti-lock brakes. He said Ford Motor Co. and General Motors agreed to put its two-wheel anti-lock brake system on nearly all of their light trucks in 1989. He added that by the 1990 model year, two-wheel anti-lock brake systems will be standard equipment on most light trucks made in America.

Fruehauf is a manufacturer and distributor of transportation equipment and components within the truck trailer, automotive, maritime and aerospace industries. Employment is approximately 26,000 worldwide.

Hyundai Canada, 45 dealers buy Tricom

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

In an unusual move, Hyundai Auto Canada Inc. and 45 Canadian dealers have teamed up to buy the computer network of Tricom Automotive Dealer Systems Inc.

The purchase, through a liquidation sale, has allowed the 140 General Motors, Hyundai Canada and other dealers on the system to survive Tricom's demise with little impact, said Wayne Gilbert, manager of management information systems for Hyundai Canada.

The new owners have retained Leasecorp Systems Ltd., of Mississauga, Ontario, to manage the operation.

Hyundai, which owns 50 percent of the venture, said that 45 of its 190 Canadian dealers are on the system. The other half is held by a group of 45 dealers, most of them with GM franchises.

One advantage of the setup is that the dealers will have a direct voice in how the network runs, said Ian Mead, vice president of Leasecorp. A council made up of five Hyundai dealers and five GM dealers will determine the direction of the business.

"I think in the long run the product will be more conducive to what dealers want," Mead said. Leasecorp will make most of the day-to-day operating decisions.

In addition to its role in providing financial packaging and acquiring the IBM/36 hardware for the system, Leasecorp will also handle the marketing, Mead said.

Most of its initial thrust will be in Canada, where many dealerships haven't been computerized. Eventually, it hopes to challenge industry leaders ADP and Reynolds & Reynolds in Canada. Later, it expects to broaden its U.S. presence, where the network now serves about 30 dealers.

Leasecorp also will keep a share of the venture's profits and distribute a share back to the system's owners.

Tricom, based in Hayward, Calif., was known as Tricom Systems Corp. until its 1985 purchase of Toronto-based Automotive Dealer Systems Inc. and ADS Computer Services Inc. The company had begun marketing the ADS system in the United States until going out of business in April, according to Mead.

About 18 Tricom employees have been picked up by Leasecorp.

Hyundai Canada calls the service the Hyundai Dealer Management System. The GM dealers and other dealers know it as the Automotive Dealer Management System.

Hyundai Canada also is expected to make an announcement soon about plans to install a computer communications system between its dealers and its Markham, Ontario, headquarters.

AUCTION NEWS

West Palm Beach Auto Auction, West Palm Beach, Fla., has moved to a new facility. The auction, a subsidiary of **Anglo American Auto Auctions Inc.**, features six lanes and can handle 1,800 cars per week.

GE Credit Auto Auctions has acquired three more auto auctions and now owns 11. The new auctions are **Minneapolis Auto Auction**, Minneapolis; **Newburgh Auto Auction** (formerly Northeast Auto Dealers Exchange), Newburgh, N.Y.; and **Portland Auto Auction**, Portland, Ore. "These latest acquisitions further solidify our presence in the auto auction business," said Mike Zafirovski, president and general manager of General Electric Credit Auto Auctions, a subsidiary of General Electric Credit Corp. GE Credit Auto Auctions began purchasing auto auctions in 1985. Currently, it anticipates selling more than 400,000 units during 1987.

Harrisonburg Auto Auction, Harrisonburg, Va., was the site of the largest Ford factory sale ever, according to Jim Wheatley, the auction's general manager. Wheatley said 835 cars and trucks were sold for $8,205,800 to the 167 dealers who were in attendance from 19 states.

Taiwan ventures interest Magna

MARKHAM, Ontario — Magna International Inc. is exploring the possibility of joint ventures with auto parts firms in Taiwan.

Magna, Canada's largest parts company, would use the ventures as low-cost sources for some components, said Stephen Rodgers, director of planning. It would likely use those parts in modular assemblies for automakers.

Rodgers said Magna has had questions about quality and availability in its search for components. A joint venture would help answer those concerns by giving Magna a voice in production.

Although Magna isn't negotiating with any company right now, it could have a deal within five months, Rodgers said. Magna is also looking for similar opportunities in South Korea.

Lataif says Ford stocks are 'perfect'

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — Ford Motor Co. believes it is in ideal strategic position as it prepares to shed inventory over coming months and make way for this fall's 1988 lineup.

Ford had a 71-day supply of domestic cars at the start of June, lower than Chrysler Motors' 82-day stock and General Motors' 87-day inventory. "That's a perfect position for us at this time of year," Louis E. Lataif, vice president of North American sales operations, said in an interview last week.

Automakers are again paying close attention to their inventory levels this summer, as sales lag despite incentive programs.

Total car sales were down 10.7 percent through the end of last month. Inventories of U.S.-built cars were 15 days above year-ago levels at 77 days. Stocks of imported cars, too, have climbed from a 41-day supply last June 1 to 60 days this year.

The industry is in worse shape in 1987 in part because consumer tax refunds have not been as high as they have been in the past, said Thomas O'Grady, president of Integrated Automotive Resources Inc., Wayne, Pa.

He expects a round of strong incentives to begin within two or three weeks, with GM likely taking the lead in trimming its stock and the other automakers following. Ford and GM will want to maintain a higher-than-usual supply — perhaps 80 days worth of cars — to protect against a possible UAW strike in September, he said.

AUTOMOTIVE NEWS/JOE WILSKERS

Lataif: "You can expect us to be every bit as competitive as we've been, in terms of trying to neutralize whatever any of our major competitors do."

But O'Grady said the makers do not want to go into the strike period with incentives, so he expects the annual cleanup programs to begin earlier than usual.

O'Grady gave Ford credit for managing its inventory well. Not only has its car stock been lower than that of its U.S. rivals, but the company has been able to avoid buildups on its slower-moving lines, O'Grady said. The Ford product with the highest supply, the Mercury Sable (119 days), has been selling well.

While Ford is not expected to lead the way on any new incentives, Lataif made it clear that the company will respond to protect its market share.

"I think you can expect us to be every bit as competitive as we've been, in terms of trying to neutralize whatever any of our major competitors do," he said.

The combination of steady Ford sales and a declining industry has boosted Ford's share to 20 percent of the U.S. car market and 30 percent in trucks. Ford officials set that goal 15 months ago, when its respective shares ran at about 17 and 27 percent. If Ford can hold its current levels for a year, Lataif said, it then will set its targets higher.

Lataif predicted combined U.S. car and truck sales will come in at about 15 million units in 1987. He said car sales have been weaker and truck sales have been stronger than expected.

Cash and cheap loans fail to halt sales slide

By Karen Detkowski
AUTOMOTIVE NEWS STAFF REPORTER

Although sales incentives were extended and were in full force during the June 11-20 period, domestic new-car sales dipped 11.33 percent below the 1986 total.

With nine selling days both years, domestic-car sales dropped to 223,376 from last year's 251,920.

The mid-June daily selling rate was 24,820, down from 27,991 in the comparable period of 1986. The June 1-10 rate was 23,189, based on sales of 208,699.

Domestic sales since Jan. 1 totaled 3,417,873, down 11.77 percent from 3,873,974 in the year-ago period.

Showing sales increase for mid-June were Honda, up 60.58 percent over the 1986 span, and Ford Motor Co., up 14.13 percent. Ford's total of 68,232 was its highest mid-June figure since since 1978 when 83,214 cars were sold. Nissan sold 4,332 U.S.-built cars, compared to 78 in 1986 when its plant was down for retooling.

American Motors' sales dipped 63.27 percent, and there were declines of 18.76 percent for Chrysler Motors, 22.57 percent for General Motors and 21.96 percent for Volkswagen. Toyota reported sales of 1,198 U.S.-built cars this year; it was not selling such cars at this time in 1986.

Despite incentives, sales were down for all Chrysler Motors and GM makes. The Chrysler declines amounted to 23.70 percent for Plymouth, 17.08 percent for Chrysler and 15.81 percent for Dodge.

Sales dips at GM were 37.67 percent for Pontiac, 24.08 percent for Chevrolet, 23.64 percent for Oldsmobile, 13.52 percent for Buick and 8.23 percent for Cadillac.

All three Ford Motor Co. makes reported increases for mid-June. Lincoln was up 35.68 percent over last year; Ford climbed 15.89 percent; and Mercury rose 3.45 percent.

LEADER

FROM PAGE 1

year was similar to that of last month, with Ford outselling Chevrolet by 2,242 domestic cars.

Look at the 1987 model year so far: Ford dealers have outpaced their Chevrolet counterparts in six of the last eight months in sales of domestic passenger cars. The model-year totals (Oct. 1 to May 31) were: Ford, 924,702; Chevrolet, 886,302. Ford amassed much of its lead in December when it outsold Chevrolet by 23,000 cars.

The last time Ford outsold Chevrolet for the calendar year was 1959, but that was due largely to a steel industry strike that Ford sidestepped through ownership of its steel works in the Rouge complex.

Ford Division also beat Chevrolet in 1957. That year, Ford's leading lines had major restyling while its chief competitor's cars received only a facelift.

In those days, the auto arena was far less crowded, and the Ford vs. Chevrolet contest was more tense. If a person decided not to buy a Chevrolet, it was much more likely a Ford would be purchased than it is today with many more competitors.

Louis E. Lataif, sales operations vice president, Ford North American Automotive Operations, looked at the competitive situation from his perspective.

"There are a lot of dynamics in the marketplace," he said. "What we have said is, it's fun to have the trophy of being the largest division or achieving a specific goal but, in fact, the competition is no longer Ford, General Motors and Chrysler; it's a much broader base of competition."

Lataif also told Automotive News, "It's not inappropriate for us to have some specific targets, but the typical buyer is not saying, 'Shall I buy a Ford or a Chevy?' any longer. He's buying from a wide bunch of choices. And, to the extent more of them decide Ford's a good car, our numbers go up. To the extent that they decide Chevrolet is not quite so desirable, Chevy's numbers go down. Some of the rest is mathematical fallout."

Lataif said of Ford's current lead over Chevy, "It's a very important achievement because it's something we've wanted for a very long time. The Chevrolet and the GM team is an extraordinarily talented group. It's fun to beat somebody who's very good.

"But when I think as a marketer about what customers are thinking, this is just internal gamesmanship. We're just talking to each other in the industry. The customers just want to buy good cars at a good value for the money, and there are a lot of brands to pick from, and there aren't just Ford and Chevy any longer. There's a whole host of names to select from."

Ford consistently has done even better in pickup trucks, vans and utility vehicles than it has in cars in competition with Chevrolet.

The division outsold Chevrolet in 1986 with deliveries of 1,324,885 light trucks to Chevrolet's 1,229,437. It also outsold Chevrolet in 1984, 1983 and 1981. And, for the first five months of 1987, Ford led by a robust 110,011 units with 574,903 deliveries against Chevrolet's 464,892.

A Ford man mused, "At one time, Detroit wondered if Ford Division would beat Chevrolet in trucks. That came to pass. Now, Detroit is wondering if we can pass General Motors in trucks, and we're close."

In the first five months of this year, GM's light-truck sales — Chevrolet and GMC — totaled 587,061 units while Ford's totaled 574,903, a difference of 12,158. In the first five months of 1986, Chevrolet and GMC sold 643,945 units and Ford sold 531,993, a difference of 111,952 units in GM's favor.

Chevrolet's total car sales, of course, include Sprint and Spectrum from Japan. With those cars added to its domestic sales, Chevrolet outsold Ford in 1986 by 321,698 cars.

Chevrolet dealers sold 9,294 Sprints and Spectrums in May and 49,265 in the first five months of 1987, so Chevrolet led Ford in overall car sales for both periods.

Ford dealers had no captive import until the introduction of the Festiva from Korea in May. The division expects to sell 35,900 Festivas this calendar year.

Automotive News Staff Reporter David Versical and Statistician Karen Detkowski contributed to this report.

CHINA

FROM PAGE 1

their car, it would be a significant move."

First Autoworks is the largest automaker in the People's Republic of China.

Whether or not the deal is consummated, Chrysler is likely to have a Chinese connection. Its planned acquisition of American Motors would give it an equity stake in Beijing Jeep Corp., the Chinese builder of four-wheel-drive vehicles.

The Dodge 600 four-door sedan is a six-passenger vehicle which was introduced in October 1982, as a 1983 model. Its companion E-body cars in the Chrysler lineup are the Plymouth Caravelle and Chrysler New Yorker. All are assembled at the Jefferson Avenue plant in Detroit.

Chrysler intends to keep the E-bodies in the 1988 model year with minimal exterior design changes, although it earlier had planned to end production of the models after the 1987 model year.

The powerplants, first introduced in Chrysler's K-car, are manufactured at Chrysler's Trenton, Mich., engine plant.

Ford's Petersen elected MVMA chairman

DETROIT — Donald E. Petersen, chairman and chief executive officer of Ford Motor Co., has been elected chairman of the Motor Vehicle Manufacturers Association.

He succeeds Donald D. Lennox, former chairman and chief executive of Navistar International Transportation Corp., for the one-year term, effective July 1.

Thomas H. Hanna, MVMA president and chief executive, was re-elected.

Elected to three-year terms on the MVMA board of directors were Bjorn Alhstrom, president and chief executive, Volvo North America Corp.; Gerald Greenwald, chairman, Chrysler Motors; Philip A. Hutchinson Jr., vice president — industry/government relations, Volkswagen of America; Shoichiro Irimajiri, president, Honda of America Manufacturing; and Robert C. Stempel, the president-elect of General Motors.

Elected to a two-year term was Donald J. Atwood, GM vice chairman.

In addition to Petersen and Hanna, the directors who will continue on the board are: Betsy Ancker-Johnson, vice president — Environmental Activities Staff, General Motors; Joseph E. Cappy, president and chief executive, American Motors; Jose J. Dedeurwaerder, vice chairman, American Motors; Lee A. Iacocca, chairman and chief executive, Chrysler Corp.; and Robert A Perkins, vice president — Washington office, Chrysler Corp.

Also, Helen O. Petrauskas, vice president — Environmental and Safety Engineering Staff, Ford Motor Co.; Noel Phillips, president and chief executive, Volkswagen of America; Harold A. Poling, president and chief operating officer, Ford Motor Co; Roger B. Smith, chairman and chief executive, General Motors; and Neil A. Springer, president and chief operating officer, Navistar International Transportation Corp.

MVMA members are AMC, Chrysler Corp., Ford, GM, Honda of America Manufacturing, M.A.N. Truck & Bus Corp., Navistar International Transportation Corp., PACCAR, Volkswagen of America and Volvo North America Corp.

PRODUCTION

Cars hold at 152,000

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Domestic auto production continues to trail the 1986 weekly totals because of downtime at several plants.

Last week's targeted output of 152,099 dipped slightly (0.43 percent) from the previous week's 152,750 and was 13.44 percent below the year-ago week's 175,718.

So far this year, 3,869,929 cars have been assembled, 8.99 percent below the 4,252,322 assembled last year at this point.

Companies shared last week's production as follows: General Motors, 51.89 percent; Ford Motor Co., 24.48 percent; Chrysler Motors, 13.61 percent; Honda of America Manufacturing Inc., 4.31 percent; New United Motor Manufacturing Inc., 2.47 percent; Nissan Motor Manufacturing Co. U.S.A., 1.93 percent; and Volkswagen of America, 1.31 percent.

As previously reported, American Motors has ended output of its 1987 Alliance line.

GM's Doraville, Ga., and Lordstown, Ohio, plants closed June 26 for model changeover. Output at Lordstown is expected to resume Aug. 24, and Doraville will be down until November.

GM's Fiero plant in Pontiac, Mich.; its Detroit-Hamtramck plant (excluding the Allante line); and the Clark Avenue plant in Detroit shut down today for model changeover.

The Clark Avenue plant is scheduled to resume operations July 22, and the Fiero and Detroit-Hamtramck plants are scheduled to re-open Aug. 24.

GM's Oklahoma City plant resumed production today. The plant had been idle for one week to adjust inventories.

All Ford plants closed today for vacation. They will reopen July 13.

Chrysler's Newark, Del., assembly plant closed today and will be idle until July 20 for model changeover.

As previously mentioned, Chrysler's Belvidere, Ill., plant is idle for model changeover until mid-July.

Chrysler's St. Louis (No. 1) and Sterling Heights, Mich., are slated for daily overtime this week.

Week's truck build off 3%

Last week's domestic truck production totaled 75,121. It was 3.43 percent below the previous week's 77,791 but 0.43 percent more than the year-ago week's 74,803.

Year-to-date, 1,891,405 trucks have been assembled, 2.05 percent more than the 1,853,491 built last year at this time.

All Ford truck plants closed today for vacation. The plants are expected to resume operations July 13.

Three General Motors plants were scheduled to work last Saturday — Detroit; Flint, Mich.; and Pontiac, Mich. (medium-duty line).

Canada cars far below '86

Canadian auto production was scheduled at 18,038 units last week, 1.42 percent below the previous week's 18,298 and 25.56 percent below the year-ago week's 24,560.

So far this year, 418,201 cars have been assembled, 29.35 percent below the 591,952 completed last year at this point.

Truckmakers targeted production of 18,988 units last week, 4.41 percent more than the prior week's 18,186 and 14.63 percent more than the year-ago week's 16,564.

Year-to-date, 416,202 trucks have been built, 12.63 percent below the 476,370 assembled last year at this time.

OUTPUT

FROM PAGE 1

If Ford or GM is struck, third-quarter production would be reduced, he said. A four-week strike at GM would "rescue" the industry, he said.

He estimates the UAW has a strike fund of $675 million, sufficient to last 12 weeks against GM.

Michael Luckey, analyst at Shearson Lehman Brothers, also said the third-quarter forecast needs to be cut by about 225,000 cars.

Luckey said the bulk of the needed cuts will have to come from GM's schedule. Extended downtime, small cutbacks and more incentives will be used if GM wants to retain its market share, he said.

GM may not even mind a strike to help its situation, Luckey said.

Ford's production schedule is in good shape, said Luckey. Its inventory is manageable, and if it decides it will be the strike target, it may even add to its third-quarter schedule, he said.

Chrysler had 79,000 units more than normal at the end of May and its market share is down, due in part to the halt of Omni/Horizon production, Glantz said.

"They will have to do something about the LeBaron Coupe built at St. Louis (No. 1), it is a disaster," he said.

In May, dealers were able to sell only 35 percent of the LeBaron Coupes delivered to them. Sales were 5,805 and they received 16,486 — leaving a 143-day supply of a brand-new car, Glantz said. That plant might see an extended shutdown, he said.

Other factors affecting third-quarter production include GM's plans to extend changeover downtime at many plants and Volkswagen of America's plans to shut its plant in Westmoreland, Pa., for almost two months. The normal model changeover time is about two weeks.

Third-quarter forecasts are: GM, 723,610, down 12.64 percent from the year-ago quarter's 828,299; Ford, 363,000, down 5.39 percent from 383,668; Chrysler, 220,000, down 18.39 percent from 269,581; American Motors, zero, down from 12,491; Honda of America Manufacturing Co., 74,855, up 15.95 from 64,559; New United Motor Manufacturing Inc., 48,000, down 3.65 percent from 49,820; Nissan Motor Manfacturing Co. U.S.A., 29,640, which is more than double its 1986 schedule when the plant was idle during most of the quarter; and Volkswagen, 5,800, down 63.11 percent from 15,721.

Honda expands Ohio engine plant

ANNA, Ohio — Honda of America Manufacturing Inc. broke ground last week on the $450 million expansion of its engine plant.

The expansion, totaling 650,000 square feet, includes a new area for engine production and a suspension and components plant.

The expanded plant will produce engines, drivetrains and suspension components for the Honda Accord. Production of Civic engines and drivetrain components will be increased.

When the expansion is complete in 1990, the plant will produce 360,000 engines a year. Honda will then be the first "transplant" Japanese automaker building all the high-value major components in the United States for the cars it builds here.

GM staggers intro dates; Chevy first

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Chevrolet will apparently beat the other General Motors lines to the starting gate with its 1988 models.

A survey of 1988 new-product introduction dates shows Chevy planning to launch its models on Sept. 24, with most of the other GM cars to follow on Oct. 1. GM is also scheduling a number of mid-year introductions this year.

Chrysler Motors is planning a single introduction date for everything but its Maserati-built coupe, and that is likely to be a 1989 model. Ford Motor Co. is scheduling two dates: one for carryover models and a December introduction for its new front-wheel-drive Lincolns. American Motors is staggering its introductions, as well.

GM traditionally introduces all its carryover vehicles on one date, with some all-new models arriving later. The last time GM staggered its introduction dates was in the fall of 1983 when 1984-model Pontiacs were introduced 10 days before the other divisions' cars.

Spot checks of dealers throughout the country found mixed reaction to the planned staggered introductions.

An automaker's introduction

Big 3 cut auto-sales forecast

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

Corporate economists for the Big 3 automakers have downgraded their forecasts for 1987 U.S. car sales because of a weaker-than-expected economy and sales stolen by 1986 incentives.

At the same time, the economists have boosted their projections for truck sales for 1987.

The average of the Big 3 economists' forecasts indicates car sales will total about 10.0 million for the calendar year. That would be down 13 percent from 1986's 11.5 million.

It also means car sales will have to move at a faster clip in the second half of the year than they did in the first half to meet the full-year projections.

Car sales in the first half of 1987 ran at annualized rate of 10.0 million or less, said David C. Munro, a General Motors economist. The five-month total for domestics and imports was 4,147,809.

Truck sales, the economists predict, will match or surpass by a slight margin 1986's record 4.7 million units. The economists said trucks continue to outdo their predictions because potential car buyers are switching to trucks.

see FORECAST, page 45

Opel Senator gives GM new European ammo

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

STOCKHOLM, Sweden — General Motors is aiming at a bigger share of the European luxury-car market with its new, top-of-the-line Opel Senator that is due this fall.

GM is counting on its new European flagship to be a more formidable competitor for mid-range Mercedes-Benz models, the BMW 5 series, the Audi 100 (5000) and the Ford Scorpio than was its predecessor.

The car might also be sold in the United States if GM goes ahead with a plan to sell high-priced Opels in the luxury import segment. Company officials say the U.S. import plan is being held up by the dollar's weakness against the German mark.

The Senator is based on GM's hot-selling new Opel Omega/Vauxhall Carlton — Europe's Car of the Year in 1986 — just as the previous Senator was derived from the Opel Rekord. But GM said there is more differentiation between the new Senator and the Omega than there

'Common sense'

Odometer snafu 'dumb . . . stupid,' Iacocca says

By Mary Connelly
and Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTERS

Chrysler Corp. Chairman Lee Iacocca last week launched a goodwill program to repair consumer confidence in the wake of three class action lawsuits and a federal indictment of the company and two executives on odometer tampering charges.

Iacocca maintained that Chrysler had acted legally but admitted making a mistake in failing to notify customers that vehicle odometers were disconnected during overnight quality testing programs.

"The only law we broke was the law of common sense," Iacocca said at a press conference called last week to lay out Chrysler's response.

"We made mistakes that we will never make again. Period."

Chrysler expected to notify dealers and affected vehicle owners of the program by early this week.

Meanwhile, auction houses reported no change in the prices or trading of Chrysler vehicles. And lawyers representing car owners in lawsuits against Chrysler were reassessing their strategies in light of the company's announcement.

The Chrysler goodwill program followed a flurry of unfavorable publicity. Iacocca said a

Ford moves $100 million ad account

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. last week shuffled account assignments for three of its four major ad agencies. The net result was that J. Walter Thompson, which recently agreed to be acquired by London-based WPP Group, lost an estimated $100 million in annual billings.

Ford called the account shuffle a "consolidation" and said it had been under consideration for some time. "It is more of a coincidence than anything else that it happened during the WPP takeover thing," a spokesman said.

J. Walter Thompson retains the Ford Division car and truck ad accounts, which it has handled since 1943, and Young & Rubicam retains the Lincoln-Mercury Division account.

Dealer ad group business handled by the two agencies through the Ford Dealer Advertising Fund and Lincoln-Mercury Dealer Association seemed unlikely to be affected, according to agency sources close to the decision.

Oglivy & Mather, which recently withdrew from competition for the Nissan Motor Corp. in U.S.A. account, was a big winner. O&M picked up the former JWT ad accounts of Ford affiliates in Austria, Belgium, Denmark, France, Italy, the Netherlands, Spain, Sweden and Switzerland while retaining the Ford of Britain account.

O&M also picked up the Ford Parts & Service Division account in the United States. That account had been handled by Y&R, which gained the Ford of Canada account. That account had been handled in Toronto by JWT, with Vickers & Benson.

Y&R also retained the Ford of Germany and Ford of Finland accounts.

Ford also put up for review JWT accounts in Mexico and Venezuela.

Ford's other major agency, Wells, Rich, Greene, which handles the corporate account, was not involved in the shuffle.

"We're very pleased to give both Young & Rubicam and Oglivy & Mather expanded responsibilities," said Ford President Harold A. Poling when he made the announcement.

The decision to shuffle the accounts was the result of discussions involving Ford corporate officials, as well as advertising and marketing executives from Ford Division, Lincoln-Mercury and North American Automotive Operations.

Jim Falloon, left, plant manager, and Smith in a full-size pickup

Building spree ending

As GM dedicates Indiana truck plant

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

FORT WAYNE, Ind. — General Motors held dedication ceremonies for its truck plant here, one of the last all-new assembly plants to be built by the automaker during this century.

GM Chairman Roger B. Smith said that when the Saturn plant in Spring Hill, Tenn., is completed in 1990 and the Fairfax plant near Kansas City, Mo., is running later this year, GM will take a break from building new plants.

"Then I don't think we're going to need another assembly plant in this century," Smith said, adding that GM has built or modernized 18 assembly plants in six years at a cost of $40 billion.

Smith was booed repeatedly by some workers at the plant as he was introduced at the dedication ceremonies. However, by the end of his speech, he apparently had won the crowd over: No booing followed his talk and workers rushed up to shake the chairman's hand as he toured the plant.

Ground was broken for the Fort Wayne plant, in which GM invested $500 million, in November 1984. About 2,400 of the 3,000 workers at the plant came from other GM facilities including St. Louis; Janesville, Wis.; and Flint, Mich.

The plant has been producing GM's new line of full-size pickup trucks since December. For GM, the plant represents the latest in automation, with 144 robots, 300 programmable controllers, 25 cell controllers and 105 automated guided vehicles.

In addition, the plant is to be a showcase for manufacturing automation protocol, a communications link between the pieces of automation equipment that has been pushed worldwide by GM.

In installing the automation, the plant brought together the automaker's recently acquired high-tech subsidiaries, Electronic Data Systems and Hughes Aircraft. EDS designed and installed the hardware and software while Hughes debugged it and got it running. Hughes also helped in tying together all of the plant's cells of automation.

On the people side, GM would like the Fort Wayne plant to be the showcase for the team concept of production, a labor practice GM is pushing to spread throughout its plants.

Smith told workers at the plant during dedication ceremonies last week that the plant will be a role model for other GM facilities.

"When I look at this facility," he said, "and at what you've been able to accomplish in these few short months, what I see is the future of General Motors."

The Fort Wayne plant will add a second shift on July 20. At full capacity with two shifts, the plant will build 230,000 units a year.

The plant is one of three producing the new full-size pickup truck but is the only plant which was built from the ground up. The same trucks are also produced in plants in Pontiac, Mich., and Oshawa, Ontario.

No perks, no sales: GM, Chrysler pad incentive lineup

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

General Motors and Chrysler Motors have once again shuffled their incentive programs on selected car and truck models to match the competition.

Models that were dropped two weeks ago from incentive programs at Pontiac, Buick and Oldsmobile were reinstated last week. Those GM dealers contribute approximately one-third of the cost of the incentive program. Meanwhile, Chrysler added several models to its incentive lineup.

Pontiac said last week its Grand Am and Pontiac 6000 models have been put back in the incentive lineup with $500 cash rebates or cut-rate financing. An $800 rebate or cut-rate financing is offered on Pontiac 6000 STE models.

Those models were previously excluded when Pontiac extended its incentives two weeks ago. The Pontiac incentive program ends Aug. 6.

Buick added Skyhawk and Somerset/Skylark to its incentive program with $500 rebates or low-interest financing on those models. The Buick program also ends Aug. 6.

Oldsmobile reinstated Cutlass Ciera, Cutlass Cruiser, Firenza and Calais models to its incentive program with $500 rebates or low-cost financing. The Oldsmobile incentive program has no ending date.

GMC Truck extended all of its incentive programs until Aug. 6 with no changes.

At a press conference at GM's Fort Wayne, Ind., truck plant, GM Chairman Roger B. Smith rebutted rumors that GM will offer a big, very-low-interest-rate program at the end of the 1987 model year.

"Don't hold your breath because I don't see that in the cards," Smith said. "We've got a good program out there right now."

Chrysler announced its "Hot Summer Savings" incentive program on June 30. It offers cash rebates and low-interest financing on selected cars and trucks.

The program began July 1 and does not have an ending date. There is no dealer financial participation. Consumers must purchase vehicles from dealer stock.

Buyers of the Chrysler Fifth Avenue, Chrysler LeBaron GTS and Dodge Lancer models may choose a $750 cash rebate or financing between 3.7 percent for 24 months and 9.9 percent for 60 months. Those models were not included in the previous program that ended June 30.

Dodge Ramcharger, Dodge Dakota (excluding S model), Dodge Raider, Chrysler LeBaron Coupe (excluding convertible), Chrysler LeBaron and Dodge Daytona carry $500 rebates or low-interest financing.

Plymouth Sundance and Dodge Shadow, Plymouth Reliant and Dodge Aries, Colt (including Vista models), Dodge Ram 50 and Power Ram 50 have $300 rebates or low financing.

Peugeot offering up to $3,000 in rebates, floorplanning help

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Peugeot Motors of America is offering up to $3,000 in rebates to clear 1987 model inventories.

The promotion involves incentives for sales staff and extended floorplanning.

Dealers and Peugeot Motors of America will split the cost of the new program. The importer said the plan had the approval of the dealer council.

Incentives will be offered virtually across the board: $1,500 on four-cylinder sedans and wagons; $2,200 on the STI V-6; $2,500 on the STX V-6; $2,700 on turbo sedans and wagons; and $3,000 on Turbo S sedans and wagons.

In addition, according to a Peugeot Motors of America brochure, dealers will receive a "wholesale support plan." This means payments for orders placed between July 1 and Sept. 30 are due Oct. 31. The plan is essentially four months of free floorplanning.

Peugeot Motors of America will advertise the program in the Wall Street Journal and USA Today.

61st year—No. 5188

AUTOMOTIVE NEWS (ISSN 0005-1551) is published weekly except semiweekly the fourth week in April at 965 E. Jefferson, Detroit, MI 48207. Second-class postage is paid at Detroit, MI and at additional mailing offices. Postmaster: Send address changes to AUTOMOTIVE NEWS, Circulation Department, 965 E. Jefferson, Detroit, MI 48207.

World Congress to address competitive toll

The shifting sands of the automotive marketplace have caused uncertainty for tens of thousands of auto workers faced with plant closures and the loss of their jobs in the face of intensified worldwide competition.

Three prominent speakers will explore many of the critical issues from their own distinct perspectives at the 12th annual Automotive News World Congress, to be held July 26-29 at the Hyatt Rengency Hotel in Dearborn, Mich.

The three speakers in this important area are Robert White, president of the Canadian Auto Workers union; Stephen J. Cabot, a leading management labor relations attorney and partner in the Philadelphia firm of Pechner, Dorfman, Wolffe, Rounick & Cabot; and Congressman Dennis M. Hertel, a Michigan Democrat from the east side of Detroit.

The theme for this year's World Congress is "Facing Up to Competitive Times." White, Cabot and Hertel will address the group on Monday, July 27, when the daily theme is "Recoveries & Strategies for the Domestic Industry."

Cabot, an afternoon speaker, will lead off and discuss "Labor Law Trends in the 1980s and Beyond." A much-in-demand speaker, Cabot has a remarkable record as a management advocate in labor disputes. He previously served as counsel for the General Counsel of the National Labor Relations Board. He has written two books, three manuals and numerous articles on labor law.

Hertel will be the first speaker at the evening general session. The topic is an "Update on Government and the Auto Industry." Hertel will give his outlook on current developments, including the trade bill, plant closings and the ever-increasing impact of competition.

White will close the evening's formal presentations with his speech, "The Labor Story from the Canadian Perspective." A labor leader from the traditional, class-oriented school, White is very active in Canadian politics. He was a prime mover in the CAW's 1985 secession from the UAW, and has led the union since that time. He heads this year's CAW contract bargaining team in talks with the Canadian subsidiaries of Ford Motor Co. and General Motors.

This year's World Congress will feature more than 30 speakers who will share their knowledge and viewpoints on where the car and truck industry stands and where it is headed.

FORECAST

FROM PAGE 1

Donald P. Hilty, Chrysler Corp. economist, said buyers apparently see more unique and interesting vehicles in the truck segment than in the car segment.

The average of the revised forecasts puts total motor-vehicle sales at about 14.8 million units in 1987, down from 1986's 16.2 million.

The economists blame the weak economy, in part, for lower car sales in the first half of the year. Aggressive incentives, such as the 2.9- and 2.4-percent programs offered late last summer, stole some sales from 1987, they said.

Also, the year-end rush to buy vehicles before the Jan. 1 enactment of the tax reform law borrowed sales from 1987. The deduction for sales tax ended Dec. 31, and the deduction for interest on consumer loans is being phased out.

Some payback for the incentives and the December tax rush was expected, but economists said the payback was underestimated.

"The first half didn't shape up as we expected in terms of the hills and valleys," said GM's Munro. "Both the December bulge in auto sales and the subsequent January drop-off were more extensive than anticipated."

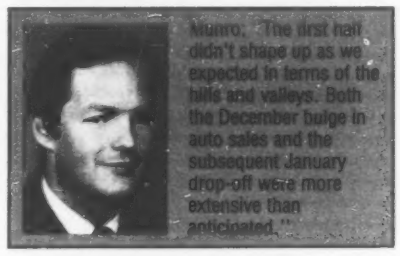
GM's forecast issued in January put total motor-vehicle sales at 15.0 million to 15.2 million units for 1987 — 10.5 million to 10.7 million cars and 4.5 million trucks. Since January, GM has reduced its forecast for car sales and upped its truck forecast to bring total vehicle sales to 15.0 million units at best.

John V. Deaver, Ford Motor Co. economist, has revised his January forecast only slightly, from 15.0 million vehicles to 14.9 million. He, too, has scaled back projections for car sales and boosted estimates for truck sales.

Deaver said his forecast anticipates some modest increase in incentive programs. Sales could be stronger if incentive programs are more aggressive, he said.

Chrysler's Hilty is sticking with the lower end of his forecast issued in January of 14.7 million vehicles. He also has downgraded his forecast for cars and anticipates that truck sales will come in at the upper end of his January forecast.

The economists describe 1988 as likely to be similar to 1987, but they expressed some concern about the possibility of a downward trend.



Munro: "The first half didn't shape up as we expected in terms of the hills and valleys. Both the December bulge in auto sales and the subsequent January drop-off were more extensive than anticipated."

Ford's Deaver said that earlier this year, he had expected a pick-up in the economy and vehicle sales for 1988. He has since lowered his forecast and expects 1988 to have slower economic growth and lower vehicle sales than 1987.

In January, Deaver rated the possibility of a 1988 recession at less than 10 percent. He now gives it a 25 to 30 percent chance. "I don't expect it to happen, and if it does, it won't be a big recession," Deaver said.

GM's Munro said that in January, he gave a 1988 recession a one-in-four or one-in-three chance. By spring, he boosted the possibility to a 40 percent chance but has since lowered the possibility.

Munro said there is nothing clearly wrong with the economy but there also is not a tremendous amount of momentum in the economy, so it is more vulnerable now to occassional glitches like the "potholes" in January and May.

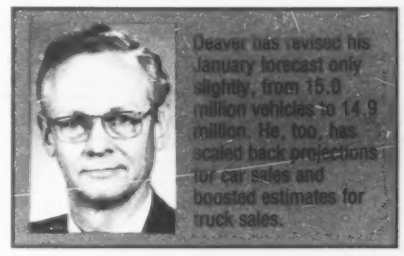
All of the economists sense a nervousness in the economy.

The recovery of the 1980s, long by historic standards, has been led by the consumers. The economists do not expect consumers to spend as they did early in the recovery.

For one thing, tax reform has discouraged vehicle buying, and the negative impact increases yearly. In 1987, for example, the consumer can still deduct 65 percent of the interest on a car loan. That amount will decrease during the next few years until it is phased out entirely.

In addition, interest rates have been jumping around and, as they do, consumers pull back on their spending.

"Consumers become concerned when they see interest rates go up — even if they don't affect them," Deaver said. "They think it could mean a recession so they rein in spending on houses, cars and other durable goods."



Deaver has revised his January forecast only slightly, from 15.0 million vehicles to 14.9 million. He, too, has scaled back projections for car sales and boosted estimates for truck sales.

CHRYSLER

FROM PAGE 1

company sampling indicated 69 percent of those over age 21 in the United States were aware of the situation within two days.

Iacocca said Chrysler will extend the warranty coverage to seven years/70,000 miles for any vehicle tested before October 1986 that can be identified from company records. Chrysler is broadening the coverage for affected vehicle owners. It will now include additional major systems such as brakes, suspension, electrical, steering and air conditioning.

Chrysler altered its odometer policy in October 1986. It now tests 2 percent of its daily build with the vehicle odometer engaged, limits mileage to 65 miles and places a notice of the test mileage in the vehicle.

An estimated 60,000 1985 and 1986 models vehicles are affected, according to the company. Some 1984 models may be covered, depending on record availability.

Iacocca said overnight testing records are kept in assembly plants and records from earlier model years are no longer available.

Tested vehicles were driven an average of 40 miles, he said.

The owners are also entitled to a free inspection at a Chrysler Motors dealership under the warranty with any product deficiency corrected at no cost to the customer. Most of the vehicles had carried 5-year/50,000-mile warranties.

Chrysler has also sent letters to owners of all vehicles assembled since the first week of October 1986 notifying them that the practice of disconnecting odometers on test vehicles had been discontinued by the time their vehicles were built.

In addition, 40 vehicle owners will be offered new, comparable vehicles at no cost, Iacocca said. Those were test cars repaired and sold as new. They were repaired at costs ranging from $91 to $950, according to Iacocca, with most costing close to the lower amount.

Iacocca called disengaging odometers without customer notification "dumb," but he said selling the vehicles damaged by testing as new "went beyond dumb and reached all the way out to stupid."

Chrysler last week also launched a newspaper and print advertising campaign bearing Iacocca's signature and designed to combat consumer concern. The ads state: "Testing cars is a good idea. Disconnecting odometers is a lousy idea. That's a mistake we won't make again at Chrysler. Period."

Iacocca declined to specify how much the total program will cost

"In total, it's going to be quite a bit of money," he said. "The sixth and seventh year of a warranty is expensive."

Asked if extending and broadening warranty coverage might not alienate owners of older tested vehicles for which the company says no records exist, Iacocca said, "Possibly. But we

A company sampling indicated 69 percent of those over age 21 in the United States were aware of the situation within two days.

— IACOCCA

give them such a long warrranty, we really do take care of them."

Iaocca said he was not personnally aware that odometers were disconnected during vehicle testing until last October when he was notified of the Justice Department investigation.

On June 24, a federal grand jury in St. Louis indicted Chrysler Motors and two senior executives for conspiracy to commit mail fraud, wire fraud and odometer fraud. Chrysler and the executives pleaded innocent. Trial has been set for Aug. 31.

If the 16-count felony indictment against the company is upheld on all counts, Chrysler could face a maximum fine of $120 million.

The two executives, Frank J. O'Reilly and Allen F. Scudder, were charged in a single misdemeanor count of conspiracy to commit odometer fraud. If convicted, they face a maximum penalty of one year in prison and fines.

The company also faces three class-action lawsuits. One was filed in November in the U.S. District Court for Southern Illinois, and the other two were filed June 25 and June 29 in U.S. District Court in St. Louis.

None of the suits is presently certified for class action but the closest one to gaining certification was the one filed in Illinois by attorney Nicholas H. Ores representing Gordon E. and Stephanie Maag.

In their $300 million lawsuit, the couple charges that the value of their 1986 Plymouth Voyager was diminished by Chrysler's overnight evaluation programs in which odometers were disconntected.

"Chrysler does not appear to be making a settlement offer, so if my clients receive something from the company, I will see what it says before making a recommendation on whether to accept it," Ores said. "The Chrysler offer does not appear to have any effect on civil or criminal matters. It appears to be more of an advertising position."

Under federal odometer laws, customers could each be entitled to a minimum of $1,500 — the fine set by the government — if a class-action suit is won in court, he said.

There also could be other damages awarded under common law or state laws if it is proved the Chrysler testing program was "willfully concealed" and therefore fraudulent, said Ores.

On Friday, Ores will argue against a motion by Chrysler to dismiss the lawsuit. If he is successful, he then will ask for class certification.

Chrysler maintains the lawsuit "fails to state a claim."

If certification is granted, the framework for the class is set.

Ores suggested the class could consist of all Chrysler car buyers between October 1972, when the odometer law was enacted by Congress, and October 1986, when Chrysler stopped testing cars with the odometer disconnected.

If fraud is proved, the class could consist of all customers with test-program vehicles dating back to 1949, said Ores.

In a separate class-action suit filed against Chrysler on June 25, a Hazelwood, Mo., woman claims the altered odmometer on her 1986 Plymouth Gran Fury caused her vehicle to depreciate by $5,000. The suit was filed on behalf of Shirley A. Jones by attorney Hardy C. Menees. It does not specify damages sought.

In a third class-action suit filed June 29 in the same court, George Saitta, of Pennsylvania, and Edward J. Rabetich, of New Jersey, are suing Chrysler as individuals and as part of a class of similar individuals.

The lawsuit asks for damages of a minimum of $1,500 per class member in addition to lawyer fees and three times any other damages awarded by the court to class members.

Owners of automobile auctions where dealers buy and sell cars said Chrysler products were unaffected by the indictments, lawsuits and publicity.

Larry Treble, owner of Southern Auto Auction in East Windsor, Conn., said there has been no noticeable affect on trading of Chrysler vehicles at the auction.

"Convertibles are as strong as ever and we lack Dodge trucks and minivans," he said. "I wouldn't expect this to affect sales for another three weeks if ever."

Bill Reid, manager of Memphis Auto Auction in Tennessee, said: "None of the buyers have shied away from the Chrysler products — nobody's even thinking about it."

And Joe Greco, manager of Florida Auto Auction of Orlando, said he sells Chrysler "brass-hat cars" at the auction and trading has remained exactly the same as it was prior to the indictments.

"We sell 7,000 Chryslers through here a year, and sales have been exactly the same — there has been no reflection here whatsoever," he said.

However, one auction owner said a Chrysler representative made an unusual announcement at a recent auction.

"The auction was stopped so he could tell buyers that the mileage on a particular Chrylser vehicle and the odometer reading were not the same," he said.

He added that dealers were amused by the revelation.

OBITUARIES

Howard F. Hembrough

JACKSONVILLE, Ill. — Howard F. Hembrough, 50, a Volkswagen-Porsche-Audi dealer in Springfield from 1972 to 1985, died June 14. He once served as president of the advisory board of Volkswagen of America.

Thomas A. Amatucci

WASHINGTON — Thomas A. Amatucci, 87, an automobile dealer from 1917 through the 1950s, died June 17 in Ormond Beach, Fla. Mr. Amatucci opened a Maxwell dealership in Salem, Mass., in 1917. In 1922, he moved to the Washington area and opened a Studebaker dealership. He acquired a DeSoto dealership in 1926, a Chrysler dealership in 1929 and a Plymouth dealership in 1932. By 1941, his Chrysler-Plymouth outlet had become one of the largest in the nation. In 1954, he acquired a Chevrolet dealership in Wheaton, Md.

Dan Boone

LOS ANGELES — Dan Boone, an automotive writer and advertising executive here for more than 25 years, died June 27. He was 67. Mr. Boone was auto editor of the Los Angeles Herald Examiner for 16 years before leaving in 1976 to become executive director of the Southern California Motor Car Dealers Association. He later joined E.F. McDonald Co. as an account executive and retired in 1986.

Kelley Blue Book offers computerized appraisals

IRVINE, Calif. — Kelley Blue Book, an automobile appraising firm, has introduced a computerized, on-line service to provide instant car-value appraisals and other price and inventory information.

The service, called KAR for Kelley Appraisal Report, is available to persons using IBM PCs or compatibles through the TYMENT public data network. The network can be accessed in more than 600 locations across the United States and in 65 countries.

Kelley is marketing the system to auto dealerships.

PRODUCTION

Holiday slices auto output

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Last week's U.S. auto production dipped tremendously from the prior week's build because of the holiday and downtime at several plants.

Automakers scheduled 81,980 cars last week, 43.74 percent below the previous week's 145,711 and 25.34 percent below the year-ago week's 109,799. The year-ago week's output was also affected by the holiday.

So far this year, 3,945,521 cars have been assembled, 9.54 percent below the 4,361,712 completed last year at this point.

Last week's targeted build was split as follows: General Motors, 72.07 percent; Chrysler Motors, 14.33 percent; Honda of America Manufacturing Inc., 7.99 percent; New United Motor Manufacturing Inc., 3.66 percent; and Volkswagen of America, 1.95 percent.

Nissan Motor Manufacturing Co. U.S.A. and Ford Motor Co. plants were idle last week for vacation. The plants are scheduled to resume output July 13.

As noted earlier, American Motors has ended output of its 1987 Alliance line.

GM's Wentzville, Mo., and Lansing (No. 2), Mich., plants shut down today for model changeover. The Wentzville plant is expected to re-open Aug. 3; the first shift at Lansing will resume Aug. 8; the second shift, Aug. 17.

GM's Orion Township, Mich., plant will be closed from July 8 to Aug. 17 for model changeover.

The following GM plants remain down for model changeover: Clark Avenue, Detroit, until July 22; Leeds, Mo., until Aug. 3; Lordstown, Ohio until Aug. 24; Pontiac Fiero in Pontiac, Mich. until Aug. 24; Detroit-Hamtramck, until Aug. 24; Arlington, Texas, until Sept. 14; and Doraville, Ga., until November.

As previously reported, Chrysler's Belvidere, Ill., and Newark, Del., plants are idle for model changeover. Both are expected to resume production in mid-July.

All assembly plants were closed Friday for the holiday.

Truck build drops in short week

Last week's estimated domestic truck production fell 54.21 percent to 33,260 from the previous week's 72,643, due to the holiday and plant downtime.

The week's output was 15.58 percent below the year-ago week's 39,398, which was also a holiday week.

Year-to-date, 1,922,187 trucks have been assembled, 1.80 percent more than the 1,888,212 built last year at this time.

Ford Motor Co. and Nissan Motor Manufacturing Co. U.S.A. plants were idle last week for vacation. Production is slated to resume July 13.

All plants were closed last Friday for the holiday.

A holiday week in Canada, too

Car and truck production in Canada fell last week from the previous week's output because of the Dominion Day holiday.

Last week's targeted Canadian auto production totaled 12,592, 27.86 percent below the previous week's 17,455 and 33.38 percent below the year-ago week's 18,901.

So far this year, 430,210 cars have been built, 29.64 percent below the 611,453 completed last year at this point.

Truck output of 14,056 units last week was 25.32 percent below the prior week's 18,822 but 11.58 percent more than the year-ago week's 12,597.

Year-to-date, 430,092 trucks have been assembled, 12.15 percent below the 489,578 built last year at this time.

Canadian plants were closed last Friday for Dominion Day.

RESOLD

Masco acquires Cars & Concepts

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

TAYLOR, Mich. — For the second time in less than a year, C&C and its wholly owned subsidiary, Cars & Concepts, have changed ownership.

Masco Industries announced Tuesday it purchased the Brighton, Mich.-based manufacturer of specially designed and installed convertibles, T-roofs, vinyl roofs and sunroofs for an undisclosed amount.

Masco is not expected to change the management of C&C. "We buy good companies and keep the management," a Masco spokesman said. "We don't buy turn-around companies and fire the management."

The fit gives Masco manufacturing capability and provides C&C with a greater engineering base.

The long-range plan is for C&C to become a coach builder for luxury cars, sports or recreation vehicles.

C&C was purchased in a highly leveraged management buyout last August for roughly $25 million from entrepreneur and company founder Richard R. Chrysler, who then turned his attentions toward politics in an unsuccessful bid for the Michigan governorship.

David L. Draper, company president; Mel Raznick, an attorney; and five other top-level C&C managers constituted the buyout team at that time.

In February, C&C said it would make a public offering of 1.2 million shares of its common stock. Company officials expected shares to be in the $13 to $15 range, but the proposed offering never left the ground. However, it did spur inquiries from companies like Masco.

"Interest by Masco and other companies was strong enough to delay the stock offering and pursue other possibilities," said a C&C spokesman.

Although the 1986 fiscal year ended Aug. 31 was a record year for C&C, with roughly $100 million in sales, a company official labeled the following quarter as the worst in company history, saying retooling by Ford and C&C for the Mustang took 60 days.

He said the company had record sales again in March and April of this year.

John C. Nicholls Jr., Masco director of investor relations, said C&C was profitable but "had some working capital problems which it obviously doesn't have now."

Masco posted sales of $712 million last year.

All three domestic automakers are customers of C&C in addition to a large portion of the the aftermarket. Ford is the company's largest customer with an estimated 25 percent of C&C's business.

Masco Industries, based in Taylor, Mich., maufactures custom engineered and other specialty commercial and industrial products. For the auto industry, it makes engine and drivetrain parts.

The company recently acquired two other Michigan companies, Taylor Building Products and Tom McGuane Industries, with combined sales of approximately $150 million.

The aggregate purchase price of the three companies is approximately $100 million in cash and common stock. Additional purchase price payments are contingent on increases in future earnings of the acquired companies.

Analysts see 4% dip in profits

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

The Big 3 automakers are expected to report combined second-quarter profits of about $2.44 billion, about 4 percent less than they earned in the second quarter of 1986.

Higher profits are expected at Ford Motor Co. General Motors and Chrysler Corp. earnings are predicted to be lower than in 1986.

GM and Ford will announce their financial results the week of July 20. Chrysler's will be released later in the month.

Based on an average of forecasts by auto anlysts, the Big 3 will report combined earnings of $2.44 billion in the second quarter, compared with $2.54 billion in the second quarter of 1986.

EARNINGS FORECAST
(in millions)
GM
Ford
Chrysler
Big 3
2nd Qtr. '87* $ 800 $1,400 $ 235 $2,435
2nd Qtr. '86 978 1,078 488 2,544
Full-Yr. '87* 2,840 4,600 800 8,240
Full-Yr. '86 2,945 3,285 1,400 7,630
(Averages of 11 auto analysts for GM and Ford; 9 for Chrysler)*

AUTOMOTIVE NEWS/CHARLOTTE WINTER

Analysts estimate GM will report earnings of about $800 million for the second quarter, down from last year's second-quarter profit of $978 million.

Analysts point out that GM is expected to make a change in its accounting procedures which would boost its bottom line by nearly $360 million for the year. However, it is not known in which quarter GM will make the change.

Ford is expected to report second-quarter profits of $1.40 billion, a 30 percent increase from 1986's second quarter earnings of $1.08 billion.

Chrysler is expected to report profits of about $235 million for the second quarter, compared with $488 million in the year-ago period.

Combined full-year earnings for the Big 3 are now predicted to be higher in 1987 than they were in 1986, based on an average of forecasts by the auto analysts.

They predict the Big 3 will earn $8.24 billion in 1987. That would be an 8 percent increase over 1986's combined profits of $7.63 billion.

In April, an average of forecasts put Big 3 earnings at $6.70 billion for 1987, which would be a 12 percent decrease.

Recently, analysts have significantly boosted forecasts for Ford and, to a lesser degree, GM. They have downgraded their earnings estimates for Chrysler because of its purchase of American Motors.

However, forecasts for Ford and GM vary widely.

Ford, based on the average, will earn $4.60 billion for the year, compared with $3.29 billion in 1986. Estimates vary by as much as $5 a share, which would mean an earnings range from about $3.99 billion to a high of $5.32 billion. The April average of estimates put Ford earnings at only $3.05 billion.

The average forecast for GM now is $2.84 billion for the year, compared with 1986 earnings of $2.95 billion. But analysts' predictions range from $1.98 billion to $3.6 billion. The previous average of estimates put GM's full-year earnings at $2.45 billion.

Analysts expect Chrysler to earn about $800 million for the year, compared with $1.40 billion in 1987. The range for Chrysler is $674 million to $921 million. Before announcement of the AMC purchase, Chrysler's full-year earnings were expected to be $1.17 billion.

GM planning V-12, new V-8 for Cadillac

Lotus involved in program; engines aimed at '92 models

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors is developing a 12-cylinder engine that may eventually wind up in an all-new Cadillac.

Sources say the 12-cylinder engine, as well as a new V-8, are being developed for exclusive use by Cadillac. The V-8 is being developed by GM's Lotus subsidiary and the 12-cylinder by GM. GM, however, may decide to bring the V-8 inside and have Lotus build the 12-cylinder engine.

Neither will be ready before 1992 and both will go into all-new vehicles, sources said.

GM's plan would pit Cadillac against Jaguar's XJS, which also is powered by a 12-cylinder engine. BMW plans to offer a similar powerplant this fall. Rumors from Europe insist that Mercedes-Benz is also developing a V-12.

Lloyd Reuss, GM executive vice president in charge of North American car operations and the worldwide Truck & Bus Group, confirmed that a new Cadillac engine is in the works, but he declined to confirm details.

Other projects under development, according to Reuss, include: vehicles exclusive to Cadillac, vehicles exclusive to Oldsmobile and a family of Oldsmobiles built around the new multi-valve Quad 4 engine.

The moves are all part of GM's plan to emphasize design, technology and vehicles exclusive to a single car division, Reuss said.

In the last six years, GM has spent an unprecedented $43 billion on building and modernizing assembly and component plants. Capital spending will decline in the coming years, but spending on product

DEALING

U.K. megadealer scouts U.S. market

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

LONDON — Lex Service PLC, a $1.8 billion publicly held British automotive and electronics group and one of the largest car retailers in the world, may enter the U.S. car market through acquisition of an American megadealer.

Chairman Trevor Chinn said in an interview that Lex is interested in buying a multi-point organization with sales of $100 million to $150 million a year.

Lex then would aim at building a U.S. network with volume of at least $500 million, making it one of the biggest dealer groups in the country.

No deal is imminent, but Chinn said, "We do have people wanting to meet us."

The British group has had two

Senate ignores imports' pleas in trade bill

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The Senate turned a deaf ear to the pleadings of the import auto industry as lawmakers moved to wrap up trade reform legislation.

Importers and dealers took heart, however, in a veto pledge from U.S. Trade Representative Clayton Yeutter. Yeutter said, "There is no chance whatsoever" that the Senate trade bill can escape a presidential veto. Yeutter's threat came after the Senate dealt two big setbacks to the administration.

First, by a 55-41 vote, the Senate defeated an attempt to strip the trade bill of a provision strengthening protection for domestic industries hurt by imports. The National Automobile Dealers Association, the American Interna-

Buick, Oldsmobile plan direct-mail incentives

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

General Motors' pilot incentive program offering cash rebates of $200 to $1,500 to selected GM owners in four markets apparently will be adopted nationwide by some divisions this month.

The test programs have been successful in helping local dealers reduce inventories and bring customers back into their showroom. Buick dealers attending a regional marketing meeting last week were told the division will launch its own version of the owner's rebate program for Buick customers nationwide. One dealer attending the meeting, who spoke on the condition of anonymity, said Buick on July 10 mailed certificates to present Buick owners.

A reliable source close to Oldsmobile said the division also plans to launch a direct-mail rebate to Oldsmobile owners this month. The division is said to be planning to offer to Oldsmobile owners a choice between rebates — ranging from $300 to $500 in addition to current nationwide retail incentives — or 2 percentage points off low-interest loan rates currently available.

By Friday afternoon, other GM divisions had apparently not made a decision on the program.

GM's Owners First pilot incentive program runs from May 20 to July 31 in the Minneapolis, Cincinnati, Denver and Tampa, Fla., markets. GM is offering rebates to more than 2 million GM owners of 1970 to 1987 GM vehicles in those areas.

The rebates range between $200 and $1,000 in Minneapolis and Tampa and $350 and $1,500 in Cincinnati and Denver and can be used in addition to other incentives. There is no dealer financial participation. Advertising costs, number of customers contacted and letter formats vary in each of the markets. All GM vehicles are included in the program except Lotus, Cadillac Allante and medium- and heavy-duty trucks.

Under the 10-week regional program, the recipient of the letter or a member of his or her immediate family living in the same household can use the letter to receive the rebate. Rebates vary from vehicle to vehicle and buyers can receive bigger rebates if they purchase a vehicle made by the same division as their current vehicle.

Several GM dealers in the four market areas contacted by Automotive News last week said the program has been highly successful in generating sales. "Since the mailing, 45 percent of our car sales have been from Owners First certificate owners," said a large Tampa-area Buick dealer.

Rod Borcherding, owner of Pride Pontiac and Borcherding Buick, Cincinnati, said 45 percent of the June sales at his Pontiac franchise and 36 percent at his Buick franchise were covered by the program.

Rod Creighton, general sales manager at Superior Chevrolet, Cincinnati, said he likes the program because it is straightforward and less confusing than other GM programs offering rebates or cut-rate financing.

"Plus there is no dealer participation, which is a real nightmare," Creighton said.

"I think it's a viable program because it's believable; people can go in and make their best deal and then pull out the certificate," Borcherding said.

Dealers interviewed said the majority of Owners First buyers are purchasing vehicles from the same division as their present vehicle. Steve Cox, president of Cox Chevrolet, Bradenton, Fla., said only five of the 15 to 20 vehicles sold under the program at his store have been purchased by non-Chevrolet owners. An Oldsmobile sales manager in Minneapolis said 50 percent of the vehicles sold under the program were to owners of other GM makes.

Despite generally positive feedback for the program, there were some dissenters. Jack Douglas, general sales manager of Dew Cadillac, St. Petersburg, Fla., said the flurry of activity over the program lasted only 10 days at his dealership.

"I don't think you can run something for 40 days and have it be effective," said Douglas, who said he would rather see GM roll back prices than offer incentives.

GM may speed up models based on new C/K pickup

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors is considering introducing products derived from its new C/K full-size pickup earlier than planned. The products include the next-generation Blazer and Suburban.

"While we've introduced a new C/K platform, we certainly aren't done introducing more innovative components and ideas on those vehicles," said Lloyd Reuss, GM executive vice preident. "You're going to be seeing more of that over the next few years than perhaps a lot of people were expecting."

Reuss, who has added GM Truck and Bus to his responsibilities as head of North American car operations, said he recently reviewed Truck and Bus product and marketing plans with the group.

"They've laid out some very aggressive product plans as well as aggressive marketing plans," Reuss said. "We're going to continue to review them to see if we can't bring some of them to market faster than presently slated."

Reuss would not say for what year products based on the C/K platform are slated, but sources had said the next-generation full-size Chevrolet Blazer and GMC Jimmy, as well as the Suburban sold by both Chevrolet and GMC dealers, are scheduled for about 1992. Apparently, GM is trying to figure out how to move up that date.

Charles Katko, GM vice president and group executive for the Truck & Bus Group, has said it is unlikely that the next-generation Blazer, Jimmy and Suburban can be brought to market before 1990. Katko said the C/K platform will be a springboard for a whole new family of vehicles.

AUTOMOTIVE NEWS/JOE WILLSENS

Reuss: "While we've introduced a new C/K platform, we certainly aren't done introducing more innovative components . . . on those vehicles. You're going to be seeing more of that over the next few years than perhaps a lot of people were expecting."

GM introduced the new full-size pickup April 23. This fall, a stepside short-bed version will debut, Reuss said. Other models that will be derived from the pickup platform include an extended-cab version and a short-bed model.

"Those are niche vehicles that the competition doesn't have a direct competitor for," Reuss said.

DDA has Brazil deal, still seeks major link

By Joseph Bohn and Rik Turner
AUTOMOTIVE NEWS STAFF

The Detroit Diesel Allison Division of General Motors, following an abortive effort to link up with Deere & Co. earlier this year, is still seeking a major venture partner.

DDA has reportedly been focusing its attention on foreign engine manufacturers, like Mercedes-Benz, which are having trouble getting their diesel truck engines certified in the United States.

DDA also has just concluded a $10 million deal to produce automatic truck transmissions in Brazil.

And it is going full bore on a major new electronic truck transmission family, the so-called "six-pack," slated for introduction around 1990, officials confirmed.

Ludvik Koci, DDA general manager, declined to comment directly on DDA's continuing search for a venture partner.

Koci did, however, point out that the same excess capacity for diesel engines worldwide that first impelled DDA to seek out Deere still favors a joint venture.

"We're open to people who want to discuss ways of serving the market better. We've had some discussions," but none so far are "serious or official," Koci added.

"As an industry, we have to use our resources and services (more) effectively to market products," Koci said, adding that his worldwide competitors echo his view.

In fact, Koci said, "If you took a half-dozen names (diesel manufacturers) from the Far East, three or four in North America and a half-dozen from Europe and listed them all — I wouldn't be surprised if half the names on that list had scheduled discussions with the other half in the last six months."

DDA's strength as a potential partner, Koci said, lies in its heavy investments in electronic injection timing controls — the DDEC system that is optional on its Series 92 engines and is an integral part of its new Series 60 engines.

Koci regards electronic injection control as important to meeting future emission standards as well as engine management, diagnostics and maintenance.

He said he didn't have specific figures on the overcapacity that exists in diesel manufacturing, but he said that the non-highway mar-

AUTOMOTIVE NEWS (ISSN 0005-1551) is published weekly except semiweekly the fourth week in April at 965 E. Jefferson, Detroit, MI 48207. Second-class postage is paid at Detroit, MI and at additional mailing offices. Postmaster: Send address changes to AUTOMOTIVE NEWS, Circulation Department, 965 E. Jefferson, Detroit, MI 48207.

World Congress to probe competition issues

The hyper-competitiveness of the world auto industry has created a number of problems. It has created the need to identify them and the need to solve them.

Three speakers will discuss ways and means to solve some of those problems, as well as problems created by the solutions to other problems, at the 12th annual Automotive News World Congress, to be held July 26-29 at the Hyatt Regency Hotel in Dearborn, Mich.

The three speakers who will discuss problems and solutions, many of them relating to the efficient ultilization of time, are: Robert M. Isenhour, senior vice president of the automotive sector business team at United Research Co. Inc.; Brian F. Newton, vice president of Scanner Solutions Inc.; and Thomas Hayalian, Ph.D., president of Peak Performance Systems.

The theme for this year's World Congress is "Facing Up to Competitive Times." Isenhour, Newton and Hayalian will speak Tuesday afternoon, July 28, when the daily theme will be "The Importance of a Global Perspective."

Isenhour has a degree in finance from the University of North Carolina plus management consulting expertise in a number of industrial areas, including automotive. He will talk about "Compressing the Engineering Cycle for Competitive Advantange."

His primary consulting thrust is improving corporate competitiveness through programs aimed at improved profitability, product quality enhancement and acceleration of the product development cycle.

Newton, whose company is an innovator in the development of bar-code technology, will deliver a presentation entitled "Scanning Solutions for Material Handling."

Scanner Solutions Inc. has designed, written and installed inventory-control systems for a number of large corporate clients, including General Motors.

When the pressures of developing hyper-competitive systems and solutions take their toll on the workforce, companies often turn to clinical psychologists to solve human behavioral problems. It is the kind of human development situation that Hayalian and his Minneapolis-based company, Peak Performance Systems, routinely face.

The topic of Hayalian's address, fittingly, is "Stress: Recognizing and Controlling It."

Hayalian has developed stress programs for automotive sales and service personnel who subsequently have shown increases in the amount of productive work time, increased concentration, stamina and emotional control, as well as fewer customer complaints, less coworker friction, less turnover, fewer errors and less stress-induced illness.

This year's World Congress will feature more than 30 speakers who will share their expertise and opinions on where the car and truck industry stands and where it is headed.

Freightliner puts its name on anti-lock braking

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

EAST LIBERTY, Ohio — It was no-holds-barred as Freightliner Corp. demonstrated its new anti-lock braking system, the Freightliner/Wabco ABS, for reporters at the Ohio Transportation Research Center here.

The system was able to stop big speeding trucks straight as a string on a wet dime, and it enabled drivers to steer them smoothly through sharp wet curves while braking hard, without wheel lockup.

For many in the audience, there was a sense of deja vu. They had seen plenty of such demonstrations back around 1975 when Federal Motor Vehicle Safety Standard 121 was the law of the land and many companies were trying to develop anti-lock braking systems. However, the system Freightliner showed this time around was different in a number of significant ways.

Peter E. Rupp, Freightliner chairman, said, for example, the Freightliner/Wabco ABS is the first to which a truck manufacturer has lent its name.

It is an integral part of the vehicle. The electronic control module is in the cab rather than outside, exposed to the weather. Earlier systems were add-ons that wore the label of their makers, supplier firms.

Electronic components, such as the microcomputer in the new anti-lock braking system, are far more advanced than those of the Federal Motor Vehicle Safety Standard 121 era, he said.

And packaging and such features as filtering of electromagnetic interference have been improved dramatically.

Wabco ABS system keeps Freightliner on a straight course

Freightliner offering an anti-lock braking system is a bit of a surprise because Rupp has been an outspoken opponent of any headlong lunges into emerging technologies. He has said any advancements must come into use in an evolutionary manner and only as they meet rigid bottom-line criteria.

Rupp often has warned, "Technological overkill could lead to a technical nightmare for maintenance people."

He added, though, "In our ABS, there is no gimmickery, no electronic fun and games. There is vehicle perfomance, safety and efficiency.

"Given the proven ability of electronic ABS to enhance vehicle control, augment safety and reduce tire wear, we believe it represents a value-added option that will provide customers with an excellent return on investment. It is an example of technologic logic," he said.

Rupp also said, "Safety is a capital investment with a guaranteed return. And reduction of social cost, reduced human suffering, is an aim in itself."

The Freightliner/Wabco ABS for a truck or tractor carries a price tag of $3,750. The systems are covered by a three-year, 300,000-mile unlimited warranty.

A. Gordon Clark, senior vice president of sales and marketing, said the $3,750 is "about the same as many sleeper or body options."

Freightliner declined to discuss the price for trailer applications but one knowledgeable source said it would be "something less than half the $3,750."

The company said 34 systems already have been sold in the United States. Wabco has been selling a similar system in Europe since 1981 and about 60,000 have been installed on tractors there.

Testing of the Freightliner-designed anti-lock braking system has included 2.1 million miles run up on 23 vehicles. One unit has run for 238,700 miles with the system, said Peter Wolsdorf, senior vice president, engineering and technology.

Wolsdorf said the new system is not affected by brake size or pad or shoe material. However, a truck's foundation system, the basic brake layout, must be intact because there are no compensating abilities in the system. Brakes must be positioned properly and working properly, he said.

Gordon said several insurance companies have indicated they will reduce premiums on full-coverage insurance by 10 percent on tractors and trailers with the Freightliner/Wabco ABS.

Wabco is Westinghouse Air Brake Co., a subsidiary of American Standard Inc. of New York.

Light trucks set sales records for month, half

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Sales of light trucks in the United States continued at a record pace in June and for the first six months of calendar 1987.

Domestic truck companies, while giving up a small bit of market share to importers in June, still gained a half percentage point in market share for the first six months of the year.

Light-truck manufacturers retailed 456,535 vehicles in June, 13.9 percent more than last year. They retailed 2,344,879 vehicles for the first half of calendar 1987, up 3.6 percent over last year's previous record.

Importers retailed 80,244 light trucks in June, posting a 15.1 percent gain over last year. Their six-month sales of 448,851 were up 1.1 percent from last year's total.

Foreign truck companies captured 17.6 percent of the market in June compared to 17.4 percent last year. For six months of calendar 1987, their market share dropped to 19.1 percent from 19.6 percent in the 1986 period.

Domestic firms retailed 376,291 light-duty trucks in June, up 13.6 percent from last year. Their six-month total of 1,896,028 was up 4.2 percent from last year.

All the domestic manufacturers, except Chevrolet, posted gains last month, as did most of the importers, with the exception of Mazda, Isuzu and Subaru. Subaru is almost out of the truck business.

Chevrolet retailed 13,326 1988-model C/K pickups in June, up from 9,807 in May. It has retailed 33,120 of the new pickups so far.

GMC retailed 4,051 Sierra pickups in June, up from 2,645 in May. It has retailed 9,665 of the new pickups so far.

$87 BILLION

Congressmen say their deregulation bill could save carriers that much in 5 years

WASHINGTON — Two congressmen have introduced bipartisan legislation for the complete deregulation of the trucking industry. They said it could save $87 billion during the next five years.

Reps. Tom Delay, R-Texas, and Jim Moody, D-Wis., said the legislation would improve efficiency, increase competition and reduce paperwork in the truck industry.

Delay said that savings were the equivalent of a $1,440 tax cut for every family of four over a five-year period.

Delay is a longtime advocate of trucking deregulation. He said the bill, H.R.2591, or the "Trucking Productivity Improvement Act of 1987," would further enhance the productivity gains achieved by the Motor Carrier Act of 1980.

"Under the proposal, the truck industry would be free to operate just like other businesses in the free market system, rather than being subject to stringent economic government controls," Delay said.

It would eliminate the remaining economic controls on the trucking industry and provide additional incentives for increased efficiency and competitiveness of motor carrier operations, he said.

"While regulation of trucking might have made sense in the 1930s, there's no reason why the government should be telling the trucking industry how much it can charge for its services," Delay added.

The bill also would end antitrust immunity for collective ratemaking, "which has proven to unnecessarily raise rates," according to the congreesman, and abolish all remaining entry and rate regulation of the trucking industry.

Delay is a member of the Transportation Subcommittee of the House Appropriations Committee and a former member of the Public Works and Transportation Committee. He said that transportation amounts to 25 percent of the cost of manufactured products in this country.

Delay said he anticipates that an identical version of the Trucking Deregulation Bill soon will be introduced in the Senate.

In its specifics, the bill calls for:

- Eliminating Interstate Commerce Commission entry requirements for motor carriers of property.
- Eliminating ICC tariff filing requirements for motor carriers.
- Eliminating ICC power to grant antitrust immunity to motor carriers for collective ratemaking.
- Ending ICC regulation of rates set by motor carriers of property.
- Retaining common carriers' liability for loss and damage (Carmack Amendment), but allowing carriers to offer contracts with reduced liability as long as they also offer a full-liability contract.
- Prohibiting any state or related entity from regulating interstate or intrastate rates, routes or services of any owner or operator of a commercial motor vehicle as long as it transports property in interstate commerce.
- Making motor carriers of property subject to the Federal Trade Commission Act and the Clayton Antitrust Act.
- Requiring foreign motor carriers to comply with all U.S. safety, financial responsibility and tax requirements.
- Requiring the Department of Transportation to report, within two years, on the implementation of the National Governors Association's consensus agenda for uniform administration of state truck taxes.

June car, truck sales climb in Canada

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

A healthy economy and a wide range of sales incentives boosted sales of North American-built cars and trucks in Canada in June.

Sales of North American-built cars climbed 8.46 percent in June from the year-earlier total. Truck sales rose a whopping 31.76 percent.

"Sales are strong because we have some incentives out there and a generally healthy economy with economic indicators up," said Jerry Kuzemchak, manager of marketing analysis, General Motors of Canada.

Canadian dealers delivered 79,627 North American-built cars in June, compared to 73,418 in June 1986. Truck sales totaled 43,367 in June, compared to 32,913 a year ago. June sales rose significantly from the prior month, when dealers delivered 69,439 domestic cars and 36,993 domestic trucks.

For the first six months of 1987, sales of North American-built cars totaled 402,015, down 3.44 percent from 416,318 in the 1986 period. Trucks sales rose 12.08 percent, totaling 208,221 this year, compared to 185,786 last year.

GM, Ford of Canada and Chrysler Canada continued to offer low finance rates or cash rebates on selected cars and trucks in June.

GM offered 3.9 percent to 9.9 percent financing or $750 cash rebates on some models; in Ontario, it offered only low financing. Ford offered 3.9 percent to 9.9 percent loans or cash rebates of $500 to $1,000; in Ontario, Ford offered only rebates. Chrysler offered rebates between $500 and $1,500 in all provinces.

Of the six domestic automakers, three — GM, Ford and Honda — increased domestic-car sales in June compared to a year earlier.

Ford reported an all-time June sales record for cars: 23,812, a 30.21 percent increase over the 18,288 sold in June 1986. The previous June record was 23,556, set in 1978. The most popular Ford model last month was the Ford Tempo with sales of 5,891, an any-month record for Tempo.

"High quality products, competitive prices and good availability of models in dealer stock combined to produce a record month for Ford," said Jack G. Clissold, vice president of sales and marketing, Ford of Canada.

In addition to its domestic cars, Ford sold 38 Merkur XR4Ti models, 1,164 Mercury Tracers and 46 Scorpios.

GM's domestic-car sales rose 5.92 percent to 39,990 from 37,756 in June 1986. In addition to its North American-built cars, GM sold 1,476 Suzuki-built Chevrolet Sprints, 1,232 Suzuki-built Pontiac Fireflys, 208 Isuzu-built Chevrolet Spectrums and 149 Isuzu-built Pontiac Sunbursts.

The Pontiac 6000 was the most popular GM car in June with 4,325 units sold.

Sales of Chevrolet's new Corsica and Beretta increased 52.68 percent, to 1,423 from May's 932. Tempest, Pontiac's version of the Corisca, increased 50.82 percent to 825 from May's 547.

The third automaker to show "increased" domestic-car sales for the month was Honda, but that is because it wasn't selling North American-built cars in the country one year ago. Honda sold 1,399 domestically produced cars in June. In addition, it sold 4,763 Japanese-built Hondas and 555 Japanese-built Acuras during the month. Acura, too, has no year-ago comparison: Importation began in March. But sales of imported Hondas in June 1986 numbered 6,136.

Chrysler's domestic-car sales dropped 15.35 percent to 13,807 from 16,311 in June 1986. A Chrysler spokesman said the company's car sales are suffering from the absence of the low-priced Omni/Horizon Expo models (called America in the United States). Those cars are temporarily out of production as Chrysler moves tooling to a new plant.

"There is no question we are missing the Expo cars here; it's a very competitive marketplace in Canada," the spokesman said.

Chrysler also sold 678 Mitsubishi cars and 29 Peugeot cars in June.

AMC sold 26 Eagles in June compared to 25 last June. It sold 374 domestic Renault cars in June, a 52.54-percent drop from 788 a year earlier. AMC also sold 356 imported Renaults last month.

Sales of Canadian-built Volvos dropped 12.40 percent to 219 from 250 in June 1986. However, sales of Volvo imports climbed 8.28 percent to 549 from 507 a year earlier.

"The 240-series car (assembled in Volvo's Halifax, Nova Scotia, plant) is considered an older model while the 740-series car (built by Volvo in Sweden) is more appealing to customers," a Volvo of Canada spokesman said.

GM was the leader in truck sales in June. GM sold 17,365 trucks, a 24.60 percent increase over the 13,937 sold in June 1986.

GM also sold 100 Isuzu-built trucks last month.

Ford set an any-month truck sales record in June, selling 15,537, a 36.21 percent increase over the 11,407 sold in June 1986. The previous record was set in April when Ford sold 15,293.

Chrysler also set an any-month record, selling 8,438 trucks, a 30.92-percent increase over the 6,445 sold a year earlier. Chrysler's old monthly truck sales record was 8,398, set in April. It also sold 335 Mitsubishi trucks in June.

AMC showed the largest percentage increase in truck sales in June. It sold 2,027 Jeeps, a 80.34-percent increase over the 1,124 sold a year earlier. Cherokee was the best-selling Jeep in June.

Magna wagon: result of 30 months of development

Wagon vital to Mitsubishi Australia

By Pedr Davis
SPECIAL CORRESPONDENT

ADELAIDE, Australia — Mitsubishi Motors Australia is treating its latest baby, the Magna wagon, as if the company's future depends on it. To a great extent, it does.

The company, which now has about 13 percent of the local market, said Magna will be the only model it builds in Australia by 1990. "And when you make just one model," said Chief Executive Graham Spurling, "you simply can't afford to get it wrong."

Two years have passed since the four-cylinder Magna sedan was introduced to an almost unanimous roar of praise. But the entire industry has plunged into depressed days, forcing carmakers to trim production, prune costs and reduce model lineups. There are predictions that 1987 sales will be the worst in 20 years.

Until now, there has been no wagon version of Magna, yet the sedan has consistently held third place on the best-sellers' chart. Only the six-cylinder Falcon and Commodore (both with wagon models) do better.

Spurling said the long-running Sigma has been completely phased out but the other locally built Mitsubishi — the smaller Colt — will continue in sedan and hatchback form until 1990.

"For the rest of our requirements, we will either import or perhaps buy locally from another manufacturer," he added.

The Magna wagon is mechanically similar to the sedan, with a 2.6-liter Astron engine available in carburetor and fuel-injected form. It is the result of 30 months of development and an enormous amount of market research.

Spurling said that market research has been the key to the project. "Everything we did came out of the customer's needs and requests," he said.

Nissan Australia casts its eyes on performance

DANDENONG, Australia — Nissan Australia plans to set up its own design, development and manufacturing facility to build limited numbers of high-performance and special vehicles.

It will be called the Special Vehicles Division and will be housed in a new facility adjacent to Nissan Australia's main office here.

The division will be headed by Paul Beranger, Nissan's former product planning and design manager. He is setting up the facility and hiring a staff so that production can start as soon as possible.

The new division will work closely with Nissan's international competition department in Australia and Japan.

"This naturally means that our vehicles will have a strong performance flavor, although it is our intention to also develop models for special commercial and off-road applications," Beranger said.

The first program for the new division will be to prepare vehicles for the Australian Grand Prix that will be held in Adelaide later this year. Nissan Australia is the major on-course sponsor of the event.

The vehicles will include 27 cars for the celebrity race, plus two modified Skyline pace cars. They will be followed in early 1988 by a series of limited-edition models to be marketed nationally through select Nissan dealers.

AUCTION DATES

American Motors

July 14 — D-A Auto Auction, New Stanton, Pa.

Private carriers change name of trade group

ALEXANDRIA, Va. — Members of the the Private Carrier Conference have voted to change the name of the organization to the National Private Trucking Association, effective immediately.

The association is a national organization representing proprietary truck fleets — companies that operate trucks in support of their primary non-transportation business activities. Approximately 60 percent of the nation's freight is transported in private carriers' trucks.

The Private Carrier Conference will continue to operate as a subsidiary of the National Private Trucking Association. Primarily, it will publish the association's monthly magazine, The Private Carrier.

E.M. Cody, association chairman, said the new name more accurately describes the organization as the major one representing the largest sector of the U.S. transportation industry — private trucking.

Robert Lomas has been elected president of the National Private Trucking Association. He is corporatate transportation manager for Benjamin Moore & Co., Montvale, N.J.

The association also is continuing its discussions with the Private Truck Council of America regarding a possible consolidation.

California insurance plan seeks 50% rate increase

SAN FRANCISCO — Claiming losses of $50 million in 1985 and estimating 1986 losses at twice that, the California Automobile Assigned Risk Plan has asked the state's insurance department for emergency approval of a 50 percent increase in premium rates.

The Assigned Risk Plan was created in 1947 by the California legislature. It is not an insurance company, but a last resort for automobile owners who are unable to obtain automobile liability insurance on the open market.

Stocks dip despite drop in car sales

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

Although sales are running well behind last year's, inventories of unsold domestic new cars July 1 were below those of June 1 in terms of days' supply and number of units.

The moderate slimming of stockpiles is the result of extended plant closings for model changeovers, closings aimed specifically at inventory reduction and a notable lack of overtime work assignments.

The month opened with 1,900,096 cars in stock, equal to a 75-day supply. Those figures were down from the 1,910,805 units and 77-day supply on June 1. On July 1 a year ago, the inventory count was 1,859,576 cars, a 63-day supply.

Back on July 1, 1985, there was a 58-day supply of cars at dealerships or in transit.

General Motors, hit particularly hard by poor sales in the first half, had 1,057,494 cars on hand July 1, an 84-day supply. A month earlier, GM's inventory was 1,055,673 units, an 87-day stock.

Each of the U.S.-based carmakers started July with a lower days' supply than they had a month earlier.

Volkswagen had a significantly larger supply. Honda, Toyota and Nissan stocks were only minimally higher.

A 60-day to 65-day stock is considered optimal.

Companies shared the July 1 inventory this way: General Motors, 55.65 percent; Ford Motor Co., 26.18 percent; Chrysler Motors, 13.97 percent; Nissan, 1.35 percent; Volkswagen, 1.21 percent; American Motors, 0.86 percent; Honda, 0.53 percent; and Toyota, 0.25 percent.

On June 1, the split was: GM, 55.25 percent; Ford, 26.62 percent; Chrysler, 13.83 percent; Nissan, 1.50 percent; Volkswagen, 1.00 percent; AMC, 0.97 percent; Honda, 0.44 percent; and Toyota 0.39 percent.

The shares by size class July 1 were: intermediate, 41.68 percent; compact, 18.62 percent; subcompact, 16.95 percent; standard, 12.40 percent; and luxury, 10.35 percent.

Import cars set record in Japan

TOKYO — Sales of imported cars in Japan in June set an any-month record and rose 34.2 percent from the year-ago month. It was the 42nd month in a row in which sales topped year-earlier figures.

The Japan Automobile Importers Association said sales reached an all-time high for any month at 9,504 units, making a total of 44,456 for the first half of the year. BMW sales accounted for 10,050 of the six-month total; Volkswagen, 9,570; and Mercedes-Benz, 9,114.

The increase was attributed in part to price cuts at dealerships handling West German cars. Cuts were made because of competition with Italian and other makers, which had the advantage of currency gains on the exchange market against the increased value of the yen.

The association is now revising its forecast for the year upward from 75,000 to 80,000 units.

GM plunge cuts sales: 5.1 million for 1st half

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

Sales of new United States-built cars in the first half of 1987 fell 12.02 percent below those of a year earlier and were off 10.80 percent from the 1986 total in June.

General Motors was the big loser. Its domestic-car sales plunged 525,384 units in the first half, a decline of 22.13 percent. GM's dip in June was 89,839 units, or 21.53 percent.

The drops for domestic cars occurred despite a variety of attempts to boost sales. Those efforts include generous retail cash-back offers, cut-rate financing deals and localized promotions.

Domestic sales fell even as import competitors watched their prices rise steadily as foreign currencies strengthened against the dollar.

Six-month sales figures clearly show the severity of problems the domestic industry faces, and action seen and foreseen on the wholesale and retail fronts indicates no solutions are in sight.

Domestic sales, January through June, totaled 3,642,525 cars, compared with 4,139,979 in 1986's first half.

Import first-half sales totaled 1,443,340 cars, off 4.22 percent, from 1,506,897 last year.

Combined domestic and import sales for the half were off 9.93 percent as deliveries dipped to 5,085,865 cars from 5,646,876 in 1986.

Imports captured 28.38 percent of U.S. sales in the first half, compared to 26.69 percent a year ago.

In the first half, AMC had a sales decline of 53.42 percent from the year before. GM was down 22.13 percent; Chrysler Motors slipped 14.92 percent; and Volkswagen was off 13.46 percent.

Nissan recorded a six-month gain of domestic-built products of 155.38 percent. Honda's sales rose 67.49 percent, and Ford Motor's sales climbed 1.65 percent. Toyota dealers delivered 18,282 U.S.-built cars in the six months. Toyota was not selling U.S.-built cars in the first half of 1986.

In June, domestic sales totaled 656,727 cars, off 10.80 percent from the 736,261 delivered in the month last year. The import total reached a June record of 281,555 units, up 6.29 percent, from the 264,892 sold a year before.

The domestic-import figure for June was 938,282, down 6.28 percent from 1,001,153 in 1986.

Imports took 30.00 percent of the June market compared with 26.46 percent a year earlier. This year's penetration was a record for any June, according to Automotive

News data.

The daily selling rate for domestics during June this year averaged 25,259 cars, down from the daily sales average of 29,450 cars in June 1986.

For June, AMC reported a year-to-year sales decline of 47.45 percent. VW had a drop of 24.44 percent; GM was down 21.53 percent; and Chrysler Motors dipped 18.64 percent.

Honda's sales for the month climbed 37.29 percent; Ford Motor's rose 6.71 percent; and Toyota sold 2,586 units in June with no 1986 figure. Nissan's sales were 13,718, compared with 217 last year when the plant was down for changeover.

In June's final 10-day selling period, there still were no signs of improvement for the U.S.-based manufacturers.

Domestic 10-day sales totaled 224,652 units, off 15.55 percent from the 266,005 units delivered at retail a year before.

In the June 21-30 sales period, AMC had a sales decline of 31.51 percent; Chrysler, 24.60 percent; GM, 21.99 percent; Ford, 9.66 percent; and VW, 7.44 percent.

Honda had a gain of 1.08 percent. Nissan sales rose to 6,045 units from 50 last year, and Toyota sold 1,228 U.S-built cars.

It was a close-but-no-cigar toss for Ford Division in its domestic sales race against Chevrolet in the first half. Chevy outsold Ford by just 1,269 cars with a six-month tally of 715,459 units to Ford's 714,190. A year ago, Chevy led its traditional rival by 148,580 domestic cars with sales of 829,749 to Ford Division's 681,169.

In June, Chevy sold 133,999 units to Ford's 130,488, a margin of 3,511 units. In the month last year, Chevy sold 153,462 to Ford's 120,097, a margin of 33,365 units.

Record high monthly sales were reported by American Honda's Acura Automobile Division, Hyundai, Mitsubishi and Yugo.

Audi of America said June was its second-best month in its history in the United States.

Sales of light trucks set records for the first six months of the year and for June.

Audi sales skyrocket, but now comes test

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Audi of America wound up its $5,000 discount offer with a flourish in June, selling a near-record number of cars. Sales topped the previous month's total in each of the three months of the incentive.

The program allowed Audi to march toward the 1988 model year with a tidy 43-day supply of cars.

That Audi would reach such a mark by midyear seemed virtually inconceivable back on April 1, when the discount began. At that time, publicity surrounding sudden-acceleration incidents in the Audi 5000-S had reduced showroom traffic to a trickle and had pushed inventories to a 248-day level.

The $5,000 rebate, which was available to owners of 1984-1986 Audi 5000-S models, boosted sales dramatically. The momentum reached its peak in June when Audi chalked up 7,915 sales. That was the highest monthly sales total since the sudden-acceleration controversy surfaced more than a year ago, and it was also Audi's second-best monthly total in 18 years. Its high was 8,050 units in May 1985.

Despite the success, though, Audi sales for the first half of 1987 were down nearly 23 percent from the year-ago total. And now, some dealers admit, comes the challenge of selling Audis without incentives to people outside Audi's existing customer base. The rebate was available only to Audi owners.

If nothing else, the program proved that Audi has kept a loyal block of owners — albeit ones encouraged by a sizable discount. In each month, dealers indicated that nearly all of their sales went to Audi owners cashing in their rebate certificates.

While sales are expected to drop now that the rebate has expired, some dealers are reporting that their supplies of 1987 5000 models have just about dried up anyway. Production of 1987 models will continue through July, and the 1988 5000 should be in showrooms by September, a spokesman said.

Inventories are higher on the Audi 4000 model, but that line is being pushed by factory-to-dealer incentives worth up to $2,500 through Sept. 30.

Audi is taking with the 4000 series, I think you'll find dealers sold out a month to six weeks before the introduction of the new models (in November)," said Mike Zatine, owner of Andrews Nissan-Audi in Seattle.

Dealers said they hoped that the car, which will carry Audi 80 and

Audi marches toward the 1988 model year with a 43-day supply of cars

Audi 90 badges, will kick off a new era of prosperity for the franchise.

The new Audi 5000 bows next spring as the Audi 100/200.

One dealer attributed the late sales surge to procrastination on the part of some Audi 5000 owners. Another said that sudden-acceleration investigations involving other makers are drawing attention away from Audi. Last week, Nissan said it would recall and install shift-lock devices on 180,000 280-ZX and 300-ZX models equipped with automatic transmission as a precaution against further sudden-acceleration complaints.

Audi added shift locks on models equipped with automatic transmission through recalls and made the devices standard on 1987 5000 models. The devices require drivers to put their foot on the brake before shifting into gear.

Car sales in Britain on record track

LONDON — The British auto market is booming, and record sales of more than 1.9 million are forecast for the whole of 1987.

At 1,002,742, sales topped one million for the first six months. That has happened only once before — in 1979 — and demand tailed off in the second half of that year.

In contrast to 1979, the industry expects record sales of up to 400,000 cars in August. August is the best sales month in Britain, as the new registration plate prefix is introduced. Continued strong demand in the autumn is expected to push the market beyond the 1986 record of 1.88 million car sales.

Not only are makers selling more cars, but the five-year discount war is largely over.

Ford, the traditional market leader, increased its domination over rivals Austin Rover and Vauxhall in the first half of this year. Ford's market share increased to 29 percent from 26.7 percent for the first six months of 1986.

Ford Escort, Fiesta and Sierra models are the three top-selling cars.

Austin Rover and Vauxhall have, for the moment, given up amibitions of significantly improving market share in the hope of curbing financial losses. Austin Rover lost almost 1 percentage point in market share, falling to 15.5 percent in the first six months of 1987. Vauxhall's loss was more than 2 percentage points; its share was 13.8 percent.

The imports' share of the market fell from 55 percent to 50 percent in the first six months as Ford and Vauxhall built more cars in their British plants and imported fewer from Belgium and Germany.

Pact sets up GM-Isuzu deal

LUTON, England — General Motors' plan to hand over its loss-making Bedford van plant here to a new GM/Isuzu joint venture company will proceed.

Workers voted 787 to 605 in favor of a Japanese-style employment agreement. They had previously overwhelmingly rejected the new deal.

The Bedford/Isuzu operation is expected to be set up in September with an Anglo-Japanese management team. The ambitious objective is to boost Luton's output from 19,000 vans a year to 40,000. The aging Bedford CF model will be rplaced by new Japanese designs and will be be built alongside the Isuzu pickup and small Suzuki van already assembled at the plant under license.

The controversial employment agreement closely mirrored that already in use at Nissan's Sunderland car plant in northeast England. It includes introduction of total flexibility between jobs.

Other provisions are: single staff status for all workers; an end to time clocks; and negotiations to be conducted by a joint works council that includes elected employees and union representatives.

Last-minute concessions made to the workers included a reduction of 100 in the proposed 480 job losses and a choice of arbitration in the no-strike procedure.

First-half car output lowest in 4 years

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

While truck production was breaking records across North America last month and in the first half, car output continued to lag.

Production of cars in the United States in the first half totaled 4,009,538, the lowest for that period since 1983 when 3,423,209 units were built.

The six-month total was a 6.58-percent decrease from the 4,291,975 completed during the first half of last year.

Automakers built 651,261 cars during June, the lowest for that month since 1982 when 546,807 cars were assembled.

Last month's output was 4.50 percent more than May's 623,236 but 9.87 percent below the year-ago month's 722,608.

Second-quarter output of 1,930,389 cars dipped 7.15 percent from the first quarter's 2,079,149 and was down 10.68 percent from the year-ago quarter's 2,161,269.

The combination of a holiday, vacations and model changeover downtime affected last week's scheduled output. Automakers targeted production of 73,397 cars last week, 8.84 percent below the prior week's 80,517 and 31.44 percent below the year-ago week's 107,062.

Companies split last week's estimated output as follows: General Motors, 69.76 percent; Chrysler Motors, 23.43 percent; New United Motor Manufacturing Inc., 4.09 percent; and Volkswagen of America, 2.72 percent.

Ford Motor Co., Honda of America Manufacturing and Nissan Motor Manufacturing Co. U.S.A. plants were all idle last week for vacation.

As previously reported, American Motors has ended output of its 1987 Alliance models.

GM shut its Tarrytown, N.Y., plant today until Aug. 17 for model changeover. On Wednesday, GM will close its Buick City plant in Flint, Mich., until Aug. 4 and its Janesville, Wis., facility until Aug. 11.

On Thursday, GM will close its Lansing (No. 1) plant until Aug. 4 for model changeover.

The following GM plants remain idle for model change: Wentzville, Mo.; Leeds, Mo.; Orion Township, Mich.; Framingham, Mass; Detroit-Hamtramck; Clark Avenue, Detroit; Lordstown, Ohio; Arlington, Texas; Doraville, Ga.; and the Fiero plant in Pontiac, Mich.

GM's Norwood, Ohio, plant remains idle for inventory adjustment until July 20. The plant is scheduled to closed permanently Aug. 24.

Chrysler's Jefferson Avenue plant in Detroit and its Sterling Heights, Mich., plant closed today for model changeover. The Sterling Heights plant is scheduled to reopen July 31, and Jefferson is slated to resume operations Aug. 3.

As reported earlier, Chrysler's Belvidere, Ill., and Newark, Del., assembly plants are idle for model changeover.

All Ford car plants were expected to resume production today after a two-week vacation.

Truck assembly sets records

Truckmakers in the United States cranked out so many units in the first six months of 1986 that five records were broken.

First-half truck production was the highest ever for that period.

Output totaled 1,986,343, passing the previous record of 1,891,166 in 1979.

The first half's production was 6.88 percent more than the 1,858,416 built during the same period last year.

Truckmakers built nearly one million trucks during the second quarter. Output of 994,968 was also an all-time high, topping the previous peak of 961,228 completed during the same period last year.

Second-quarter output was 0.36 percent more than the first quarter's 991,375.

The manufacturers also set production records in February, March and April.

June truck production of 334,926 was the highest for that month since 1978 when 344,408 units were built.

Last month's output was 1.73 percent more than May's 329,216 and 6.19 percent more than the year-ago month's 315,400.

Last week's targeted production of 37,871 was 20.01 percent more than previous week's 31,557 and 1.24 percent more than the year-ago week's 37,407.

Ford Motor Co., Nissan Motor Manufacturing Co. U.S.A., Navistar International and Jeep were all on vacation last week. Production is expected to resume at those companies today.

GM slated overtime last Saturday at it's Lordstown, Ohio; Baltimore; Flint, Mich. (No. 2); and Detroit plants.

Trucks pass Canada cars

Canadian truck production has passed the year-to-date car production total, according to adjusted figures.

So far this year, 459,296 trucks and 443,344 cars have been assembled.

June's truck production of 79,830 was the highest ever for that month and was also the highest for any month since January 1986 when 81,115 units were built.

Last month's truck output was 1.21 percent more than May's 78,872 and 4.38 percent more than the year-ago month's 76,482.

Second-quarter truck production of 238,257 was 13.61 percent more than the first quarter's 209,711 but 1.24 percent below the year-ago period's 241,250.

Last week's scheduled truck output of 11,945 was 11.12 percent below the prior week's 13,439 but 3.38 percent more than the year-ago week's 11,555.

While truckmakers were setting a June record, last month's car production dipped to 77,953, the lowest for that month since 1980 when 77,321 cars were built. Car output was 23.58 percent below the 102,010 built in June 1986.

Car output for the second quarter totaled 209,546, the lowest for that period since the second quarter of 1974 when 207,623 cars were assembled.

Second-quarter car production was 9.04 percent below the first quarter's 230,383 and 33.51 percent below the year-ago period's 315,161.

Automakers scheduled assembly of 8,397 cars last week, 36.80 percent below the prior week's 13,286 and 17.17 percent below the year-ago week's 10,138.

General Motors will close its Oshawa, Ontario, plant tomorrow until July 20 for inventory adjustment. On July 27, Oshawa will close again for a two-week vacation.

All Ford Motor Co. plants were closed last week for vacation. The Oakville, Ontario, truck plant will resume output July 20. The car plants are slated to reopen July 27.

Navistar International closed its Chatham, Ontario, plant last week for a three-week vacation.

Is Rouge vote omen for Ford?

Slim OK may mean trouble in car talks

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

A new three-year labor contract squeaked by at Ford Motor Co.'s Rouge Steel Co. last week by a vote of 1,333 to 1,326.

Top Ford and UAW negotiators had said before the vote that reaching an agreement after a year of bargaining without the threat of a strike would bode well for upcoming national contract talks.

The close vote makes that prospect appear less serene.

The new contract includes a commitment — surprising to many in the steel industry — to further modernize the plant. It does not cut wages, as had been expected. It includes a wage freeze, a $500 annual lump sum payment, reduced classifications, team production, a lower wage rate for employees transferring into Rouge Steel and a no-strike clause.

Russ Leone, chairman of the local's tool and die unit, said that the close vote indicates that Ford will have "serious problems" with similar proposals in the fall. The master UAW contract with Ford expires Sept. 14, as do remaining local agreements.

In announcing the proposed pact, Ford surprised the industry with an upbeat forecast for its steel operation, which dates from the early 1920s.

Rouge Steel President David Blackwell said, "We're going to be a tough competitor next year." He said that "a couple of pieces" still need to be put in place "to make Rouge Steel competitive not only domestically but worldwide." He added, "the facility is absolutely poised to be world-class."

AUTOMOTIVE NEWS/JOE WILSSENS

Rouge Steel employees cast their ballots

The only U.S automaker with its own steel-making facility, Ford recently invested $300 million in a continuous caster and an electrogalvanizing line.

Rouge Steel employs 3,800 UAW members from Local 600. Opponents of the contract said that the contract passed at only one of the plant's five units — the rolling mill.

Leone and an opposition group of skilled tradesmen said that if

Chrysler selling 2.2-liter tooling to Chinese maker

HONG KONG — Chrysler Corp. has agreed to sell China's government-owned First Autoworks tooling for Chrysler's 2.2-liter engine, according to a reliable source close to the negotiations.

The source, returning from Mainland China, said in a telephone interview that agreement had been reached between Chinese officials and Chrysler on the engine deal and that another deal was expected under which China would buy tooling to build the Dodge 600 from Chrysler.

A formal announcement could come any time, the source said.

In Detroit, Chrysler officials declined to comment on the report. But earlier (Automotive News, June 29), Chrysler had confirmed it was in discussions with the Chinese automaker involving purchase of the engine and Dodge 600 tooling.

The agreement has apparently not ruled out another pact with French automaker Citroen. A spokesman for Citroen said that the company is continuing to negotiate with the Chinese for the assembly of Citroen engines in China.

The source from China said the 2.2-liter engine will be used as the base engine for vans and light trucks produced by First Autoworks. First Autoworks is anxious to have the engine so that it can meet the government's production goals, the source said.

In a related development, Chrysler was reportedly close to a deal with First Autoworks to supply the tooling for its Dodge 600 model, which is scheduled to go out of production after the 1988 model year.

The Chinese automaker wants to replace its Red Flag sedan with another car soon. First Autoworks favored the Dodge 600 as a replacement instead of another front-runner, the relatively new Audi 100 (called Audi 5000 in the United States) because "they can get the (Dodge 600) tooling for next to nothing from Chrysler," said the source from China.

Chrysler's 2.2-liter engine is used in the Dodge 600, making a car deal with Chrysler more attractive in light of the engine agreement.

Chrysler will sell the head and block line once used in its Trenton, Mich., engine facility to the Chinese company, the source from China said. The 2.2-liter engine remains in production in Trenton, however.

The Chinese company has said that it can produce 250,000 to 300,000 engines a year using one shift at its plant and up to 400,000 a year using two shifts.

The source said the machinery to be sold to First Autoworks is old and "would have to be rehabilitated and installed in their (Chinese) factory."

The other components of the en-

KEY MAN

Werner can pick his spot; Daimler, VW want him

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — The key figure in the unexpected resignation last week of Daimler-Benz Chairman Werner Breitschwerdt may have been Helmut Werner, chairman of Continental Gummi-Werke AG, West Germany's largest tire manufacturer.

Automotive News has learned that Werner is not only being courted by Daimler as a possible future chief executive, but also has been wooed by Volkswagen AG.

According to sources at VW's Audi subsidiary in Ingolstadt, West Germany, Werner has been offered the top job at Audi with the expectation that he would replace VW Chairman Carl Hahn in 1991 when Hahn is due to retire.

Werner succeeded Hahn at Continental in 1982 after the Volkswagen chief assumed his

Ford will spend $30 million to fix ambulances

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. will spend $30 million to voluntarily recall more than 15,000 ambulances built on E-350 chassis or vans between 1983 and 1987 to modify them against potential fires.

Ambulances built on the E-350 chassis and vans converted to ambulances have been involved in 34 fires nationwide, and customers have complained that gasoline spurts from the fuel tank.

The voluntary recall announcement Friday followed by 24 hours a petition by six state attorneys general asking NHTSA to step up its inquiry into Ford ambulances built on E-350 chassis.

King of Hill Vette to get royal power

DETROIT — The top-secret "King of the Hill" Corvette isn't so secret anymore.

The look of the ultra-Corvette is little changed from the existing version. The front is identical to the current Corvette but, beginning at the middle of the doors and extending to the rear, the body widens considerably to accommodate the specially made, extra-wide Goodyear tires.

AutoWeek, a sister publication of Automotive News, reports in its July 20 issue that the new Corvette will be powered by the Chevrolet LT-5 V-8 engine, basically the same as the 5.7-liter engine in today's Corvette but equipped with Lotus-engineered twin-cam four-valve heads. The engine is matched with a six-speed ZF transmission.

The engine is planned to have an output of 400 horsepower and 400 pounds-feet of torque. The goal is for the "King" to do zero to 60 mph in the four-second range, a quarter mile in 13 seconds or less and have a top speed of 180 mph, the magazine reports.

The new Vette is expected to be in dealer showrooms within two years and reportedly will carry a price tag in the $45,000 to $50,000 range.

Look is little changed, but beginning at the middle of the doors, the body widens considerably to accommodate the specially-made, extra-wide tires

KORDICK

Love thy dealer is message of Ford Parts-Service boss

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — At Ford Motor Co.'s Parts and Service Division, where the notion of helping customers is implied in the name, there may have been logic in picking a boss who preaches love and trust as unblushingly as a Sunday school teacher.

Still, it was an unlikely place for such an appointment in early 1985. The division and Ford Motor Co. dealers had often been in conflict over the years — if they interacted at all. And bringing a car in for repairs, General Manager Joseph Kordick admits, had to rank among life's most unpleasant experiences.

In the two years since he's been in the job, Kordick has been trying to change the way Parts and Service does business. By many accounts, he's succeeding. And the parent company paid tribute to Kordick and his 33-year career this spring by making him a vice president.

Kordick, 55, was Parts and Service Division programs manager in the mid 1970s and subsequently headed Ford's Glass Division and its North American marketing and international export operations.

It's not Kordick's track record but his ideas, however, that are likely to raise eyebrows on a first meeting. Take, for example, these comments from a recent interview:

• "Can you get hugged and kissed in every (Ford) dealership in America today? Hell no. But I'll bet you in half of them you can, and maybe even more than that."

• "We don't want to run a business that ends up in this office, because I'm going to be out hugging dealers."

Kordick's ideas: likely to raise eyebrows on a first meeting

• "I use the words loving and caring very frequently with our employees, with our dealers, with everyone. So I have become kind of known as a kook on that subject."

And, Kordick concedes, he's also encountered some skeptics among the division's 7,600 employees and the company's 5,600 dealers.

His language — sprinkled with mild expletives still lingering from his West Chicago upbringing — causes some people to doubt his professed commitment to Christ.

Toyota dealer sues on allocation plan

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — A North Carolina dealership that is challenging a Toyota distributor's allocation practices has dropped Toyota Motor Sales from its $30 million civil suit and has added a rival dealer. It said the rival profited from the distributor's tactics.

Rice's Toyota World, of Greensboro, has added Toyota Sanford to its lawsuit and is pressing a similar case against Southeast Toyota Distributors before the state Department of Motor Vehicles.

In the matter before the Department of Motor Vehicles, Rice seeks to have the distributor's license suspended. A newly formed group of Toyota dealers recently won the right to be heard in that proceeding, which is scheduled to begin Aug. 3. The civil suit asking $30 million in damages will not be heard until the Department of Motor Vehicles case is completed.

Eugene Boyce, an attorney representing the new dealer group, said he will be allowed to take a position in the case on behalf of the dealers as well as cross-examine witnesses. About 28 of the state's 38 Toyota dealers are members of the group, which calls itself North Carolina Toyota Dealers Inc.

Boyce said the dealers sought standing in the case because Garson Rice Sr., who brought the charges, "made allegations that purported to speak on behalf of all the dealers." The group is not involved in the $30 million lawsuit.

Rice, who has had depositions taken from a number of dealers, recently sent a letter to all Toyota dealers in North Carolina outlining why he is suing Southeast Toyota and bringing the action to suspend the distributor's license.

Rice said the turn-to-earn system "rewarded cheating, false reporting and sham sales to leasing companies."

In both legal proceedings, Rice accused Southeast Toyota of using false sales reports and sham sales by dealers to its World Omni Leasing Inc. so the distributor could obtain a greater car allocation from Toyota Motor Sales.

He said that when he would not go along with Southeast Toyota, the distributor began to deprive his dealership of cars.

"In November of 1986, I probably averaged less than 22 or 23 cars in daily stock," Rice wrote. "During this same time period, Toyota Sanford was advertising in one-third-page ads in the Greensboro News & Record that it had hundreds of cars available for sale."

Rice included an aerial photo of Toyota Sanford, taken, he said, on Dec. 6, 1986. It showed more than 300 vehicles on the lot. The amended civil suit filed by Rice now includes Toyota Sanford.

Rice is predicating his lawsuit and the Department of Motor vehicles action on a 1983 North Carolina law that prohibits makers or distributors from failing to deliver new vehicles in reasonable quantities relative to the dealer's facilities and sales potential.

Don Strickland, an attorney representing Rice, said the law was meant to prohibit turn-to-earn practices used by Southeast Toyota.

According to Rice's suit, Toyota Motor Sales U.S.A. could cancel Southeast Toyota's distributor agreement if Southeast's license is suspended in any state. Neither Toyota Motor Sales nor Southeast Toyota would comment on that point or on the case in general.

Meanwhile, Southeast Toyota has sent a letter to North Carolina dealers saying that Toyota Motor Sales has tightened retail sales reporting requirements.

According to that letter, sent by Al Hendrickson, Southeast Toyota's automotive group vice president, "The action taken enables us to enhance the allocation process and 'build a floor' or 'provide a minimum pipeline fill' for each customer (dealer) for cars, trucks and cargo vans based on each dealership's sales potential in its market area, with due consideration being given to dealership facilities."

The letter said that dealers now must provide the name, address and telephone number of the lessee in order to to receive credit for a retail sale to a leasing company.

Cars sold for dealership or daily rental use must be kept in service at least 180 days rather than 120 in order to receive retail credit. Cargo van sales will be credited only when there is a transfer of possession, title and control to the ultimate consumer or a converter

According to Toyota Motor Sales, the company's objective "is to eliminate to the maximum extent possible intentional misreporting of retail sales."

Automotive News World Congress opens Sunday

A business strategist, a steel industry executive and a highly successful auto dealer are among 34 speakers featured at the 12th annual Automotive News World Congress, which opens next Sunday and runs until midday Wednesday at the Hyatt Regency Hotel in Dearborn, Mich.

They are: Norman Stoller, director of SRI International's Transportation Equipment and Component Industries Program; Milton Deaner, president of the American Iron and Steel Institute; and Ronald B. Tonkin, president and chief executive officer of Ron Tonkin Dealerships.

Stolier, who specializes in business problem-solving and strategy development, will speak Monday on "Meeting the Competitive Challenge — Price, Quality, Technology — What Next?"

He has conducted worldwide business strategy studies in the automotive, truck, marine, farm, construction, aircraft and railroad industries, and has been the project leader of more than 100 studies including 20 worldwide and 30 in foreign countries.

Stoller's experience also includes business and techno-economic studies in a broad range of advanced technologies such as structural ceramics, robotics and computer-aided design and manufacturing.

Deaner also will speak Monday, and his topic will be "Awakening the Sleeping Giant." Before joining the Iron and Steel Institute in January, he was chairman and chief executive officer of McLouth Steel Products Corp.

During his nearly 40 years of steel industry experience, Deaner worked for McLouth as chairman and president, for National Steel Corp. as vice president — engineering and for the former United States Steel Corp. as blast furnace supervisor.

Tonkin will speak Tuesday and will discuss "Automobile Dealers: Today and Tomorrow."

Tonkin, whose working life has been devoted to the automobile business, has nine dealerships, all in the Portland, Ore., metropolitan area.

His franchises include Chevrolet, Ferrari, Alfa Romeo, Honda, Toyota, Maserati, Mitsubishi, Dodge, Yugo, Acura, Suzuki, Sterling and Zimmer.

He represents Oregon as director of the National Automobile Dealers Association and is NADA Region IV vice president.

The overall theme of this year's World Congress is "Facing Up to Competitive Times." Daily themes are "Recoveries and Strategies for the Domestic Industry" (Monday), "The Importance of a Global Perspective" (Tuesday) and "Coping With Change" (Wednesday).

For further information, write: Automotive News World Congress, 1400 Woodbridge Ave., Detroit, MI 48207, or call (313) 446-6047. Overseas inquiries cable: 810-221-5122 AUTNEW.

Hagenlocker: "Great news for Ford and Louisville"

Ford Louisville to expand; 4-door Bronco II expected

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

LOUISVILLE, Ky. – Ford Motor Co. plans to invest $563 million in a new line of light trucks — believed to be a four-door version of the Bronco II — that will be built at its Louisville, Ky., assembly plant.

Employees said Ford engineers have been gearing up to build the new Bronco II compact truck at the plant for two years, although Ford refused to confirm the product. The new vehicle is expected to be introduced in late 1990.

Ford officials said $263 million will be spent on expansion, tooling and support programs for additional production.

The $300 million addition will cover 162,000 square feet and include a new frame and chassis assembly area and pre-trim facility.

"This is great news for Ford and for the people who live and work in and around Louisville because it means we will be able to build on our leadership position in the light-truck market," said E.E. Hagenlocker, company vice president and general manager of Ford Truck Operations.

A Ford spokesman said the expansion project could affect up to 1,200 jobs at the Louisville plant — as many as 300 new jobs resulting from the new model, retention of up to 700 existing jobs that might have been transferred elsewhere if the plant had not been selected to produce the new vehicle and 200 jobs related to possible future production increases.

Assembly of the Ranger began at Louisville in 1982 and Bronco II was added in 1983. The plant opened in 1955.

Louisville is expected to produce about 120,000 Bronco IIs and 218,850 Rangers in the 1987 model year.

Import stocks of cars, trucks climb to record

Inventories of unsold new imported cars and trucks stood at record highs July 1.

Stocks of cars at dealerships, ports of entry and in transit climbed to 650,508 units, a 60-day supply at current selling rates.

Stocks on June 1 also had been a record — 606,583 units, a 58-day supply.

On July 1 last year, imported-car stocks totaled 400,106 units, a supply good for 40 days.

The inventory of imported trucks also reached a record high. The July 1 total was 241,038, a 71-day supply. On June 1, the truck figure was 230,562, equal to a 67-day stockpile.

The previous high for trucks was May 1 this year when the total was 238,832, a 67-day stock.

The combined car and truck inventory July 1 was 891,546 units, a 63-day supply. That compares with 837,145 units, a 60-day stock, on June 1 and 806,711 units, a 63-day stock on May 1.

A year ago, the combined car-truck inventory consisted of 593,714 units, a 46-day stockpile.

As of July 1, 66.23 percent of the imported cars in inventory were from Japan; 16.21 percent were from West Germany; and 17.56 percent were from other nations.

Safety group charges fire hazard in '84 Fiero engines, urges recall

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The Center for Auto Safety has asked NHTSA to investigate engine fires it says occur in about one out of every 900 1984 Pontiac Fieros.

The group asked the government to warn owners and order a recall as soon as possible. It also said General Motors should be charged with violating NHTSA rules on retaining records. The safety group said GM should be subject to as much as $800,000 in fines and possibly criminal penalties.

"We are continuing to cooperate fully on this matter with NHTSA," GM said Friday.

GM admitted to NHTSA that it "misplaced or inadvertently discarded" documents related to a special GM committee investigating the cause of Fiero engine fires. The committee apparently was formed in late 1983 within weeks of the 1984 Fiero introduction and lasted until early 1985.

NHTSA requested those documents in May as part of its engineering analysis — a low-level investigation into the alleged problems that opened on July 18, 1986. The center accused GM of failing to tell NHTSA of its early Fiero fire committtee until a year after its documents were missing.

Criminal charges involving documents GM either withheld or delayed and thus misled the government remain pending against GM in the 1980 X-car case involving alleged rear-brake lockup.The government has appealed the verdict in the civil X-car case.

The Center for Auto Safety said it has reports of 140 1984 Fiero fires, and nine injuries.

GM told NHTSA the actual risk is "minimal." But the center pointed out that a U.S. District Court in another GM case involving fires — GM Buick Quadrajet carburetors in 1977 — ruled that the law is meant to "prevent serious injuries stemming from established defects before they occur." It is not merely to redress the situation after harm has been done.

Other GM documents which NHTSA does have indicate the 1984 Fiero "is all too aptly named," said Center for Auto Safety investigators Dan Howell and Russell Shew.

They maintain it suffers from a combination of chronic overheating problems and an assortment of defects that allow coolant and oil to leak or spill on to exhaust components whose surface temperatures are so hot the fluids ignite.

Quoting from documents in the NHTSA docket, the center's petition cites an Oct. 6, 1983, GM employee memo marked "urgent." It warned of fires when coolant hose clamps come loose. It was followed by a November 1983, memo pinpointing a supplier problem with H.K. Porter Co., maker of hose clamps, and continuing problems despite fixes.

According to the documents, in November 1984, two reliability engineers from the newly organized Chevrolet-Pontiac-Canada Group referred to the "disturbing number of field fires" and to steps taken by the Fiero assembly plant to eliminate the possibility of "operator-caused failures which could result in a vehicle fire."

Memos dated December 1984 and undated ones, according to the center, show the "thermal distress" study moving beyond hoses and clamps to "ventilated engines" and "timing plate leaks."

In a document dated October 1986, GM told NHTSA about "improper service procedures" and said that problems occur only at low mileage. GM documents given to NHTSA in May referred to poor casting quality, mostly "microshrinkage" in the 2.5-liter engine's connecting rod. GM noted it was used in all 2.5-liter engines since the late 1970s, not just in Fiero.

The presumed explanation of why fires occur in 1984 Fiero engines and not in all 2.5-liter engines came in a December 1983 memo from GM's Central Foundry Division. The memo explained that the compression ratio of the Fiero engine was increased by 0.5, thus raising the load on the connecting rod.

In addition, the test speed of the dynanometer was raised and that meant an increase of some 26 percent in tensile load on the connecting rod. The Center for Auto Safety deduced that engineers at Pontiac and Chevrolet raised the compression ratio but "apparently someone forgot to tell the people who make the connecting rods."

A December 1984 memo from Central Foundry said that "engine failure due to internal shrink" continued and "no permanent solution has been found."

Last May, however, GM told NHTSA it found no evidence that failing rods have caused fires. Instead, GM referred to other conditions, including "oil system failure" that could cause rod failure.

The center pointed out that GM cannot use those arguments as reasons for not recalling, since GM service bulletins sent to dealers in 1984 and 1985 said the 1984 Fiero engine may have oil contaminated by coolant due to a cracked block.

Dealers were told in late 1985 that if a customer brought in a 1984 Fiero with a cracked block not due to owner abuse, the existing 2-year/24,000-mile warranty should be extended to 5 years and 50,000 miles.

But, the center noted, GM never informed owners of the availability of free repairs or that fires might occur if the engine block cracked.

Responding to the center's letter of last February asking GM to notify owners of its "secret warranty," GM indicated the problem was a relatively rare, low-mileage one.

But the center said that the Pontiac warranty data GM provided to NHTSA showed otherwise. It noted that the failure rate for engine block cracks was 2.5 percent under the 2-year/24,000-mile warranty alone.

Moreover, said the center, the safety risk was increased because of delay in diagnosing and repair, since dealers may deny coverage and owners postpone costly repairs.

If owners just keep adding coolant without being aware of oil contamination, the engine would ultimately fail and fires would occur. The center pointed out that if owners knew of free repairs, they could prevent worse problems.

GM told NHTSA that owners have advance warning — the smell of gasoline, coolant gauge showing overheating or excessive engine noise. Yet, the center said it had complaints saying the only warning was the sight of fire in the mirror.

FORD

FROM PAGE 1

engineering, said the recall will be conducted as "a safety-related defect" recall with NHTSA in the hopes of expediting modification.

Beginning in 1988, Ford will restrict sales of E-350 chassis and vans for conversion to ambulances to 7.3-liter diesel engines that do not require catalytic converters.

"The diesel engine runs cooler and doesn't require a catalytic converter," said Robert M. Munson, director of the automotive safety office, Ford Environmental and Safety Engineering Staff.

Ford said it believes the fires and fuel ejection phenomenon are connected to high underbody temperatures and increases in gasoline pressure in the tank.

Special modification kits containing up to 60 components will be sent to some 525 Ford dealers for use on the ambulances. The kits will include a fuel tank vent valve, a grommet for the valve, a fuel tank restrictor and a heat shield for the muffler.

"Ford dealership technicians will give each ambulance a validation drive to verify that the modifications have been made correctly, but also to evaluate the performance and driveability for the ambulance before and after the modification," Petrauskas said.

Ford officials have inspected 29 of the 34 burned ambulances and said fires started for a variety of reasons. "The fires were all in the underbody but there was no one single causal factor," Munson said.

Another Ford spokesman said eight of the fires started near the midship fuel tank. The ambulances have two fuel tanks — one is in front of the rear axle and the other behind it.

In one fire, a grommet replaced by Ford in a pilot recall program of 250 vehicles earlier in the year cracked and leaked fuel. The spark was caused by an electrical wire that was crushed when Ford reconnected the fuel tank.

In another instance, Ford officials said they believed fuel leaked from rewelded seams in the fuel line and the spark originated from holes in the muffler.

Ford sells the E-350 chassis and vans to manufacturers that convert them into ambulances, but the company said it will bear the entire cost of the recall program.

"We will fix all conditions, even including ambulance manufacturing and operator maintenance errors that are totally unrelated to the original design and construction of the E-350 chassis or van," Petrauskas said.

She said the company received about 90 complaints about fuel spurting and fires per 10,000 ambulance customers. The company received one complaint per 10,000 vehicles from owners of other vans, she said.

Jaguar clears it up

Jaguar Cars has corrected its recall announcement for microswitch replacement in XJ6 sedans. The model year for affected cars is 1986, not 1986 (Automotive News July 13).

SERVICE MANAGEMENT

Raided parts seller seeks advice

SHOP TALK

ARTHUR FLAX

Is it a counterfeit or a reproduction?

Bill Clement, owner of a collector-car parts house that was raided recently by federal agents on suspicion of selling counterfeit Chevrolet parts and vehicle identification tags, believes the auto companies should set up a better method of dealing with companies that reproduce antique car parts.

He said he feels better communications with automakers would help establish what activities are legitimate.

Clement said his Chevy Craft shop, a classic Chevrolet parts and restoration house in Lubbock, Texas, was raided by "about 20 FBI, Department of Transportation, state police and internal revenue agents who seized about $20,000 in goods."

Clement said it was one of a series of raids conducted around the country. Some of the shops raided were padlocked, but Chevy Craft was allowed to stay in business, Clement said.

He said, "The federal people were nice to the point where they said they were sorry they had busted a legitimate business. . . . But it was like my worst nightmare come true."

Clement admitted he sold reproductions of certain Chevrolet labels and parts. He said they were identified as reproductions. He claimed that it is often not clear what can and cannot be reproduced or sold.

The reproduction manufacturer often faces "a nightmare of long-distance stonewalling, letter writing and frustration . . . (because) it doesn't pay the manufacturers a cent to become involved with the antique car aftermarket," Clement said.

He claimed that much of the material that was seized — including owners' manuals, warranty books and decals — was produced with General Motors' permission. In fact, a good portion of the seized material was "genuine GM," bought from dealers' outdated stock, he said.

"They seized anything with the Chevrolet bow tie," he said.

The main thrust of the raid was apparently aimed at confiscating counterfeit vehicle identification tags. The tags are used by thieves to disguise stolen vehicles. VIN tags are also used by car collectors to inflate the value of their cars.

Clement sold blank vehicle identification tags for Chevrolet models built before 1968 — along with instructions on how to go through the proper legal channels to have them affixed. He freely admitted that car collectors value authentic VIN plates over VIN tags reissued by a state.

He said, "I don't feel I've broken any law."

Although VIN tags can certainly be used to disguise stolen property, Clement claimed that is unlikely with the older cars. He said many "boneyards" surrender VIN plates and titles when they take in wrecks. When collectors buy wrecks and restore them, they want original-appearing VIN tags for the cars they restore, instead of state-issued tags.

Clement said he believes auto manufacturers are alienating their "strongest supporters" — people who are likely to buy tow vehicles of the same make as their collector cars.

If the supply of reproduction parts dries up, he said, "We are doomed to drive these computerized metric jellybeans instead."

Ford sues

Ford Motor Co. is suing Keystone Automotive Industries, a Pomona, Calif., importer and distributor of foreign-made auto body parts, for false advertising.

Ford said it is basing its charges on Keystone's claim that its body replacement parts "meet or exceed OEM specificiations" and are "equal to OEM in fit, finish, weight, gauge and overall quality."

Ford claimed the Keystone parts will corrode faster than Ford replacement parts and that they do not fit as well.

Ford filed the suit in U.S. District Court in Detroit and is asking for treble damages and court costs as well as "corrective advertising" from Keystone.

Porsche 356

Porsche dealers in the United States can now order parts for the company's classic 356 series.

Porsche Cars North America is stocking more than $1 million worth of 356 parts at its distribution center, and additional parts are stocked at the factory in Stuttgart, West Germany.

Larry Morris, formerly general manager of parts sales and merchandising and now national sales director for Porsche Cars North America, said, "We have more than 3,300 items in stock and available for immediate delivery to our dealers. Our inventory includes most of the parts necessary to restore the most common 356 models and our plan is to expand our inventory so that we'll have parts for all 356 models, including four-cam Carreras. At the factory in Germany, employees are contacting original suppliers to obtain more quality parts for our inventory."

Analytics' Chuck LaGrossa "discusses" repair with computerized service unit

Smart diagnostic system talks to auto technicians

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

When an Army truck or tank breaks in the field, who repairs it? In the past, it was the master mechanic, the guy who could put a truck right with chewing gum or a hammer.

But Army machines are becoming more complex and the expert mechanics are leaving — just as automobiles and trucks are becoming more complex and trained mechanics are in short supply.

Analytics, an advanced technology firm in Willow Grove, Pa., is developing a computerized diagnostic system that uses artificial intelligence and voice recognition to help Army and private industry technicians repair vehicles.

The Automated Intelligent Maintenance System is being developed under a government Small Business Innovative Research contract.

Edward J. Kapnic, Analytics marketing director, developed the concept. He said Analytics plans to produce a commercial version of its diagnostic machine in 1988.

To date, Analytics has produced a "proof of concept" prototype for the Army's HUMMWV (Hummer) vehicle and plans to have a fully functional prototype by the end of the year.

The Army invested about $50,000 in the development of the proof of concept unit and Analytics has invested about $100,000.

Should the military choose to put the system in the field, it will take several years to meet government requirements. In the meantime, Analytics plans to develop the commercial unit.

Stephen W. Leibholz, Analytics president, said the first commercial customer might be a fleet that services about 50 vehicles daily.

Leibholz said a production system will consist of a portable personal computer-sized terminal along with a microphone-headphone set for the technician. The terminal will have a video screen and will be able to diagram a repair procedure for the technician.

Analytics, he said, has the technology to store up to 250,000 pages or pictures on a compact disc.

The technician also will carry a small box with a keypad to punch in information. Eventually, he predicted, the system will become even more compact.

The system can recognize several words and numbers from the technician's voice and can respond to the technician's commands.

For example, the system may ask the technician to perform a task, such as turning on the lights or checking battery cables. If the technician misses a command from the computer, he will ask the machine, "What?" and the computer will repeat the command.

The system also employs what Analytics calls "interactive intelligence." That is, it adjusts the information it provides to the technician and its speed. When the technician signs onto the computer, the system remembers the technician and his skill level. Also, the system adjusts its operation depending on the speed at which the technician performs the diagnostic routine.

The system employs artificial intelligence; that is, it mimics the problem-solving routine of a master mechanic rather than following a long troubleshooting tree as advocated in the service manual.

Leibholz said, "There are 48 steps in the manual to troubleshoot the electrical system of the Army's HUMMWV. We have it down to 12 following the mechanic's logic."

Joe Herman, project engineer for the vehicle electronics division of the Army's Tank-Automotive Command, added, "We're losing maintenance experts faster than we can replace them. We need to computerize their experience."

Leibholz said the first commercial units will sell for about $20,000 each. The exact price will depend on the number of units programmed for a particular type of vehicle.

By 1990, Analytics plans to produce a version that will be programmed to repair a whole range of car models. Leibholz said it could sell for below $10,000."

Service Index declines for May

But backshop volume stays ahead of '86 for five-month period

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

The Automotive News Service Index fell 0.7 percent in May, compared with May 1986. It was the first decline since January in service and parts business at new-car dealerships.

Shop business fell 1.7 percent in January, compared with January 1986.

In April, shop business was up 4.1 percent over the 1986 figure.

In the first five months of 1987, shop business showed an advance of 2.8 percent over the same period in 1986.

Among dealers reporting a decline in business, a Rocky Mountain Chevrolet dealer said, "May was probably the worst month in (our) history . . . No sales. No repair."

A Chevrolet dealer in the Northeast said his decline from April was due to a 20 percent drop in body shop business.

A Northwest Lincoln-Mercury dealer attributed his service decline to the local economy.

An Eastern Chevrolet dealer speculated that his service decline might have been caused by a slip in the quality of his service advisers.

SERVICE INDEX 99.3★

	May, '87 vs. May, '86	5 mos., '87 vs. 5 mos., '86
Gross Profit on All Labor and P&A Sales	+3.3%	+4.7%
Repair Orders Written	−3.6%	−4.1%
Total Labor Sales (Customer & Warranty)	−1.0%	+4.9%
Shop Parts Sales (Cusiomer & Warranty)	−1.5%	+2.7%
Sales of All P&A	−0.6%	+5.6%

★— Survey by Automotive News shows that dealers' service and parts business in May 1987 was 99.3 percent of business in May 1986. Service business in the first 5 months of 1987 was 102.8 percent of business in the corresponding period in 1986.

Also, he said there was one more working day in May 1986.

Of dealers reporting increases in service volume, a Rocky Mountain Buick dealer attributed his success to "better salesmanship on the service drive."

A Midwest Ford dealer said his service increase resulted from the addition of more mechanics and "hot weather, which caused more breakdowns."

A Northwest Chevrolet-Honda dealer also mentioned the season and the weather as reasons for his increase in shop business.

Gross profit on all labor, parts and accessory sales was up 3.3 percent in May, but all other indicators were down.

Repair orders written were down 3.6 percent; shop parts sales (customer-paid and warranty) declined 1.5 percent; total labor sales (customer-paid and warranty) fell 1.0 percent; and sales of all parts and accessories dropped 0.6 percent.

There was no change in parts and accessories sales to off-premises customers.

Sales of all parts and accessories showed the biggest gain through the first five months of 1987, up 5.6 percent.

Total labor sales were up 4.9 percent; gross profit on all labor parts and accessory sales climbed 4.7 percent; and shop parts sales increased 2.7 percent.

Parts and accessory sales to off-premises customers were up 7.9 percent in the first five months of 1987.

Repair orders fell 4.1 percent through May.

Brazil sales dive; exports strong

By Rik Turner
STAFF CORRESPONDENT

SAO PAULO, Brazil — First-half vehicle sales in Brazil were down 39 percent from last year's and were the lowest for the period since 1972. But the industry's exports set a record of $1.16 billion.

The dramatic decline in the domestic market stemmed from the combined effects of a downturn in the economy, parts supply problems at the beginning of the year and tax levels, which the government began to lower only in June after dealers had stopped buying cars from the manufacturers.

In the January-June period this year, the industry sold 279,839 vehicles of all types, compared with 459,019 in the same period last year.

During the first six months of 1987, sales consisted of 198,112 cars and pickups, 50,630 light-commercial vehicles; 26,506 medium- and heavy-duty trucks and 4,591 buses. The comparable figures for the first half of 1986 were 359,044 cars and pickups, 59,639 light-commerical vehicles, 36,407 medium- and heavy-duty trucks and 3,929 buses.

Exports, meanwhile, went from strength to strength. Brazilian makers sold 157,273 vehicles abroad in the first half compared with 93,373 in the same period of 1986.

Exports brought in some $1.16 billion, nearly 43 percent more than the $819 million registered in the equivalent period last year. That was despite the industry's complaints of a 20-30 percent overvaluation of the cruzado.

The export figure would have been higher had it not been for parts problems experienced by some manufacturers early in the year.

That was particularly true of Volkswagen's Fox subcompact exports to the United States. Parts problems caused a reduction in Fox export forecasts from an initial 100,000 to 80,000 for the year.

Auto sales decline 12% in early July

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

Sales of domestic cars in early July fell 12.44 percent below those of a year ago with only Nissan and Honda reporting gains.

Sales for the July 1-10 period totaled 165,910 cars, compared with 189,474 last year. The daily selling rate dipped to 20,738 units from an average of 23,684 a year ago. There were eight selling days in the period in both years.

There seems to be little evidence that sales incentive programs are drawing a significant number of buyers into showrooms.

"Current incentives have lost their allure, and factory marketing types are being hard pressed to come up with replacements," said one source in marketing circles.

Volkswagen sales were off 51.61 percent from those of a year before. American Motors dealers delivered 50.00 percent fewer cars in the July 1-10 period than they did last year. Chrysler Motors' sales were off 28.78 percent, and General Motors' sales dipped 22.05 percent. Ford Motor retail deliveries were down 0.82 percent.

Nissan sold 1,659 cars this year vs. 33 a year ago when its U.S. plant was down for model changeover. Honda sales rose 235.39 percent as deliveries climbed to 9,401 units from 2,803.

Toyota, which began making cars in the United States in September, sold 605 units in the July 1-10 period.

Ford dresses up Brazilian pickup
Ford Brazil is offering the Pampa Ghia, which is built on Ford's Del Ray pickup platform. It has 13-inch wheels, flat wheel covers, a laminated windshield and upgraded interior trim. The original alcohol-fueled Pampa has chalked up sales of more than 58,000 since its Brazilian introduction in March 1982. Ghia, based in Turin, Italy, is a wholly owned subsidiary of Ford.

Ship's sinking scuttles Saab's expansion plan

By Knut Moberg
SPECIAL CORRESPONDENT

TROLLHATTAN, Sweden — Saab Car Division's plans to increase production this fall have, literally, been sunk.

The vessel, Conti Belgica, carrying three main presses from Hitachi in Japan to Saab in Sweden, sank off the coast of Yemen early this month. The ship went down two hours after running into a hurricane. The crew was rescued.

Saab needed the new machinery to increase annual production by up to 30,000 units. It was due to be installed after the August vacation in Saab's main production plant at Trollhattan, where all the preparations had been made.

Representatives from Hitachi are scheduled to fly to Sweden this week to discuss replacements, but the company is unlikely to be able to deliver them for about a year.

This is a major problem for Saab. Last year, it produced a record 126,400 cars, but it needs the extra capacity to reduce delivery time. The new presses were the main part of the plan to increase output.

The problem is compounded by a recent steady reduction in the volume of parts purchased from outside suppliers in anticipation of the arrival of the new equipment from Japan. Now, Saab is going back to the outside suppliers and asking for a resumption of deliveries.

New owner and name for Commercial Credit

MISSISSAUGA, Ontario — Commercial Credit Corp., a provider of vehicle leasing services, has changed its name to McCullagh Leasing. The company has a new owner, BNE Capital Corp., a U.S.-based holding company with assets of more than $27 billion.

Dealer competition

Quick-service centers on rise in Britain

By Jake Lucas
SPECIAL CORRESPONDENT

Large retail groups are using their aggressive sales and marketing techniques to make inroads into the annual $8 billion-plus car servicing market in Britain.

LONDON — News that J. Sainsbury, one of Britain's leading supermarket groups, will rent space for fast car servicing at some of its do-it-yourself and garden centers has highlighted the growing attack on franchised car dealers' traditional service business.

Large retail groups are using their aggressive sales and marketing techniques to make inroads into the annual $8 billion-plus car servicing market in Britain.

Significantly, the newcomers have earned healthy profits against a background of long-standing complaints from car dealers about the problems of making money on service.

The fast-service operators attribute their success to changing car servicing from being car manufacturer-led to customer-led.

They believe they answer car owners' criticism that the traditional dealer will rarely give a fixed quote on the cost of a job, so the repair bill will often escalate. They further believe that servicing is slow and replacement parts are expensive, and that the dealer's limited business hours are inconvenient for busy car owners.

For the handful of major fast-service chains in Britain, seven-day operation has been as much a part of their success as fixed pricing and no-quibble guarantees. The most aggressive centers are open from 8 a.m. to 8 p.m. each day.

The growth of the assault on the traditional dealers started with the specialty service centers offering while-you wait replacement of tires, exhaust systems, shock absorbers and batteries. Market leader Kwik-Fit now has 288 centers and 3 million customers. As the name suggests, Kwik-Fit's more sophisticated Stop 'n' Steer centers will also make repairs on brakes and steering. There are 19 already, and the goal is a network of 150.

Perhaps the most worrisome competition for dealers comes from Kwik-Fit's Autocenters, which have been developed from the success of the Stop 'n' Steer chain.

In addition to all the other work, the Autocenters offer oil changes, and radiator and clutch replacement. There are ambitious plans for 13 new Autocenters this year. Customers will be able to pay for repairs at any Kwik-Fit center with the company's Autocharge card that will also be accepted at selected Mobil and Texaco stations.

The most extensive servicing among the newcomers is offered by Halfords, a subsidiary of a major retail group. Since July 1985, Halfords has expanded from its leading chain of 320 main-street shops selling car parts, accessories and cycles to set up 16 service centers and 36 superstores.

By the end of 1988, it will have 90 superstores selling replacement parts and customizing kits at new out-of-town sites with service centers alongside 50 of the stores. An initial diagnostic engine check costs about $8, and the customer is then quoted either a fixed price for routine work based on the car's engine size, or a computer price for the specific repair required. Customers are encouraged to stand close by their cars while the mechanic is working.

Halfords plans to start selling accessories in the superstores, which also display an as-fitted price so that customers will be able to walk across to the adjacent service center and have a child safety seat or spoiler fitted immediately.

The car manufacturers have belatedly realized that dealers, suffering low profits on new-car sales, are now seeing their service business rapidly being taken away. More competitive pricing of fast-moving parts from the carmakers has helped. But there is clear evidence that even when dealers have trimmed their prices below those of the fast-service centers, they have still not convinced motorists to remain loyal.

Only the privately owned Volvo Concessionaires has adopted a lifetime guarantee for its cars as a method of helping dealers retain their traditional service business. For the moment, the only thing holding back the expansion of fast-service centers is the speed with which the companies can secure planning permission for new sites.

Car output rises 20%

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Last week's scheduled domestic auto production totaled 94,765, 20.31 percent more than the previous week's 78,769. Production in both weeks was reduced by plants idle for model changeover.

The automakers' estimated output last week was 29.66 percent below the year-ago week's 134,730.

Last week's targeted production was split as follows: General Motors, 47.19 percent; Ford Motor Co., 31.75 percent; Chrysler Motors, 7.33 percent; Honda of America Manufacturing Inc., 7.02 percent; New United Motor Manufacturing Inc., 3.96 percent; and Nissan Motor Manufacturing Co., U.S.A., 2.75 percent.

Volkswagen of America's Westmoreland, Pa., plant closed for model changeover July 13. The plant is expected to resume output Sept. 14.

GM's Willow Run, Mich., plant went down today and will remain closed until Aug. 14 for model changeover.

The following GM plants remain idle for model change: Tarrytown, N.Y.; Flint, Mich.; Janesville, Wis.; Lansing, Mich.; Wentzville, Mo.; Leeds, Mo; Orion Township, Mich.; Framingham, Mass.; Detroit-Hamtramck; Lordstown, Ohio; Arlington, Texas; Doraville, Ga.; and the Fiero plant in Pontiac, Mich.

GM's Clark Avenue, Detroit, plant will resume output at a reduced rate on Wednesday after being closed since June 29 for model changeover.

Ford shut its Wixom, Mich., and Kansas City, Mo., plants for model changeover on July 13. Both plants are slated to resume operations today.

The following Chrysler plants remain idle for model changeover: Jefferson Avenue, Detroit; Belvidere, Ill.; St. Louis; and Sterling Heights, Mich.

All Ford plants except Wixom and Kansas City are scheduled for daily overtime this week.

Week's truck production doubles

Domestic truckmakers almost doubled production last week compared to the prior week's build, as vacations ended at several plants.

Last week's targeted output of 71,692 was 93.89 percent more than the previous week's 36,975 and 7.98 percent more than the year-ago week's 66,391.

Ford Motor Co. plants and the Jeep facility resumed output last week after two-week vacations. Nissan Motor Manufacturing Co.'s plant in Smyrna, Tenn., will reopen today after a three-week vacation.

Overtime was slated last Saturday at General Motors' Lordstown, Ohio, plant.

Saturday overtime was scheduled at Ford's Twin Cities, Minn., plant.

Canada: Cars up; trucks down

Canadian automakers scheduled production of 9,392 cars last week, 15.23 percent more than the previous week's 8,151 and 4.95 percent more than the year-ago week's 8,949.

Truck production was targeted at 10,875 units last week, 11.74 percent below the prior week's 12,322 but 59.74 percent more than the year-ago week's 6,808.

Navistar International's Chatham, Ontario, plant remains idle for model changeover.

Ford Motor Co. car plants will be idle until July 27 for vacation.

General Motors' Oshawa, Ontario, plant resumed output today but will close July 27 for a two-week vacation.

ROUGE

FROM PAGE 1

workers had been given more than two days to consider the pact, it would have been defeated.

Local 600 also represents 9,000 workers at stamping, frame, glass, engine and assembly plants. Those workers are not covered by this pact. Leone said the agreement sets a dangerous pattern not only for the Rouge complex but for all of Ford.

He said that a provision cancelling transfer rights into other parts of the Rouge complex — except for a one-time move — fences off the steel plant from the rest of the complex. He said the arrangement is part of Ford's plan to separate more and more of its businesses as being "non-auto."

A UAW summary of the contract given to workers says it improves pensions and protection against outsourcing. Al Gardner, former chairman of the tool and die unit, said the outsourcing language is that of the Ford master contract, which UAW International leaders have said is not strong enough. Gardner said the pension increase is significant only for those retiring before Jan. 1, 1988.

Though Rouge Steel is still for sale, the new contract specifies that a buyer would have to honor the terms of the agreement.

Steel industry analysts are cautiously optimistic about American steelmakers' stronger showing in recent months. They say that Ford's moves at Rouge Steel may be coming at just the right time to benefit from increased prices, a weaker dollar and a rise in the value of the Korean won.

Bernard Addo, steel analyst at Smith Barney, Harris Upham & Co., said that it is too soon to talk about an industry turnaround. But he said that if Rouge Steel's labor costs could be brought down, "the company would be in a good position to come back."

Addo said that it is difficult to predict whether relaxed work rules and other changes can lower Rouge Steel's current labor cost of $27 an hour, versus an industry average of about $23.

But Addo said that "Ford is doing very well, and since Rouge Steel's fortunes are tied to Ford, it may also do well." Rouge Steel sells about 40 percent of the two million tons of steel it produces annually to Ford, and Ford takes most of the electrogalvanized steel.

Paul Tiffany, assistant professor of management at The Wharton School of the University of Pennsylvania, said, "To compensate for the huge difference in labor rates, U.S. steel makers have to get a tremendous amount of benefit out of capital investments such as a continuous caster."

Armstrong said that the new caster has lowered the cost of producing higher quality steel and thus contributed to profitability. It has also allowed Rouge Steel to provide steel for customers' more intricate and demanding requirements, and thus is helping broaden the market for steel.

Armstrong said Rouge Steel is "very competitive in quality" and that the new labor agreement, with its commitment to further modernization and training, will allow progress toward cost-competitiveness.

Tiffany, author of the forthcoming "The Roots of Decline: Business, Government and Labor in the American Steel Industry," said, "It's surprising that they settled" on a new agreement at Rouge Steel, considering the outsourcing trend in the U.S. auto industry.

'Get mad,' execs tell business

Greenwald, Mercer chart survival plan

DEARBORN, Mich. — The United States will be doomed to second-class industrial status unless its manufacturers shoulder some of the task of rebuilding the nation's economic base.

That theme emerged last night in the two keynote addresses at the Automotive News World Congress. The 12th annual forum runs through Wednesday at the Hyatt Regency Hotel here.

In remarks prepared for delivery at the opening session, Gerald Greenwald, chairman of Chrysler Motors, and Robert E. Mercer, chairman of Goodyear Tire & Rubber Co., focused on the theme likely to occupy the nation's attention at least through the 1988 presidential election: competitiveness.

"The reason competitiveness is all the rage is obvious," said Greenwald. "Despite the softer dollar, America continues to get its clock cleaned in today's increas-

Great days for Ford; profits hit peak

Who's Number One in the domestic auto industry? From a money standpoint, it's clearly Ford Motor Co. Ford profits set records for the second quarter and first half of 1987, and the company earned more than General Motors, Chrysler Corp. and American Motors combined. Ford's performance enabled the four domestic automakers to exceed last year's second-quarter profits by 16 percent. Even AMC was in the black for the quarter; its $30 million profit reversed a $52 million loss in the 1986 period. **Story on Page 66.**

New GM pickups gaining ground after slow start

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — After a sluggish start, dealers are beginning to see a surge in the sales of General Motors' C/K pickups — the products of a $2.6 billion investment, billed as the country's first all-new truck in a quarter-century.

Chevrolet dealers retailed 13,326 C/K models in June, up from 9,307 in May. They retailed about 8,000 through mid-July, putting Chevrolet on a 16,000- to 18,000-unit course for the month.

GMC dealers retailed 4,051 Sierras in June, up from 2,645 in May. Sierra is GMC's name for the C/K line. Together, the two divisions retailed 42,785 C/Ks through June 30.

Dealers attribute the C/K's slow start to radical styling, shortages in some body styles and the sales-incentive emphasis GM has put on older-style R/V pickups in order to clear them out. Production of the R/V line, with the exception of a Crew Cab model and a special chassis cab, ends July 30. The R/V Crew Cabs and chassis cab will be continued indefinitely, according to a Chevrolet spokesman.

John M. Kelley, Chevrolet marketing manager — trucks, generally concurred with dealers' viewpoints and said specific product shortages are beginning to be cleared up.

Dealers, for example, have been unable to get dual-rear-wheel extended-cab models. They finally went into production a week ago. Similarly, short-box (six-foot pickup bed) models have been unavailable. They went into production July 13, and should reach full acceleration by the end of August, Kelley said.

Chevrolet has a backlog of 25,000 wholesale orders for short-box models. They normally account for 20 percent of its overall full-sized pickup sales.

Chevrolet also anticipates that it will sell twice as many of its more stylish new Sportside models as it did before. The new Sportsides will be available this fall. They previously accounted for about 4 percent of Chevrolet's short-box sales mix, and the division expects that to rise to 8 percent next year.

Kelley said that Chevrolet still anticipates selling 480,000 full-

Japanese speed new products to U.S.

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

New technology and faster product development are the cutting-edge technologies Japanese automakers hope will help them muscle past U.S. and European competitors into profitable upscale segments of the U.S. automotive market.

Japanese automakers are spending heavily on new technology — reducing new design lead time to two years or less and shrinking product life cycles to as little as three years for vehicles and seven years for engines.

The result is a competitive advantage that could allow the Japanese to bring sophisticated new products to market faster

move into previously uncontested new segments during the next five years.

A strong yen that makes Japanese products re in the United States intensifies the e automakers' desire to leapfrog U.S. competitors and use domestics as a buffer against the South Koreans and other manufacturers from low-wage countries.

"The Japanese are leaping as fast as they can," said George Peterson, president of the AutoPacific Group, Newport Beach, Calif. Peterson charts product planning of major auto manufacturers and publishes a quarterly, "The Competitive Battleground."

Product life cycles are six years at General Motors and five years at Ford Motor Co. But Toyota Motor Co., Nissan Motor Co. and smaller Japanese manufacturers are on a four- to five-year cycle and Honda is currently under four years, Peterson said.

U.S. manufacturers are still using engines

Nissan screening luxury-line dealers

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Nissan Motor Corp. in U.S.A. will not start selling its new Infiniti Division upscale cars until the 1990 model year, but it intends to select the initial 60-70 dealers by the end of this year.

Nissan's existing 1,108 dealers will have first crack at winning one of the new franchises, said William R. Bruce, head of Infiniti, at a press conference Wednesday. The anticipated new line will compete with European and domestic luxury cars, Honda's Acura models and Toyota's anticipated second-channel offerings.

"We expect to have the dealer selection process completed by the end of the year," Bruce said. Nissan will require each new dealer to build a completely separate multi-million-dollar sales, service and parts facility.

The first points will be in major markets on each coast and in the

Columbus labor pact held up as industry model

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

A local contract negotiated at General Motors' Fisher Guide Division in Columbus, Ohio, is being held up as a model for making products more competitive and keeping them from being outsourced.

Outsourcing, which threatens the existence of the automakers' component plants, is a key issue in the contract talks that begin today between the UAW and the Big 2.

A top GM official told Automotive News in February, when the pact was signed, "We had a great thing happen at the Fisher Guide plant in Columbus." He said recently that the contract pointed the way to making component plants more competitive without a two-tier wage system.

Don Deibel, president of UAW Local 969, which represents workers at the Columbus plant, said that 770 jobs have been saved as a result of the new contract, and that 300 to 400 jobs "will be saved on the tail of those."

The new contract in Columbus includes a less drastic cut in job classifications — from about 90 to 50 — than other recent industry agreements, which slashed the number of classifications to five or less.

It also includes a new layoff and recall procedure, flexibility to assign workers on downtime to other jobs, a new method of establishing production standards and a new way of paying workers.

They receive a piecework wage rather than an hourly wage, as they did under the former agreement, but they can earn up to 50 percent more pay for surpassing the production standard, Deibel said.

That standard is set by a new "hardware standard data system," which uses a computer to time jobs, he said. Data such as the weight of a part and the distance a worker has to move to load it into a machine are fed into the computer.

"We listen to workers when they tell us a job can be done more efficiently," Deibel added.

GM has said that about 10 percent of its components are being made in-house at a cost higher than they could be purchased. Industry officials have said that a two-tier wage system, with a lower wage for component plants, is one way to cut the cost of making components in-house.

UAW officials agree that the contract in Columbus was successful in cutting the costs of some products and — more important — it has established a problem-solving mode that is resulting in plantwide efficiency.

Deibel said the plant's insourcing committee is becoming more active and has found ways to bring back work that had been outsourced.

"We've come a long way, but we're not out of the woods yet," he said.

A Fisher Guide spokesman said the new contract allowed the plant to win some molding business from the division's Fort Street (Detroit) plant, which is scheduled to close by 1989. The Columbus plant also retained some anchor bolts and door locks that customers were thinking of sourcing elsewhere, he said.

He added, "This secures business for the immediate future and gives us breathing room to address the future."

The Fisher Guide spokesman said, "The single most important outcome of the new agreement and the key to the success of the plant is the spirit of the people making the agreement. (They have agreed) to solve plant problems as they develop."

The division has organized itself into business units, which are divided into product teams such as a door-locks team, the spokesman said. The teams "involve production workers in other aspects of the business," he said, including visiting customers' plants.

Though other Fisher Guide plants have implemented the business unit and product team concepts, "Columbus was the first one to pick up on it," he said.

Detroit dealers win: Saturday closing legal

By Helen Kahn and Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTERS

Charges that Detroit-area auto dealers and their trade associations violated antitrust laws by conspiring to limit hours of operation have been dismissed by a Federal Trade Commission administrative law judge.

Judge James P. Timony dismissed the charges on the grounds that the dealers' agreement to limit hours was in response to a labor dispute, and thus was exempt from antitrust laws.

Reaction from the Detroit Automobile Dealers Association was obviously joyful, but was restrained and low-key.

"We feel very good about the decision," said David Fischer, president of the dealer association.

Fischer, an Oldsmobile and Nissan dealer, told a press conference the dealers and the association had been vindicated.

"We have violated no state or federal law," Fischer said. "This was exclusively a labor issue and was decided as a labor issue."

Fischer said dealer and association costs for fighting the FTC action could total as much as $3 million. "I'd like to know how much the government spent," he said.

Glenn A. Mitchell, of Stein, Mitchell and Mezines, the Washington law firm retained by the Detroit dealer association, said, "The issue is whether the closings resulted from a labor dispute, not whether they were included in written collective bargaining agreements. And given the history of the closings, there is no other conclusion he (Timony) could have reached."

Mitchell added, "This is a rare decision in that everyone wins. The dealers' labor policies were vindicated, but the salesmen won what they had been fighting for all these years — shorter work weeks without having to join a union. And the consumers get the benefits of competition."

"We have violated no state or federal law. This was exclusively a labor issue and was decided as a labor issue."

— FISCHER

The case arose in December 1984 when the FTC charged the Detroit Auto Dealers Association, 105 dealerships, 115 individuals and 18 other associations with illegally conspiring to close all day on Saturdays and to limit evening hours to Mondays and Thursdays.

Plymouth network wins Diamond-Star distribution

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — The sport-specialty coupe to be built by Diamond-Star Motors and introduced in the 1989 model year will be sold through the Plymouth dealer network.

Sources said the new model will not be available in Dodge showrooms because it would be positioned too closely to the Dodge Daytona.

The move is also a part of Chrysler Motors' continuing brand-name identification program. In 1986, the company began a brand repositioning designed to make each product line more distinctive.

As part of that philosophy, some models became franchise exclusives such as the Dodge Daytona and Chrysler LeBaron Coupe.

The Diamond-Star model is a front-wheel-drive, two-door hatchback, sport-specialty model that Chrysler Corp. treasurer Fred Zuckerman has described as "the working girl's Ferrari."

Sources said the model is not expected to be introduced until the middle of the 1989 model year.

A four-door sedan is the next model scheduled in the line.

The models are being produced as a joint venture of Chrysler Motors and Mitsubishi Motors Corp.

The Diamond-Star plant, now under construction in Bloomington-Normal, Ill., will have a capacity of 240,000 units annually when the second shift starts in October 1989. The two-million-square-foot facility is to be completed in January 1988 with the first cars produced later in 1988.

Chrysler and Mitsubishi Motor Sales of America will each receive 50 percent of the production volume.

Market value of Ford stock tops GM's

DEARBORN, Mich. — Ford Motor Co.'s successes have been recognized on Wall Street — in a big way.

For the first time since Ford went public in 1956, the market value of Ford's common stock has surpassed that of GM's common stock.

It occurred for the first time on July 14 when, based on that day's closing stock prices, Ford's market value was $27.3 billion; GM, based on the price of its common stock only, was worth $26.9 billion. With GM's other classes of stocks its market value that day was $32.4 billion.

Ford outearned GM in 1986 for the first time since the early 1920s and has continued to do so in 1987. Analysts predict that Ford will continue to outearn GM for the next two years.

Starcraft sold to management-led group

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

A management-led investor group has purchased recreational-vehicle maker Starcraft Corp. and its affiliated companies from Lear Siegler.

Dominic D. "Don" Cuzzocrea, longtime Starcraft president and now its chairman and chief executive officer, outlined some aggressive expansion plans following the July 21 purchase.

Starcraft management and outside investors acquired all Starcraft-branded product lines, all Starcraft manufacturing facilities in North America, Lear Siegler Financial Corp. (which will be renamed) and Bangor Punta Transportation, a captive trucking fleet operation.

Cuzzocrea declined to disclose the purchase price, but he said it reflected record sales and earnings for the company's 1987 fiscal year, which ended June 30.

Cuzzocrea said Starcraft's sales for fiscal 1987 were $154.2 million, a "double-digit" increase over the previous year.

Starcraft has 1,817 employees at six U.S. and Canadian facilities. Its headquarters will continue to be in Topeka, Ind.

Cuzzocrea said his management group has "control of the corporation," but wouldn't divulge its share of ownership.

Besides Cuzzocrea, company officials with significant equity in Starcraft include Joseph L. Schulte Jr., executive vice president; Robert N. Fidler, senior vice president and general manager — marine; Cecil J. Bontreger, senior vice president and general manager — automotive; and Leslie A. Hampton, senior vice president and general manager — RV.

Outside equity investors include Duncan, Cook & Co., Houston; Greylock Management Corp., Boston; Southwest Venture Partners, San Antonio, Texas; Salomon Brothers, New York; and Equus Investments, Houston.

The management-led investor group acquired all of Starcraft Corp.'s stock in the buyout.

Starcraft is considered the RV industry's largest van customizer, with "close to 11,000" conversions eyed for 1987, Cuzzocrea said.

That business accounts for 40 percent of its sales. The two other major segments of its business are RVs — such as travel trailers and Fifth Wheels — and pleasure boats. Each accounts for about 30 percent of sales.

Cuzzocrea said future plans include re-entering the Class C motor home market within about a year and, subsequently, the Class A motor home market.

The company also plans to branch out into car customizing. It is currently working on a new bed cap for pickup trucks.

That is a new product area for Starcraft. It has a marketing agreement with GMC to sell the caps. The companies haven't decided whether the product will be offered as a factory-installed or aftermarket-installed option.

Truck sales rise 13% for June, 3% for half

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Total U.S. truck sales, including light, medium and heavy-duty models, were up 13.37 percent in June and 3.78 percent for the first six months of calendar 1987.

Truck manufacturers retailed 482,446 new trucks in June, up from 425,567 during the same period in 1986. They sold 2,488,591 during the first six months of the year, up from 2,397,914 in the same period last year, according to figures reported by individual companies and the Motor Vehicle Manufacturers Association.

Light-duty Class 1-3 sales of 457,390 in June were up 14.10 percent from 400,860 last year.

Class 4 sales, still marginal, totaled 78 in June compared with zero a year ago.

Class 5 sales of 789 were up from 730 last year.

Class 6 sales of 3,487 were off from 3,845 a year ago.

In the heavy-truck segment, Class 7 sales of 8,629 in June were off from 9,207 last year, while Class 8 deliveries of 12,073 were up from 10,565 a year ago.

Medium- and heavy-truck manufacturers, by and large, continued to enjoy exceptionally strong sales in June and for the first six months of the year.

For example, Peterbilt's June sales of 1,170 units were up 56.8 percent while its six-month total of 5,234 was up 15.2 percent.

Similarly, Kenworth's June sales of 1,199 were up 31.8 percent, while its six-month total of 6,647 units was up 37.6 percent from a year ago.

Freightliner's tally of 2,127 trucks in June was up 24.2 percent, while its six-month sales of 10,902 were up 22.9 percent.

Navistar's June sales of 6,568 units were up a more modest 7.4 percent, while its six-month total of 35,039 trucks was up 3.5 percent from a year ago.

Mack chalked up 2,475 sales in June, 12.1 percent more than last year. Its six-month total of 12,295 was up 9.7 percent from a year ago.

Japanese imports, such as Isuzu, Nissan Diesel and Hino, continue to come on strong in the medium-duty segments.

Hino, with 973 sales for six months, should easily exceed 2,000 for 1987, the first year it has reported sales.

Similarly, Nissan Diesel, with 211 in June and 782 for the first six months of the year, also has a good chance of topping 2,000 this year, the first year it has reported sales.

And Isuzu, with 713 sales last month, sold nearly twice as many trucks as in June 1986.

With 2,727 retail deliveries for the first six months, Isuzu is on track to sell well over 5,000 trucks in calendar 1987.

Mack's new data system speeds ordering procedure

ALLENTOWN, Pa. — Mack Trucks is phasing in a new electronic information system to increase the speed and accuracy of new-order placements, track new and used-truck inventories and facilitate settlement of warranty claims.

The new information system, currently being used by all 19 Mack branches in the United States, links the branches with Mack's headquarters, manufacturing and parts operations. Many of Mack's 240 dealers are expected to be on line with the new system by the end of this year.

It is part of a $60 million MRP II companywide integrated database system expected to be totally in place by 1991.

Robert Reimer, order and distribution manager, said each Mack branch now can make a faster, electronic transmittal of new truck orders. Equally important, Mack can catch and correct any errors in orders immediately.

If, for example, incorrect components or invalid numbers appear on the order, the company can go back instantly to the branch via computer and get the proper information. That alone cuts about seven working days off the ordering process compared to when Mack had to kick orders back manually, Reimer said.

Another advantage of the new information system will be computerized price books for salespeople. They will replace 400-page books that are sent periodically to Mack's branches.

The computer-based price books will not only be easier to read and more accurate, but will be able to store quotes so that orders can be placed as quoted or with alterations to fit new customer needs.

Reimer said he expected the electronic price books to be in test within a year.

AUTOMOTIVE NEWS STAFF REPORTER

The strong yen that has riddled short-term profits could be a long-term blessing for Japanese automakers. It is forcing them to become global players.

"The 60 percent appreciation of the yen since late 1985 may be as beneficial to the Japanese in the long run as the Voluntary Restraint Agreement has been by forcing them to do things culturally they couldn't do before," said John Hammond, managing director of J.D. Power and Associates, Westlake Village, Calif.

"It forces them to become global players in a global market, rather than simply exporters tied to manufacturing in their home market. They'll be much more dangerous competitors than they have been."

When the Japanese focus on the global market, they are looking primarily at the United States. Toyota, Honda and Nissan — Japan's Big 3 in this country — are talking about one million car and truck sales apiece within the next few years. About 2.4 million of those vehicles would be cars.

There may not be room for that many cars — from just three Japanese makers — in a U.S. market averaging around 10 million cars. Besides, six other Japanese makers want a piece of the U.S. pie, along with Europeans, Third World makers and, of course, U.S. manufacturers.

There may be a shakeout coming, and every one of the players is determined that it will affect "the other guy."

The rapid rise of the yen against the dollar and key European currencies is not the only problem Japan's nine automakers face. Increased U.S., European and Third World competition; political pressures that are closing export markets; and social and economic changes inside Japan have created a volatile business climate.

JAPANESE NEW-CAR SALES IN THE U.S.

	Honda	Isuzu	Mazda	Mitsubishi	Nissan	Subaru	Toyota
1986	405,399	38,910	222,716	49,436	493,549	183,242	640,155

1976	150,929	—	35,383	—	270,103	48,928	346,920

But it was the suddenness of the yen's rise that forced wholesale changes in long-range plans for virtually all automakers. It has led to heavy cost-cutting programs.

North American production is regarded as essential to reducing costs if the dollar weakens further against the yen. It also is seen as a way of reducing pressure for U.S. protectionist legislation and as a way of getting around growth-curbing restrictions on car exports to the United States.

The biggest variable in each company's strategic plan is the currency exchange rate. "It all depends on where the yen goes," said George Peterson, president of the AutoPacific Group, a Newport Beach, Calif., consulting firm.

The United States is still the source of most profits for the world auto industry. Its importance is emphasized by the case of Toyota, which was still profitable in Japan last year, but saw its profits fall by two-thirds when U.S. profits were cut to marginal levels, according to Tsutomu Ohshima, executive vice president for external affairs.

After falling below 140 yen to the dollar this spring, the exchange rate last week was around 153 yen. A year ago, the dollar was worth 160 yen; two years ago, it was worth about 240.

But the yen's appreciation is not over yet, according to Ron Glantz, automotive analyst for Montgomery Securities, San Francisco. Glantz, former head of the Japan desk in the U.S. Treasury Department's Office of International Finance, predicts a rate of 115 yen to the dollar "by this time next year."

"With the yen at 150, there is no hope that the U.S. trade deficit with Japan will fall below last year's level, which was politically unacceptable," he said. "With high trade deficits, the pressure on the yen will increase."

And with that, the first signs of global manufacturing are cropping up as Japanese automakers for the first time face labor rates that are high enough to force them to look to low-wage countries, even if it means higher unemployment in Japan.

Toyota is encouraging 20 of its biggest suppliers to locate new plants in Taiwan to reduce costs. Honda is exporting 3,000 Accords a year to Taiwan from Marysville, Ohio, and may some day export cars from Ohio to Japan.

Mitsubishi Motors is marketing 30,000 Precis cars built by Hyundai of South Korea as entry-level cars in the United States. American Isuzu Motors Inc. is selling in the United States Trooper II sport-utility vehicles built in Japan and Taiwan.

"Practically all the Japanese are using Mexico for parts and components and a number are turning to Thailand," Glantz said. "The Japanese are moving much faster than U.S. manufacturers on outsourcing in Asia.

Glantz predicted that by the early 1990s, vehicles sold by Japanese-make dealers will capture 34 percent of the U.S. passenger-car market and 20 percent of the U.S. light-truck market, compared with 23.67 percent of the car market and 21.0 percent of the truck market for the first six months of 1987.

Most of the projected growth is based on Japanese plans to expand product offerings into new segments.

The nine Japanese automakers active in the United States can be divided into three groups. The Big 3 consist of Toyota, Honda and Nissan. The Middle 3 are Mazda, Subaru and Mitsubishi, and the Little 3 are Isuzu, Suzuki and Daihatsu.

Each Japanese automaker is developing broader product lines. Toyota, Honda, Nissan, Mitsubishi and Mazda have large cars

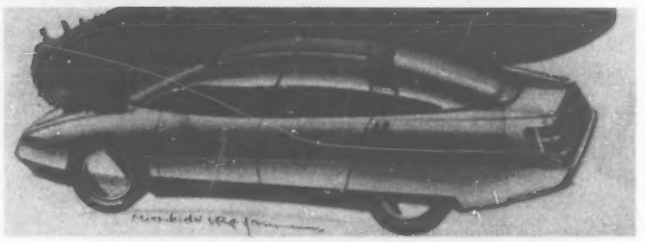
MYSTERY MEET PHOTOS



Here are some of the Japanese concept cars that are being prepared for this fall's auto shows. Toyota's FXG, above, has a mid-mounted V-8 and 4wd. It may appear at Frankfurt in September. Proposed Mitsubishi, upper right, with 4wd, 4ws, all-independent suspension and 3-liter V-8, could appear at Tokyo. Daihatsu's concept car, lower right, is also expected at the Tokyo show, which opens Oct. 29.

FROM PAGE 1

with basic designs 25 years old, while Japanese automakers are retiring engine families introduced in the late 1970s. Toyota is working on a seven-year life cycle for engines and has multi-valve engines available on six of the seven car lines it sells in the United States. No U.S. automaker currently sells a multi-valve engine, one factor that led manufacturing consultant James Harbour to say flatly, "The domestics don't have a single competitive engine on the road."

That may change this fall when Oldsmobile introduces the Quad Four 16-valve. Chrysler may have a Lotus-developed 16-valve four-cylinder engine for limited applications for the 1989 model year.

However, by then, Honda, Toyota and Nissan expect to have their own lightweight V-8s in new flagship cars.

But lightweight, efficient and powerful engines are not the only Japanese effort in applying technology. Japanese manufacturers are rushing into widespread use of four-wheel steering, anti-lock braking systems, constantly variable transmissions and "friendly interiors" that remember each family member's preference on seat and tilt-steering wheel position, rear and side mirror adjustment and favorite radio station.

The underlying Japanese idea is to take the premium market position against U.S. and European competition across-the-board in terms of features and value while working on bolstering brand image and Japanese prestige, said John Hammond, managing partner of J.D. Power and Associates, Westlake Village, Calif., which publishes the quarterly "Power Report" — a compilation of future product plans of world automotive producers. The Power Report is sold only to manufacturers.

Using a variety of sources, Automotive News has compiled a comprehensive look at the future of Japanese auto marketing in the United States. Some of the information has been confirmed — usually in general terms, rarely in specific detail — by executives of individual automakers. Several companies declined comment.

American Honda has two all-new models for 1988, Civic and Prelude. Each has its own family of all-new multi-valve engines and other technical goodies. Both continue to move upscale.

But the big surprise comes next April or May, when an Accord Sports Coupe arrives. The two-door car carries upper works that look very much like the new Prelude. It could be marketed as either a baby Acura Legend or fill the void caused by pricing-up the Prelude.

The replacement schedule of the current Accord, all-new for 1986, is uncertain.

Honda has development programs for a front-wheel-drive passenger wagon or tall car and a minicar positioned below the Civic, but neither apparently has received corporate commitment.

On the Acura side, the Legend sedan gets a larger 2.7-liter V-6 this fall and some minor detailing changes.

For 1989, Acura will introduce its flagship, a fwd, four-door sedan of about 207 inches overall length, powered by a 32-valve V-8 of about 3.6 liters. Either in the late spring or fall of 1989, a mid-engined sports car — likely powered by a V-8 — will debut, carrying ABS, 4ws and full-time four-wheel-drive.

Acura's base-model Integra will be replaced by a vehicle currently under joint development by Honda and England's Rover Group, perhaps by 1989.

Toyota Motor Sales U.S.A. will have a new generation of fwd Corollas for 1988, with the exception of the FX and FX16 built by New

JAPAN'S AMERICAN FUTURE

JAPAN

FROM PAGE 28

on the way, powered by new-generation V-6 or V-8 engines. Specialty cars and trucks, minivans, sport-utility vehicles and low-volume niche vehicles also are being developed.

Big 3 take steps to enhance U.S. role

Japan's Big 3 are taking divergent paths into the 1990s that will sharpen the distinctions among them in the U.S. automotive market.

But each plans to sell at least one million vehicles a year here by the early 1990s.

"Toyota and Honda are in the best shape of all the Japanese to emerge from the intensified competition on top," said Peterson.

He said strong dealer networks, efficient manufacturing and cost controls, clear visions of where they are headed and strong product lineups are prime assets for both.

Hammond agreed that Toyota and Honda have the strongest positions, but for slightly different reasons.

"Toyota is the best balanced of all the Japanese — like Ford Motor Co. is among the domestics," he said. "It just does so many things right. Toyota has the deepest pockets; its products are good; and it has lots of experience in tough U.S. markets, such as small pickups.

"Honda is the darling of the group right now, but that's partly because of superior product," Hammond added. Honda's aura could be tarnished quickly if it fails to keep its edge in innovative new products, he suggested.

Assessments of Nissan by most industry analysts are less positive, but no one predicted a prolonged slump or any danger of its falling from the top three importers.

Broad portions of the 1990s' business plan of each parent company and its U.S. operations are remarkably similar:

• Reduce costs.

Toyota was the first to formalize its cost-cutting program. It did so last fall in response to the yen's sharp appreciation. Toyota executives challenged each division and department to find ways to reduce costs by as much as 50 percent.

Honda followed last winter with a comprehensive cost-reduction program designed to keep the company and its subsidiaries profitable even if the exchange rate dropped to 120 yen to the dollar.

Nissan has been less public with its program, but its U.S. operation has reduced employment by attrition and is asking managers to justify each individual new hire, although there is no formal hiring freeze, said C.P. "Chuck" King, senior vice president — marketing and sales.

• Increase U.S. production.

Honda has a clear lead, with two North American assembly plants and a U.S. engine plant already in operation. Expansion already announced will push U.S. and Canadian capacity to 440,000 cars and 360,000 engines by 1989. A decision on Canadian expansion or a second U.S. assembly site is due by December.

Nissan recently increased capacity of its Smyrna, Tenn., assembly plant to 265,000 from 240,000 annually.

Toyota was the last of the Big 3 to commit to U.S. production, but started obtaining cars last winter from New United Motor Manufacturing Inc., its joint venture with General Motors in Fremont, Calif. NUMMI is building 50,000 cars a year for Toyota. Toyota's Georgetown, Ky., assembly plant is scheduled to begin production in 1988.

• Expand or launch upscale divisions.

Again, Honda was first — with its separate Acura franchise.

Nissan has just announced a similar upscale division with separate franchises, and Toyota is expected to do so shortly. Operations will begin with the arrival of the bigger and more luxurious models.

• Broaden product lines.

By 1990, each company will offer new lines of cars larger than current full-sized Buicks and Cadillacs and powered by new-generation V-8 engines to tap maturing baby-boomer families. U.S. production will allow all three to offer more specialty cars to fill low-volume niches.

TOYOTA

Industry analysts expect Toyota Motor Sales U.S.A. to retain its overall car and truck sales title among U.S. importers into the 1990s. But the size of the lead will erode because of Honda's earlier and heavier commitment to U.S. production.

Toyota reached the one-million-unit plateau in 1986, but it has lost the passenger-car sales lead to Honda largely because Honda has more U.S. production available.

Toyota's Georgetown, Ky., and Cambridge, Ontario, assembly plants are scheduled to open in 1988 with an eventual capacity of 250,000 cars, but Honda will have at least 440,000 units available from its U.S. and Canadian plants.

Yet analysts are reluctant to call Toyota's delay in setting up U.S. production a mistake. "In hindsight, it's easy to say Toyota was overly cautious, but I'm reluctant to do so without knowing all the factors it looked at," said one analyst.

"Toyota does so many things right on bal-

FROM PAGE 28

United Motor Manufacturing Inc. NUMMI will retool the FX for the 1989 model year.

Tercel gets a new wagon later in the 1988 model year, with a Corolla wagon due about the same time.

The 1989 model year brings a host of changes. The Camry is all new and production of the replacement model will start at Georgetown, Ky. An all-new, larger Cressida is expected for 1989. It will grow longer and wider, but not as much as some of the smaller competitors in its class. The MR2 will be reskinned for 1989.

A redesigned pickup truck and 4Runner sports utility vehicle derived from the pickup are due in 1989. The truck is likely to be closer to the Dodge Dakota to better tap the commercial-use market. At least two sources suggest it is a precursor to the 1990s and a much-larger Toyota pickup that would compete with full-size domestics.

Toyota's upscale separate franchise, which Toyota has not yet confirmed, is expected to start the 1989 model year with at least two cars. One will be a next-generation Soarer, a two-door model currently sold in Japan. Another is likely to be a Camry derivative built in Kentucky and widened and powered by a V-6.

The third model, a flagship sedan with Toyota's first V-8, is scheduled for 1989. But one source believes it will not be ready and could be delayed until 1990 to avoid a mid-year introduction just months after launching a new franchise.

The Toyota Supra is scheduled for a makeover in 1990 and may get a V-8.

Nissan enters the 1988 model year with virtually no changes from 1987, which saw it re-do every line except Maxima.

Maxima will grow longer and wider and move upscale when it is redesigned for 1989. It could get Nissan's new V-8 due in 1989.

The 300-ZX also will be re-done for 1989. Minor facelifts are due in 1989 for Stanza, Pulsar NX and 200-SX, with major changes to follow in 1991.

Nissan has the option of bringing in its Micra, a 1.2-liter minicar, if conditions require. If it appears in the United States it likely would be manufactured by Yue Loong, Nissan's Taiwan affiliate.

The Mid-4, Nissan's stunning 1985 concept car, has been delayed so long that it is no longer certain if it ever will arrive in the United States. A styling update by Italy's Zagato has freshened the mid-engined two-seater, but if it makes it here, it likely won't be until 1990 or 1991.

News of Nissan's preparations for a second distribution channel began to circulate in late June. It came after Automotive News first revealed that rival Toyota was working on a similar scheme. Neither company would at the time confirm its program, but Nissan broke its second channel silence last Wednesday. Toyota is expected to make a similar announcement later this year.

Mazda kicks off a massive expansion of its product line in 1988 with an all-new version of the 626 and the 929. The four-door 929, a federalized version of the Luce introduced in Japan a year ago, has a 3.0-liter V-6, rear-wheel-drive and independent rear suspension on a 107-inch wheelbase.

The 626s imported from Japan will be four- and five-door models, but Mazda is starting production of a three-door version for itself (and for partner Ford) at Flat Rock, Mich., this fall. The Flat Rock two-door with a 2.0-liter turbo version available will be broken off from the rest of the 626 line and marketed as the 626 Sports Coupe.

The 323 line gets some new punch this fall from a multi-valve GT version, followed later this year by a 4wd model.

There have been reports that Mazda would import its own 121 — the Kia-built Ford Festiva — as soon as the 1989 model year. But Mazda is concerned about pricing and possible segment saturation by then.

Much more likely are marketing fill-ins like an upscale 424 based on the 323 or a sporty coupe version of the 929, likely to be called the 828. Mazda is actively considering such a move. If either is shown at the Tokyo Auto Show this fall, it could be on sale here by 1989.

JAPAN'S AMERICAN FUTURE

JAPAN

FROM PAGE 30

ance. It is very good at anticipating future conditions and being in the right position."

Toyota Motor Sales executives declined to discuss Toyota's strategy for the future.

HONDA

Honda's 1990s plan for the U.S. market is very simple. Says American Honda Chairman Tetsuo Chino: "We have no other strategies than to increase production and the amount of local components here."

That is not all Honda is doing, by a long shot. But Chino's summary is an acknowledgement that Honda's star is hitched to the U.S. market more than ever.

Its early commitment to U.S. auto production, starting with the first Ohio-built Accords in 1982, helped make Honda the best-selling Japanese car, pushing it past Nissan and Toyota in passenger-car sales.

That commitment to U.S. assembly looks even better now that the appreciation of the yen has virtually eliminated any Japanese production cost edge and while restrictions on exports to the United States continue.

Honda's North American sales goal is one million cars a year by 1990, Chino said.

To achieve a roughly 50 percent growth over 1986 sales, Honda is taking several steps to build on what it perceives as its existing strengths. North American operations, already the keystone of Honda's empire, are being consolidated under Chino.

It is an expression of Honda's increasingly global outlook and will help rationalize Honda's decision — due at year's end — on another North American assembly plant. Options include building a second U.S. assembly plant or expanding Honda's new Canadian facility, Honda executives say.

The first option would likely be a plant of about 200,000 annual capacity located near Honda's expanding engine plant in Anna, Ohio.

Expanding Honda's Alliston, Ontario, plant from 80,000 annual capacity to a full-fledged assembly plant with its own stamping facilities could be brought on stream more quickly than a greenfield U.S. plant.

Honda also is planning a new round of efforts to increase U.S. parts and component sourcing because of the strong yen.

Honda's internal planning assumes no significant changes in existing quotas on Japanese car exports to the United States.

Chino said Honda will be able to achieve its previous goal of 66 percent local content (including labor) by 1989 and will soon set a new goal for a higher level, perhaps as high as 75 percent.

Most future growth in the United States will be through the Acura Division, Chino said. Acura topped 100,000 sales in its first 15 months. Honda expects 400,000 Acura sales annually by the early 1990s with an eventual maximum of 600 dealers by 1991, Chino said.

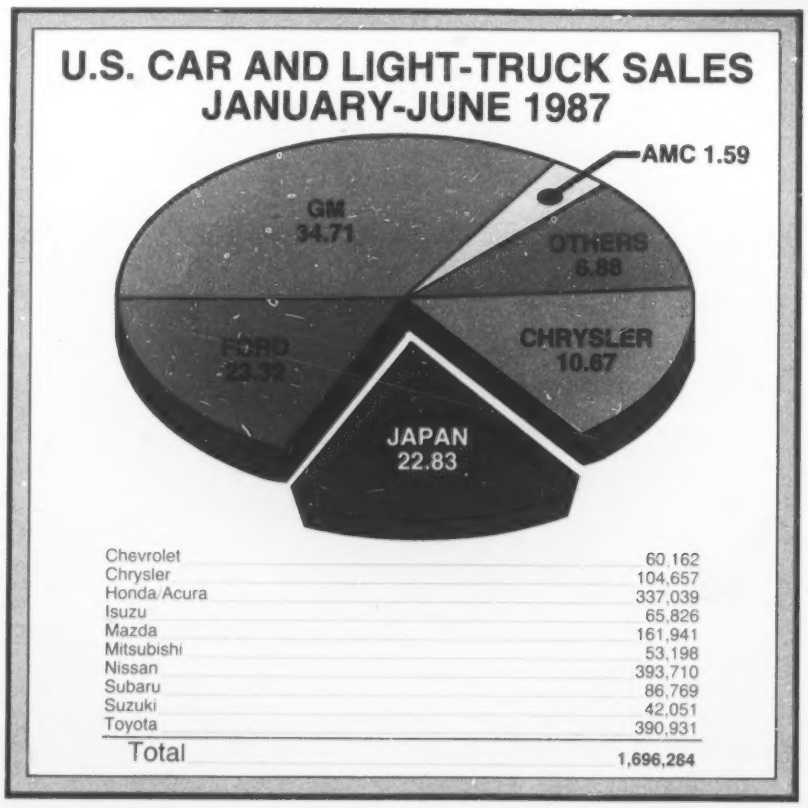
NISSAN

Nissan intends to reach one million car and truck sales in the United States by the early 1990s, up from 780,000 in the 1986 model year, Senior Vice President King says.

He said Nissan could accomplish that in a number of ways. Among the options from which it could choose are to open a second distribution channel -- details of which were revealed last week — increase the number of dealers and broaden the product range.

Nissan's sales growth in the United States must come from sources other than Japanese car exports, because auto industry officials expect car quotas to stay as they are. Yutaka Kume, president of the parent company, said in Mexico that shipping Nissans from Mexico to the United States is a possibility.

Production outside Japan, currently 325,000 a year, or 12.5 percent of the total, will grow to 25 percent by the early 1990s, Nissan Executive Vice President Atsushi Muramatsu said in March.



Chevrolet	60,162
Chrysler	104,657
Honda/Acura	337,039
Isuzu	65,826
Mazda	161,941
Mitsubishi	53,198
Nissan	393,710
Subaru	86,769
Suzuki	42,051
Toyota	390,931
Total	1,696,284

Nissan has had internal problems, reflected in a Japanese market-share drop from 30 percent to 24 percent during the last six years. In the 1986 fiscal year ended Sept. 30, the parent company recorded its first operating loss since going public in 1951.

Daiwa Securities' research department noted that the rapid appreciation of the yen has revealed Nissan's structural problems, including "unprofitable domestic sales and overseas production subsidiaries operating at a loss."

Personnel changes have been made on both sides of the ocean.

King believes Nissan quickly will be able to put the management changes behind it.

Analysts believe poor consumer awareness and image were at least partially behind Nissan's decision in April to fire long-time advertising agency William Esty.

Of all the Japanese automakers, analysts say, Nissan has the purest marketing orientation — a corporate strategy of producing what will sell best, rather than selling what can be produced best. King said he believes that emphasis will serve Nissan well in the next decade.

New products, technology important to Middle 3

The "Middle 3" Japanese automotive importers have growth plans based on new U.S. assembly plants to stay ahead of their smaller Japanese competitors.

But Mazda, Subaru and Mitsubishi part company on their 1990s approaches to dealing with Japan's Big 3.

Mitsubishi Motor Sales of America will broaden its U.S. car and truck lineup to challenge the Japanese Big 3 directly by price-positioning cars against import competitors virtually across the board.

Mazda Motors of America also will broaden its lineup to at least four separate car lines, but will seek more of an upscale, specialty brand image.

Subaru of America will stick to its niche marketing strategy, with no expansion of its basic three-platform lineup.

The difference between the three biggest Japanese automakers and the next three is far more striking in the United States than in the Japanese home market. The *combined* share of the U.S. car market for Mazda, Subaru and Mitsubishi for the first half of 1987 was 3.85 percent, compared with 5.13 percent for Toyota, 5.43 percent for Nissan and 6.63 percent for Honda.

Car sales for the first six months of this year also were disparate. Mitsubishi sold 34,147 units, up 43.7 percent over a disppointing first half of 1986. But Mazda and Subaru were each down nearly 14,000 cars. Mazda sales fell 13.5 percent to 89,573, and Subaru was off 15.3 percent to 77,514.

The Middle 3 approach to 1990s dealer networks differs as well.

Mitsubishi expects to expand from 167 dealers to 328 by 1991. Mazda will "expand as conditions permit" from its current total of 779 to about 1,000 by 1991. Subaru plans no overall change in its 800 dealer outlets, but will continue its upgrading program.

Mazda Motors of America will add at

mazda

least one car line by 1989.

"We've been crawling because we were hampered so much by the quotas," said Rod Hayden, general manager of Mazda Motors of America (Central). "We're going to break it all loose and do what we wanted to do in 1982 and '83. Katie bar the door 'cuz here comes Mazda."

A new flagship, a rear-drive, four-door 929 arrives this fall. Mazda is entering that market later than the Acura Legend, but ahead of similar large models expected in the next year or so from Toyota and Nissan.

The 929 will be the highlight of Mazda's 1988 lineup and will point the future direction of Mazda's image, said one analyst.

"The 929 is a technological tour-de-force, as good as anything the Germans are doing," said analyst Peterson.

Mazda has been rumored to have an entry-level model in the wings, ready to be marketed as the 121. Produced by Kia in South Korea, it would be virtually the same as the Festiva that Kia is currently supplying to Ford Motor Co. But Hayden flatly denied any plans to market a Kia-built minicar.

Additional distinctions within the Mazda marketing lineup are expected, starting this fall. The all-new 1988 626 will be imported from Japan in four-door and five-door form only. Flat Rock, Mich., will assemble a 626 sport coupe that will replace and upgrade the current 626 coupe.

The small 323 line will get a boost this fall with a GT version, and later a full-time 4wd model.

But other analysts see Mazda's U.S. growth hampered by a lack of a unified identity, caused by two independent sales arms. Mazda Motors of America (Central) handles sales in 31 Western and Central states. Mazda Motors of America (East) handles 19 Eastern states.

The unification of the two sales arms "is definitely necessary," Hayden agreed.

Subaru of America will cleave to the niche

SUBARU

player role that has proved so successful for it so far in the U.S. market. "We'll continue to play on the fringes rather than in the middle of the field," said President Tom Gibson.

Subaru sees its strong points as consumer belief in Subaru durability and value and dominance in passenger-car four-wheel drive.

"We see 4wd automotive sales mushrooming over the next five years," Gibson said. The 4wd car segment accounted for 150,000 sales last year, and Subaru thinks it will grow to 750,000 to 1 million by 1992-93.

"We take 55 percent of the segment now," he said. "As the segment grows, so will our sales. We won't take 50 percent of a million 4wd cars but, realistically, if we take 25 percent of it, we'll still be way ahead."

Subaru has no plans to expand dramatically on its three-platform lineup, which became that broad with the Justy minicar introduction during the 1987 model year.

But Subaru will continue to build on its 4wd technology base. It will add 4wd to the Justy in the future, Gibson said.

Besides output from the Subaru-Isuzu assembly plant in Lafayette, Ind., starting in late 1989 or early 1990, Subaru will start sourcing some Justys from Taiwan in 1989.

For 1988, Subaru's XT Sport Coupe will get a 2.7-liter flat-6 engine. And Justy, Subaru's new 1.2-liter minicar, will have 4wd available for the first time.

An upscale four-door sedan based on the XT's platform is possible next spring.

With half the eventual 240,000 annual capacity of the U.S. plant and the additional Justy source, Gibson expects Subaru to reach 300,000 annual sales by 1992-93. But the dealer total will stay around the present 800 and will never top 825, Gibson added.

Subaru may acquire more of its independent distributors by the early 1990s, but still will have both independent and company-owned distributors, Gibson said. After purchasing its Portland, Ore., independent in June, Subaru has six company-owned distributors and seven independents, plus independents in Hawaii and Puerto Rico.

"Subaru in the 1990s will be a company maturing after a significant growth period, a more sophisticated marketing company and more significant in the marketplace," Gibson said. "We'll have a sharper image in technology, customer satisfaction and value for the money. We won't be just another Japanese company."

After chafing under the Japanese government's export quotas, which restricted growth

MITSUBISHI

when it was establishing a direct U.S. sales arm, Mitsubishi is about to blossom, according to Richard Recchia, executive vice president and chief operating officer.

New imports from South Korea and production from the Mitsubishi-Chrysler Motors joint-venture plant in Bloomington, Ill., starting next spring, will allow Mitsubishi to double its dealer outlets by 1991, Recchia said.

Mitsubishi's 1990s strategic plan is beginning to take on substance, he said.

The Precis, a South Korean-built $5,195 entry-level clone of the Mitsubishi-designed Hyundai Excel, was introduced this spring and helped push Mitsubishi to record sales of 7,755 cars in June.

Mitsubishi's three-tiered sourcing plan consists of low-end products from South Korea, high-volume, medium-priced cars from the United States and high-end and specialty cars from Japan.

see JAPAN, page 34

JAPAN'S AMERICAN FUTURE

JAPAN

FROM PAGE 32

Mitsubishi's ambitious four-year introduction pace of a new product every six months starts this fall with the Galant Sigma, a top-of-the-line sedan aimed at the Acura Legend.

The three-tiered sourcing also will give Mitsubishi the product diversity to position vehicles more directly against other imports.

Recchia's 1989 lineup looks like this:

- Galant Sigma aimed at the Acura Legend and Toyota Cressida.
- Galant (replacing Tredia) positioned against Honda Accord and Toyota Camry.
- A Cordia successor from Bloomington aimed at the Nissan 200-SX.
- Starion vs. Toyota Supra and Nissan 300-ZX.
- Mirage positioned against Toyota Corolla, Nissan Sentra and Mazda 323.
- Precis aimed at Hyundai Excel, Volkswagen Fox and Toyota Tercel EZ.

The Montero sports utility vehicle is due for a major change in 1990 or 1991. The Galant Sigma will be replaced in 1991 or 1992, which could coincide with the addition to the lineup of a new front-wheel-drive van, possibly called Delica.

Little 3 are different and will become more so

The three smaller Japanese automotive importers also are the most diverse. Their plans for the 1990s are to become even more diverse.

American Isuzu Motors is well on its way to becoming a supermarket of Asian and European imports.

Suzuki of America Automotive Corp. will try to repeat its niche-conquering success of the Samurai.

Still untested in the U.S. market, Daihatsu America is just looking for a niche to fill. Its future is the most uncertain of any Japanese importer.

Expanded product lines are in the works for each of the three, and each has made optimistic sales forecasts and has predicted bright days ahead.

But executives at each of the three companies know the history of shakeouts in any industry favors the strong, the best-known and the long-rooted.

Managers are working vigorously to overcome their late arrival in the U.S. market, near invisibility among the car-buying public and products that compete in a saturated low-end segment that is most vulnerable to increased competition from low-wage countries.

Each is seeking a market position unique enough to withstand the shakeout traditionally associated with cyclical downturns, the next of which will occur in the late 1980s or early 1990s, according to many analysts.

But the analysts add: Do not write off any of these companies yet.

While conditions theoretically are ripe for consolidations or dropouts, no one is willing to single out Isuzu, Suzuki or Daihatsu as a victim.

Hanging over all three small Japanese companies is the Japanese government's quota on car exports to the United States. The quota system has stunted normal sales growth and dealer development for latecomers to the U.S. market.

Most industry observers expect the quota to remain at the current 2.3 million cars a year for the foreseeable future.

American Isuzu's long-term strategy is to get out of the commodity car business. But exactly where the company is going is still uncertain.

To continue selling only limited numbers of small cars like the I-Mark — a subcompact also sold as the Chevrolet Spectrum — was a losing game, said John E. Reilly, Isuzu senior vice president and general manager. Too many competitors with well-known names and well-established, independent dealer networks have similar products.

American Isuzu's quota is far too limited to permit the company to do as well with cars as it has done with trucks. With the stronger yen taking away low pricing as a competitive option for Japanese manufacturers, Isuzu was in the path of any future market downturn, Reilly said.

American Isuzu dealers needed more cars to sell, so Isuzu last winter went looking for non-affiliated companies overseas that would act as suppliers of Isuzu-branded cars, both entry-level and upscale.

But most established world-class automakers already had overseas partners or had intentions of marketing cars themselves in the United States. Isuzu changed its pitch by offering to sell cars with the manufacturer's own label through selected Isuzu dealers.

Deals for an upscale European import came very close with Alfa Romeo of Italy and Adam Opel AG, General Motors' West German subsidiary. But neither panned out.

The breakthrough came earlier this month when Isuzu and Bitter & Co., a West German coachbuilder, agreed that American Isuzu would be the worldwide distributor of the new Bitter, a performance and appearance upgrade of the Opel Omega priced between $35,000 and $43,000. Most of the projected 10,000 annual production will be sold here.

Isuzu still is negotiating with three other overseas manufacturers, including a maker of an entry-level car, Reilly said.

Those talks will ultimately determine the course of American Isuzu. Reilly originally pictured Isuzu of the 1990s as a far more upscale line, featuring "cars from $9,000 to $40,000," with a new, second franchise of entry-level cars.

Now, he believes the Isuzu nameplate will go on any low-end car while upscale vehicles, such as the Bitter, probably will carry only their own badge and have a separate advertising effort.

Isuzu's strength has been in small trucks, and trucks will continue to be emphasized, Reilly said.

Suzuki of America is looking for rapid growth in the United States. Its main weapon is a retail-oriented philosophy as unconventional as the Samurai, a mini sport-utility vehicle that is marketed to women as a sporty convertible.

Suzuki projects a sales rate of 300,000 annually by 1991.

It had sales of 47,732 in 1986, its first full calendar year in the United States, and it expects to sell all 76,000 the parent company can supply for 1988.

Additional 1989 models are due from a new Canadian plant shared by Suzuki and General Motors. Suzuki would appear to be a smashing success for a late entrant.

But Suzuki's position is more precarious than that of most Japanese importers, acknowledged Doug Mazza, general manager. Tight quota limitations have prevented Suzuki of America from importing any cars, although parent Suzuki Motors supplies GM (which owns 5.3 percent of Suzuki) with Chevrolet Sprints.

Suzuki of America has an ambitious new product plan starting with the opening of the factory in Ingersoll, Ontario. The plant will supply a 1989-model sport-utility vehicle that will be shared with Chevrolet. It will be slightly larger than the Samurai. The plant also will supply Suzuki of America's first car, a new-generation minicar (Chevy Sprint).

For 1990, the Ingersoll plant will send Suzuki of America its first exclusive car, a slightly larger car than the Sprint, followed by a 1991 exclusive small sports car aimed at the slot the Mazda RX-7 held until it moved upscale. Suzuki of America expects to get about 17.5 percent of the Ingersoll plant's production, about 35,000 a year.

But Suzuki of America's plan is based on correctly projecting where the import market is going so that Suzuki can hit the niches between big-volume cars. Even relatively minor shifts in the makeup of the import market could be magnified for niche marketers like Suzuki.

Suzuki of America will stick to "small, high-performance, unique vehicles that fill niches where nobody else is," President Toshiyuki Arai has said.

Because of its late entry into the United States, Suzuki adopted a different approach to marketing from the start, stressing retailing techniques to its dealers as a way of maximizing their profits.

Suzuki has trained its dealers to think of themselves as retailers, not vehicle wholesalers, making the sale of high-profit vehicle accessories part of the purchase consideration rather than an afterthought, Mazza said.

Daihatsu faces a host of problems: A strong yen that pushes up prices of Japanese goods here; being the ninth Japanese automaker to enter the U.S. market; entry into a segment that is already crowded with cars from low-wage countries; no name awareness; and a first-year quota of only 11,498 cars.

But the hardest part for Sota "John" Fukunaka, president and chief executive officer, and C.R. "Dick" Brown, vice president and chief operating officer, may be the failure of a deal between Bombardier of Montreal and Daihatsu Motor Co. on joint production in Canada in 1990.

That, and the parent company's continuing inability to close a deal for Daihatsu production in Poland, leaves Daihatsu America without a certain future source of vehicles from outside Japan.

It changes the roles of Fukunaka and Brown from strategists to tacticians, trying to start U.S. operations and build a dealer network for cars coming this fall without a clear idea where the company is headed.

"We have a scenario for every potential situation," said Brown. He said he is not worried about losing the Bombardier deal, which makes Daihatsu the only Japanese automaker without a U.S. or Canadian assembly plant or a commitment to build one.

"Right now, we just have to worry about getting started," he said.

Forty-one dealers have been selected — 39 in California, one in Nevada and one in Hawaii. Virtually all are duals. Because of limited supply, Daihatsu is not imposing any restrictions on dealers other than parts and training.

Daihatsu dealers do not have to invest in separate parts and service facilities or separate showrooms. That will come as supply is increased, Brown said. Daihatsu dealers do not have to contribute advertising funds to a central pool. There are no dealer ad associations.

The introduction of the Charade has been pushed back to Dec. 1, which means the initial 11,498 cars have to last only four months until the start of the 1988 quota year.

Daihatsu America apparently will market three trim levels of the Charade: base, middle and a sport version with turbocharger, air conditioning, stereo cassette tape player and alloy wheels.

Next spring, Daihatsu is expected to add the Rocky, a small sports utility vehicle larger than the Suzuki Samurai but smaller than the Toyota 4Runner or Chevy S-10 Blazer.

Quality pitch losing its punch; makers to promote brand image

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

In the future, Japanese automakers will place more emphasis on promoting their brand images and less emphasis on promoting product quality.

Consumer awareness of the quality improvements among virtually all domestic and import manufacturers will make quality a non-issue, according to researchers, analysts and importers.

At the same time, a public perception that any Japanese automotive product is superior is slipping. With the artificially short supply of Japanese cars pretty much a thing of the past, Japanese manufacturers are competing with each other more intensely and need greater brand distinction.

"Image and value are going to be the keys in marketing in the late 1980s and the 1990s rather than quality, price and distribution," said John Hammond, of J.D. Power and Associates.

"The discriminator between cars in the future will be image because the quality will be very close," agreed George Peterson, of the AutoPacific Group. "Today, the discriminator is quality because of the obvious difference between A and B. By the 1990s, though, customer satisfaction and the image that a car portrays for its owner will be the decisive factor."

The biggest factor behind the need for a more defined image is an abundant supply of imported Japanese cars.

"Only Honda will actually sell its quota this year, although nearly everybody will take the shipments," said Ron Glantz, of Montgomery Securities.

Nissan Motor Corp. in U.S.A., for example, began spending more on car advertising than on truck advertising earlier this year. That was a reversal of a pattern begun when the Japanese government's export quotas practically guaranteed Nissan car sales while the light-truck market was extremely competitive, said C.P. "Chuck" King, Nissan senior vice president — sales and marketing.

"We no longer have the luxury of spending 70 to 75 percent of our advertising and 95 percent of our promotion budget on trucks," King said. A desire for a more distinctive image was partially behind Nissan's April decision to drop William Esty, its advertsing agency of 10 years.

Peterson commended Nissan's effort. "Nissan and Toyota have nearly identical images in the United States," he said. "Those are good images, but it blurs the ability to create a distinction."

Mitsubishi Motor Sales of America will stress value, starting with the 1988 model year, said Richard Recchia, executive vice president and chief operating officer.

Honda's Acura Division is attempting to build an image comparable to that of European luxury cars in technology, performance and refinement, but a better value.

Similar tasks await Nissan and Toyota. Nissan last week announced plans for formation of its second dealer channel network to handle more upscale models. Toyota is expected to reveal similar plans by the end of the year.

Robots let China's workers breathe easier

By Zhou Shuchun

BEIJING, People's Republic of China — For six years, Dong Hongwei, a 26-year-old paint-sprayer of Jeeps at the Beijing Automobile Factory here, donned a gas mask and gray canvas overalls to do his job.

In spite of the protection, he feared he would breathe too much benzene from the suffocating paint-spray, which could harm his white blood cells.

He could not rid himself of that fear until late last year when a robot took the spray gun from his hand.

Dong, who now supervises the robot, is one of the first Chinese workers to be freed from a health-hazardous working environment. The paint-spraying robot in Dong's workplace signifies China's initial success in developing robotics technology.

Designed and made by the Beijing Research Institute of Automation, the PJ-1 robot consists mainly of a flexible arm of five joints connected to a control box. It has sprayed over 10,000 Jeeps after nine months in service at the Sino-U.S. joint venture, the Beijing Jeep Company Ltd.

While Dong's robot worked tirelessly on a production line, similar ones were on display at the recent China Robot '87 show here, alongside robots from West Germany, Great Britain, Japan and the United States.

China is not usually regarded as a robot producer, although robotics research began in the country a decade ago. The first Chinese robot, introduced in 1982 at the Shenyang Institute of Automation, was similar to an American model.

In the ensuing five years, nearly 100 "machine-persons" — the Chinese name for robots — have emerged at dozens of Chinese research centers.

One of them is an intelligent robot developed by Qinghua University in Beijing. A third-generation model, the robot plans its own action-sequence for a given task. Using computer vision, for example, it can find short-cuts to turn a pile of blocks into a house without human aid.

The Qinghua robot, considered to be up to world-level robotic development of the late 1970s and early 1980s, impressed foreign visitors as "much more advanced than we expected Chinese robots to be."

Most Chinese robots belong to the first-generation teaching-and-playback type. They are designed to replace people in dangerous, harmful or inaccessible working conditions.

"China has no robot industry to speak of yet. Our efforts have thus far remained within the domain of research," said Jiang Xinsong, general manager of the Research and Development Center of Robotics under the China Academy of Sciences.

So far, robot research projects have given little thought to functional aspects, and few projects have resulted in practical uses.

Also, the poor industrial level of Chinese factories prevents robot use. Experts say that under present typical workshop conditions in China, where mechanical precision standards fall short of minimum requirements, robots will not function.

China has hopes to grasp the basic robotics technologies and develop five families of robots for spot- and arc-welding, paint-spraying, cargo-carrying and underwater operations. ■

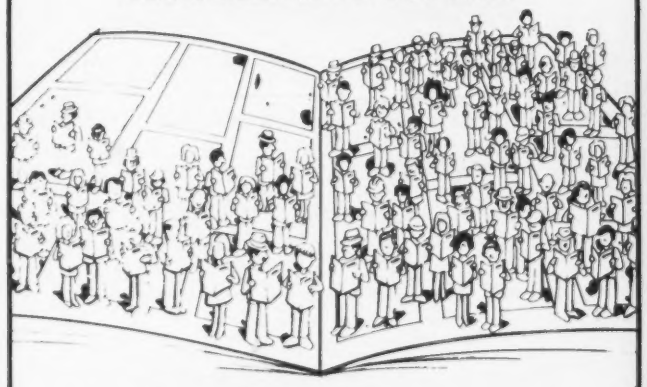
Why rely on word-of mouth when you can build a crowd in the back of Automotive News?



Auction advertising builds strong auction traffic.

You can get spirited bidding, higher prices and more cars sold when you advertise your auction in Automotive News Auction Directory.

Because the Automotive News Auction Directory is read by exactly the people who attend your auctions. In fact, Automotive News goes to virtually every dealership in the country. Why settle for a small local attendance when you get a big regional — or even national — attendance with an ad in the Auction Directory.

The Automotive News Auction Directory is a tried-and-proven tool for auctions looking to build attendance or promote a special function. That's what keeps our auction advertisers coming back for more. More results. When you want results . . .

Call Marie Hingst at (313) 446-6065 and you'll do business in the back of Automotive News.

Ford profits exceed combined total of U.S. rivals

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Ford Motor Co. continued its success story as it surpassed the combined earnings of General Motors, Chrysler Corp. and American Motors in the second quarter and first half of this year.

Ford's record earnings, as well as a profit by AMC, helped pull the domestic industry above last year's levels. GM and Chrysler reported lower earnings for the period.

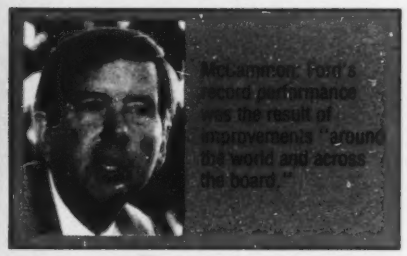
The domestic makers earned $2.9 billion in the April-June quarter, up 16 percent from the $2.5 billion earned in the year-ago quarter. Quarterly sales for the domestics totaled $53.8 billion, up 5 percent from $51.4 billion in the year-earlier quarter.

For the first six months of the year, the four domestic companies earned $5.6 billion, up 17 percent from $4.8 billion last year. Sales for the six months hit a record $105.2 billion, up 6 percent from $99.7 billion in the first half of 1986.

Ford Motor Co.

Ford earned $1.5 billion in the second quarter, its highest quarterly profit in history and an increase of 36 percent from the $1.1 billion earned in the second quarter of 1986. Ford sales for the quarter hit $19.5 billion, a record for any quarter in Ford history and up 13 percent from $17.3 billion in the same quarter a year ago. Worldwide factory unit sales were 1,694,000, up only 1 percent.

For the first six months of this year, Ford earned a record $3.0 billion, just shy of the $3.3 billion the company earned in all of 1986 and more than GM earned in all of 1986. It was also a 67-percent increase from the $1.8 billion that Ford earned in the first six months of 1986.



McCammon: Ford's record performance was the result of improvements "around the world and across the board."

Sales for the first six months totaled $37.6 billion, up 17 percent from $32.1 billion in the first half of 1986.

On a per-share basis, Ford earned $5.81 in the quarter compared with $4.02 a share in the year-ago quarter. For the six-month period, earnings were $11.54 a share, compared with $6.72 last year.

David McCammon, vice president — controller, said that Ford's record performance was the result of improvements "around the world and across the board."

He said sales and market share around the world improved from the previous year. At the same time, costs were lower this year.

In the United States, Ford's retail car and truck sales rose 5 percent for the quarter despite an industry decline of more than 5 percent compared to a year ago. Ford increased its second-quarter share of the U.S. car market by 2.6 percentage points to 20.6 percent. Ford's truck share rose 1.2 percentage points from the second quarter of 1986 to 29.5 percent this year. As for U.S. profits, Ford made $982 million in the quarter, up 24 percent from a year ago.

Outside of the United States, Ford earned $516 million, a quarterly record. That compares with overseas profits of $286 million in the second quarter of 1986, or an increase of 80 percent.

Ford posted record sales in Europe of 769,300 cars in the first half of the year. That was 57,400 units higher than in the comparable period a year ago. Ford estimated its share of the European automotive market at 12.0 percent, or 0.3 of a point better than last year's first half.

European truck sales hit their highest level since 1980 at 94,900 units, 22,300 higher than last year's first half. Ford estimated its truck share at 10.7 percent, or 0.7 of a point better than the same period last year.

Second-quarter profits were reduced by $52 million, or 20 cents per share, to reflect costs associated with the anticipated restructuring of the company's involvement in South African Motor Corp.

Ford Motor Credit contributed to Ford's continuing success with a record second-quarter profit of $192 million, a 22-percent increase from the $157 million earned in the second quarter of 1986.

The finance subsidiary's first-half earnings were a record $388.4 million, up 33 percent from $292.8 million in the year-ago first half. The company ended the period with assets of $46.6 billion, up 26 percent from year-ago levels.

The company financed 571,000 vehicles in the United States during the second quarter, compared with 508,000 a year ago, mainly because of incentives. That represented 42 percent of all Fords sold during the period.

General Motors

GM earnings for the quarter amounted to $980.3 million, down 4 percent from $1.0 billion earned in the 1986 second quarter. Sales for the quarter dropped 3 percent to $26.7 billion from $27.6 billion in the year-ago quarter. Worldwide factory sales totaled 2,058,000, a 14-percent decline from year-ago sales.

For the first six months, GM's earnings amounted to $1.9 billion, down 14 percent from $2.2 billion a year ago. Sales for the first half totaled $52.8 billion, down 3 percent from $54.4 billion in the 1986 first half.

On a per-share basis, GM earnings amounted to $2.80, compared with $2.92 for the year-ago quarter. For the first six months, GM earned $5.42 per share compared with $6.44 a share one year ago.

GM said it is ahead of targets for meeting the salaried employment reduction. The automaker said that since the middle of 1986, it has reduced its salaried rolls by 23,000, more than half way to its target of 40,000 by the end of 1988.

General Motors Acceptance Corp. had record earnings of $411.8 million for the second quarter, up 38 percent from $298.6 million in the same period a year earlier.

For the first six months, GMAC's earnings totaled $893.2 million, up 55 percent from $575.2 million in the year-ago first half.

GMAC said the higher income reflected higher average earning assets and lower borrowing costs.

GMAC financed 645,000 new cars and trucks in the United States and 148,000 vehicles in other countries, or about 24 percent of the vehicles it sold worldwide during the quarter.

GM's computer services subsidiary, Electronic Data Systems, had a profit of $72.0 million, or 59 cents a share, for the quarter, up 15 percent from $62.7 million (51 cents a share) a year ago.

EDS quarterly revenues increased 1 percent to $1.1 billion. Sales to GM and its subsidiaries amounted to $337.2 million of the total, up 30 percent from $259.1 million in the year-ago quarter.

For the first six months, EDS earned $136.6 million, up 15 percent from $118.3 million. Revenues for the six-month period rose 2 percent to $2.1 billion. Sales to GM and its subsidiaries accounted for $1.4 billion, down 7 percent from $1.5 billion.

Earnings for GM Hughes Electronics, GM's subsidiary that includes Hughes Aircraft and Delco Electronics, totaled $140.8 million, or 89 cents a share, up 6 percent from $133.0 million (85 cents a share).

Its sales totaled $2.6 billion, down 5 percent from $2.8 billion a year ago. Sales to GM and its affiliates totaled $807.8 million, down 7 percent from year-ago levels.

For the six month, GM Hughes Electronics earned $278.8 million, or $1.77 a share, up 12 percent from $249.2 million ($1.62 a share). Sales totaled $5.3 billion, even with 1986's first half. Sales to GM amounted to $1.7 billion, up 1 percent from year-ago levels.

Chrysler Corp.

Chrysler Corp. reported lower earnings on record sales for the second quarter.

Second-quarter profits totaled $428.7 million, down 12 percent from the $488.2 million earned in the year-ago second quarter. Sales set a record for the quarter of $6.4 billion, up 13 percent from $5.7 billion in the year-ago quarter. The previous sales record was $6.0 billion, set in the first quarter of this year.

Worldwide factory sales for the quarter were 558,122 units, down 3 percent from 572,869 in the 1986 second quarter.

Iacocca: Despite the earnings drop, it was "another solid performance for Chrysler."

For the first six months of the year, Chrysler earned $698.4 million, down 17 percent from $845.1 million earned in the same period a year ago. Sales hit a six-month record of $12.4 billion, up 8 percent from the $11.5 billion in sales in the first six months of 1986.

Worldwide factory sales for the six-month period were 1,128,124 units, down 1 percent from 1,139,640 units a year ago.

On a per-share basis, Chrysler earned $2 in the second quarter, compared with $2.19 a year ago adjusted for a three-for-two stock split in March. For the six months, earnings amounted to $3.24 a share, down from $3.76 a share.

Chrysler's 1986 earnings included a gain of $131.9 million from the sale of its stake in Peugeot.

Despite the earnings drop, Chrysler Chairman Lee Iacocca said it was "another solid performance for Chrysler," particularly in light of lower vehicle sales. He said the performance was due to Chrysler's program, started more than two years ago, to place greater emphasis on trucks and move upscale in its car lines.

Chrysler Financial Corp. reported record net earnings of $60 million for the second quarter, up 30 percent from the previous second quarter high of $46 million in the year-ago second quarter.

For the first six months of the year, Chrysler Financial earned a record $122 million, up 42 percent from the previous record of $86 million set in the first six months of 1986.

Chrysler Credit, the automotive finance subsidiary of Chrysler Financial, financed 212,902 new and used vehicles during the second quarter. It financed 30 percent of the new vehicles sold by Chrysler dealers.

Chrysler Financial's earnings increase was attributed to significant growth in the company's earnings assets and to an increase in finance volume by the automotive and diversified financing units.

American Motors

AMC, likely reporting its last quarterly earnings as an independent car company, announced its third consecutive quarterly profit after huge losses during the past seven years.

AMC reported profits of $30.2 million for the second quarter. That compares with a net loss of $52.0 million in the second quarter a year ago.

It was AMC's best-ever second quarter. The only quarter in AMC history in which profits were higher was the first quarter of 1979 when AMC earnings totaled $32.0 million.

For the six months, AMC earned $53.7 million this year compared with a loss of $71.0 million in the first six months of 1986.

AMC earned 17 cents a share in the quarter compared with a 50-cent-per-share loss in the second quarter of 1986. For the six months, AMC earned 29 cents a share compared with a loss of 70 cents a share for the first six months a year ago.

Earnings included tax credits of $17.0 million for the quarter and $32.6 million for the half.

Chrysler Chairman Lee Iacocca said "a big chunk" of AMC profits came from building 40,000 Chrysler Fifth Avenue cars at AMC's Kenosha, Wis., assembly plant. Chrysler has contracted with AMC to build its cars. It plans to acquire AMC next month.

AMC's sales for the quarter hit a record $1.2 billion, up 47 percent from $800.8 million in the year-ago period. For the first six months of the year, AMC sales amounted to $2.3 billion, up 35 percent from $1.7 billion in the first six months of 1986.

AMC's car and Jeep sales improved in every segment and region except automobiles sold outside of North America. Total worldwide sales of AMC cars and Jeeps amounted to 87,595 units for the quarter, up 19 percent from 73,363 in the year-ago quarter. For the six months, AMC sold 170,534 units worldwide, up 13 percent from 150,785 a year ago.

AMC President Joseph E. Cappy attributed the improvement in AMC's performance to strong worldwide Jeep sales, a richer product mix, improved operating margins, higher utilization of manufacturing capacity and continued improvement in manufacturing efficiency.

JWT agency keeps Ford account in U.S.; billing is $260 million

AMC holders approving buyout by wide margin

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Early returns from proxy votes by American Motors shareholders show overwhelming support for Chrysler Corp.'s proposed buyout of AMC.

An AMC spokesman said holders of 55 percent of the common shares had voted by proxy as of July 23, and 98 percent of those shares were voted in favor of the takeover. Among the votes in favor of the takeover were the 58,663,420 common shares owned by Renault. Renault holds 41.42 percent of all AMC common shares.

AMC said holders of 12 percent of the non-Renault common shares have voted by proxy, and 93 percent of those shares have been voted in support of the takeover.

Holders of less than 10 percent of AMC preferred shares have cast their ballots; their approval rate was 95 percent last week.

AMC will hold a stockholders' meeting Aug. 5 at its Southfield, Mich. headquarters. The results of the vote on the Chrysler takeover will be announced at that meeting.

The merger must be approved by holders of two-thirds of AMC's outstanding common and preferred shares, voting separately. It is also subject to the approval of a majority of the non-Renault common shares voted on the matter. The French government has already approved the proposal, however the U.S. and Canadian governments have yet to give their OK.

The AMC spokesman declined to give the exact number of AMC shareholders who have cast their ballots or how many shares are represented by those who have already voted.

Chrysler to select AMC exec bonuses

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — American Motors executives will not receive bonuses before Chrysler Corp.'s planned takeover of AMC this summer.

AMC directors approved a recommendation by AMC and Chrysler management on July 17 that allows Chrysler to determine AMC executive bonuses for the 1987 calendar year after the buyout.

AMC management will give Chrysler information on the performance of specific employees and their contribution to AMC's financial results during the 1987 calendar year. Based on the AMC bonus plan outlined in its recent proxy statement, AMC has set aside approximately $1.25 million for executive bonuses.

At last count, AMC had 125 employees on its bonus roll. AMC has not paid a bonus to its employees since 1986, based on 1979 financial results.

Chrysler set has set aside $102 million for bonuses, based on 1986 financial results. The bonuses will be paid to eligible Chrysler executives this year. AMC executives will not receive bonuses for 1986 because the company did not make a profit last year.

The Chrysler board normally awards bonuses to executives based on quality, productivity, market-share and marketing goals met during the year, according to a spokesman.

Despite general optimism toward the buyout, there was a report last week that a group of New York investors plans to file a protest with the Securities and Exchange Commission about Chrysler's purchase of AMC.

However, no such complaint had been registered with the commission by late last week. Chrysler and AMC officials said they do not know the name of the group or the nature of the alleged complaint.

Chrysler Corp. Chairman Lee A. Iacocca told reporters at a press conference last week that Chrysler's $4.50-per-share bid for AMC is "a very, very good deal" and indicated that Chrysler was not going to raise the price before the stockholders' meeting.

"That's the deal we offered and they're going to vote on it," he said.

Automotive analyst Ronald Glantz, of Montgomery Securities, San Francisco, said the complaint would be of little consequence to AMC or Chrysler at this point.

Iacocca predicted that Chrysler would close the deal "shortly after" the AMC stockholders' meeting on Aug. 5. However, the exact date will depend on the Federal Trade Commission, which must approve the deal.

Renault officials in France said last week that they supplied additional information to the Federal Trade Commission on July 17. The FTC had asked AMC, Chrysler and Renault for additional data in connection with the commission's review of the proposed takeover.

Automotive News Staff Reporter Mary Connelly in Detroit and Staff Correspondent Jean-Jacques Renaux in Belgium contributed to this report.

DEALERS

FROM PAGE 3

FTC further charged that those hours were enforced by threats of physical harm and property damage to non-complying dealers. There was a conspiracy of smaller scope to restrict newspaper advertising of vehicles, FTC said.

The dealers contended that they restricted their hours of operation in response to demands by their sales staffs.

Some charges were subsequently dropped, as were some respondent-dealerships and respondent-individuals. The trial began July 10, 1986, and ended late in October.

Timony's initial decision is limited to the Detroit Auto Dealers Association, 96 dealerships, 81 persons and 18 other associations, including line groups.

It may be appealed — initial decisions almost always are — or reviewed independently by the five FTC commissioners. If neither happens, the initial decision automatically becomes effective within 30 days.

There was a lengthy trial and voluminous documentation in the case, but there was never any question of the existence of an agreement among dealers and their trade associations.

The issue was whether it breached the antitrust laws. That, in turn, was determined by motivation and who benefited.

Among Timony's findings of fact was the lack of evidence that Saturday closings caused higher retail prices in the tri-county metropolitan Detroit area or that dealers in that area benefited by an increase in gross margins as a percentage of sales.

Timony noted the anomaly of the promotion of competition by the antitrust laws and the dimunition of competition through collective bargaining. The basic reason for exempting labor unions from the antitrust laws was that worker benefits may outweigh the lessening of competition.

The major case on which Timony rested his weighing of evidence was the 1965 U.S. Supreme Court decision in Amalgamated Meat Cutters v. Jewel Tea. He found the Jewel Tea case "remarkably similar" to the FTC-Detroit dealer case.

Both involved hours of operation and disagreements among retailers. Both involved union and worker demands.

Timony said in his initial decision, "The only material distinction from this case is that the food retailers in Chicago formally negotiated the hours reduction with the union, whereas the car dealers in Detroit, with the advice of their associations, gave in to the demands of their employees and unions to avoid formal multi-employer bargaining."

Timony noted that concerted activity is exempt from antitrust concerns if motivation came from labor concerns rather than business concerns and if the former is more direct than the latter.

From that point of view, Timony said, evidence in the Detroit case showed "the give and take of a struggle between labor and management." The weight of the evidence showed "substantial employee involvement" in operating hours, and the concerted action by dealers and their trade groups was impelled by that involvement, he said.

Timony concluded, "The evidence is clear that the impact of the combination here is greater on labor concerns than on competitive concerns. The uniform shortening of hours of operation directly responded to the concerns of the sales employees."

Compared with that direct impact, Timony called the effect on competition "remote." Car prices did not rise. Although consumers' shopping convenience was affected, that was "too indirect to outweigh the labor effects of uniform shorter hours of operation."

Timony's conclusion leading to the tentative dismissal of the case was, "Any successful labor demand for uniformity will affect competition. So long as the competitive effects flow naturally from the elimination of competition over wages, hours and working conditions, the goals of the antitrust laws must be subordinated to the goals of the labor laws.

"Here, the competitive effects flow directly from the elimination of competition over hours to meet the employees' demands."

Detroit is unique — it is the only metropolitan area in the United States in which almost all new-car dealerships are closed on Saturdays. According to Timony, in the communities "immediately surrounding the Detroit area," 88 out of 107 dealerships are open on Saturdays. The issue is of interest to dealerships in general because unionization is relatively rare except in urban areas.

At the Detroit Auto Dealers Association's press conference, Fischer declared that "Detroit is truly the auto capital of the country" and Timony's decision "confirms that Detroit is still the best place for a consumer to buy a car."

He also repeated the dealer association's claim that on average, a car costs at least $100 less in the Detroit market than it does elsewhere because dealers pass on cost savings resulting from the limitation on showroom hours.

Testimony in the trial showed that in the Cincinnati area, all 135 new-car dealerships are open on Saturdays. In the St. Louis area, 159 out of 161 are open Saturdays. All 364 Chicago-area new-car dealerships are open on Saturdays, as are all 168 new-car dealerships in the Cleveland area.

Unlike the Detroit area, however, dealerships in all except Cleveland — where Timony said collusion may exist — are open three or more weekday nights.

CONGRESS

FROM PAGE 1

ingly internationalized marketplace."

Greenwald praised the Japanese for their industriousness, attacked them for their "one-way trade policies" and warned that the United States had better be prepared to pay the price to compete with them and any other world economic power.

"Getting competitive is going to be expensive," Greenwald said. "It's going to take one helluva lot of sacrifice."

Greenwald outlined a seven-point bill of rights — "an amendment to the constitution of timid, laissez-faire management — be it in government or in industry."

He said government must cut the federal budget deficit, adopt a tough trade policy, create a national energy program, protect companies from corporate raiders, improve the educational system and reform the tax laws — again — to put them in line with those of our trading partners, Greenwald said.

Beyond all that, American industry must do its part by making a "proclamation of productivity, a declaration of quality and a treatise on customer service."

The odds of winning are stacked against the United States, especially when the competition is fighting the economic war like jungle-trained guerillas, Greenwald said.

"We can change those odds — but only if 'we the people' get mad enough and demand change," he said. "The key is having the will . . . and having the guts to face up to the costs — both the costs for our country and, ultimately, the costs for ourselves."

Mercer, who presented the suppliers' perspective on the industry, said the weakened dollar has only temporarily boosted U.S. competitiveness. He said long-term survival depends on companies becoming competitive in the world market.

"Right now, many American companies are riding the coattails of the devalued dollar," Mercer said. "But the dollar has only put their fatal illness into remission.

"When the dollar strengthens, as it will, world-class competitiveness is essential — not only against imports, but against emerging new suppliers in our own backyards."

Despite that backdrop, Mercer said there is a great opportunity for companies willing to make big investments and take risks.

Three corporate commitments must be made, he said: world-class product quality, global manufacturing efficiency and product innovation.

Mercer said suppliers must seek growth in the mature U.S. market through increased market share rather than an increase in total unit growth.

"In the rest of the world, suppliers must position themselves with manufacturing plants," he said. "They must supply emerging new contenders in developing nations that will export, as well as transplanted auto facilities — whether they are U.S. companies going overseas or foreign manufacturers coming to our shores."

Car-sales slump ends; up 5%

By Karen Detkowski
SPECIAL CORRESPONDENT

Domestic new-car sales climbed 5.48 percent in mid-July, ending a slump that began eight selling periods ago in mid-April.

July 11-20 sales rose to 187,410 from last year's 177,679. Domestic sales since Jan. 1 totaled 3,996,599, down 11.33 percent from 4,507,132 in the year-ago period.

The mid-July daily selling rate was 23,426, up from 22,210 in 1986. There were eight selling days in the period both years. The July 1-10 rate was 20,738, based on sales of 165,910.

General Motors' sales were up 0.51 percent, marking GM's first increase since the last 10-day period in March. Volkswagen of America reported its first increase since the early-March period. VW sales of U.S.-built cars in mid-July rose 66.56 percent over last year's.

Also showing increases were Ford Motor Co., up 16.72 percent; and Honda, up 47.61 percent. Nissan sold 2,984 cars this year, compared to 20 in 1986 when stocks were depleted because its plant was down. American Motors' sales fell 55.00 percent; Chrysler Motors dropped 15.13 percent. Toyota reported sales of 874 U.S.-built cars; it began selling U.S.-made cars in September.

PRODUCTION

Auto production sags

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

With several plants idle for model changeover, last week's domestic auto production dipped from the prior week's output and the year-ago week's total.

Automakers targeted 73,890 cars last week, 19.51 percent below the previous week's 91,804 and 35.00 percent below the year-ago week's 113,681.

Last week's scheduled production was shared as follows: Ford Motor Co., 44.08 percent; General Motors, 31.70 percent; Honda of America Manufacturing Inc., 9.12 percent; Chrysler Motors, 6.50 percent; New United Motor Manufacturing Inc., 5.08 percent; and Nissan Motor Manufacturing Co. U.S.A., 3.52 percent.

As reported earlier, Volkswagen of America's Westmoreland, Pa., plant is idle for model changeover until Sept. 14.

Output at GM's Oklahoma City plant will be reduced by seven units per hour on Aug. 24. The plant assembles Century and Celebrity models.

GM's Framingham, Mass., plant, which is scheduled to begin 1988 output Sept. 14, will cut production of the Celebrity and Cutlass Ciera by four units per hour, and the Buick City plant in Flint, Mich., will reduce output of the LeSabre to one shift on Sept. 17.

GM closed three plants today for model changeover. They are: Pontiac, Mich., until Aug. 10; Bowling Green, Ky., until Aug. 17; and Van Nuys, Calif., until Aug. 17.

The following GM plants will resume output next week after being down for model changeover: Wentzville, Mo., on Aug. 3; Leeds, Mo., on Aug. 3; Lansing (No. 1), Mich., on Aug. 4; Buick City in Flint, Mich., on Aug. 4; and Lansing (No. 2), on Aug. 6.

Ford ended production of its rear-wheel-drive Continental at the Wixom, Mich., plant last week. The 1988 front-wheel-drive Continental is scheduled for introduction this fall.

Truck output steady at 67,778

Last week's scheduled domestic truck production of 67,778 was slightly below (0.34 percent) the previous week's 68,008 and 2.97 percent below the year-ago week's 69,855.

General Motors will permanently close its St. Louis plant Aug. 7; production of Crew Cab and extended-chassis models will be transferred to Janesville, Wis. Some employees will be transferred to GM's Wentzville, Mo., car plant.

GM last week added a second shift and 1,100 workers to its truck operations in Fort Wayne, Ind., where Chevrolet and GMC full-size pickups are built.

The Janesville plant will end production of Chevrolet and GMC R/V light-duty pickups on July 30. The plant will resume production Sept. 8, building Crew Cab and extended chassis models.

Car assembly climbs in Canada

Last week's targeted Canadian auto production of 8,237 was 79.03 percent more than the prior week's 4,601 but fell 19.71 percent from the year-ago week's 10,259.

Output during the last two weeks was affected by downtime at several assembly plants.

Estimated truck output of 7,516 units last week was 21.31 percent below the prior week's 9,551 but was 74.51 percent more than the year-ago week's 4,307.

Ford's Oakville, Ontario, plant will be idle until Sept. 21 for model changeover.

Chrysler Motors' Pillette Road plant in Windsor, Ontario, resumed operations today. The plant had been down since July 6.

Curbs asked on New York auto brokers

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — State Attorney General Robert Abrams has called on the state legislature to enact laws regulating the activities of auto brokers in New York state. He wants brokers to hold customer deposits in an escrow account.

The move followed an announcement that his office had obtained a court order freezing the assets of a New York City auto broker charged with bilking approximately 100 consumers nationwide of more than $700,000 since 1985.

Abrams obtained a court order earlier this month against Automobile Buyers Network. The firm is temporarily barred from advertising as an auto broker in this state and from soliciting advance payments from consumers pending results of an Aug. 17 hearing.

Repeated attempts to contact Automobile Buyers Network were unsuccessful; no one answered the telephone.

The attorney general is seeking restitution for consumers and is seeking to bar the company from doing business in New York unless it posts a $750,000 security bond.

The issue was brought to the attorney general's attention by the Better Business Bureau, which had been attempting to resolve many of the complaints.

Abrams proposed legislation that "would protect consumers' deposits by mandating that they be placed into interest-bearing escrow accounts. Brokers would only have access to the deposit after the car is delivered or for repayment to consumers." In the Automobile Buyers Network case, Abrams said the company falsely offered foreign cars, including Mercedes-Benz, Porsche, Saab, Audi and Volvo, at savings of up to $22,000 in various national publications.

According to Abrams, the company required an advance deposit of at least 20 percent of the agreed purchase price plus a 3.3 percent fee. It assured consumers they would receive prompt refunds if cars proved to be unavailable.

Abrams said some customers paid in full for vehicles that they were assured were available for immediate delivery. He said the cars were not delivered, and customers did not receive refunds.

Output of Lynx to end Aug. 14

DETROIT — After seven years of production, Ford Motor Co. will build its last Mercury Lynx model Aug. 14.

The Lynx has been replaced by the Mexican-built Tracer. Though the Tracer went on sale in March, limited quantities of the Lynx are being produced through the end of the model year.

Lynx output ended earlier this month at Ford's Wayne, Mich., plant and will end Aug. 14 in Edison, N.J., a spokesman said. Capacity is being taken up by the Ford Escort, a sister to the Lynx. The two lines were introduced in 1980.

Through the first half of the year, Escort was the nation's top-selling domestic car. In 1986, it outsold the Lynx by a margin of more than 6 to 1 — 402,181 to 65,497.

WORLD CONGRESS: *Industry examines responses to escalating competition*

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

Focusing on the flood of new nameplates, additional new worldwide capacity and innovations in retailing, the 12th Annual Automotive News World Congress provided more than 500 industry executives with a glimpse of a rapidly changing and intensely competitive future.

"By 1991 there will be 15 automakers here (in the United States) compared with four 10 years ago," Robert E. Mercer, chairman of Goodyear Tire & Rubber Co., told the opening-night session, and he noted that "right along with them are coming new aggressive transplant suppliers."

He added, "Timid U.S. manufacturers with average cost and quality will become marginal competitors alongside more aggressive and efficient American and foreign companies."

Meeting that competition head-on with product alone, however, is not enough, Gerald Greenwald, Chrysler Motors chairman, said in his keynote address.

"We in American industry have to do our part," he said, adding that a "competitive manifesto" should be adopted. "This manifesto should include a proclamation of productivity, a declaration of quality and a treatise on customer service," Greenwald said.

The dizzying array of product already in the marketplace means that "the customer is king," said J. David Power III, president of J.D. Power and Associates, a California marketing and consulting firm. Power added that he expects incentives to remain a fact of life for automakers for the forseeable future.

Edward Hagenlocker, vice president and general manager of Ford's truck operations, estimated that "by the mid-1990s, we expect car and truck manufacturers to have capacity in place for more than 20 million vehicle sales in the United States alone.

see CONGRESS, page 47

Robert Sinclair of Saab, left, told a World Congress audience: "My job, the way I see it, isn't work at all. It's fun. It helps, of course, if your company's making money." Sinclair showed off a 900 convertible at the World Congress.

Toyota seen eyeing huge Brazil stake

By Rik Turner
STAFF CORRESPONDENT

SAO PAULO, Brazil — Usually reliable reports say Toyota is contemplating a massive $2.4 billion investment in car and component plants in Brazil — its first of any significance in the country and its most aggressive outside Japan.

Despite official denials by Toyota in Japan and Brazil, the reports should not be taken lightly. A strong production position in Brazil, which is not likely to face U.S. trade restrictions for many years because of the billions it owes U.S. lenders, could provide Toyota a protected beachhead for U.S. access if further restrictions are imposed on Japanese imports.

In addition, in the face of rising yen values, a Brazilian base could provide Toyota a lower-cost source of small, low-priced cars for sale in North America.

Brazil has been trying to attract Japanese investment for many years. President Jose Sarney recently announced that financially attractive export production zones will be established around the country as part of a broad plan to reduce Brazil's $112 billion foreign debt.

In Japan, Prime Minister Yasuhiro Nakasone has promised to make $30 billion a year available for International Monetary Fund-approved projects in the developing world. The move follows criticism from other world leaders of the buildup of Japan's foreign trade surplus, now estimated at $93 billion.

Luiz Carlos Bresser Pereira, Brazil's finance minister, said in Washington that his country is preparing to make an agreement with the IMF on debt repayment. That would open the door for Brazil to receive $1 billion annually of the promised $30 billion overseas investment by Japan.

GM banks on new car for rebound drive

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — The Oct. 1 debut of the Buick Regal marks the start of the largest new-car program in General Motors history — and one of the most critical.

The Regal is the first of a new family of midsized cars, code-named GM10, to be introduced. The Oldsmobile and Pontiac versions will follow the Regal in late winter, and Chevrolet's version debuts in the 1989 model year.

The GM10 cars are aimed at the heart of GM's market. GM's midsized cars accounted for 1.6 million units, or 35 percent of GM sales in calendar 1986. Nonetheless, GM has seen its entries in that segment lose sales to the imports and to Ford's popular Taurus and Sable.

GMers involved with the program, dealers and industry watchers know GM10 is critical to turning the automaker around and regaining lost market share.

As one dealer said, "If these cars flop, we're in serious trouble."

see GM10, page 8

GM 10	Replaces	Assembly Plants	Announcement Dates
Buick Regal	Initially G-body Regal; eventually A-body Century	Oshawa, Ontario #2	Oct. 1, 1987
Oldsmobile Cutlass Supreme	Initially G-body Cutlass Supreme; eventually A-body Cutlass Ciera	Fairfax, Kan.	March 1988
Pontiac Grand Prix	Initially G-body Grand Prix; eventually A-body 6000	Doraville, Ga.	April 1, 1988

Plastic pickup box slated for 1990s

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

The Big 3 auto manufacturers are developing pickup trucks that will make use of plastic composite materials in the pickup box and possibly in other areas.

Ford Motor Co. is developing a next-generation pickup truck, scheduled for the 1993-1994 time frame, which may have a composite plastic pickup bed and plastic cab components. Also, the company plans to begin fleet-testing composite pickup beds on existing platforms over the next few years.

Chrysler Motors is looking to develop a composite pickup bed for a low-volume model in the 1992-1993 time frame.

General Motors is also experimenting with composite pickup truck beds.

James K. Reinker, manager of advanced automotive development for DiversiTech General, a major manufacturer of composite plastic components, said composites promise to reduce the number of parts in the pickup bed, eliminate the need for anti-corrosion measures and reduce weight.

"A steel pickup box has a tremendous number of parts that are welded together," he said. "A molded composite box would reduce those parts."

A Ford engineer, who asked not to be identified, added, "It's safe to say that we will see a fair number of demonstration pieces, in (increasingly larger fleet tests) over the next few years.

"The first production application will be, logically, in a 10,000- to 20,000-volume model."

The Ford engineer said a next generation pickup

UAW seeks to close loopholes in job protection

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

The UAW hopes to devise an innovative job security system aimed at closing loopholes in programs that local union leaders say have allowed thousands of jobs to be lost to non-UAW plants and foreign countries.

In negotiations that began last week, the UAW is seeking to beef up or replace General Motors' Job Opportunity Bank.

The union has not made public the demands it presented to Ford Motor Co. last Thursday. But at the National Ford Council meeting in June, the union said that Ford's Protected Employee Program is also targeted for revision.

The new job security system would guarantee the jobs of the approximately 490,000 workers at GM and Ford. The labor contracts at those companies expire Sept. 14.

GM and Ford have not rejected the union's demand out of hand. On the contrary, Peter Pestillo, Ford vice president — employee and external affairs, said, "The union's goal of job security has never been a conflict to us. . . . It's very clearly our intention to provide work."

GM Vice President Alfred Warren, the company's top negotiator, said he understood the union's principle, but he added, "Whatever we do cannot make us less competitive than we are."

Analysts have said that Ford — which cut 100,000 workers from its rolls in the downturn from 1979 to 1982 — will find it easier to guarantee jobs than GM. GM said it wants to jettison production of 10 percent of its components that are not competitive.

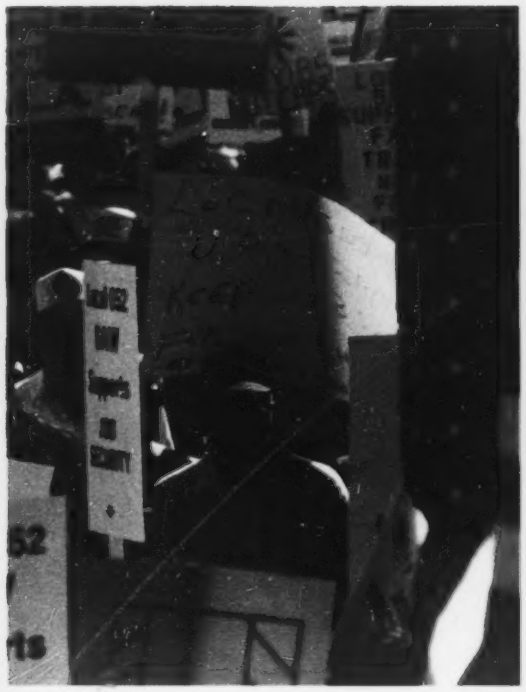
Both the job bank and employee protection programs were designed to shield workers laid off for certain specific reasons by giving them training or finding other work for them in the corporation.

The circumstances under which employees are covered include work reduction due to new technology, outsourcing, productivity improvements and transfer or consolidation of operations. But employees are not entitled to move into the programs if their work is cut because of volume reduction.

"That's one of the major problems we're trying to solve," said Donald Ephlin, UAW vice president and head of the union's GM department.

Jobs lost through attrition also do not create slots in the job bank.

GLENN TRIEST



GLENN TRIEST

Clockwise, from top: Ceremonial handshake between Ford Vice President Peter Pestillo, right, and UAW President Owen Bieber begins the contract talks at Ford; UAW demonstrators march around GM Building as talks get underway; GM Vice President Alfred Waren, left, and Bieber begin the talks at GM. The UAW is seeking to beef up or replace GM's job bank. The union has not made public the demands presented to Ford.

And one unforeseen wrinkle in the job bank, negotiated in 1984, was the split of the Canadian Auto Workers from the UAW in 1985. The transfer of work to GM plants in Canada does not create slots, although it is now considered outsourcing by the UAW, since it can result in UAW members losing their jobs.

A Ford spokesman declined to provide details on the protected employee bank at this stage of the negotiations. But according to Steve Wyatt, treasurer of Local 600, which represents Ford's Rouge complex, U.S. workers who lose their jobs when work is transferred to Ford plants in Canada qualify for that bank providing the Canadian plants don't get additional jobs as a result of the transfer of work.

With the increasingly attractive production costs in Canada, the UAW foresees more outsourcing of its work there.

"The labor cost differential is probably greater between us and Windsor today than between us and Hiroshima (Japan)," Ephlin said. The labor cost advantage in Canada is generally put at $8 an hour (U.S.).

"It's the biggest loophole" in the UAW's safety net for workers, said Clayton Moll, president of Local 668, representing GM foundries in Saginaw, Mich.

Moll said hundreds of jobs in Saginaw have been lost to a GM foundry in St. Catharines, Ontario, and to other locations without placing an equal number of Saginaw workers in the job bank.

The Canadian foundry "has two main advantages" over GM foundries in Saginaw and in Ohio, Illinois and Indiana, Moll said.

"The first is national health insurance and the second is a 30 percent differential" in the exchange rate.

Moll said the Saginaw foundries will continue to lose work to Mexico and countries like Brazil without corresponding job bank slots being created because GM has "manipulated language" in the agreement. He said GM treats the transfer of Saginaw work to foreign countries as "volume reduction."

John Coale, president of Local 662 at GM's Delco Remy Division in Anderson, Ind., said that the complicated language of the job bank makes it difficult for locals to "identify the qualifying event" enabling laid-off workers to move into the program.

Coupled with loopholes in the job bank, Moll said another way the company erodes U.S. jobs is through Paragraph 96 in the national agreement. That provision prohibits workers from following their jobs if they are moved outside the United States, he said.

About 880 workers are currently laid off from the Saginaw foundries due to those loopholes, Moll said. Those workers do not qualify for the JOB bank, he said. Moll said he demonstrated in front of the GM building last week in total support of the international in its program to keep GM from eliminating jobs.

Both Ford and GM have plans to continue outsourcing in the United States and abroad. They say it is essential to remain competitive. Pestillo said, for example, that Ford can't build a small car like the Festiva profitably in the United States.

But he said that foreign sourcing and the union's goals are not in conflict. He said he believes that the UAW's priority is securing work for its members.

Foreign sourcing will not be a burning issue, "if we can keep our plants filled," Pestillo said.

But UAW president Owen Bieber blasted the automakers at press conferences last week, claiming their expanded activities with foreign producers showed irresponsibility to American workers and their communities.

Reatta plant eyes bigger role

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

LANSING, Mich. — The Buick Reatta plant plans to attract more of General Motors' low-volume specialty-vehicle business with the anticipated success of the Buick two-seater.

The Lansing plant, now called the Reatta Craft Centre, was previously the Oldsmobile Axle and Forge Plant. It is now in the pilot production stage of the Reatta, a two-seat luxury car that will not be shared by other divisions.

J. Robert Thompson, Reatta program manager and plant manager, said he hopes the Reatta is just the beginning. The plant's long-term goal is to become GM's assembly plant for specialty vehicles with volumes of 15,000 to 40,000 units annually.

The Lansing plant also will serve as GM's incubation center for new ideas in management style, labor-management relationships, manufacturing processes and supplier relationships.

Reatta production begins in the fall, and the car goes on sale after the first of the year. The car is expected to be priced between $25,000 and $30,000, and sales volume is expected to be 25,000 to 30,000 units annually.

The plant's low volume allows GM to try new ideas with minimum risk, Thompson said.

Already some new ideas are being tried out.

UAW Local 1618, which represents 650 workers, has formally adopted the team concept of production. Teams of five to 15 people learn each team member's job and rotate through those jobs. The employees have more authority and more responsibility than in traditional plants.

The manufacturing process at the Lansing center is totally different from the manufacturing process in GM's high-volume assembly plants. There is no traditional assembly line. The car in its various stages of build-up is carried on an automated guided vehicle.

An overhead monorail drops the body onto the chassis, carried on an automated guided vehicle. The vehicle then travels to a series of work stations, called the Premier Center by workers.

GM plans overtime for Corsica/Beretta

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — General Motors plans to schedule overtime at the two Chevrolet Corsica/Beretta assembly plants. The plants are in Wilmington, Del., and Linden, N.J.

Robert Burger, Chevrolet general manager, said the overtime will be implemented "sometime soon." He said it is needed because of increased demand for the new cars.

"We're selling them at a rate of 1,600 a day and we're only building 1,400 a day now," Burger said. Even though demand is rising, Burger said incentives will continue, primarily because of similar programs offered by the competition.

"You need to keep things on even terms," he said. "You're not going to get away from incentives until you can get everyone in the industry away from them."

Burger was here to participate in an annual meeting of the Future Farmers of America sponsored by Chevrolet.

RV shipments climb 5% for May; 5-month total shows 3% advance

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

RV wholesale shipments totaled 37,800 in May, a 5.3 percent increase over May 1986.

The year-to-date total reached 180,400 units, up 3.7 percent over the figure for the first five months of 1986. Seasonally adjusted, they represented an annual sales rate of 408,000, according to the Recreation Vehicle Industry Association.

Van conversion shipments totaling 18,400 in May were up 4 percent from like 1986.

Their year-to-date total of 81,500 was 3.3 percent below last year's, according to RVIA, but it is progressively moving toward last year's level.

Van chassis shipped with seat-delete options by the major Detroit manufacturers to van customizers continue to portend strong future shipments of customized vans to dealers.

In May, Chevrolet, GMC, Ford and Dodge shipped 20,700 vans with the seat-delete option to customizers, a 31 percent increase over the 15,800 shipped in May 1986.

In the first five months of this year, the four major domestic makers shipped 92,600 vans with seat deletes to customizers, a 26.3 percent gain over 73,300 in the 1986 period.

Of the May seat-delete van shipments, 3,700 were compact vans, a 19.4 percent gain over 3,100 shipped in 1986. Year-to-date, domestic automakers shipped 16,700 compact vans without seats to customizers, a 21.9 percent gain over 13,700 last year.

In May, domestic auto firms shipped 17,000 full-sized vans without seats to customizers, a 33.9 percent gain over 12,700 last year. The five-month total was 75,900 such vans, a 27.3 percent gain over last year.

In May, manufacturers wholesaled 12,600 towable RVs, up 9.6 percent from last year.

The industry also wholesaled 6,800 motor homes in May, up 6.6 percent from a year ago.

Warranties puzzle dealers, buyers

Salespeople want van converters to provide more information

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Van-conversion customers most commonly ask what a unit costs, its towing capability and the kind of conversion company that produced the unit — its history, reputation and warranties.

Those are among the findings of a 10-city dealership survey by Burson-Marsteller for the Recreation Vehicle Industry Association.

The survey of dealership-only personnel was part of the agency's efforts to help promote sales of van conversions (see related story).

The survey found that warranties have caused some confusion among dealers and consumers.

For instance, Ford gives a warranty on the engine, chassis and other mechanicals. The interior luxuries, such as TV, bed and carpeting, are typically warranted by the converter.

Van converters, however, often aren't very clear about what's under contract and what's not. To complicate matters, some dealers buy van conversions through out-of-state conversion houses. Therefore, they say, they sometimes must commission a local factory to guarantee the interiors.

Most salespeople feel that improving the information about warranties would enhance customer relations and purchases.

The survey also found that minivans are cutting into the van-conversion market. Sales representatives have noticed the floor traffic moving in that direction. Since minivans cost less and are perceived as upscale, trendy vehicles, consumers are finding them attractive.

On the flip side, many dealers recognize that increased traffic flow is an opportunity to sell more van conversions. The minivan is bringing into the dealership consumers who never would have considered van conversions before.

Converted vans need greater visibility in view of the strong consumer interest generated by minivans, the survey concluded.

Dealership sales personnel said that most van-conversion buyers know they want such a unit before visiting the dealership.

Already having the model in mind, customers then choose option packages.

It's rare that a customer can be switched to a different vehicle, and in those instances he usually has been in the market for a station wagon or regular van.

Basically, dealership salespeople don't put a lot of effort into selling converted vans, the survey found.

They regard them as "pre-sold" items and take a "back-seat" approach to selling them.

The survey found that salespeople regarded van-conversion customers as people who were not impulse buyers, but knew that they wanted a specially equipped vehicle and had been thinking about their purchase for a long time. Buyers were described as concerned with engineering and quality of construction, brand-loyal and willing to spend money for extras.

When salespeople did make points about a van conversion, it was usually about the unit's smooth ride, its driving ease and spaciousness and the reputation of the conversion house that produced it.

Dealerships almost always get information about the conversion units from the conversion companies, rather than from the van manufacturers.

Conversion houses provide dealerships with brochures, price indexes and option-package information. Additionally, converters' representatives frequently visit the car dealerships to conduct seminars on the features of the van and available floor plans.

One interesting sales technique was used by an auto dealership in Jacksonville, Fla.

Since the van converter is located near the dealership, one sales representative takes her potential customers to the factory to view the actual assembly. Customers are able to query the van converter's management about engineering and interiors.

Sales representatives generally feel they receive ample information from converters to sell the vehicles, the survey found. Aside from wanting warranties to spell out specifically what's covered on interior extras in the vehicle, the only time they feel they need additional information is when something new is introduced in the van-conversion market.

In terms of additional marketing tools, sales representatives said anything that would help "liven up" their sales presentation would be welcome.

Profile of van-conversion buyer loaded with sales tips

NEW YORK — Van conversions represent the fast-growing segment of the overall RV market and show the greatest future growth potential.

But to penetrate that sizable and profitable market, van conversion dealers should learn the demographics, psychographics and lifestyles of prospective buyers to improve their sales effectiveness, a Burson-Marsteller study concludes.

The study, prepared for a Recreation Vehicle Industry Association promotion (see related story), pointed out that baby-boomers are prime targets for van conversion sales.

The average age of a van conversion buyer is 35 to 45, according to the study. Some 27 percent of buyers are in that range.

Dealers are advised to go beyond their lots and promote van conversions, emphasizing the benefits of the lifestyle for young, active families.

Demographics show that 75 percent of van conversion owners are married, 85 percent are homeowners and they are more likely to take family vacations than most Americans.

In their marketing efforts, dealers are advised to point out that van conversions encourage family togetherness by enabling families to travel affordably.

The study revealed that most van conversion owners are employed full-time in white-collar positions, with incomes averaging between $25,000 and $49,999, exceeding the national average.

When selling to people in that income bracket, dealers are advised to emphasize the value and benefits of van conversions.

The study also found that a high percentage of van conversion owners live in the most populous areas of the United States and take shorter vacations.

Some 36 percent live in the East Central and West Central regions. About 19 percent live in the Southeast and 19 percent on the Pacific Coast.

Dealers are advised to know the vacation attractions and campsites in their areas and use them as selling points, emphasizing the convenience and excitement of short trips.

Typically, van conversion owners are goal-oriented achievers, the study found.

It is important to them to be in control of their destinations and the amount of money they spend on vacations.

Dealers are urged to point out that on van conversion vacations, expenses can be budgeted prior to the trip, giving travelers complete control of their journeys.

Typically, achievers enjoy camping and are outdoor- and sports-oriented. Therefore, dealers should emphasize how van conversions complement that lifestyle.

Van conversion buyers are also value-minded, conservative spenders. They shop about 5.6 dealers on average. They know brand names and features. And their primary purchasing concerns are price, quality and interior design.

Therefore, dealers should sell aggressively, addressing buyer concerns to outsell the competition, the study said.

Van conversion buyers want new, not used, vehicles.

They tend to upgrade within product categories, are trend-conscious, look for high-tech features and typically buy on impulse for small "extra" items.

Therefore, dealers should focus on new van sales, highlighting special features and pitching impulse items and extras, the study advised.

Van conversions also can be sold as third cars, the study pointed out.

More than half of van owners already have two cars, so their van conversion serves as a leisure and transportation vehicle.

Dealers can stress the value of vans for carpooling, moving large items and transporting the family on long trips.

They should also stress convenience.

Vans enable families to travel without a lot of planning, for example, with the flexibility to alter vacation plans in mid-course, if necessary.

The vans are always ready to go, eliminating the need to book hotel rooms or plane reservations or worry about anything more than routine maintenance.

RVIA adopts communications program to spur growth of van-conversion market

RESTON, Va. — The Recreation Vehicle Industry Association's public relations agency, Burson-Marsteller, is launching a marketing communications program to expand the van conversion market.

The 1987-1988 program was approved by RVIA's board of directors at its June meeting in Arlington, Va.

Differences between dealer networks for traditional RV products and van conversions convinced the RVIA's Custom Van Conversion Committee that it should seek a targeted communications approach to promote van sales.

The van conversion communication program consists of two phases: market research and media relations. Its target audience is not only the consumer, but also auto dealers who may need additional incentives or information to market the product effectively.

To develop a thorough understanding of the current environment for van conversions, including the complete marketing and selling process, Burson-Marsteller conducted a study of the van conversion market.

The results of the research will be made available to van converters, dealers and General Motors, Ford and Dodge. It includes a profile of van conversion buyers — why they buy them, how they use them and how their purchase may influence their purchase of a traditional RV product in the future.

The media portion of the van program is twofold.

First, Burson-Marsteller will use the same USA Today "advertorial" approach it used successfully to kick off the RVIA's industrywide market expansion program in 1986.

A van-specific advertorial combining editorial content and advertising to generate consumer interest in van conversions will appear in a late September issue of the newspaper, which has circulation of 4.5 million.

Publication will be timed to the introduction of 1988-model van conversions. Reprints will be available to dealers for use as consumer handouts.

Highlights of the advertorial will be repackaged for distribution to the estimated 24,000 persons who will attend the National Automobile Dealers Association convention next February.

Scott Chapman, president of Bivouac Industries in Vandalia, Mich., and chairman of RVIA's Custom Conversion Committee, said the committee is exploring a number of ways to achieve high visibility for van conversions at the NADA convention.

A Trade News Bureau is also being formed to stimulate an exchange of information among van conversion dealers.

U.S. ports spend millions to lure more imported vehicles

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Competition among the nation's leading ports for the lucrative auto import business is mounting as more and more imported cars pour into the U.S. market.

Auto analysts predict that domestic automakers will boost the number of captive imports from 160,000 in 1986 to 550,000 by 1990. More Third World nations will try to muscle into the U.S. market and, spurred by success, newcomers like Hyundai will continue to increase exports.

Census bureau figures and analysts say that some 4.2 million cars and light trucks were processed in 1986. Figures from port officials set the number at roughly 4.3 million, but that includes tractors and heavy trucks.

Port officials and industry analysts expect the number of imports to increase to about 4.5 million cars and light trucks by 1990, sparking wholesale expansion at nearly every U.S. port that has auto import business.

Private terminal owners, port authorities and state governments are spending millions to expand and improve their facilities for storing and processing vehicles.

And on the West Coast, port officials are gearing up for the next wave in the automobile import business — "knockdown auto parts" shipped in containers to the Japanese assembly plants in the Midwest.

On Sept. 25, the Philadelphia Port Corp. will open its $14 million auto import facility on 50 acres without a contract with a major automaker.

W. Henry Colson, director of the Maritime Division at the Jacksonville, Fla., port, said $6 million will be spent this year to add about 50 acres of paved and lighted parking for vehicle handling and storage.

Baltimore will begin construction of a $15 million port facility for Toyota and, in Virginia, plans are under way for a $4 million expansion of the Portsmouth Marine Terminal in an effort to attract the European automakers.

The Newark (N.J.) Port Authority will add 144 acres to the existing 220 acres devoted to auto imports by the fall of 1988 at a cost of $31 million.

Howard Schmidt, principal property representative for the port, said: "We are wondering if we will be able to keep pace with the autos coming into this country. There will be a lot more activity in the luxury lines, and the domestics will continue to increase their captive imports."

The Port Authority in Houston spent $1.8 million to pave and light an additional 10 acres this year, bringing the number of acres devoted to autos and trucks to 197. A $2.9 million project is under way at the Wilmington, Del., port to add 34 acres to the existing 52 acres used for vehicle storage.

In Richmond, Calif., port officials are spending about $14 million to nearly double vehicle import capacity to 124 acres from 66 acres. The port of Los Angeles plans to expand capacity by 47 acres.

A processor at the Narragansett Bay Ports in Providence, R.I., is spending $1 million to clear an additional 30 acres to add to the existing 40 acres for imports, and a processor at the Massachusetts Port Authority in Boston is adding another building and five acres at a cost of $1.4 million.

Although some port officials and auto industry analysts say part of the widespread expansion is due to an expected influx of new cars from Third World nations, others say the ports will be snatching accounts from one another.

"There are a lot of new makes entering the U.S. from Asia, Taiwan and even Yugoslavia," said Howard Gable, president of International Auto Processors at the port in Brunswick, Ga.

"Our business will come from other ports," he said. "We have the room, and some importers are looking for a new home. None of the ports will close their automobile terminals, but they will be forced to share their cars."

Brunswick is a relative newcomer to the imported-car scene. It began operations last fall, processing an estimated 6,000 cars. In 1987, Gable said, the company expects to process more than 56,000 vehicles.

Port officials have designated 500 acres for automobiles, with 63 acres currently being used. International Auto Processors said it will exercise its option on another 48 acres by the end of this year. A second dock costing $6.8 million is planned for the port and a third is on the drawing board.

U.S. AUTO PORTS

	1986 Imports	1987 Forecast

Philadelphia	4,600	N/A

Figures supplied by ports.

The company scored an impressive coup last October by winning BMW away from Jacksonville after the company said air pollution damaged its cars. Said a Jacksonville port official: "The number of cars didn't amount to much, but losing an account with the name recognition of BMW has hurt us."

Dave Hvzidos, general manager of Jacksonville's Blount Island facility, agreed that the competition for automobile import business is growing. "Not all ports can get involved — you need plenty of room," he said.

Jacksonville has the largest share of the import auto business with 120 acres for imports at its Tallyrand facility, 900 acres at its Blount Island facility and 55 acres leased to Toyota.

Automotive imports are a revenue plum. In 1986, about 565,000 cars and trucks entered the United States through Jacksonville, pumping $174 million into the local economy in wages and taxes. Ports charge wharfage fees and lease land to auto processors, who prep the vehicles and install accessories after they are unloaded from the ships.

The Jacksonville Port Authority is a quasi-public agency, so decisions on capital expenditures are made on a project-by-project basis. Said Hvzidos: "Many ports are funded through taxes while we are funded through the revenues that we generate. We can't make improvements based on speculation — we have to get the business first."

Most major East Coast ports predict a gain in car and truck imports this year over 1986. An exception is Newark, which expects business to remain roughly the same. Most West Coast ports also expect an increase (see accompanying table).

In Houston, port authorities say business is lagging behind last year's by approximately 5 percent. They expect a drop to 263,000 vehicles from 276,000 a year ago.

"The imports are still coming in," said a spokeswoman for the Narragansett Bay Ports. "If the importers can't sell them, they will have to to store them someplace. There is already an overage problem in New Jersey, and there have been some diversions of cars here to Providence."

Francois Elmaleh, general manager, Portland (Ore.) Automobile Import Division, said fewer cars will be coming through the East Coast ports.

"Some Japanese automakers are experimenting with land bridges from Portland to New York," he said.

Elmaleh said that cars will be transported by rail to East Coast ports for distribution. "Basically, I think the port game now is to swipe what you can from other ports," he said.

When Honda built its plant in Ohio, port officials feared import volume would decline. "Honda didn't reduce the volume at this port and Toyota is signing long-term leases, too," said Elmaleh.

David Healy, analyst with Drexel Burnham Lambert Inc., New York, said: "There are a lot of professional optimists pushing Third World cars around here. I hope they (port authorities) are not depending on projections that 200,000 cars made in Greece will be sold in the U.S."

Ted Sullivan, of Wharton Economics in Pennsylvania, said: "Imports are expected to increase and the source will be Third World products. We project 3.5 to 3.6 million import cars and 930,000 light trucks by 1990, and that could be a conservative estimate."

He indicated that the port expansions could be related to the auto parts boom as more and more Japanese automakers ship containers of knockdown auto parts for assembly at their U.S. plants.

Hvzidos agreed. "Knockdown auto parts is the next big wave for ports in the automobile business," he said, "but they will go to the West Coast and will be shipped by rail to assembly plants in the Midwest."

Michael M. Luckey, of Shearson Lehman Brothers, New York, said the ports could be playing a market-share game expanding and modernizing to curry business from other ports.

However, he predicted that import cars will be in the 3.5 million to 4 million range by the end of the decade even though Japanese imports are expected to show a retreat from the market. He said the decline in Japanese imports will be filled by vehicles from Korea, Taiwan, Brazil and other Third World nations.

Auctions operators plan collector sale

LANCASTER, Pa. — A merger agreement has been signed by Earl E. Cark, owner of the Dutch Wonderland Collector Auto Auction, and J. Omar Landis, owner and operator of Garden Spot Auto Auction, to produce an annual collector auto auction at Dutch Wonderland.

The new corporation will own and operate the annual Dutch Wonderland Collector Auto Auction under a new name — Dutchland Collector Auto Auction Inc.

The auto show and auction will be held Oct. 2-4 this year. More than 300 rare, classic and antique cars are expected for the auction.

TO AIR USED TO BE HUMAN

Now optimal PSI can be constantly maintained without human effort or error. And perfect tire pressure means superior handling, improved gas mileage and greater safety. Today it's all possible—with entire Control™ from techni Guidance, Inc.

POWER OVER PRESSURE
A computer-controlled, micromechanical system, entire Control continuously monitors pressure and makes needed adjustments—*inflation* or *deflation*—automatically. Hi and Lo settings can be pre-programmed for road conditions. Pressure changes as small as 1/10 PSI are detected within 1/3 second, and a dashboard digital display shows pressure levels on command.

SENSES SLOW LEAKS
Flats and blowouts generally result from slow leaks left unnoticed and unattended. Entire Control senses slow leaks, corrects for deflation and warns the driver of an on-going problem.

ROAD-TIRE INTERFACE
Entire Control is the missing link to integrate and enhance Anti-Lock Brake System (ABS), Traction Control Systems (TCS), and Active Suspension Systems. How? By working from the point of contact, where the tire and road meet. Properly inflated tires give you maximum road adhesion and reduce error due to uneven rolling radius. Minimum roll resistance results in improved mileage.

A PROFITABLE OPTION
Developed and manufactured in the U.S., entire Control adds new retail value to high performance cars. *The proprietary design is easily customized for any model, and there are no tooling or engineering costs.* Another advantage—entire Control is remote from the wheel, therefore the normal maintenance procedures remain the same.

PERFORMANCE ENHANCED
Optimal pressure for better handling, minimum tire wear, improved gas mileage, greater safety. With entire Control, there's nothing to forgive because the pressure will be perfect.

AUTOMOTIVE NEWS/RUTH SKURDA

Acura, Honda rank 1-2 in Power's CSI

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

American Honda Motor Co.'s Acura nameplate received the highest Customer Satisfaction Index rating of any high-volume car make sold in the United States for 1987. Honda, the sister car division and last year's winner, received the second-highest CSI score.

The annual survey, conducted by J.D. Power and Associates, a Westlake Village, Calif., research firm, said that Acura's "strong product quality and expert dealer servicing" contributed to the division's first-place finish in its inaugural year in the U.S. market.

Power's CSI survey, which was released last week at the Automotive News World Congress, is based on responses from 21,497 questionnaires received from owners of 1986 cars. Consumers were asked about their satisfaction with the car's quality and dealer servicing after one year of ownership.

The product-quality, or technical-service-factor, score and the dealer servicing, or people-service-factor, score were averaged to give the overall CSI score.

Asian car manufacturers as a group received the highest average CSI score with 119 points compared with an average score of 104 points for all manufacturers. The industry average rose: In the 1986 survey, the average was 100.

Asian carmakers matched their 1986 average score; however, last year's survey of Asian manufacturers included only Japanese makers. This year's survey included Korean car maker Hyundai.

European automakers averaged 102 points in the CSI survey, a four-point drop from 1986.

Asian car manufacturers as a group received the highest average CSI score with 119 points compared with an average score of 104 points for all manufacturers.

Domestic automakers averaged 98 points, a four-point rise from 1986.

Power said the domestic manufacturers' technical-service rating (product-quality rating) remained the same "despite some problem-plagued models." The biggest gain in points for the domestic manufacturers was in the people-service factor, Power said.

In fact, domestic manufacturers trailed Asian manufacturers by only four points in that area. The Asian group scored an average of 109 points in that area compared with 105 for the domestics.

However, European manufacturers as a group had the highest average score in the people-service ratings with 125 points.

Power noted that the 1987 industry average for the people-service factor was seven points higher than in 1986. The firm attributed the rise to the recent growth of manufacturer-sponsored, dealer-by-dealer CSI programs.

Power said technical problems with Honda's Accord model and problems with the Mercedes-Benz 190E-16 lowered overall CSI scores for those manufacturers. Honda dropped to second place overall from first place last year while Mercedes dropped to third from second place.

Cadillac received the highest rating of any domestic manufacturer in both the overall CSI score and the people-service factor. Cadillac jumped to seventh place from 14th place last year, mainly because of high marks in dealer servicing, Power said.

Mercury received the second highest overall CSI score for the domestics and was the only Ford Motor Co. nameplate to show an improvement from 1986. Customers rated dealer service very high; however, technical problems with Sable prevented Mercury from making an even stronger finish in this year's survey, Power said.

Among the Big 3 corporate scores, Chrysler Motors received the highest CSI overall and the highest score in the technical-service factor. Last year, Chrysler ranked third in overall CSI score among the domestic makers.

General Motors' overall CSI score was the second highest for the domestic makers. GM received the highest score in the people-service factor and the lowest score in the technical-service factor.

Ford's product-quality problems with its high-volume Taurus/Sable models hurt the company's overall CSI ratings in 1987, Power said. Ford held the No. 1 spot for the Big 3 last year. The company ranked third overall and second in both the people service and technical service factor areas this year.

Power calls today's buyers less loyal, more demanding

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Today's car buyer is less loyal, more demanding and more price conscious than in the past and is shopping in a marketplace that offers more models and brand names.

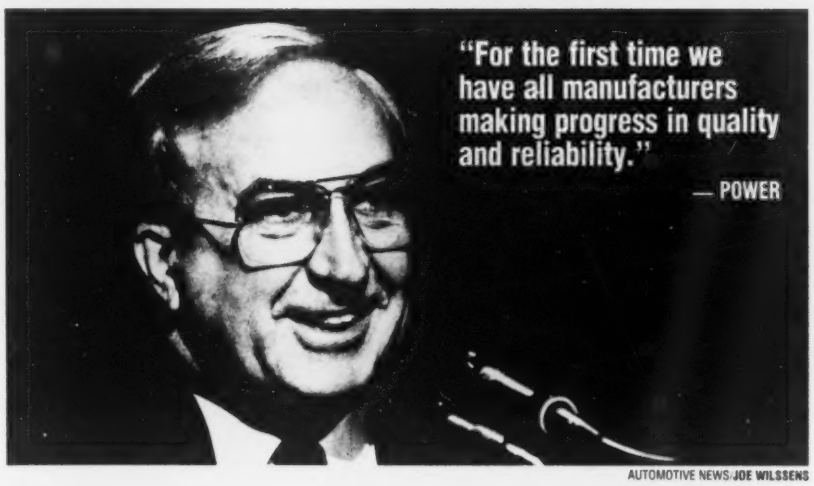
J. David Power III, president of J.D. Power and Associates, a consumer research firm in Westlake Village, Calif., said the buyer selects a car based on quality and reliability, not on image as in the past.

"For the first time ever, we have all manufacturers making progress in quality and reliability," Power told the Automotive News World Congress.

"Some are moving faster than others, but all moving in the right direction. They have to or they will be left at the gate."

Power said that Asian vehicle manufacturers continue to receive the highest customer satisfaction index ratings, with European and domestic manufacturers in second and third places, respectively.

On the retail side of the car industry, he said one of three buyers will purchase a vehicle from the same manufacturer that built his last car, and one of five will purchase a vehicle from the same dealer.



AUTOMOTIVE NEWS/JOE WILSSENS

About 85 percent of the consumers surveyed said they would purchase a vehicle again from the same salesperson, 83 percent said they would recommend the salesperson to someone else and 54 percent said they had already recommended the salesperson to someone else.

Power's findings are based on three consumer studies. Two polled buyers of 1987 models and one, the CSI study, interviewed buyers of 1986 models.

Other items from Power's consumer research:

- 79 percent of the 1987 new-car buyers surveyed shopped at one or more domestic-make dealerships; 48 percent shopped at an Asian-make dealership; and 19 percent shopped at a European-make dealership.
- 46 percent of 1987 new-car buyers who purchased a domestic car shopped at domestic-make showrooms exclusively.
- 15 percent of the 1987 buyers of Asian-made cars shopped only at Asian-maker dealerships, and 3 percent of buyers of European makes shopped exclusively at European-make stores.
- 40 percent of 1987 domestic-car buyers surveyed looked at only one brand while only 29 percent of buyers of Asian makes looked at one brand exclusively.
- 33 percent of 1987 new-car buyers reported that they visited a Chevrolet dealership, 31 percent visited a Ford dealership, 26 percent visited a Honda dealership, 26 percent visited a Toyota dealership and 22 percent visited an Oldsmobile dealership.

AUTOMOTIVE NEWS/JOE WILSSENS
Isenhour: The Japanese model of a two and a half to three-year development cycle is the goal domestic auto manufacturers should shoot for

CULTURE: *Japan's shorter product-development cycles linked to background and history of nation's manufacturers*

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

Shortening the product development cycle for new automobiles is as much a matter of changing the culture of a company as it is of changing its engineering practices.

Robert M. Isenhour, senior vice president — Automotive Sector Business Team of United Research Co., said that one reason Japanese auto manufacturers are able to develop automobiles faster than domestic manufacturers is because their culture encourages teamwork.

Compressing the development cycle enables automakers to bring products to the market faster, with lower development costs and higher revenues, he said at a news conference following his address to the Automotive News World Congress.

Japanese manufacturers can develop a new automobile in about three years, Isenhour said. Domestic manufacturers operate on a five- or six-year development cycle.

Of the current Japanese advantage, he said, "The Asian mentality as it relates to teamwork and cooperation is fundamentally different. The economic system as it relates to the lender, supplier and producer is radically different. And that is part of the reason they are more effective, at least in this arena of cycle time."

He added, "The good news is . . . if you look at the (consumer) complaints, in the J.D. Power survey for example, there is less of a gap in quality between the Asian, European and U.S. auto manufacturers."

Isenhour said the Japanese model of a two and a half to three-year development cycle is the goal domestic auto manufacturers should shoot for. He said that future cars will be assembled with fewer parts, but those parts will be more complex.

"Given the complexity of automobiles, it may not be possible to go any shorter (than two and a half to three years)," he said.

In his address to the World Congress, Isenhour said shortening the product development cycle, "demands a dramatic change in the structure and relationships within and between the automobile manufacturer and his supplier."

Suppliers, he said, will have to be partners with the auto manufacturers. And project teams that include marketing, management and design functions will have to be created to work with the auto manufacturer.

PRODUCTION

23 plants on sidelines

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Model-changeover downtime curtailed auto production again last week. Twenty-three plants were out of action; 18 of them at General Motors. Five of the GM plants return to work this week.

Targeted output of 71,568 was 3.46 percent below the previous week's 74,130 and 28.36 percent below the year-ago week's 99,895.

So far this year, 4,323,556 cars have been assembled, 10.79 percent below the 4,846,538 completed last year at this point.

Last week's scheduled output was shared as follows: Ford Motor Co., 44.85 percent; General Motors, 26.62 percent; Chrysler Motors, 10.34 percent; Honda of America Manufacturing Inc., 9.32 percent; New United Motor Manufacturing Inc., 5.24 percent; Nissan Motor Manufacturing Co., 3.63 percent.

Volkswagen of America's Westmoreland, Pa., plant is idle for model changeover until Sept. 14.

Ford's Kansas City, Mo., plant remains closed for model changeover.

The following GM plants remain down for model changeover: Janesville; Wis.; Flint, Mich.; Willow Run, Mich.; Tarrytown, N.Y.; Orion Township, Mich.; Lordstown, Ohio; Detroit-Hamtramck; Pontiac, Mich.; Bowling Green, Ky.; Van Nuys, Calif.; Framingham, Mass.; Doraville, Ga.; and Arlington, Texas.

Chrysler's Sterling Heights, Mich., and Jefferson Avenue, Detroit, plants resumed output today. Both plants were down for model changeover.

Chrysler's Belvidere, Ill., and St. Louis (No. 1) plants remain idle for model changeover.

Truck output 4% ahead of 1986

U.S. truckmakers scheduled production of 67,545 units last week, 2.33 percent more than the prior week's 66,009 and 1.05 percent more than the year-ago week's 66,846.

Year-to-date, 2,223,177 trucks have been assembled, 4.01 percent more than the 2,137,515 built last year at this point.

General Motors' Janesville, Wis., plant remains idle until Sept. 8 for model changeover.

Chrysler Motors' Warren, Mich., plant resumed output today. The plant had been down for two weeks for model changeover.

Navistar International's plant in Springfield, Ohio, resumed operations last week after a three-week vacation.

Auto production dips in Canada

Canadian auto production was scheduled at 8,396 units last week, 1.64 percent below the previous week's 8,536 and 23.89 percent below the year-ago week's 11,031.

So far this year, 469,545 cars have been assembled, 27.06 percent below the 643,711 completed last year at this time.

Targeted truck production of 8,513 units last week was more than double the previous week's 3,493 when several plants were idle for vacation and model changeover.

Last week's estimated output was 32.33 percent below the year-ago week's 12,580.

So far this year, 481,230 trucks have been built, 7.73 percent below the 521,540 completed last year at this point.

Ford Motor Co.'s Oakville, Ontario, truck plant resumed production last week. The plant had been down for vacation.

Navistar International's Chatham, Ontario, plant resumed output last week after a three-week vacation.

American Motors' Brampton, Ontario, plant resumed output last week. The plant had been idle for two weeks for model changeover.

GM cuts 50,000 for quarter

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors has trimmed almost 50,000 cars from its original third-quarter U.S. auto production forecast, bringing its anticipated total to 675,617.

That forecast is down 18.43 percent from last year's third-quarter output of 828,299.

When the original forecast was made in June, analysts had predicted that the bulk of the industrywide third-quarter cutbacks would come from GM's schedule.

However, Michael Luckey, analyst at Shearson Lehman Brothers, said he thinks the cut is not enough. If GM builds what it is currently projecting, it will end up with about an 85-day supply of cars by mid-September, he said.

Another 100,000 cars will have to be trimmed to achieve a more reasonable 75-day supply by mid-September, Luckey said.

The revised domestic-industry production schedule for the third quarter calls for 1,415,912 cars, down 13.36 percent from the 1,634,205 completed during last year's third quarter.

Ford Motor Co. scaled back its third-quarter schedule a mere 1,000 cars from its original estimate. It now expects to build 362,000 cars this quarter, 5.65 percent below the last year's 383,668.

Chrysler Motors' plans are unchanged from its original forecast. Its scheduled 220,000 cars would be a decrease of 18.39 percent from the year-ago quarter's 269,581.

Nissan Motor Manufacturing Co.'s third-quarter forecast also remains unchanged at 29,640, up dramatically from the 10,066 of the year-ago period. Nissan's Smyrna, Tenn., plant was down for model changeover for most of the quarter last year.

American Motors reports zero units for this quarter; it has ended production of its 1987 Alliance model, and all its other domestic cars are built in Canada.

Volkswagen of America continues to schedule 5,800, down 63.11 percent from the 15,721 built last year. Honda of America Manufacturing is sticking to its schedule of 74,855 units, up 15.95 percent from 64,559. And New United Motor Manufacturing Inc. continues to schedule 48,000 cars, down 3.65 percent from last year's 49,820.

UPDATED THIRD QUARTER AUTO PRODUCTION

GM, Ford try 1.9% in cleanup

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors' "Big One is Back," but it might not be big enough.

GM announced Wednesday what it called its "sweeping close-out" of 1987 cars. It offers interest rates as low as 1.9 percent and cash rebates of up to $2,000. The program covers most GM car lines and runs from Aug. 6 to Sept. 30, the last day of the 1987 model year.

But in some cases, the new rebates are less than those that just expired. The launch of the new GM incentives was confused by GM's announcement of the campaign days before the new incentives actually took effect.

On Friday, Ford Motor Co. followed with new incentives of its own. Financing as low as 1.9 percent or rebates of up to $700 are offered on most Ford cars.

Louis E. Lataif, vice president of Ford North American Sales Operations, said strong demand for Ford and Mercury cars and resulting low inventory levels made incentives unnecessary. However, Ford was offering the program, he said, to keep its dealers competitive and to maintain the company's momentum.

Chrysler marketing staff members were said to be in meetings on

Lee waves, Joe drives; AMC-Chrysler deal done

American Motors stockholders overwhelmingly approved the takeover of AMC by Chrysler Corp. last week. Officials wasted no time in sealing the deal. The new Jeep-Eagle dealer sign, above right, was unveiled even as AMC President Joseph Cappy drove Chrysler Chairman Lee Iacocca to a formal announcement about the takeover, above left, in a vintage World War II Jeep. The AMC stockholder approval came after Cappy, left, fielded some tough questions from shareholders who questioned the $4.50-per-share sale price.

Honda nears OK for Acura plant in U.S.

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

Copyright, 1987, Automotive News

TOKYO — Honda North America is within weeks of receiving rubber-stamp approval to build a second U.S. assembly plant in Ohio, increasing capacity to 700,000 cars a year by the early 1990s.

The new plant, which would cost about $500 million, would be dedicated to production of the hot-selling Acura, Honda's upscale brand, sources said.

Honda North America President Tetsuo Chino, acknowledging that a decision was imminent, said that the added U.S. production also would make Honda a major U.S. exporter. And Chino laid down the gauntlet to frequent Japanese critic Lee Iacocca in an interview here, saying, "Within four years, I'll beat Chrysler on both local content and exports."

Honda has forecast U.S. sales of more than 1 million cars annually by the early 1990s, but officials say brisk sales and optimistic forecasts for the late 1980s are forcing Honda to make a decision on additional North American production sooner than expected. The decision will come "within three months," Chino said.

He outlined Honda's three options:

- Honda could expand its Marysville, Ohio, assembly plant, where current capacity is 360,000.
- Honda could expand its Alliston, Ontario, facility, where capacity is 80,000.
- Honda could build a new facility near its Anna, Ohio, engine plant, about 50 miles from Marysville.

The Ontario option was considered unlikely, sources said, because of Honda's philosophical commitment to build cars in the country where it sells them. Current Canadian capacity about meets Honda's demand there.

Asked if Honda is leaning toward a new U.S. plant roughly the size of the Marysville facility and devoted to building Acura models, Chino would only say, "That is a very educated guess."

But informed sources said both Chino and his top manufacturing executive, Honda Manufacturing President Shoichiro Irimajiri, favor adding a separate assembly facility at the Marysville site, that the plan should be finally approved this fall, and that construction of the new plant would begin early next year. Production would begin two years later — in early 1990.

Honda wants to keep U.S. production of Acura and

Chrysler may import Brazilian Fiat mini

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Chrysler Motors and Fiat's Brazilian subsidiary are discussing a venture that would bring a version of the Brazilian-built Fiat Uno minicar to the United States.

The negotiations have not been finalized and Chrysler is considering other manufacturers for a joint venture.

However, Fiat appears to be the front-runner for the manufacturing and export joint venture.

If Chrysler and Fiat reach an accord, it will mark Fiat's return to the United States market after an absence of more than four years and Chrysler's entry into the mini-car business.

Fiat pulled out of the United States in early 1983, shortly after the introduction of the Uno in other markets.

Chrysler is discussing the potential manufacturing and export venture with Fiat Automoveis S.A. in Brazil. The Uno is a front-wheel-drive minicar that Fiat Automoveis manufactures in Betim.

A Chrysler spokesman confirmed that Chrysler has purchased four or five vehicles from Fiat in Brazil for evaluation. However, the spokesman said that the company routinely conducts such tests.

Asked about a possible joint venture,

The Brazilian-built Fiat Uno is essentially a replica of the model produced in Italy.

nounced plans for Fiat in Brazil." However, sources confirmed the negotiations and Fiat's front-runner status.

Fiat has an annual production capacity of approximately 270,000 units in Brazil. However, a Fiat spokesman said, "We could very quickly expand to 300,000 units a year."

Because the Brazilian domestic auto market is languishing, Fiat said 60,000 units could be available for export this year.

It is not clear how Chrysler would use [illegible]ducts in its distribution network.

Chrysler has used America versions of its aging subcompacts, Dodge Omni and Plymouth Horizon, at the bottom end of its product line, although its domestic competitors have introduced new-technology imported minicars, Chevrolet Sprint and Ford Festiva.

Chrysler explored importing a small car called the Oltcit from Romania, but that has now been ruled out.

Chrysler spent $200 million this summer to retool the former American Motors Kenosha, Wis., assembly plant

Brokerage firm moves new Toyotas at auctions

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

More than a thousand new Toyotas — many of them from Guam and Puerto Rico — are being sold at East Coast and Midwest auctions this summer by an overstocked Montgomery, Ala.-based leasing and brokerage firm.

Pat Ryan, president of Trans-America Leasing Inc., declined to say how many of the Toyotas are from Guam or Puerto Rico. The issue is a sensitive one because cars from those distributors are not counted under Japan's voluntary export quota of 2.3 million cars for the United States.

Ryan said his "judgment was bad" and that he will never again buy as many Toyotas on speculation.

Not that Toyota would sell him any more.

Ryan said Toyota is probably unhappy about his company selling new cars at auction, adding he will

Dealer applicants learn Saturn marketing plans

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors dealers and others who have asked for information on how to obtain a Saturn Corp. franchise will receive a packet of information from the GM subsidiary next week.

About 12,000 packets will be sent out Aug. 14 to dealers as well as state dealer associations.

The packet contains the background and philosophy of Saturn, marketing areas, the dealer selection process and a preliminary application.

As detailed earlier (Automotive News, June 1), Saturn will select a limited number of dealers for each territory. Dealers will be allowed to have multiple locations, including sites in shopping centers and office complexes.

By the end of the 1991 model year when the car is introduced, about 200 Saturn dealers will be operating in about 120 cities. As production and product offerings grow, the number could increase to 250 to 350.

"The true test of how successful Saturn is will be the repeat business we get."

Donald Hudler

The information packet explains that Saturn adopted the approach of limiting the number of dealers in a given area to allow a dealer to sell and service a large number of vehicles and to allow dealers to grow as Saturn grows.

The packet makes it clear that Saturn is looking for dealers of substantial financial means. Saturn also is looking for dealers with a proven track record of high customer satisfaction and strong sales and with the management skills and financial capability to develop one or more dealership facilities.

"The true test of how successful Saturn is will be the repeat business we get," said Donald Hudler, Saturn vice president of sales, service and marketing.

Hudler said for that reason, Saturn is looking for dealers who are willing to commit to the long-term partnership with Saturn and who demonstrate the ability to satisfy customers from the buying process and through the ownership of the Saturn car.

Dealers should have a minimum personal net worth of $1.3 million excluding their personal residence, and have personal liquidity (total current assets minus total current liabilities based on the formula given in the packet) of $325,000.

The packet said that women and minority dealers will be encouraged to seek a Saturn franchise so that Saturn has input from all segments of the car-buying population.

Those interested in the Saturn franchise must complete the two-page questionnaire and return it within two weeks.

One page of the questionnaire is devoted to the candidate's personal financial information. It also requires a listing of businesses in which the candidate holds an interest of 15 percent or more. The candidate also is required to list his top two choices of marketing areas.

Candidates will be notified within one month whether they pass the first hurdle.

For those who do, a follow-up questionnaire will be mailed. At the same time, Saturn will begin reviewing candidates on a market-by-market basis. The process may take up to 18 months.

The follow-up questionnaire must be returned to Saturn within one month of receipt. It will require a detailed explanation of experience, personal financial information and plans for capitalizing the proposed franchise.

Dealer candidates will be notified within two months if they are selected to continue in the process. If they are, they will be visited by a Saturn team. The team will spend a day observing the dealer's existing operations and meet with members of the dealer's organization.

The dealer will be notified within two months if he or she moves on to the next step. If so, the candidate will be invited to visit Saturn headquarters in Troy, Mich., for a day of orientation and discussion with Saturn team members and other Saturn dealers. At that point, Saturn and the dealer will decide whether to proceed.

The candidates will return to Saturn for a two-day briefing on Saturn's plans, information on the dealer's local market and development of a marketing area plan for the dealer candidate.

Each dealer may tailor sales and service facilities to his or her marketing area. The approach could result in a sales-only facility in a shopping mall, office complex or a stand-alone location as well as service-only facilities. The dealer must develop within a two-month period a marketing area plan. It must contain commitments for facility development and operation.

The dealer and Saturn must agree on the strategy for the marketing area. Then the dealer signs the franchise agreement.

Caddy's 1987 Allante

Chevy's 1988 Beretta

TURNABOUT: *Corsica/Beretta hot; Allante sales slow*

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — It's the classic story of the tortoise and the hare: Sales of the Cadillac Allante got off to a jack-rabbit start when the luxury two-seater was introduced in January. Now, sales appear to be slowing.

Meanwhile, Chevrolet Corsica and Beretta, introduced at the same time, started off at a turtle's pace. But Corsica and Beretta have now hit their stride. They have become the country's third-best sellers, and plants will soon be running overtime to meet demand.

Initially, every Allante that went to a dealer's showroom was sold virtually overnight. Now, Allante sales are slower than production.

Cadillac built 2,779 Allantes through Aug. 1. Retail sales for the period totaled 1,320 units, leaving about half unsold at the retail level. Cadillac has dealer orders for all of the 1987-model production.

In February and March, Cadillac dealers ran ads in Automotive News seeking to buy Allantes from other dealers. Some offered premium prices. Today, dealers say they are discounting the $54,700 sticker price by as much as $5,000.

Since there are so few Allantes in total number, Cadillac's 1,600 dealers aren't swamped with inventory. Some dealers reported having one or two; others were sold out. Cadillac pointed out that some of the cars are used as demonstrators or display models and others are in transit to dealers.

Cadillac's goal had been to sell 4,000 by the end of the 1987 model year but fewer than that will actually be produced.

At the opposite end of the price spectrum, Chevrolet Corsica and Beretta are finally doing what they were intended to do. For the second consecutive month, Corsica/Beretta was the third best selling nameplate in the industry, behind Ford Escort and Taurus. Chevrolet has predicted that Corsica/Beretta will be the top-selling line in 1988.

Sales total 104,358 for the calendar year, with 27,452 in July.

Chevrolet General Manager Robert Burger said recently that the cars are selling at a rate of 1,600 a day, exceeding production of 1,400 a day, so overtime is due.

Volvo-GM heavies dubbed White GMC

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

ANAHEIM, Calif. — White GMC is the official name for the heavy duty trucks Volvo GM Heavy Truck Corp. will begin to produce and distribute in the United States next January.

The new truck will also be distributed in Canada by Volvo GM Canada Heavy Truck Corp. under the White GMC brand.

Thage Berggren, president, revealed that the company will identify its products and dealerships with a new symbol — the stylized outline of a heavy truck whose grille features a diagonal slash.

The slash, he said, reinforces the relationship to AB Volvo of Sweden, one of its parent companies.

A joint venture of Volvo and General Motors, Volvo GM Heavy Truck combines the Class 8 truck business of GM's Truck and Bus Group and Volvo White Truck Corp., which will cease operations when the joint-venture firm starts.

Volvo Trucks marketed by Volvo GM Heavy Truck will carry only the Volvo name, Berggren said, since they are produced by Volvo Truck Corp., a subsidiary of AB Volvo.

Berggren said familiar names will be used for U.S.-built trucks where appropriate — Autocar, Integral Sleeper, Xpeditor and Brigadier, for example.

The annoucements were made here during a news conference at the opening of the International Trucking Show by Berggren and John D. Rock, board member of Volvo GM Heavy Truck. Rock is general manager of GMC Truck Division.

ITC to investigate foreign trade subzones

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — At the request of the House Ways and Means Committee, the International Trade Commission has opened an investigation into the impact of foreign trade subzones on U.S. industry.

The commission, which looked into the use of foreign trade zones in 1984, has been asked to update that investigation. For the first time, the commission is expected to expand the focus to include subzones.

The use of subzones has exploded since the late 1970s, when Volkswagen applied for and received the third subzone ever granted. Two previous subzone zones applications were granted in 1963 and 1970.

Since 1977, the number has grown to nearly 100, with auto-related subzones accounting for more than 40 of them (Automotive News, March 9).

Manufacturers use the subzone status for duty-free import of components used in manufacturing. A tariff is then paid based on the imported content of the finished product.

For cars, a tariff of 2.7 percent levied on import cars would be assessed against the percentage of imported components used in a vehicle produced at a subzone site. The tariff on individual components, such as engines, imported directly into the United States can be as high as 6 percent.

The commission must report its findings by Jan. 29. It is expected to look at safeguards in the system, including the effectiveness of customs procedures in detecting such abuses as evasion of quotas and circumvention of countervailing duties and antidumping orders.

The investigation will cover the economic impact of the subzone status on employment, tariff revenue, state economic development, U.S. investment levels and international trade.

FTC asked to order Ford to repair cars

WASHINGTON — The Center for Auto Safety has asked the Federal Trade Commission to order Ford Motor Co. to pay for any repairs to floor pans of more than 1.2 million 1979-83 Ford Mustangs and Mercury Capris.

The action followed NHTSA's referral to FTC after a two-year investigation that found a 50-percent failure rate.

The consumer group said FTC should require Ford to repair cars with split floor pans.

Fixing them (usually post-warranty) can cost $100 to $500.

Ford's own documents show special attention given to state police cars (California, Massachusetts, Arizona) where failure rates are higher.

NHTSA's docket showed 400 consumer complaints made to Ford and NHTSA. There were 11,347 warranty adjustments as of June 14, 1985.

The Center for Auto Safety sent FTC four Ford dealer service bulletins. It pointed out that selective treatment of customers is an unfair trade practice that violates the FTC Act.

July light-truck sales set record; domestic gain offsets import dip

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Light-duty truck sales in the United States continued at a record level in July, with domestic manufacturers gaining ground against importers.

July's light-duty total of 423,252 was up 5.6 percent over 400,885 a year ago.

Sales of major Japanese importers, including Toyota, Nissan and Mazda, were off, although smaller importers managed increases.

As a group, import sales totaled 77,764, off 23.2 percent from July last year.

Suzuki is still withholding its Samurai sales numbers. The 8,000 Samurai sales shown for July are an industry estimate.

All the domestic manufacturers had robust gains last month.

Chrysler had the greatest increase. Its total of 68,305 was up 47.9 percent from a year earlier.

Chrysler's minivan sales are driving the compact van market.

Voyager, for example, posted a 94.9-percent gain last month with sales of 16,402, while Caravan had an 84.7-percent gain with sales of 17,033 units.

Compact trucks generally are continuing to drive the light-truck market.

Ford Ranger sales of 29,942 were up 30.2 percent for the month, while its Bronco II sales of 12,935 were up 45.1 percent from a year earlier.

Ford also managed a sizable 22.8-percent increase on sales of 16,815 Aerostars in July.

Overall Ford light-truck sales of 123,806 were up 9.9 percent last month. The full-sized F-series pickups and Broncos posted declines.

Chevrolet similarly had booming compact-truck sales, though its full-sized pickup sales of 35,935 were also up slightly from 35,673 a year ago.

On the compact side, Chevrolet posted a 21.5-percent gain with sales of 15,329 Astro vans in July. Its compact S-10 pickup had a 56.9-percent gain with sales of 22,156 units, and its compact S-Blazer sales of 14,492 were up 15.1 percent from a year ago.

Chevrolet's light-truck total of 109,259 was up 11.9 percent over last year.

GMC barely edged out its year-ago total with sales of 27,605 light trucks, up from 27,022 in July 1986.

Like its competitors, GMC did well with its compact pickup, S-15, which had a 21.9-percent gain, and with the compact Safari van, up 17.0 percent.

Its full-sized vans and sport utility Jimmy, as well as its S-Jimmy and big pickups were off for the month, though.

Jeep managed a small gain with 16,513 sales last month, up from 16,069 a year ago. Jeep sales have increased steadily for a couple of years and appear to be nearing a plateau.

4x4 Yugo planned for 1990
Global Motors is planning to introduce this Yugo four-wheel-drive sport-utility vehicle around the 1990 model year. It is based on the Yugo GV car platform and will be priced near the Suzuki Samurai. The 4x4 will be built at the Zastava factory in Yugoslavia, where Yugo cars are assembled.

Study charts truck rise in family buying plans

NEW YORK — Ninety-nine percent of new compact trucks registered in the public sector are used for personal driving, while only about 20 percent are used exclusively for business.

The figures are part of the 1987 Buyers of Compact Trucks study from Newsweek's market research department.

At least half of those trucks are the principal household vehicle, and more than 50 percent are owned by first-time truck buyers, the study revealed.

The report is designed to provide a marketing analysis of the automotive growth market of the 1980s — compact pickups and compact sport-utility models, according to James Schwartz, Newsweek's market research manager.

The study includes data on 37 compact truck lines — 21 pickups and 16 sport-utility models.

More than twice as many 1987 pickups (68 percent) as sport-utility models (32 percent) were sold at the start of the model year in November and December 1986, the study found.

Sales of pickups were divided almost equally between domestic (52 percent) and import (48 percent) models, while sport-utility sales were controlled by domestic manufacturers, with 73 percent.

The median price of the sport-utility models was $15,800, significantly higher than the median price of $9,500 for pickups.

The demographic profile of the compact truck driver shows he is well-educated and frequently is in the professional/managerial job category (42 percent for pickups and 59 percent for sport-utility models).

Most respondents spent a median of nine weeks gathering information and two weeks selecting their vehicle.

They considered durability/reliability, quality of workmanship, price or deal offered, value for the money and ease of handling as the most important influences on their buying decision.

New buyers visited a median of 2.5 dealerships that carried the make of truck they eventually purchased.

Buyers anticipated keeping their new trucks an average of 5.5 years, and 19 percent of them planned to keep the vehicles 10 or more years.

Newsweek commissioned Maritz Marketing Research, of Toledo, Ohio, to conduct the study. From March 7 to April 6, 1987, more than 10,000 questionnaires were mailed to a nationally representative sample of early buyers of 1987-model compact trucks.

More than 4,300 buyers returned the questionnaire, a 44.5 percent response rate.

Freightliner sales at peak; production hike scheduled

PORTLAND, Ore. — Freightliner is operating its Class 8 truck business at a record level and plans to boost production.

The company's June retail sales of 2,127 were an any-month high, as was its 17.6-percent share of the June Class 8 market.

Six-month retail sales of 10,902 Class 8s were also a record.

The company has been steadily inching up in production and is boosting output to more than 100 units a day in August.

Peter E. Rupp, chairman and chief executive officer, said Class 8 retail sales began showing strength in March, causing Freightliner to raise its 1987 forecast for the industry to 129,000 sales from a previous projection of 120,000.

With the exception of May, the industry's new orders for Class 8s have been similarly strong in 1987.

The net order intake for Class 8 through June averaged 12,218 trucks per month, a 21.9 percent increase over an average of 10,020 units per month in 1986.

Freightliner's share of higher industry orders paralleled and, at times, surpassed the industry average increase, Rupp said.

He said that improved profit margins and financial restructuring moves among all segments of the U.S. trucking industry have generated new and additional capital for equipment purchases.

In addition, replacement demand due to the aging of fleets also generated more truck orders, Rupp said, pointing out that more than 27 percent of Class 8 trucks operating in the United States are 13 years old or older. Well over 60 percent of all heavy-duty trucks are seven years old or older.

Registrations through April 1987 show that the long-conventional tractor's share of the market has increased to 38.1 percent from 35.9 percent during 1986, A. Gordon Clark, senior vice president of sales and marketing added.

Conversely, cab-over-engine tractors, commonly referred to as HCOE, dropped to an 18.9 percent market share during the same period from 21.4 percent last year.

Medium-length conventional trucks have been holding almost steady with a 25.3 percent share.

Clark said that Freightliner's long-conventional models were getting 27 percent of that segment, and that it has 6.9 percent of medium-length conventional sales.

Clark said that while Freightliner sees a continuing decline in the HCOE segment for the short term, the company believes the class will rebound.

Rupp said that while there have been some recent signs of a typical summer slowdown in the trucking industry, Freightliner expects sales and order intake to continue strong into the fourth quarter.

Fruehauf to add Tennessee plant

HUNTSVILLE, Tenn. — Fruehauf Corp. will operate a new platform trailer manufacturing operation here, employing 200 to 250 people. Production is scheduled to begin in mid-1988.

Construction of a 175,000-square-foot facility will begin in the fall.

The plant will be built and owned by the Industrial Development Board of Scott County, a local government agency, and leased to Fruehauf.

Fruehauf plans to produce 4,500 trailers a year here, while expanding its manufacturing facilities to 16 in North America.

Fruehauf has been selling assets to pay off about $1 billion in debt incurred from a leveraged buyout it used to fend off a hostile takeover last year.

It sold its Rentco Trailer Corp. lease operations to XTRA Corp. for $70 million earlier this year and, in completing that deal, recently sold a fleet of about 11,600 piggyback trailers to XTRA Corp. for $54 million in cash and the assumption of certain lease liabilities.

AMC donates war workhorse
Roy D. Chapin Jr., former American Motors chairman, sits in a World War II Jeep that AMC donated to the Henry Ford Museum, Dearborn, Mich. The 1943 Kaiser Jeep was restored by AMC and will appear in the museum's permanent "The Automobile in American Life Exhibit," beginning Nov. 6. AMC acquired Kaiser Jeep Corp. in 1970 under Chapin's leadership.

Missouri auction to pay $600,000 for rollbacks; state expands drive

JEFFERSON CITY, Mo. — A Joint Task Force on Odometer Fraud will be formed in Missouri following the successful prosecution of one of the largest automobile auctions in the country.

The owner of the 166 Auto Auction, Springfield, pleaded guilty in U.S. District Court for the Western District of Missouri recently to misrepresenting mileage on used cars and agreed to pay $600,000 in fines and restitution.

Federal authorities described the July 28 settlement with Melvin Reid's 166 Auto Auction as unprecedented, saying that no previous odometer rollback case in the country led to such a large penalty. Reid was not charged, said an official.

The company pleaded guilty to six misdemeanor counts of a 137-count federal indictment and agreed to pay $300,000 in fines and another $300,000 for a consumer restitution fund.

For five years, state and federal officials will closely monitor activities at the auction.

Springfield attorney Bill Wendt, the official representative of the corporation, said used cars with rolled-back odometers were sold through the company. Some employees knew of the sales, but Reid, who with his family owns the auction, did not, Wendt said.

The federal indictment said the auction and other conspirators sold more than 1,000 high-mileage cars with reset odometers between Aug. 10, 1981 and February 1984. Lowered mileage allegedly totaled more than 16 million miles.

Fifty percent of all used motor vehicles sold at the auction in 1983 had odometers reset, the indictment charged.

Five employees of the auction were indicted. Two of them pleaded guilty to conspiring with other agents of the auction to sell rollback vehicles and are awaiting sentencing. The other three are awaiting trial on similar charges.

The restitution fund will provide money for current or former owners of cars sold at the auction from 1980 through last Tuesday if odometers on the cars were rolled back before being sold.

The court will appoint an administrator to oversee the fund. Federal officials believe at least 1,000 cars are involved. They said the administrator will seek out affected consumers using records from the auction.

Current owners can receive $1,500 or three times their actual damages, whichever is greater. Former owners can receive three times their actual damages. All claims must be paid within 2½ years.

Defrauded consumers could reject the payment and instead pursue civil suits against the auction, officials said.

Missouri Attorney General William L. Webster said the task force will have representation from offices of the Missouri attorney general, U.S. attorney, Missouri Highway Patrol and Department of Revenue.

"We believe joining resources and investigative powers can result in an increased enforcement effort as it applies to odometer fraud," he said.

"The $600,000 in fines and restitution that the auction has agreed to pay is the largest amount ever obtained in the prosecution of odometer rollback fraud," said U.S. Attorney Robert G. Ulrich.

In accepting the guilty pleas, U.S. District Court Judge Russell G.Clark said the agreements were in the best interests of the public and in the furtherance of justice.

Webster characterized the settlement as a landmark case, saying: "There was a real team effort. This case is a textbook example of cooperation between state and federal law enforcement agencies. Therefore, we have decided to make this a more permanent situation by the creation of the task force to monitor and investigate complaints of odometer fraud."

NHTSA backs rule change for listing vehicle mileage

WASHINGTON — NHTSA has proposed that motor-vehicle titles issued by states must have space for disclosure of odometer mileage upon transfer of title. The rule is slated to go into effect April 25, 1989.

In addition, dealers, lessors and auctions would be required to retain mileage records of cars sold for at least five years.

Although federal law has required disclosure of mileage on transfer since 1972, that disclosure is usually done on a separate form. Under the new rule, the safety agency said, "The title must include a space for the mileage of the vehicle and be printed by a secure process or, if not printed, be set forth by a secure system in order to decrease the possibility of counterfeiting or altering titles."

Lessors of vehicles with long-term contracts must also inform their lessees that the lessee is required by law to disclose the vehicle's mileage.

The new rule calls for dealers, distributors and lessors to retain mileage records on tranferred vehicles for five years, as opposed to four under the 1972 law, and requires auctions to keep similar records for the first time.

Ford donates baby seats

LOS ANGELES — Ford Motor Co. has donated 24 Infant Safety Carriers to the Exceptional Children's Foundation here. The car seats, required by California law, will be loaned to families who cannot afford to purchase them.

Anglo-American adds 3 sites, now owns 18

NASHVILLE, Tenn. — Anglo American Auto Auctions announced recently the purchase of three auto auctions, bringing its U.S. auction total to 18.

The Nashville-based company has acquired Mississippi Auto Auction, Hattiesburg, Miss.; Puget Sound Auto Auction, Auburn, Wash.; and Tri-City Auto Auction, Pasco, Wash. The Financial Times of London reported a purchase price of $16.59 million.

All three will continue to be managed by previous owners.

"These acquisitions strengthen our base in the Southeast and establish an immediate presence in the Pacific Northwest," said Michael J. Richardson, president and chief executive officer of Anglo American Auto Auctions.

Anglo American is a wholly owned subsidiary of the British Car Auction Group PLC, of England, and is the largest auction company in the United States.

AUCTION DATES

American Motors

Aug. 11 — D-A Auto Auction, New Stanton, Pa.

Aug. 12 — Minneapolis Auto Auction, Plymouth, Minn., and Metro Milwaukee Auto Auction, Caledonia, Wis.

Franchised new-car deals up in size, number in '86

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — The National Automobile Dealers Association reported that franchised new-car dealerships grew in number and size for the second year in a row in 1986.

Franchised new-car and truck dealers also set records for new-vehicle sales and dollar-sales volume last year. The report, entitled NADA Data for 1987, was compiled by NADA's industry analysis division.

The association said the number of new-car dealerships increased to 25,250 on Jan. 1, 1987, up 50 for the year and up 425 since Jan. 1, 1985. NADA also estimated that the number of large dealerships — stores selling more than 750 new units annually — increased to 5,155 at the end of 1986 from 4,705 a year earlier.

Total dollar sales of all franchised new-car dealerships rose 8.8 percent to a record $283.2 billion in 1986 compared with $260 billion in 1985. The increase was led by new-vehicle sales coupled with gains in used-vehicle sales, service and parts sales, the report said. The rise in the dollar volume of new-vehicle sales reflected price increases by the manufacturers.

New-vehicle sales for calendar 1986 reached a record 16.3 million units compared with 1985's 15.7 million units, which was the previous record.

NADA reported that total dollar sales for the average franchised dealership have more than doubled during the past five years. NADA estimated that in 1986, the average franchised dealership had sales in excess of $10 million.

July sales fall 4% from 1986 total

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

July new-car sales fell below last year's total as both domestics and imports failed to match their 1986 figures.

Domestic sales dipped 5.80 percent. Import sales also slipped, but by only 0.04 percent.

Domestic dealers delivered 611,035 cars, down from the 648,667 units sold in July 1986.

The imported total was 304,795, a decline of 147 units from last year's 304,942.

The overall total of 915,830 was off 3.96 percent from the 953,609 units sold in July 1986.

Deliveries of domestic-built cars for the last 10 days of July totaled 257,655, off 8.48 percent from the 281,514 delivered a year earlier.

The daily-selling rate for domestics dropped for the 10-day period and for the month. Domestic cars were sold at a rate of 25,766 a day in the last 10 days of July, compared with 28,151 a day in 1986. There were 10-selling days in both periods.

The average selling rate for the month was 23,501 a day, down from 24,949 last year. Both months had 26 selling days.

For the first seven months of the year, new-car sales slipped 9.07 percent to 6,001,695 from 6,600,485.

Domestic sales at the end of July totaled 4,253,560, down 11.17 percent from 4,788,646 a year earlier.

Import sales were down 3.52 percent for the seven-month period — 1,748,135 this year vs. 1,811,839 last year.

Sales gains for July were reported by four domestic makers. Nissan's sales of domestic cars increased to 10,957 from 91 last July when its plant in Smryna, Tenn., was down for model changeover. Honda sales rose 65.95 percent from the year-ago month's; Ford Motor reported an increase of 4.99 percent; and Volkswagen was up 4.39 percent.

Sales declines for the month were reported by American Motors, down 52.26 percent; Chrysler Motors, off 24.59 percent; and General Motors, down 12.48 percent.

Toyota, which was not selling U.S.-built cars last July, sold 3,289 this year.

July's market was split this way: GM took 33.67 percent; Ford, 19.48 percent; Chrysler, 8.14 percent; Honda, 2.87 percent; Nissan, 1.20 percent; Volkswagen, 0.73 percent; Toyota, 0.36 percent; and AMC, 0.27 percent. Imports accounted for 33.28 percent of the market.

Hyundai's sales for July were the highest for any month since it entered the U.S. market in February 1986.

Mitsubishi posted an increase of 103 percent over last July's sales, due mainly to an increase in its dealer network and the addition of the Precis line, which was not sold in the U.S. at this time last year.

Where the U.S. market was July 1987

	Total Sales	Pct. of Total

July output plummets

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Domestic auto production during July was affected severely by the number of plants idle for model changeover.

July's output of 354,980 was the lowest for any month since February 1982 when 311,926 cars were assembled. The month's production was also the lowest for any July since 321,017 in 1958.

Last month's output was 45.49 percent below June's 651,261 and 30.75 percent below the year-ago month's 512,588.

Model changeover continues to affect weekly production. Targeted output of 68,697 cars last week was 4.91 percent below the previous week's 72,245 and 10.47 percent below last year's 76,733.

As reported earlier, Volkswagen of America's Westmoreland, Pa., plant is down for model changeover until Sept. 14.

The following GM plants remain idle for model changeover: Buick City in Flint, Mich., until Aug. 11; Janesville, Wis., until Aug. 11; Lansing (No. 2), Mich., until Aug. 12; Willow Run, Mich., until Aug. 14; Bowling Green, Ky., until Aug. 17; Tarrytown, N.Y. until Aug. 17; Orion Township, Mich., until Aug. 17; Van Nuys, Calif., until Aug. 17; Lordstown, Ohio, until Aug. 24; Detroit-Hamtramck, (excluding the Allante line) until Aug. 24; Pontiac Fiero plant in Pontiac, Mich., until Aug. 24; Arlington, Texas, until Sept. 14; Framingham, Mass., until Sept. 14; and Doraville, Ga., until Sept. 14.

Ford's Lorain, Ohio, plant was idle last week because of a parts shortage. The plant is expected to resume production today.

Ford's Kansas City, Mo., plant remains closed for changeover.

Truck assembly highest since '78

July's truck production of 275,857 was the highest for that month since the July 1978 count of 278,020.

Last month's output was 17.64 percent below June's 334,926 but 1.23 percent more than the year-ago month's 272,515.

Last week's scheduled production of 65,767 trucks was 7.81 percent below the prior week's 71,335 but was 12.41 percent more than the year-ago week's 58,504.

As reported earlier, General Motors' Janesville, Wis., plant remains idle until Sept. 8 for model changeover. Ford Motor Co. slated Saturday overtime at three plants: Norfolk, Va.; Lorain, Ohio; and Twin Cities, Minn.

July a loser on Canada's charts

Production of cars in Canada for July totaled 36,183, the lowest for any month since September 1981 when 22,690 cars were built. The month's output was also the lowest for any July since 1967 when 31,926 units were assembled.

Last month's car production was 53.58 percent below June's 77,953 and 38.17 percent below the year-ago month's 58,519.

Because of plant closings for vacation and model changeover, last week's targeted car production dipped to 1,730 units, down 77.67 percent from the previous week's 7,749 and 80.60 percent below the year-ago week's 8,918.

July's truck production of 41,899 was the lowest for that month since 1983 when 26,896 units were built. Last month's truck output was 47.51 percent below June's 79,830 and 13.90 percent below the year-ago month's 48,662.

Scheduled production of 9,111 trucks last week dipped slightly (0.38 percent) from the prior week's 9,146 and was 10.42 percent below the year-ago week's 10,171.

Ford to build more truck automatics

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Ford Division expects that its tight supplies on light trucks with automatic transmissions will ease by the 1989 model year.

The shortage, which is focused on F-series light trucks, is a company-wide problem stemming from unanticipated demand for large cars and pickups, said Bill Wilcox, truck marketing plan manager.

But a transmission line will be replaced next year, adding automatic capacity. An improved manual transmission coming this fall from ZF of West Germany also is expected to help the situation.

Ford uses the same automatic transmission on its Crown Victoria/Grand Marquis series as it does on its F-series models. The cars haven't been affected because the division has concentrated the shortage on trucks, Wilcox said.

To offset the demand, Ford has been stimulating activity on some F-series models with manual transmissions by offering about $1,000 worth of free equipment on each sale. Wilcox said he expects that program to continue in some fashion through the start of the 1988 model year.

Currently, about half of the F-Series trucks come with automatics — a percentage that would be higher if it weren't for the shortage, Wilcox said. The shortages will persist company-wide in the 1988 model year, he said.

A new transmission line will be put in place next year at Ford's Sharonville, Ohio, plant to ease the bottleneck.

"The volumes at Sharonville will certainly be higher," Wilcox said. "And internally we have to decide how to allocate the volume. It's not clear exactly yet what our specific operating patterns are going to look like and how much improved the truck automatic situation will be."

The new five-speed manual transmission with overdrive will be available on 1988 models and is expected to attract some buyers who might normally buy an automatic.

While Wilcox hesitated to say exactly when the automatic shortage will be resolved, dealers said the division had indicated they will be over in a year.

A decline in sales would also improve the situation, although not in the way Ford wants. Ford plants have been producing at capacity for about three years now.

Wilcox said the shortage has its roots in the shift toward smaller cars in the 1970s. At the time, large rear-drive transmission capacity seemed adequate. The company was caught off guard by this decade's surge in demand for large cars and pickups.

Ford Missouri plant fights drugs, alcohol

ST. LOUIS — Ford Motor Co.'s assembly plant in Hazelwood, Mo., staged a program on drug and alcohol abuse earlier this month.

Cosponsors included Holiday Inn North and McDonald's Restaurants of Greater St. Louis and Metro East. The program originated with the Ford-UAW Employee Assistance Program Committee at the assembly plant.

Chrysler eyeing big price hikes for some '88s

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Chrysler Motors has tentatively raised prices an average of 7 percent on its Chrysler, Plymouth and Dodge cars for the 1988 model year.

The analysis of pricing information distributed to dealers was not sales-weighted or adjusted for changes in standard equipment on the 1988 models.

Chrysler has not announced its 1988 pricing but has distributed to dealers a tentative price schedule. In recent years, those early prices have run very close to Chrysler's final pricing schedule.

Substantial price hikes on some models reflect Chrysler's move to include more items in standard equipment packages, dealers said.

For example, the 1988 Chrysler New Yorker Turbo is tentatively priced at $17,373 which is 20 percent higher than the 1987 model year price of $14,396. The turbocharged engine was a $678 option on the 1987 model.

Chrysler Motors maintained its introductory-level prices on cars throughout the 1987 model year.

The 1988 Chrysler LeBaron coupe in the base version is tentatively priced 1.5 percent above the 1987 model. However, the premium version is tentatively increased 12.5 percent from $12,288 in 1987 to $13,830 in 1988, dealers said.

Similarly, the Dodge Caravan LE and Plymouth Voyager LE tentatively jump 14.6 percent from the current $11,741 to $13,462 in 1988. The Grand Caravan LE and Grand Voyager LE show tentative increases of 23.4 percent from $12,561 to $15,509.

Base versions of the Caravan and Voyager tentatively rise 4.5 percent, according to dealers. Standard SE minivans show a tentative 6.5-percent hike, and stretched SE minivans in the SE version get a 6.3-percent boost.

Dealers said some of the increases reflect additions in standard equipment. In some models, including the premium LeBaron coupe, for example, air conditioning becomes standard.

Dealers said they have not been given tentative prices for the new 1988 luxury sedans, the Chrysler New Yorker, Chrysler New Yorker Landau and Dodge Dynasty. Chrysler also has not notified dealers of the pricing of the 1988 Dodge Omni and Plymouth Horizon America models which go back into production in September.

Tentative 1988-model prices obtained from dealers indicate that Chrysler will add a premium version of its LeBaron convertible priced at $18,079.

The base convertible tentatively declines $15, from $13,974 in 1987 to $13,959 in 1988.

The Dodge Aries/Plymouth Reliant lineup changes in 1988, according to the pricing information: There will be only one two-door and one four-door version, both LE models. Both are tentatively priced at $8,364, unchanged from 1987. The base Aries/Reliant models

Daihatsu seeks N. America tie

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

OSAKA, Japan — Daihatsu Motor Co. is searching for a new North American production source for its fledgling U.S. sales operation.

The head of the Japanese company's overseas project office said Daihatsu is considering several options after a tentative joint venture between Daihatsu and Canada's Bombardier was called off in June.

Haruo Fujii, who doubles as chief of the project development group, said options include another joint venture, taking over an existing U.S. or Canadian assembly plant or contract sourcing, whereby an existing North American producer would build cars to specification using Daihatsu tooling.

That would be similar to the arrangement Chrysler and American Motors worked out to build Chrysler M-body cars before AMC was absorbed by Chrysler.

The contract sourcing was not originally considered by Daihatsu. "But after the Bombardier talks broke off, many offers came to us," Fujii said.

However, no decision will be made until Daihatsu learns what its future U.S. allocation will be under the Japanese government's car-export quota, Fujii said.

Daihatsu is limited to 11,498 cars in its initial effort in the United States or one-half of one percent of the entire Japanese export allocation of 2.3 million cars for the year ending March 31, 1988.

Daihatsu has delayed its launch date to Dec. 1 to enable it to bunch the 11,498 units into the final four months of the quota year. Daihatsu had expected to receive an initial allocation of at least 20,000 cars.

"We will aggressively pursue a larger allocation this year," Fujii said.

He would not speculate whether Japan's Ministry of

Police brass tell makers of problems in vehicles

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

ORLANDO, Fla. — Law enforcement officials say they have plenty to do without worrying whether the vehicles they drive will catch fire, experience steering lock-up or lose their brakes.

But, according to police fleet administrators, officers do need to worry about those problems.

State and local police also are concerned that some of the problems they encounter are shared by the civilian versions of their patrol vehicles, though they admit their modified cars are driven much harder than the average citizen's vehicle. Unfortunately, they often do not report those problems to NHTSA.

According to police fleet managers gathered here for the National Association of Fleet Administrators' Law Enforcement Seminar, problems in police fleets include:

Police complain that hard braking causes Dodge Diplomat to spin

AUTOMOTIVE NEWS/GEOFF SUNDSTROM

Ford Crown Victoria:

- High levels of carbon monoxide in the car.
- Cracked or broken diaphragm on the carburetor causes exhaust system to heat up and results in fires.
- Prolonged use of four-way safety flasher causes fuse block to melt.

Dealer total off 74 for 1st half; GM down 80

By John K. Teahen Jr.
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — A decline by General Motors cut the number of dealerships handling domestic makes of cars in the first six months of 1987.

The latest Automotive News census found 20,331 domestic-car outlets on July 1, down 74 from the 20,405 in operation at the beginning of the year. But GM alone suffered a drop of 80 locations.

Elsewhere, Chrysler Motors posted a gain of 28 car dealerships. Ford Motor Co. was down 13; American Motors-Renault was off 19; and Volkswagen reported the same total for both census dates. A

Stocks dip in July; early August sales rise
Page 47

Wixom expansion could give Ford $1 million

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. is making investments at its luxury-car plant in Wixom, Mich., that could add $1 million a day to its pre-tax profit.

A new paint shop now being built will break up a production jam and allow Ford to manufacture about 10 more units an hour, said Sam Mills, manager of paint process and systems. The plant now turns out 43 Lincoln Mark VIIs, Town Cars and Continentals hourly.

Analysts project that Ford earns an average of about $6,000 before taxes on each Lincoln it now builds.

As the plant has been running two shifts daily, the new paint shop will allow Ford to build at least 160 additional cars per day. Any overtime could boost the daily output by as much as 40 cars.

Four auto analysts and an accounting expert surveyed by Automotive News agreed that at those rates, the added production would generate between $960,000 and $1.2 million in pre-tax earnings per day. Multiplied by 220 working days a year, the added earnings would amount to at least $211 million annually. Taxes would take about 41 cents from each of those dollars, analysts said.

Mills said that Ford hasn't awarded all the construction contracts for the paint shop, and he declined to put a price tag on it. Analysts estimate the cost in the $250 million to $300 million range. If that cost is written off over 15 years, the shop would account for $16 million to $20 million in depreciation charges annually.

Another factor affecting profitability would be the development costs for the new 1988 Continental, which Ford will likely continue writing off as the paint shop comes on stream.

"When you open up a bottleneck like that, and they can move them (the cars), the return on investment is pretty good," said David Healy, an auto analyst at Drexel Burnham Lambert.

A Ford spokeswoman declined to comment, citing the company's policy of not revealing internal financial information. But she pointed out that any earnings projections are speculative, especially when events such as an increase in fuel prices or a shift in consumer tastes could sharply curtail the public's appetite for luxury cars.

The Wixom plant, which turned out 183,035 cars last year, is already a significant contributor to Ford's profits. Ford earned a record $3.3 billion in 1986 and nearly $3 billion in the first half of this year.

The paint shop isn't expected to be operating until at least August 1988. And while continued demand for the Lincolns can't be guaranteed, dealers are now reporting short supplies.

At the end of July, average inventory levels for the Lincoln line stood at a lean 46 days. Additional demand is anticipated this fall when the next-generation Lincoln Continental goes on sale.

"It's a hell of a good problem to have," said Bob Tasca Jr., a Lincoln-Mercury dealer in Seekonk, Mass. "I think they missed a lot

Damoose heads back to Chrysler

Quits top Audi post to head sales and marketing in Canada

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — John B. Damoose, the young executive whose take-charge efforts won him acclaim for pumping life back into Audi of America, resigned last week, nine months after taking the job.

He will become vice president of sales and marketing for Chrysler Canada. When he left Chrysler Motors last fall, he was general manager of marketing for Dodge Division.

By his own account, Damoose, 40, is leaving a company that has advanced just a fraction of the way toward recovering from the crisis he was brought in to resolve. His tenure at Audi was marked by significant sales gains and bolstered dealer confidence.

Damoose

Yet the charges and confusion over sudden acceleration in the Audi 5000 persist. Just last month, a New York consumer group called Audi's shift-lock device a failure. And the company hasn't demonstrated that its cars can be sold without generous incentives.

Damoose made it clear, though, that he had no doubt about Audi's continued progress: "If I didn't think the crisis was over, no opportunity would have lured me away."

Chrysler's offer was unexpected and unsolicited, Damoose said. He said he is anxious to work again with the people he developed an affection for as the company battled its own trouble earlier in this decade. "The long-term prospects (at Chrysler) looked very good," he said. "I don't think I would have considered anything other than Chrysler."

Volkswagen of America President Noel Phillips will assume Damoose's duties as VWoA vice president in charge of Audi until a replacement is found. The company said it was caught off guard by the announcement, and a search for a successor could take as long as two months.

However, there had been rumors about Damoose interviewing at Chrysler. "I think many of us expected something like this to happen," said an Audi employee who worked with him. "I think there was great frustration on his part that was insurmountable . . . frustration with the way the organization ran and frustration with Germany. We're an importer, and he wasn't used to working under that system."

Damoose, while acknowledging those differences, maintained that they had nothing to do with his decision to leave.

From his earliest days on the job, Damoose is said to have immersed himself in the crisis. He arrived in November, just before CBS aired its damaging report about the Audi 5000 on "60 Minutes," and he told dealers that combatting the sudden-acceleration issue would be his first priority.

Damoose later said that he was surprised at the seriousness of Audi's problems. And those troubles were compounded by a stagnant U.S. sales market, a falling dollar and an infusion of competition in Audi's price range.

A joint committee of dealers and Audi officials formulated a series of incentives and other programs to carry the franchise through the launch of some new products this fall. Damoose was able to sell the ideas to Volkswagen AG under the premise that serious problems required dramatic solutions.

Dealers credit Damoose with solving two immediate problems: regaining the confidence of Audi owners and trimming a huge inventory. A $5,000 rebate to Audi owners who chose to buy a new 5000 exceeded expectations and nearly wiped out inventories of the 1987 Audi 5000. That effort combined with factory incentives on the soon-to-be-replaced Audi 4000 left the company with an ideal 56-day supply of cars on Aug. 1.

In one sense, Damoose will be leaving at a natural break in the recovery process, the transition between the 1987 models and the eagerly anticipated Audi 80/90 series.

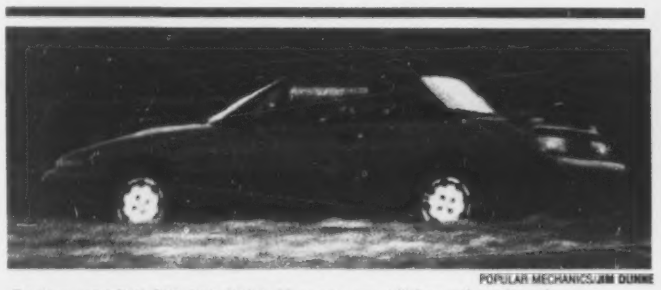
But to Fred Lavery, an Audi dealer in Birmingham, Mich., and a member of the dealer committee, the advances so far might prove to be the easiest.

"We've been very successful in achieving some major short-term sales gains, and that was obviously something that had to be done," Lavery said. "But in the long run, re-establishment of the franchise after digging it out from the problems that unintended acceleration caused is a process that really, from a strategic basis, is just now beginning. I think that until you've got through all those issues, the leadership issue is very important. Any change over the next 24 months, you could categorize as critical."

At Chrysler Canada, Damoose replaces Theodor R. Cunningham, who will become executive director, Dodge and Dodge truck marketing, for Chrysler Motors in Detroit. Damoose will work in Windsor, Ontario, beginning Sept. 1.

Damoose and Cunningham are part of a bigger personnel reorganization of Chrysler's sales and marketing department due in part to Chrysler's acquisition of American Motors on Aug. 5.

Joseph A. Campana, formerly vice president of marketing for Chrysler Motors, was appointed vice president of Chrysler-Plymouth marketing. Arthur C. "Bud" Liebler, previously general marketing manager — Chrysler, was named director of marketing services. Joseph E. Cappy, formerly president of American Motors, was appointed group vice president-Jeep-Eagle marketing. Jeep-Eagle encompasses the former AMC operations.



POPULAR MECHANICS/JIM DUNNE

Dealers said $11,000-$12,000 L-M sports car will be well equipped

Next: Australian Capri

Venerable badge for Mazda derivative

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Lincoln-Mercury will likely revive the Capri nameplate for its new convertible sports car scheduled for introduction in 1988.

Dealer and advertising sources said L-M is expected to put the established badge on the 2+2 roadster to be built by Ford of Australia. The previous Mercury Capri, a companion to the Ford Mustang, was discontinued last year.

The new Capri is expected to more than fill the void left by its predecessor. Dealers see the car as a chance for L-M to broaden its appeal and attract some youthful buyers. And as a Mercury exclusive, it will not have to compete for an image or its share of production in the shadow of a Ford make.

Dealers said the car will be well equipped and will sell in the $11,000-$12,000 range. Among a handful of options will be be air conditioning, automatic transmission and a hardtop version.

The car will carry a 1.8-liter, four-cylinder engine with a naturally aspirated overhead cam. A turbocharged version also will be offered. L-M is thinking about offering a 2.3-liter engine sometime after the car's launch, dealers said.

Sources at Ford Motor Co. have said the car will be made at Ford of Australia's Broadmeadows factory with components from the Mazda 323, which is assembled and sold by Ford in Australia as the Laser. Ford's Ghia center in Turin, Italy, designed the car, and it was developed by Italdesign SpA.

The company expects to ship about 40,000 units annually to the United States.

The new Capri will give the Mercury brand a second product of its own: the Mercury Tracer, which replaced the Lynx earlier this year, is also exclusive to the division. Tracer also is based on the Mazda 323. The U.S. version of the Tracer is built in Hermosillo, Mexico. Company sources said some production of the new Capri could be shifted to Hermosillo if needed.

The Capri nameplate also was used on an imported German coupe sold by Mercury in the United States from 1970 to 1978.

Mustang safe through 1991

By Al Fleming
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Ford Motor Co. has determined the fate of the Mustang.

The sporty rear-wheel-drive Mustang will continue to be produced through the 1991 model year, and Ford engineers have plunged into development of an air-bag system for the car.

The high investment cost of a new passive-restraint system was among the factors the company weighed in considering whether to keep or drop the nine-year-old Mustang platform and replace it with a Mazda product.

The Ford model that will be built by Mazda in Flat Rock, Mich., will be called the Ford Probe. The two-door model is expected to enter the market next spring.

Meanwhile, Ford product planners are studying the possibility of replacing the rwd Mustang with a next-generation Probe in the 1992 model year.

The 1992 Ford Probe, code-named ST-44, could have front-wheel drive. The company believes that by then, it will be able to produce a fwd muscle car in the tradition of Mustang, as a result of advancing technology and experience gained with fwd and four-wheel-drive systems.

According to Ford sources, the company received thousands of letters criticizing management for thinking of abandoning the popular V-8 model in favor of a less-powerful fwd version made at Mazda's new plant.

Petersen has week-long ESPN date

WASHINGTON — Ford Motor Co. Chairman Donald E. Petersen will appear every day this week on ESPN's early morning business news program, "Nation's Business Today." The Petersen interviews — on the program's "CEO Close-Up" segment — will focus on his management style and company goals.

SERVICE MANAGEMENT

Computers speed U.S. effort to improve quality

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — To the service technician, who sees only the failures in technology, it might seem that cars have become more complicated, but hardly better. On the other hand, it can be argued that the quality of all automobiles has increased as a result of advances in technology.

At the recent Automotive News World Congress, J. David Power III, president of J.D. Power and Associates, a Westlake Village, Calif., consumer-research firm, said, "All manufacturers are making progress in quality and reliability. Some are moving faster than others, but all are moving in the right direction. They have to, or they will be left at the gate."

The common usage of computers in the design and manufacturing process may be one reason the domestic and European manufacturers are catching up to the quality and reliability of Asian manufacturers.

The most obvious advantage of computer-aided design and manufacturing processes is the increased speed at which projects can be developed. Such operations also result in a more precise rendition of the engineer's original idea and less chance of human error interrupting the design-to-manufacturing process.

Ed Lundberg, chief engineer, advanced engineering, General Motors Saginaw Division, said, "There is less potential to misinterpret the data from computer-aided design to manufacture."

In the automobile industry, it is quite common for prototypes to be machined directly from drawings or "models" that have been entered into a computer — the so-called computer-aided design to computer-aided manufacturing process.

Going a step farther, manufacturers are developing computer systems that will take an idea from computer-aided design and engineering beyond the prototype stage and onto the factory floor — computer-integrated manufacturing.

The computerized hardware used to design automobiles is commonly available, however manufacturers and suppliers compete to develop software programs that will give them an edge in developing products with higher quality.

GM has been particularly active in the development of computerized engineering aids. The company, in fact, has used computer-aided engineering tools to perform repetitive trial-and-error engineering calculations since 1965.

As a result of computerized design techniques, Larry Howell, head of engineering mechanics at the General Motors Research Laboratories, said, the quality and reliability of the entire industry should improve. But he added that it takes more than just having top-of-the-line computer hardware to develop the best cars.

"Products are more complex, and the design criteria requires developing a product that is light in weight, crashworthy and durable," Howell said. "That requires the use of more complex computer-aided design techniques to find an optimal design that meets all the requirements.

"We develop a lot of our own (computer-aided design and manufacturing) tools. We try to stay ahead of the state of the art," he said.

GM Research, for example, has developed a computer-aided design program that optimizes the structure of an automobile body.

Called ODYSSEY, the computer program allows an engineer to enter the design requirements for stress, deflection and packaging constraints of automobile body panels and structural members.

In essence, an engineer using the system will enter a design into the computer and the ODYSSEY program will alter the thickness of the body material and the cross sections of beams in the design to the optimum measurement.

GM Research is also working on a program that will alter the shape of a part in order to optimize the structure. It is also looking at the possibility of designing a program that will take into account the stress and tear levels acting on stamped sheet metal.

One of the first trials for ODYSSEY, Howell noted, was on the 1984 Corvette. Within the last year, he said, the program has become a tool that is commonly used on development projects.

GM is also working on a "factory of the future" project that will use computerized equipment throughout the design-to-manufacturing process.

Saginaw Division's Vanguard project will produce front-wheel-drive axles beginning in December.

Chris Dulski, superintendent of manufacturing engineering, Saginaw Vanguard factory of the future project, said product and manufacturing people started working on the project at the same time.

Computer-aided design and manufacturing, he said, have been a great help in spurring the simultaneous engineering of products and the manufacturing processes to build them.

In the Vanguard project, product and manufacturing engineers sat at a terminal together and "described" a solid model of the product.

Computerized "models" of the product were developed for each step of the manufacturing process and the computer was used to develop the operations that will be used in the manufacturing process.

Dulski predicted that many of the developments in Vanguard will spread throughout GM.

Rustproofing hurt by long warranties

Slow car sales, coupled with long corrosion warranties by the automakers, are causing a serious lag in the rustproofing business, both at new-car dealerships and in the aftermarket.

Vic Shanley, president of Corrosion Consultants, Redford, Mich., a supplier of rustproofing chemicals and auto reconditioning chemicals, said aftermarket rustproofing applications are off 25 percent to 40 percent.

" 'Fast-track' auto dealers are still selling rustproofing successfully, but market penetration at many auto dealerships is down," Shanley said. He estimated that

SHOP TALK

ARTHUR FLAX

rustproofing sales at auto dealerships that do not aggressively push the treatments have fallen from 80 percent to 90 percent penetration on new-car sales to 50 percent to 60 percent.

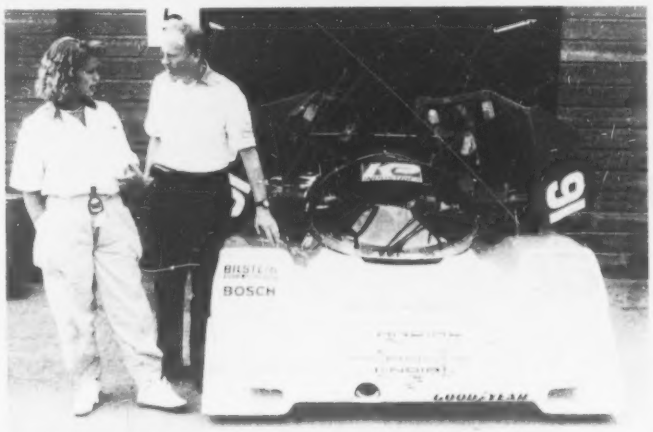
Aftermarket rustproofers also are suffering from the new-car corrosion warranties. Before the longer warranties, many new-car buyers had their cars rustproofed by aftermarket applicators, he said. However, Shanley said, used-car buyers often take advantage of aftermarket rustproofing.

He said he doesn't believe the rustproofing business will decline further and, in fact, predicts the market will eventually pick up.

But, he added, "I see the rustproofing industry changing dramatically. It's time to get innovative."

Shanley said he is making up for the market lag by selling chemicals to companies that provide rustproofing for car importers at the port. He also is finding that certain name-brand rust treatments have declined in popularity in some areas, opening a market for the sale of less expensive generic rustproofing chemicals to regional distributors.

In addition to chemicals, Shanley is marketing Rust Evader, an electronic device that is said to prevent rust. The device, which can be transferred from car to car, is said to prevent corrosion on outside painted surfaces that pick up stone chips and cracks. Traditional rustproofing treatments don't affect outside surfaces.



McQuade discusses Porsche 962 race car with driver Rob Dyson

A first for Porsche

Jennifer McQuade, service manager for Bigelow Motorcars, a Porsche dealership in Mansfield, Ohio, is the first woman to win Porsche Cars North America's Honorary Pit Crew competition.

The contest is held on a regional basis and was designed by the North American Porsche distributor and importer to recognize people who are essential to customer service. The competition requires contestants to answer 26 tough product-knowledge questions designed to stump all but the best service personnel.

As winner of the Midwest regional contest, McQuade joined the Porsche 962 pit crew of Dyson Racing during a recent race at the Mid-Ohio road racing course.

McQuade joined Bigelow Motorcars in 1984 to handle warranties. At Bigelow Motorcars, McQuade heads a team of 10 mechanics and customer service personnel.

Jaguar road aid

Jaguar is offering a roadside assistance plan for its 1988 models.

The Jaguar Service-On-Site plan includes a toll-free number for emergency calls and nationwide emergency vehicle service. Under the plan, Jaguar will provide roadside service for mechanical problems and other situations that disable a car.

Big month for Ford

Ford sold more extended service plans in June than in any other single month during the 10 years it has offered the program.

Ford and Lincoln-Mercury dealers sold more than 130,000 contracts in June, according to Terry Emrick, Ford ESP manager.

Sales of Ford extended service plan contracts this year are 22 percent ahead of the last year's, Emrick said.

Dealership service volume shows 6% pickup for June

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

The Automotive News Service Index bounced back in June following a slight decline in May.

Service and parts business at new-car dealerships rose 5.9 percent over the June 1986 figure.

In May, service and parts business was down 0.7 percent compared with May 1986.

Shop business during the first six months of 1987 was up 3.3 percent over the same period in 1986.

Dealers attributed the increased business to the return of new cars for service, innovative advertising and extremely hot summer weather.

All indicators, with the exception of repair orders written, showed gains in June. Repair orders, which were down 1.4 percent from last year, often lag slightly behind the other indicators. Gross profit on all labor, parts and accessories sales registered the biggest gain in June, up 11.5 percent over June 1986.

Total labor sales (customer paid and warranty) climbed 8.1 percent; shop-parts sales (customer paid and warranty) were up 7.1 percent; and sales of all parts and accessories rose 4.4 percent.

Parts and accessories sales to off-premises customers climbed 2.4 percent in June.

Gross profit on all labor parts and accessory sales also showed the biggest gain through the first six months of 1987, up 5.9 percent.

Total labor sales climbed 5.5 percent; sales of all parts and accessories increased 5.4 percent; and shop-parts sales were up 3.5 percent. Repair orders written fell 3.6 percent in the six-month period.

Parts and accessories sales to off-premises customers were up 6.9 percent through June.

SERVICE INDEX
105.9★

	June, '87 vs. June, '86	6 mos., '87 vs. 6 mos., '86
Gross Profit on All Labor and P&A Sales	+11.5%	+5.9%
Repair Orders Written	−1.4%	−3.6%
Total Labor Sales (Customer & Warranty)	+8.1%	+5.5%
Shop Parts Sales (Customer & Warranty)	+ 7.1%	+3.5%
Sales of All P&A	+ 4.4%	+5.4%

★— Survey by Automotive News shows that dealers' service and parts business in June 1987 was 105.9 percent of business in June 1986. Service business in the first 6 months of 1987 was 103.3 percent of business in the corresponding period in 1986.

Alfa offers training to boost CSI

NEW YORK — Alfa Romeo has expanded its training courses in an effort to obtain a better customer satisfaction index rating.

Thomas F.X. Tooley, service manager for the importer, said the new series of courses is open to all dealership employees who work with the public. It is not restricted to the service department, though that division is conducting the seminars.

The goal, Tooley said, is to train dealership employees to "fix the customer before you fix the car." In other words, employees must smooth the ruffled feathers of the customer before they can attempt to repair the vehicle.

The Alfa courses rely heavily on role playing and videotaping students in various situations that might occur on the job. The "instant replay" is used to critique each student.

The training courses are offered free of charge to the dealers, Tooley said, because they are "so damn important."

Q & A

CAPLINGER & PAYTON

Continued from page E6

tected themselves.

Caplinger: Right, they're all going to the option concept where you get, let's say, a luxury package with electric windows, seats and door locks. Maybe you would like a car with just electric windows and door locks, but not electric seats. But when you price it out, if you don't go with the luxury option package, you wind up paying more for the car without the option than you do with it. That keeps dealers from being able to sell people items that enable us to make money.

■ **What do car buyers think about option packages? Do they like them?**

Caplinger: Most of them don't even know about them. They don't know the difference. Most customers look at the car and want to know, has it got electric seats? Yeah. Has it got power door locks? Yeah. OK, I'll take it.

Payton: Take the case of radios. What the manufacturers do is put on an item that dealers can't add, like the tilt steering wheel, and combine that with a radio. Maybe we could sell the customer a better radio at about the same price, and we could make more money. But we're not able to do that because we need the tilt steering wheel and we can't install it at the dealership, so we've got to buy their radio with their tilt steering wheel — strictly their combination.

So, the manufacturers have become very good at marketing options, and it's one of the areas where they're making good money.

■ **What about safety options? Any profit potential there?**

Payton: Safety items don't make anybody any profit. Any safety item they put on a car, I don't care, people just say no thanks — they will not pay for them.

■ **How do you feel about the trend toward computers for use in dealer-factory communications?**

Caplinger: There's something close to my heart. General Motors came along and had us all buy some kind of communication system to tie in directly on everything — sales, service, bookkeeping. Now they come along with CAMS (computerized automotive maintenance system), a machine for the service area that's going to cost the dealer $20,000 or better. They're trying to push them on dealers as fast as they can, and it represents a dealer investment that's not going to pay off soon.

Then there's EDS (GM's Electronic Data Systems). Dealers want to know if the equipment they have in their dealerships will be compatible with what EDS is coming out with, and we're told it is. But the point is, the factory divisions are going to their dealers and saying, "Buy, buy, buy." And as long as the manufacturers control distribution, the dealers pretty well do what they're asked to do. ■

Total dollar sales for the average franchised dealership have more than doubled over the past five years. The new-vehicle department, because of record new-unit sales, has shown the largest dollar increases, but dealers have also had increases in used-vehicle and service and parts operations.

In addition to having increases in dollar sales, all dealership departments had increases in the actual unit volume of work performed. As compared to 1985, the average dealership had a 3-percent increase in new-unit sales in 1986. Used-unit sales increased 1 percent, and the total number of repair orders increased by 3 percent.

In 1986, gross as a percent of sales decreased slightly, but remained above the low levels experienced in 1982-1984. Nevertheless, the long-term trend (over the past 30 years) has been for dealerships to become increasingly large businesses that operate on increasingly thin margins, the NADA says.

Source: NADA Industry Analysis Division

The total dollar sales of all franchised new-car dealerships reached a record $283.2 billion in 1986, the NADA reports. That's up 8.8 percent from 1985.

Although the dollar sales increase was led by the recovery in new-vehicle sales, the average dealership also had significant gains in both used-vehicle and service and parts sales, according to the NADA.

The chart at right illustrates just how much the typical franchised new-car dealership is increasingly becoming a large business entity. In 24 states and the District of Columbia, the average franchised dealership had sales in excess of $10 million. In only four states were average sales in 1986 below $5 million.

The strong rise in new-car sales over the past four years naturally has resulted in a large increase in the number of new cars sold per dealer. In 1986, the average dealer sold 456 new cars — the highest level of sales ever. By comparison, the average dealer sold 346 new cars 10 years ago, according to NADA statistics.

Car, truck sales dip in Canada

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

A downturn in demand for General Motors cars and trucks contributed to a sharp decline in domestic sales in Canada last month.

Sales of North American-built cars dropped 22.05 percent compared to July 1986. Domestic truck sales fell 8.86 percent.

Canadian dealers delivered 53,158 domestic new cars in July compared to 68,198 in July 1986. They also delivered 29,982 domestic trucks compared to 32,898 a year ago.

Five of the six domestic manufacturers reported lower car sales in July than a year ago. Honda, Canada's sixth automaker, began producing cars in its Alliston, Ontario, plant in November 1986 and began importing its Acura cars in March, so its sales last month were up.

GM was the biggest loser in car sales. Its dealers delivered 25,847 domestic cars, 33.60 percent below the 38,929 it sold in July 1986. A GM of Canada spokesman attributed the sharp drop to 16 selling days on which no rebates or financing incentives were offered by GM dealers in Canada. GM ended its low-financing and consumer cash program on June 30 and reinstated it on July 20.

The present program offers consumers $750 or financing ranging from 3.9 percent for 24 months to 9.9 percent for 60 months on selected models. GM is offering only the cash rebate in Ontario because of a provincial law that prohibits offering both.

Ford also showed a drop in car sales. Ford dealers in Canada sold 13,109 domestic cars in July, a 13.45 percent drop from the 15,146 sold a year ago. Ford continued to offer $750 cash rebates and low financing ranging from 3.9 percent to 9.9 percent on selected models — only the rebates are offered in Ontario. Tempo outsold all other Ford and Lincoln-Mercury nameplates in July with 3,071 deliveries.

Chrysler Motors' car sales continued to be affected by a shortage of Omni and Horizon Expo models (called America in the United States). Those cars are temporarily out of production.

Chrysler dealers in Canada sold 11,884 domestic cars in July, a 10.51-percent drop from the 13,280 sold a year ago. The company sweetened its rebate program in July and offered consumers $500 to $1,500. The rebates ranged from $500 to $1,000 in June.

Honda sold 1,685 Canadian-built cars — all Accords — in July. Honda was not building cars in Canada a year ago.

In addition, Honda sold 4,538 Japanese-built Honda models, a 33.84-percent drop from the 6,859 sold a year ago. Honda also sold 732 Japanese-built Acura models. Acura also has no year-ago comparison.

Accord was the best selling nameplate in Canada in July with a total of 3,136 domestic and imported cars.

American Motors sold 365 domestic Renault cars and 27 AMC Eagles in July compared to 567 domestic Renaults and 32 Eagles a year ago. AMC also offered cash incentives to dealers depending on the number of vehicles sold and in stock.

Volvo sold 241 Canadian-produced cars, down 1.23 percent from the 244 units sold in July 1986. A Volvo spokesman said the company's sales are suffering from low availability of certain models in Canada.

In truck sales, GM was also the biggest loser. GM sold 11,865 domestic trucks in July, down 29.58 percent down from the 16,850 it sold in July 1986. GM offered $750 cash and financing incentives on its Chevrolet S-series four-wheel-drive pickup trucks and compact 4wd sport-utility vehicles. GM buyers in Ontario are being offered only the cash incentive.

Canada's other domestic truckmakers showed sales gains in July. Ford sold 10,501 domestic trucks, up 10.18 percent from 9,531 last year. Ford's July truck sales were the highest for any July since 1979 when it sold 10,916. Ford offered truck buyers a choice between cut-rate loans or a $750 rebate on Ranger models equipped with manual transmission. Only the rebate is offered in Ontario.

Chrysler sold 5,988 domestically produced trucks, up 14.23 percent from the 5,242 trucks it sold in July 1986. The July truck sales total, including Mitsubishi trucks, was 6,384 and was an all-time sales record for that month. The previous record was set in July 1986 when 5,587 domestic and imported trucks were sold.

AMC Jeep sales totaled 1,628, up 27.69 percent over the 1,275 sold in July 1986. It was the highest July total in AMC history.

In addition to North American-built cars, GM in July sold 999 Suzuki-built Chevrolet Sprints, 898 Suzuki-built Pontiac Fireflys, 118 Isuzu-built Chevrolet Spectrums, 48 Isuzu-built Pontiac Sunbursts and four Isuzu I-Marks.

Ford sold 784 Mercury Tracers, 42 Merkur Scorpios and 33 Merkur XR4Ti models. The Tracer is built in Taiwan; the Scorpio and XR4Ti are built in West Germany.

Chrysler sold 1,087 Mitsubishi cars and 15 Peugeot cars. As mentioned above, Honda sold 4,538 Japanese-built Honda models and 732 Japanese-built Acura models.

Volvo sold 453 Swedish-built Volvo models in July, and AMC sold 233 imported Renaults.

In the imported-truck category, GM sold 11 Isuzu Trooper models, and Chrysler sold 396 Mitsubishi trucks.

Domestic, import stocks drop

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — The Aug. 1 stockpile of domestic cars in the United States was the lowest in seven months. Inventories of unsold imported vehicles were slimmer than last month, too, but were higher than on June 1.

Last August's domestic inventory was also a seven-month low. This summer, lower domestic inventories can be attributed to extended plant closings for model changeovers and to a number of attractive incentives offered in July.

The decline in the import-car stockpile may have been helped by German, French and Japanese automakers' incentive programs. The 54-day supply of imported cars was two weeks more than last year's 40-day Aug. 1 stockpile, but it was lower than last month's 60-day supply.

August opened with an inventory of 1,657,974 U.S.-built cars, a 71-day supply. That was 12.74 percent below the previous month's stockpile of 1,900,096 cars, a 75 day-supply.

On Aug. 1 last year, the domestic inventory was 1,725,524, a 69-day supply. Two years ago — on Aug. 1, 1985 — there were 1,579,595 units on hand, a 65-day supply, which is considered in the optimal range.

A number of dealers confirmed that inventory numbers were down in July. Lou Turiano, general sales manager, Bill Luke Chrysler-Plymouth in Phoenix, Ariz., said: "We're where we have been and want to be with a 65- to 70-day supply." He added, "My '88s are coming in shortly. Voyager and LeBaron convertible are our two sweethearts."

There was a drop in the number of imported cars and trucks on Aug. 1 at ports of entry, in transit within the United States and at dealerships. The combined stockpile totaled 846,350 cars and trucks, a 57-day supply, compared with last month's total of 891,546, a 63-day supply. A year ago, there were 643,893 imported vehicles in inventory, a 43-day supply.

Stocks of unsold imported cars dipped to 628,337, a 54-day supply, compared with last month's total of 650,508, a 60-day stockpile. A year ago, 443,244 cars were in stock, a 40-day supply.

A Nissan and Saab dealer in New York said he was happy with a three- or four-week supply in July.

The Aug. 1 inventory of imported trucks also slipped — to 218,013, a 66-day supply, compared with 241,038, a 71-day total on July 1. A year earlier, truck inventories totaled 200,649, a 49-day supply.

The majority of domestic manufacturers started August with lower days' supplies than in July.

They shared the Aug. 1 domestic inventory this way: General Motors, 56.10 percent; Ford Motor Co., 25.55 percent; Chrysler Motors, 13.75 percent; Nissan, 1.29 percent; Volkswagen, 1.16 percent; American Motors, 0.85 percent; Honda, 0.78 percent; and Toyota, 0.52 percent.

On July 1, the split was GM, 55.65 percent; Ford, 26.18 percent; Chrysler, 13.97 percent; Nissan, 1.35 percent; Volkswagen, 1.21 percent; AMC, 0.86 percent; Honda, 0.53 percent; and Toyota, 0.25 percent.

GM's Aug. 1 stock dropped 12.04 percent from its July 1 total. A dealer who confirmed the lower numbers at his store was Larry Wagers, sales manager, Bud Young Chevrolet-Oldsmobile, Shelby, Ohio.

"Cavaliers and Cutlass Supremes are down to one (day's worth). But since July, our inventories have changed dramatically because of the 1.9-percent (financing incentive) in the last week," he said.

Ford's inventory was 14.84 percent lower than in July. A sales manager for a Ford dealership in St. Charles, Ill., said stocks at his store confirmed the downward trend. He said Ranger and Escort stocks were lower but admitted that Taurus and Thunderbird inventories were up. He added that "incentives will help move and sell them."

The domestic shares by size class Aug. 1 were: subcompact, 16.61 percent; compact, 17.65 percent; intermediate, 43.38 percent; standard, 12.42 percent; and luxury, 9.94 percent.

Stocks of some intermediate-size domestic cars increased during July, while others declined. For example, Chrysler New Yorker sales were down significantly, leaving a 160-day supply, up from a 100-day inventory last month. That was offset by Dodge Lancer sales, which nearly doubled during the month, lowering the supply from 160 to 95 days. Chrysler's offer of rebates or 3.7-percent financing on Lancer boosted sales in July. There were no incentives on New Yorker.

Improved July sales for Volkswagen reduced the company's domestic days' supply. It fell 39 percent, leaving a 75-day supply vs. a 123-day supply a month earlier. Low-interest financing was offered in July.

John Wallace, sales manager, College Park Volkswagen, College Park, Md., said: "Inventories are down. Sales are good."

Imported car and truck inventories declined by 45,196 units during July, which was 5 percent lower than stocks a month ago. The leanest stockpiles were Honda's imported cars, which stood at a 10-day supply. Inventories of imported Renaults climbed to a 266-day supply because sales were down in July.

Imported truck stockpiles declined from a 71-day supply in July to 66 days at the beginning of August. However, that was up from a 49-day supply on Aug. 1 last year.

Nissan's truck sales were off in July, increasing its days' supply to 107 days compared with 69 on July 1, even though its actual unit count was lower.

The Aug. 1 inventory of imported cars by country of origin was split up this way: Japan, 65.64 percent; Germany, 14.58 percent; and other countries: 19.78 percent.

The July 1 inventory share by country was: Japan, 66.23 percent; Germany, 16.21 percent; and other ccuntries, 17.56 percent.

Domestic sales for early August beat year ago

Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Domestic car sales for Aug. 1-10 rose 12.07 percent over the same period a year ago, with Ford Motor Co. and General Motors leading the gains. Honda and Nissan also reported big gains.

Sales for the period totaled 170,382 cars compared with 152,035 last year. The daily selling rate increased to 21,298 units, up from 19,004 a year ago. There were eight selling days in the period both years.

GM's announcement of new incentives gave it a sales edge. Sales for the first 10 days were 91,582, up 16.88 percent from 78,355 in the year-ago period. Industrywide cleanup incentives last year weren't launched until late August.

Ford's 10-day sales of 49,402 units were 19.23 percent stronger than 41,435 sold in the comparable 1986 period.

Chrysler Motors sales, which included Eagle division estimates, were off 34.14 percent compared to a year ago, again including American Motors estimates.

Chrysler was not offering 1.9 percent financing during the period. Sales were also hurt by Dodge Omni and Plymouth Horizon being out of production. They are normally high-volume sellers.

Honda's sales of Ohio-built cars rose 89.36 percent to 8,421 compared to last year's 4,447 units. Nissan sold sold 2,195 cars versus six a year ago, when the Smyrna, Tenn., plant was idle.

Toyota, which was not producing cars in the United States last year, sold 568 units in the Aug. 1-10 period this year.

Volkswagen sales slipped to 646 from last year's 1,118, a 42.22 percent drop. Volkswagen stopped its incentives at the end of July.

Subaru distributors drop suit; pressure to buy cars alleged

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The difference between having too many cars and not enough is often only one car, according to an old industry saying.

But in the case of four independent Subaru distributors, the too many cars may number in the thousands.

Saddled with a climbing inventory that numbers into the hundreds of days, the four Subaru distributors — New England, South, Mid-America and Inter-Mountain — sued Subaru of America in federal district court in Denver. They accused the company of forcing too many cars on them.

That practice, according to the lawsuit, would force them into insolvency. As a result, it would allow Subaru of America to buy out the distributors at a low price.

Three other independent distributors were not party to the suit. Subaru of America owns another six distributors.

The suit was withdrawn after a Denver judge refused to grant a preliminary injunction barring the shipment of 1,700 vehicles to Inter-Mountain. The distributor said it had not ordered the cars, since it had a 200-day supply of vehicles in stock. A Subaru spokesman said the vehicles were being shipped because they had been ordered by the distributor. He added that Subaru of America has no "master plan," as alleged in the suit, to over-supply vehicles to force the distributors into selling.

The spokesman said that while inventories are high, the company is trying to deal with the problem through the current rebate and interest subvention program.

"We've extended the program and have gone as far as to let the distributors and dealers choose which models, except for Justy and BRAT, get either the cash back or interest rates. That's not a way to put a stranglehold on the distributors," he said.

Allen Kezsbom, an attorney with the New York law firm of Fried, Frank, Harris, Shriver & Jacobsen, which is representing the four distributors, said, "The suit is having an effect. Subaru is attempting to take steps to deal with some of the excess car problems."

Kezsbom said the distributors were told that Subaru of America executives were meeting with executives of Subaru's manufacturer, Fuji Heavy Industries in Japan, to iron out vehicle allocation problems.

UAW rejects GM proposal tied to productivity, quality

By Michelle Krebs and Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — UAW officials Friday rejected a proposal from General Motors tying job protection and income to productivity and quality at GM plants.

"We are formally saying we cannot accept the proposal or concepts that would replace cost of living or wage increases with lump sum payments — particularly iffy lump sum payments," Donald Ephlin, UAW vice president in charge of the GM department, said.

Ephlin said the problems at GM are not wages but mismanagement. He cited instances where GM is paying more for "friendly" suppliers to do some work than it is paying to its own employees who may not have enough work.

He said the union is willing to cooperate with programs already in place to solve problems related to productivity and quality.

Even though the union has rejected the proposal, Alfred S. Warren, GM vice president of industrial relations, said the company would not remove it from the bargaining table. He said the proposal fostered valuable discussion.

Warren said one of the biggest problems facing the company is making its component divisons competitive.

Ephlin said the company's mid-level managers are violating contracts at some of the automaker's 150 U.S. plants.

"My problem is getting the corporation to do what it promised to three years ago," he said. "There are mid-level managers who are not singing out of the same hymn book as the people on the 14th floor."

GM had called the proposal conceptual and a starting point for discussions addressing the union's demand for job security and GM's need for increased competitiveness.

"Our problems lie in a number of different areas, and one of them is to devise a method of job security without adding cost," Warren said.

Under the proposal, base wages would have stayed at current levels. Lump-sum payments, which would combine the cost-of-living allowance and performance bonuses, would be made to all workers in the first year of the contract. Those payments have been made separately throughout the year.

The COLA formula, in effect, would have been eliminated and the current level of COLA payment retained as part of the incentive payment. COLA now amounts to 86 cents an hour, or $1,788 annually per worker.

Lump-sum payments in the second and third years of the contract would have included the COLA payment as well as performance payments based upon individual plants or divisions meeting or exceeding quality and productivity targets. Performance bonuses would not be paid if a plant or division did not make progress in meeting those targets.

In addition, the proposal would have established a separate pay structure for component and defense-related plants. In the first year of the contract, lump-sum payments to workers at component plants would be smaller than those paid to assembly workers.

In return, GM said it might place a moratorium on outsourcing likely for the first year of the contract while productivity and quality goals were being set. GM also would not outsource work at plants where productivity and quality targets are met.

While GM said the proposal was designed to meet the union's need for job security, the proposal did not guarantee that a certain number of jobs would be retained.

Ephlin had warned that if there was any one issue that UAW members would be willing to strike over, it would be COLA.

"The last time someone tinkered with the COLA formula, it cost us at GM 67 days of wages and 67 days of production to correct that error," said Ephlin, referring to the 1970 strike against GM. "We have no desire to repeat that terrible mistake."

In addition, Ephlin said the union is looking for a return to the annual improvement factor, negotiated in the last contract with Chrysler Corp. Ephlin said the UAW is not opposed to bonuses based upon productivity and quality performance.

The contract negotiated in September 1984 added $250 to the price of every GM car, said Warren. The industry can no longer pass along the cost increase to the consumer, he added.

GM's initial contract proposal came two weeks earlier than it normally does. Warren reiterated the complexity of the problems necessitated an early start.

Observers said GM's initial contract proposal came early to test reaction to its radical proposal and so that GM could point out its differences from Ford.

Ford also finished its third week of negotiations, but no company proposal was presented to the union. The UAW's contracts with both Ford and GM expire Sept. 14.

Striking VW workers in Mexico block highways

By Stephen Downer
STAFF CORRESPONDENT

MEXICO CITY — Thousands of striking Volkswagen de Mexico workers blocked all roads into and out of the city of Puebla for 3½ hours last Tuesday.

The following day, they blocked access to the city's six VW dealerships and closed all entrances to four facilities being used as emergency offices by the company.

The previous week, they drove 13 buses across the main Mexico City-Puebla highway and left them there for several hours.

Arturo Garduno Escobar, spokesman for the Independent VW Union, said last Wednesday that if the company did not discuss the union's demands by today the union would consider occupying state government offices in Puebla and blocking VW's several hundred dealerships throughout Mexico.

"We know these acts are illegal," he said. "But we also know that the company is breaking the law by refusing to talk."

The strike, declared legal by the federal government, began July 1. The 10,500 workers are demanding a 100 percent wage increase and are fighting the company's plan to reduce the workforce by about 800.

Garduno Escobar said VW's management, which has been unavailable for comment, also wants to cut vacations and year-end bonuses by 50 percent. He said the company has offered a 5 percent raise.

"We are not going to lose this strike," Garduno Escobar said. "We're prepared to accept the consequences of our actions."

Herminio Nunez Navarro, who heads the National Union of Ford Motor Co. Workers, said his members would not take similar action. About 3,200 Ford workers have been on strike since July 20, demanding an emergency wage increase of 23 percent.

"Motorists are not to blame," he said. "We will follow normal strike procedures."

The Ford strikers work at the Cuautitlan plant and in Mexico City at a parts warehouse and the company's headquarters.

Nunez Navarro said Ford has offered a 6 percent raise plus the equivalent of about $50 in food vouchers. "For some workers, that represents a 23 percent increase," he said. "But for the highest-paid workers, it's worth no more than 11 percent.

"Ford made a profit of $3 million in the first six months of the year, its first profit in Mexico for five years. It can afford to pay what we are asking," he said.

Ford of Mexico makes the Thunderbird, Cougar, Topaz and pickup trucks in Cuautitlan and is preparing to produce the Taurus there later this year, he said.

A Ford spokesman said, "We are doing our best to find a solution to the strike."

The 950 workers at Ford's engine plant in Chihuahua and the 843 who work at the Tracer plant in Hermosillo accepted a 23 percent emergency increase July 1.

CENSUS

FROM PAGE 1

change in the number of intercorporate duals brought the industry's net loss to 74.

All figures in this article and in the accompanying tables indicate the net change in the dealer population, both for the individual corporations and car lines and for the domestic industry as a whole.

The midyear census marks the last time that American Motors will be be listed as a separate automaker. Chrysler Corp.'s purchase of AMC took effect Aug. 5. Henceforth, the former AMC outlets will be part of Chrysler's Jeep-Eagle network.

The first half of 1987 saw a major reduction in the number of dealerships that handle only domestic cars. Ford Division and Pontiac jumped into the captive-import arena with Ford Festiva and Pontiac LeMans from South Korea. Not all Ford Division outlets are stocking Festiva at this moment, but they are expected to have the car by October.

The Mexican Tracer gives all Lincoln-Mercury dealers a captive — some of them don't carry the Merkur line — and AMC resumed importation of Renault models (Medallion). That leaves only Buick, Oldsmobile and Cadillac without a captive.

Many of those GM dealers handle a non-captive import, and those that are dualed with Chevrolet or Pontiac have entered the captive import field. Cadillac dealers are at least halfway into the import lair. Their Allante is assembled in the United States, but the body is made by Pininfarina in Italy.

Automotive News estimates that not more than 1,200 of the 20,331 "domestic" dealerships handle only U.S.-built cars.

This year, the second-quarter decline in the dealer total amounted to 28 outlets. It was an improvement over the first quarter, which saw 46 establishments fade from the scene. In 1986, there was a loss of 25 in the first quarter and 77 in the second for a total of 102.

Franchise totals increased for the domestic makes during the first half. There were gains of 3 for Mercury, 13 for Lincoln and 30 to 37 for Chrysler, Plymouth and Dodge. The other side of the ledger showed drops of 5 to 16 franchises for Buick, Oldsmobile, AMC, Renault and Ford and a decline of 40 for Chevrolet. Cadillac, Pontiac and Volkswagen were unchanged for the first half.

The gains outnumbered the losses; there were 17 more franchises on July 1 than on Jan. 1.

Chrysler Motors continued a dealership upturn that began late in 1982; it has recorded only one decline in its total in the last 19 quarters. This year, Chrysler posted an advance of 18 in both the first and second quarters. Its dealer total now is the highest since the spring of 1980.

In addition to its 4,051 car dealers, Chrysler has three that handle only Dodge trucks. They are not included in the Chrysler Motors dealership total or the Dodge car-franchise total.

Ford Motor Co. was steady in the first half with dips of nine outlets in the first quarter and four in the second. Last year, the declines were 16 and 19 for the first two quarters.

Ford Motor has 111 dealerships that handle only Ford heavy-duty trucks. They are not included in the company's dealership total or in the Ford Division franchise total.

GM had a drop of 50 dealerships in the first quarter and 30 in the second. The total of 80 was more than three times as severe as in 1986 when the first two quarters brought declines of five and 20.

GM's overall dealer count on July 1 was 10,145, including GMC truck outlets that do not handle any of the corporation's car lines.

Dealer losses for AMC-Renault totaled 12 in the first quarter and seven in the second. The first-half decline of 19 compared with a dip of 50 last year.

About 1,210 of the 1,330 dealerships handle both AMC and Renault. AMC has 726 duals with Big 3 cars, and Renault is included in 665 of them.

Including Jeep, the AMC-Renault dealer total was 1,451 on July 1. That is the network that is now Chrysler Motors' Jeep-Eagle organization. About 170 of those stores are dualed with Chrysler Motors makes.

Volkswagen showed no change in its dealership count for the first half. It added two outlets in the first quarter and lost two in the second. About 100 VW dealerships handle Big 3 cars.

The latest domestic dealer count of 20,331 is down 240 from 20,571 on July 1, 1986. Chrysler gained 51 during the 12-month period, and there were slips of 205 for GM, 41 for AMC-Renault and 35 for Ford Motor. VW had the same number of dealers on both dates. A change in the number of intercorporate duals brought the decline for the industry to 240.

DeLorean settlement will stand

DETROIT — A federal judge has denied the British government's challenge to a bankruptcy settlement between John Z. DeLorean and the trustee for creditors to his defunct sports-car company.

Attorney Malcolm Schade, who represented the British government, had argued that there were no guarantees that DeLorean would be able to pay the creditors $9.3 million, as stipulated in the settlement. Great Britain helped finance the DeLorean Motor Co. project in Northern Ireland and was the largest creditor in the case.

But in a ruling here Friday, Judge Ray Reynolds Graves approved the settlement, which is expected to resolve DeLorean's U.S. bankruptcy troubles. Graves rejected Schade's claims, including the argument that DeLorean could have hidden assets.

"The objecting creditors have failed to demonstrate that this settlement is unfair, unreasonable, or that the estate would be enhanced if this litigation were carried forward to conclusion," Graves wrote. He said the agreement was a fair one and promises a return to the estate.

Schade also represented Renault, which was a supplier to the DeLorean venture.

Car output moves up

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Last week's targeted domestic auto production increased over the prior week's build, as several plants returned to work after being idle for model changeover.

Output of 79,425 cars was 13.37 percent more than the previous week's 70,060, but it fell 10.38 percent from the year-ago week's 88,621.

So far this year, 4,473,718 cars have been built, 10.87 percent below the 5,019,066 completed last year at this point.

Companies split last week's production as follows: General Motors, 35.60 percent; Ford Motor Co., 32.18 percent; Chrysler Motors, 15.74 percent; Honda of America Manufacturing Inc., 8.49 percent; New United Motor Manufacturing Inc., 4.72 percent; and Nissan Motor Manufacturing Co. U.S.A., 3.27 percent.

As reported earlier, Volkswagen of America's Westmoreland, Pa., plant remains closed until Sept. 14.

Ford's Kansas City, Mo., plant is idle this week because of a parts shortage.

Chrysler's Kenosha, Wis., plant is idle for vacation until Aug. 24.

The following GM plants resumed production last week: Buick City in Flint, Mich.; Janesville, Wis.; Lansing (No. 2), Mich.; Pontiac, Mich.; and Willow Run, Mich.

These GM plants were scheduled to resume output this week: Bowling Green, Ky.; Tarrytown, N.Y.; Orion Township, Mich.; and Van Nuys, Calif.

The following GM plants remain idle for model changeover: Lordstown, Ohio; Pontiac Fiero plant in Pontiac, Mich.; Detroit-Hamtramck (excluding the Allante line); Arlington, Texas; Framingham, Mass.; and Doraville, Ga.

Daily overtime is slated this week for Ford's Wixom, Mich., plant.

Week's truck production slips

U.S. truckmakers scheduled production of 68,070 units last week, 2.66 percent below the prior week's 69,931 but 15.16 percent above the year-ago week's 59,109.

Year-to-date, 2,364,968 trucks have been assembled, 4.78 percent more than the 2,256,993 built last year at this point.

As reported earlier, General Motors permanently shut down its St. Louis truck plant on Aug. 7. Production of the Crew Cab and extended-chassis models are being transferred to Janesville, Wis.

Ford Motor Co. slated daily overtime this week at its Louisville, Ky. plant.

Canada posts car, truck gains

Last week's scheduled Canadian auto production of 4,012 was almost triple the previous week's 1,387, but fell 60.21 percent from the year-ago week's 10,084.

Both last week's and the previous week's totals were affected by the number of plants down for vacation and model changeover.

So far this year, 474,297 cars have been assembled, 28.59 percent below the 664,181 completed last year at this time.

Truck production was targeted at 12,011 units last week, 7.44 percent more than the prior week's 11,179 but 5.64 percent below the year-ago week's 12,729.

Volvo's Halifax, Nova Scotia, car plant was idle last week for vacation.

General Motor's Oshawa (No. 1), Ontario, and Ste. Therese, Quebec, car plants are slated to resume output today. Both plants were idle for vacation.

of opportunities not being able to build more luxury cars."

Ford's new phosphate E-coat sealant system will be built in a 260,000-square-foot building to be connected by a tunnel to the existing plant. The present paint shop is nearly 30 years old and has been expanded several times, Mills said. There's no more room for growth within the plant.

Ford expects to switch over to the new system without interrupting production.

"It will give us a more robust process and allow us to continue our overall improvement," Mills said. "Not only does it relieve the bottleneck, it also allows us to improve our quality."

Healy called the addition another "low-risk" step in a series of Ford moves to stretch capacity without building new plants. The company's strategy has been to risk short supplies of its cars and trucks in order to avoid being saddled with excess capacity during industry slumps.

In another production move, Ford last week cleared a hurdle in its efforts to build a body and stamping complex adjacent to its Wayne, Mich., assembly plant. The plant is expected to produce the next-generation Ford Escort in 1990.

Last week's expiration of a public comment period gives the city of Wayne the go-ahead to apply to the state for permission to build on a designated wetlands site, said Assistant City Manager John Zech. Another wetlands area will be created nearby in its place.

The city owns the 85-acre parcel and has agreed to sell it to Ford. The company is expected to spend $300 million to $400 million on the 667,000-square-foot stamping plant in addition to renovating the existing Wayne plant. The plant would produce a replacement for the Ford Escort in the 1990 model year.

Zech said construction could begin as early as September, with completion targeted for mid-1989. "We feel very confident that this project will go forward," he said.

2 suppliers add Detroit centers

DETROIT — Budd Co.'s Plastics Division will establish a plastics engineering design center in Troy, Mich., and Lear-Siegler has broken ground for a research and technical center in Southfield, Mich.

Budd Co. will relocate personnel and equipment from its Madison Heights, Mich., headquarters to a leased facility in Troy. The 16,000-square-foot center, which will cost $1 million, is scheduled to open in early September.

Lear-Siegler, a supplier of automotive seating, has broken ground for a $5 million Automotive Research and Technical Center in Southfield. The center will house Automotive Group headquarters, currently located in Santa Monica, Calif. It will create 150 additional jobs that will bring the total research staff to 300.

The 69,000-square-foot facility is the second major investment for Lear-Siegler this year. The company, also a supplier of plastic components, tooling and heavy-truck air suspension and brake systems, recently completed a $3 million technical center for heavy-truck products in Muskegon, Mich.

Third World: lower costs, higher risks

Korean, Mexican strikes shut firms

By Oles Gadacz
SPECIAL CORRESPONDENT

SEOUL, South Korea — The vulnerability of Korea's automotive industry was revealed this month when labor disputes at auto parts plants cut off the supply of parts and components needed by car assemblers.

Supplies of hot-selling cars, such as the Hyundai Excel in the United States, could have been jeopardized if the strikes were prolonged. But the slow process of returning to work began here last Friday.

In the two previous weeks, wildcat strikes spread across the country, affecting hundreds of companies, many of them serving the showcase automobile industry.

The Korean strikes, together with the current strikes at Ford and Volkswagen plants in Mexico, signal one of the risks involved in sourcing high volumes from low-cost countries. Periodic labor unrest can quickly destabilize the flow of components and finished vehicles. Korean companies expect to sell more than 300,000 cars in the United States this year. Tens of thousands more imports will be sourced from Mexico.

By far, the most serious problems have been in Korea. Korean workers have been demanding higher wages and improved workers' rights, including a voice in management, the scrapping of existing pro-management trade unions and the election of new union officers to represent their interests in labor negotiations.

The current spate of labor unrest presents the first and most serious challenge to Korean labor laws since they were overhauled in 1980.

GM closes its Norwood plant this week; 4,000 will lose their jobs

Bitter and abandoned, city fights GM closing

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

NORWOOD, Ohio — When General Motors closes its 64-year-old Norwood assembly plant this Wednesday, 4,000 workers will lose their jobs and GM will lose what it considers an albatross in its drive to cut car-making costs.

But Wednesday's closing brings no sigh of relief from GM, because the legal fallout could take years to resolve.

Norwood, a city of 26,000 that banked on GM staying around for years, filed a $318 million lawsuit against GM Aug. 7, charging betrayal of GM's commitments to the city.

Norwood's action is part of a growing movement that would hold corporations accountable to communities that nurtured their

Toyota unveils Lexus Division; upscale in 1989

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

TORRANCE, Calif. — Toyota Motor Sales U.S.A. will introduce its long-anticipated upscale Lexus automotive division in the summer or fall of 1989. The first offerings will be two luxury-performance sedans.

Toyota, which will make the formal announcement today, is forecasting sales of about 30,000 cars in the 1990 model year with an initial network of fewer than 100 dealers in the top 50 luxury-car markets, said J. Davis Illingwirth, corporate manager of Lexus Division.

Ultimate volume is undetermined for the division that is designed to complement the full-line car and truck Toyota Division, but will probably be less than 150,000 units annually, Illingwirth said.

"We are looking for distinction, not volume, and you don't get distinction with high volume," he said.

The timing is a surprise to industry analysts and observers, who expected Toyota's second division to start selling next fall. That would have put Toyota a full year ahead of Nissan's recently announced Infiniti Division (Automotive News, July 27). The Japanese luxury-car segment was established by Honda's Acura Division, which was formed in March 1986.

Illingwirth said the 1989 launch decision was made to give dealers time to build a separate facility and to allow Toyota to start operations with its flagship model.

That will be a large four-door powered by a new-generation V-8. Illingwirth would not discuss pricing this far in advance, but most industry sources expect retail prices in the low-$30,000 range.

"If you're going to have an upscale image, it's very important that you have the flagship car available at the beginning," Illingwirth said. "We decided to start with our best foot forward."

The second Lexus offering will be a near-luxury four-door sedan powered by a performance-oriented V-6, Illingwirth said. Both cars will be built in Japan.

Toyota is expected to add at least a coupe in subsequent model years to fill out the line, possibly based on its Japanese-model Soarer, but Illingwirth would say only that Toyota is reviewing potential "line enhancement options" and has not yet made any decisions.

"We recognize that American car buyers are becoming more knowledgeable and affluent and that they're demanding more performance and technology in their luxury cars," said Robert McCurry, Toyota Motor Sales senior vice president.

Lexus' target market will be import-oriented luxury-car buyers emerging in the baby-boomer generation, a population segment expected to grow three times faster than the national average during the next decade.

Lexus will be maintained as a separate franchise from Toyota Division, with its own dealer network, distribution and advertising and public relations operations.

Existing Toyota dealers are being invited to apply for a Lexus franchise, although Toyota also is open to bids from non-Toyota dealers. Illingwirth said some dealers outside the Toyota family may win initial-round franchises.

Toyota will have three phases of

EAGLE: *Upscale image, lineup in works as Chrysler signs ex-AMC dealers*

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Chrysler Motors expects to round out the car lineup of its new Eagle franchise within four years as it strives to create an upscale image for the brand.

Bennett E. Bidwell, vice chairman of Chrysler Motors, also said last week that Chrysler will not resume production of the Renault Ailiance. Production ceased June 5 at the former American Motors plant in Kenosha, Wis., and the plant has been retooled to assemble the subcompact Dodge Omni and Plymouth Horizon America models.

Bidwell, speaking to the Detroit Auto Writers Group, said production of the America models [illegible] Sept. 9. Chrysler anticipates a build of 130,000 to 140,000 units in the 1988 model year, he said.

The first shift will be called back Aug. 31 and a second shift is expected to be added later in the year.

Bidwell said Chrysler hopes to keep the price of the America models below $6,000 in the 1988 model year. The 1987 model-year price is $5,799.

The AMC Eagle will be phased out, Bidwell said. Importing the Renault Medallion in a four-wheel-drive version currently remains a go program at Chrysler, he said. But, he said, "the four-wheel-drive Medallion, if it comes, will be at least a year and half to two-years out. I do not expect the Eagle to last that long."

GM engineers among dead in Detroit plane crash

DETROIT — General Motors confirmed that 14 of its employees and seven of their family members were aboard Northwest Airlines Flight 255 bound for Phoenix when it crashed at Detroit Metropolitan Airport last Sunday, killing 157 people.

Most of the employees were en route to GM's Desert Proving Ground at Mesa, Ariz. The proving grounds are used for hot-weather testing of vehicles. The Sunday evening flight was a popular one with GM employees, who had to be at the proving grounds on Monday morning.

Two GM employees were returning with their families from vacations, GM said.

Flags flew at half-staff at GM facilities around the nation.

"My heart goes out to the relatives and friends of the fine GM employees, their family members and all of the people who were involved in this tragic disaster," said GM Chairman Roger B. Smith in a statement. "All of our employees feel this loss very personally, and fellow employees have been assigned to assist the families."

Among those GM employees killed in the crash were Don W. Briggs, 43, manager of the GM Desert Proving Ground, Mesa, along with his wife Sharon, 42, his son Matthew, 13, and daughter Megan, 8. The Briggs family was returning from a vacation in Michigan to their home in Arizona, where they had lived for about a year.

Also killed were GM employees from the Harrison Radiator division in Lockport, N.Y. They were: Kevin P. Insalaco, 27, project engineer; Louis Scarselletta, 30, staff project engineer; Thomas L. Spark, 32, senior project engineer; Carl A. Scherer, 58, supervisor — product engineering; and Phyllis A. Zigler, 32, senior project engineer.

The Harrison Radiator Division engineers were all involved in advanced design of air conditioning systems. They were among the scores of groups each year that travel from Lockport to Arizona to test new equipment, officials said.

William M. Best, 36, national accounts manager for GM's Detroit Diesel Allison Division in Dallas, was listed among the dead as were his wife, Kathryn, 32, his son, William Jr., 5, and daughters Hillary, 3, and Katelyn, 4 months. The family had been vacationing in New York state and were catching a connecting flight.

The following is the list of other GM employees aboard the plane: Kenneth A. Bell, 28, project engineering technician, Truck & Bus Group, Milford, Mich.; Lewis E. Dresch, 45, system manager, Chevrolet-Pontiac-GM of Canada Group, Warren, Mich.; Patrick A. Gleason, 49, staff engineer, C-P-C Headquarters, Warren; Douglas A. Hagler, 31, staff project engineer, Buick-Oldsmobile-Cadillac Group, Flint, Mich.; Gary A. Kimmel, 34, laboratory technician, Truck & Bus Group, Milford; Ernest J. Mathews, 38, systems manager, C-P-C Headquarters; and Jay T. Strausbaugh, 29, design release engineer, C-P-C Headquarters.

Other GM employees reportedly were killed in the crash but were not included on GM's official list.

Louis Talarico, 24, of Lansing, Mich., was listed among the dead. He was an assembly line worker at GM's complex in Lansing and was headed for a two-week vacation in Phoenix with a friend.

Another GM employee, Eddie Galloway, 38, of Detroit was killed when the airliner crashed into his truck as he drove past the airport. Galloway was a computer programmer in the automotive design studios at GM's Technical Center in Warren.

A Ford Motor Co. retiree, Robert Gaines, 70, of Rochester Hills, Mich., was also among those killed, as was an executive secretary for Chrysler Corp.'s Phoenix zone, Sandra Garriott, 37. Ms. Garriott had been visiting relatives in Detroit and was returning to her home in Arizona.

EDS retirement program sparks IRS inquiry at GM

By Nicky Robertshaw
CRAIN NEWS SERVICE

WASHINGTON — The Internal Revenue Service is reconsidering the tax-exempt status of General Motors' $11 billion salaried retirement program after some employees complained that GM illegally cut their early-retirement benefits.

If the tax-exempt status is revoked, it could cost GM at least $400 million in earnings per year, according to auto analyst Ronald A. Glantz, Montgomery Securities vice president.

"It means the interest on the stocks and bonds in the plan would be taxable, which would reduce the return on investments and require a larger contribution to the plan," Glantz said. "It would hurt earnings."

At issue are the benefits of some 7,000 GM data processing employees transferred to Electronic Data Systems following GM's 1984 takeover of the Dallas firm.

The transferred employees became participants in the EDS pension plan and, as a result, do not become eligible for early retirement as quickly as they would under GM's plan.

Currently, the GM salaried retirement plan includes 134,000 active employees and 60,000 retirees in the United States as well as 14,000 former employees who are vested but do not yet draw benefits.

The IRS reviewed GM's status after being notified by Sen. Carl Levin, D-Mich., of complaints from GM employees, according to a Senate aide.

The GM plan has a 30-and-out provision, which gave an employee an early retirement option after 30 years of service regardless of age. The EDS plan sets age 55 as the requirement for early retirement.

Two of the transferred employees, who would have reached the 30-year mark this year, sued GM in 1984, claiming they were entitled to remain eligible for the 30-and-out program.

In an Aug. 5 letter, IRS officials said GM no longer can depend on a March 1986 favorable determination letter on its salaried plan, because the letter might have been issued in error. The letter was issued after GM directors amended the salaried plan to exclude employees of any subsidiary acquired after March 1, 1984, from participation in the plan, including the credited service portion.

The amendment was approved Oct. 3, 1984, after the directors agreed to merge with EDS. The merger was completed two weeks later.

In responding to charges by the two transferred GM workers, GM pointed to the Oct. 3, 1984, amendment. A U.S. District Court in Flint, Mich., ruled in favor of GM. The decision has been appealed to the 6th U.S. Circuit Court of Appeals.

IRS officials said the determination process for the GM plan is being reopened and, in the meantime, GM would have a chance "to amend the plan or otherwise resolve any of the issues raised."

A GM spokeswoman said the company is "cooperating fully" with the IRS. Although company executives don't believe the agency will find any reason to drop the fund's tax-exempt status, it will address any problems the IRS might find, she said.

Gerald D. Facciani, president, of a Cleveland consulting firm, Facciani and Co., noted that the GM case is only one of many employee lawsuits being brought under the Retirement Equity Act of 1984.

"The way companies and sponsors have responded to this situation is to be as liberal as they can to avoid just this kind of employee suit and the adverse publicity that comes with it," he said.

Stuart J. Brahs, executive director of the Association of Private Pension and Welfare Plans, said: "It's disturbing that a company can get a favorable letter from the (IRS), but then it later turns and says, 'Forget it.' "

OLDSMOBILE: *Straight on course for 1988 with more ad money, new Cutlass*

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

LANSING — A new car and a bigger push on advertising will pull Oldsmobile out of the sales slump it has been in during the 1987 model year.

The forecast was from William Lane, Oldsmobile general manager, who said the division will boost sales in the 1988 model year by spending more on advertising. Advertising will be focused toward specific audiences and on the product.

Also, the new front-drive Cutlass Supreme, Oldsmobile's version of the GM10 car, will add to Oldsmobile's overall sales and will create a halo effect over the rest of the division's model line, Lane said.

Oldsmobile sales during 1987 have been running 25-30 percent lower than levels of the previous year. General Motors' overall sales have been running 15 to 20 percent behind the year-earlier.

Lane predicted that 1987 model-year sales will be 802,000 to 805,000 cars. For the 1988 model year, Oldsmobile projects sales will be 865,000 units.

It had seemed that Oldsmobile had been immune to the ups and downs of the auto cycles. For four consecutive years — from 1983 to 1986 — Oldsmobile sales broke the 1 million mark. Even during the recession, sales were above 800,000 units a year except for 1982 when sales totaled 799,585.

But for the first half of 1987, Oldsmobile sales totaled 381,132 units, down 32 percent from 558,553 units in the year-earlier period. Oldsmobile's market share, which has been running between 9 and 11 percent for several years, fell to 7.5 percent in the half.

The sales slide has led some dealers to fear that Oldsmobile is headed down the same path as Buick. Buick sales have tumbled as the division has struggled to sort out what kind of cars it should sell and to whom they should be sold.

Lane doesn't agree with the comparison.

"If you look at us over the years," he said, "we've been able to maintain a steady sales record. Where other ones were having peaks and valleys, we just kind of rolled along. I think the reason we did that is because we stuck with the plan."

Oldsmobile and its dealers have not changed direction, Lane said. "There wasn't any problem for Oldsmobile in terms of market segmentation definition. We didn't go out and say to the dealers, 'Hey guys, we're going to do something different.' "

Lane said Oldsmobile will push for innovation, engineering leadership and high styling in its automobiles. "That's where we've always been," he said.

Lane explained this year's sales slide by pointing to the difficulty of maintaining its repeated sales records: "Any time you don't set another record, you're going to see minuses."

More importantly, however, Oldsmobile has been socked by competition. Japanese imports have recently moved upscale, into the midsized segment, the heart of Oldsmobile's market. Ford Motor Co. also has become a significant factor.

"We see Ford products coming more as alternates now in our market, where before Ford products used to be lower-priced and even smaller. By Oldsmobile's count, 615 models of cars are sold in the United States today. With all of that competition and the advertising that goes along with it, it's difficult to get the message across to customers in advertising," Lane said.

"Chevrolet obviously spends more than any of us, and I think they're witnessing the same thing," he added. "You can't break through everything that's out there even if you're as big as Chevrolet."

Oldsmobile hopes to "break through the clutter" with advertising that will emphasize product, not lifestyle. Lane said the Aerotech, Oldsmobile's test and show car equipped with the Quad 4 multi-valve engine, will be used to emphasize technology, innovation and engineering leadership.

Advertising will focus on the features of Oldsmobile cars and the benefit of those features to buyers.

Hertz says fleets take half of sales

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Cars purchased for business use — rentals, leased vehicles and business-owned fleets — continued to account for nearly half of all new-car sales in the United States last year.

An annual survey of the car-truck lease and rental industry prepared by Hertz Corp. reported that increased 1986 revenues were accompanied by a record high number of vehicles in service.

Hertz said revenues for the lease-rental industry soared 23.4 percent to $64.626 billion in 1986, from $52.368 billion in 1985.

The number of rental and lease vehicles in service during 1986 grew 7.1 percent over 1985 to a new high of 7,199,000. Total vehicles in service during 1985 was 6,719,000. The dollar figures and the number of vehicles in service include cars and trucks.

The Hertz figures for "non-personal" cars include fleet sales (organizations buying 10 or more units a year), smaller businesses and government groups purchasing four to 10 vehicles annually and sales to individuals who drive more than 50 percent for business.

Hertz spokesman Leigh Smith said survey totals are compiled from manufacturers and from independent polls.

According to Hertz, "Sales of all new non-personal cars rose 4.5 percent from 5,145,000 in 1985 to a record 5,374,000 last year." Last year's total was 48.2 percent of total new-car sales, Hertz said.

The survey showed that import makes accounted for 7.1 percent of non-personal-car sales in 1986.

The survey noted that the ratio of new non-personal sales to all new auto sales has been in the 40 to 60 percent range for the past 20 years.

The report said there was an 11.8 percent jump in the number of rental cars on the road last year, and a 21 percent increase in rental car revenues.

The survey showed that the average age of lease-rental vehicles dipped in 1986. The report said the average "holding time" edged down to 3.13 years from 1985's 3.33 years. Hertz noted that both times are far above the 2.45-year average in 1972, the last year before the first Arab oil embargo.

Hertz said that the average age of the nation's 176.4 million vehicles was 7.73 years in 1986.

WELL USED: *Fleets keep vehicles longer, drive them farther, NAFA finds*

WASHINGTON — Operators of commercial fleet vehicles in the United States are holding on to their cars longer and driving them more miles before disposing of them.

The National Association of Fleet Administrators' 1987 used-car marketing survey found U.S. commercial vehicles were an average of 31 months old when sold and had been driven an average of 64,356 miles.

Last year, commercial fleets reported average disposal at 30.2 months and 61,029 miles.

U.S. commercial fleets responding to the survey said they sold 52,417 vehicles last year. Most of them were 1984 models. As in past years, most of the vehicles were disposed of through auto auctions and auto wholesalers, the association said.

When determining used-car prices, 47 percent of fleet operators responding to the survey said they use the Automotive Market Report. Nearly all respondents (97 percent) said they did not recondition vehicles before sale.

The 1987 survey gathered 406 responses from fleets across the United States and Canada. The survey contains data on U.S. commercial fleets, Canadian fleets, U.S. public utility fleets and government fleets.

Those responding to the survey control 102,263 company-owned vehicles and 102,676 leased vehicles for a total of 204,939. The association's 1,700 members control an estimated 2.7 million cars, light trucks and vans.

Big 3 add light trucks to cleanup incentives

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DETROT — General Motors, Ford Motor Co. and Chrysler Motors have added light trucks to their year-end incentive programs that had previously covered selected car models.

The Big 3 are offering cash rebates and cut-rate loans as low as 1.9 percent on some 1987 light trucks.

GM led the pack with an announcement on Aug. 14 that its Chevrolet and GMC compact pickup trucks and sport-utility models would join its incentive lineup. Chrysler followed 2½ hours later with incentives on its Dodge Dakota pickup. Ford responded on Aug. 18 with incentives on Bronco II and Ranger.

The GM and Ford car and truck programs run until Sept. 30; Chrysler said its program has no expiration date.

Under the GM truck incentive program, buyers of Chevrolet S-10 pickups and Blazers and GMC S-15 pickups and Jimmys can choose a cash rebate of $1,000 or low-interest financing. Buyers of the Chevrolet S-10 EL pickup and the GMC S-15 X81 pickup will receive $500 rebates or low-interest loans.

Financing rates on the GM compact trucks include 1.9 annual percentage rate on 24-month loans, 3.9 APR on 36-month loans, 4.8 APR on 48-month loans and 8.9 percent on 60-month paper.

No dealer financial participation is required on the trucks. There is dealer financial participation on GM cars in the cleanup program.

Ford is offering $1,000 rebates on Bronco II 4x4s and Ranger 4x4s and $700 on Bronco II 4x2s and Ranger 4x2s. The customer can choose the rebate or financing between 1.9 APR for 24-month loans and 8.9 APR for 60-month loans.

A cash rebate of $500 is available on F-150, F-250 and F-350 models equipped with manual transmissions. The low-rate financing option is not available on the F-series trucks.

No dealer financial participation is required in the Ford truck program.

Chrysler said buyers of its two-wheel-drive and four-wheel-drive Dodge Dakota pickups, except the Dakota S model, can choose a $1,000 rebate or financing between 1.9 APR and 8.9 APR. Dakota S buyers receive a $500 cash rebate or the financing. The Chrysler program has no ending date and requires no dealer financial participation.

Chrysler's Jeep-Eagle Division — formerly American Motors — sweetened its truck incentive program on Aug. 20. Buyers of two-door Jeep Cherokees and four-wheel-drive Comanche models may choose a $1,000 rebate or financing between 1.9 APR for 24 months and 8.9 APR for 60 months. The previous program offered $1,000 on two-door Cherokees or financing between 3.9 and 9.9 APR, and $1,000 on 4wd Comanches or financing between zero and 9.9 percent.

Buyers of the 2wd Comanche may select a $700 rebate or financing between 1.9 APR and 8.9 APR. The previous program offered a $500 rebate or financing between zero APR and 9.9 APR.

Four-door Cherokees and Wagoneers have a $700 cash rebate or financing between 3.7 APR for 24 months and 8.9 APR for 60 months. The previous program offered a $600 rebate or financing between 5.9 APR and 9.9 APR on those models.

The Jeep program runs until Sept. 30 and requires no dealer financial participation.

Japan bows to U.S. pressure to monitor sales of parts

By John Suzuki
SPECIAL CORRESPONDENT

TOKYO — The United States won an important strategic concession in its auto parts trade talks with Japan. It is an agreement that Japan will monitor all transactions involving Japanese automobile producers and American suppliers for the next five years.

The accord, announced jointly by the two governments last Tuesday, brought to a close the market-oriented, sector-selective, or MOSS, talks on auto parts. Those talks, involving the U.S. Commerce Department and Japan's International Ministry of Trade and Industry, began last August.

At the outset last August, the Japanese government had opposed the concept of a monitoring system. A basic agreement on that issue subsequently was reached in February of this year, although sources claim that Japan initially supported only a three-year monitoring period.

In a press briefing, Bruce Smart, undersecretary of Commerce for international trade, said he believes the provisions "will give us a good data base to measure how the trends are taking place."

Specifically, the U.S. government hopes to accumulate data on the value of U.S. parts purchased by Japanese car manufacturers both in Japan and the United States in addition to the number and type of purchasing relationships between Japanese makers and American suppliers.

Also to be made available is the number of prototype samples ordered from American parts suppliers for import into Japan for the 12-month period through July of this year.

Data collection is to be administered on a "voluntary" basis by the Japan Automobile Manufacturers Association. It will be compiled semiannually, beginning in the current Japanese fiscal year through fiscal 1991 (to March 1992).

U.S. auto parts exports to Japan are estimated to have reached $203.4 million in 1986, 6 percent over the previous year's total. That compares with more than $5.8 billion in imports from Japan, creating an auto parts imbalance of $5.6 billion.

JAMA, however, claims that total Japanese purchases, including those by Japan's U.S. manufacturing subsidiaries, approached $2.5 billion during the year, up 44 percent in dollar terms.

Smart said he believes the greatest achievement in this round of talks was the increased awareness of Japanese companies to open bidding to foreign suppliers and, similarly, the increased awareness of American companies of the need to compete "Japanese style" to meet the needs of Japanese automakers who insist on 100 percent quality, just-in-time delivery and other specifications and conditions.

He added that the agreement is likely to have little effect on the omnibus trade legislation being debated by Congress.

John Creamer, director of the Japan office of the U.S. Automotive Parts Industry, said, "We've succeeded in focusing some attention on the parts industry."

Creamer's office is supported jointly by the Commerce Department and the Motor and Equipment Manufacturers Association.

Another official, who asked that his name not be disclosed, added, "The agreement gives the Japanese auto companies an excuse to buy from American suppliers."

The agreement contains additional provisions to identify purchasing contacts in Japan for U.S. parts suppliers and to foster trade development, including Japanese government and industry cooperation in seminars and trade shows.

One area not addressed in the talks, though it has become an increasingly hot topic in the United States, concerns the increasing tendency of Japanese auto parts companies to shift part of their operations to the United States along with the movement of Japanese assembly plants.

A U.S. Embassy report published in January predicted that a minimum of 300 Japanese supplier companies would set up some sort of U.S. production base within the next couple of years. Some now are suggesting that estimate may be too low.

Lee Kadrich, director of government affairs for the Automotive Parts and Accessories Association, called for a curtailment of Japanese parts companies moving to the United States.

Reflecting the Reagan administration's free-trade position, Smart took exception to that view. He said, "The U.S. welcomes foreign investment and gives it the same treatment in almost all cases it does U.S. investment. The increase in assembly and parts plants in the U.S. will make the auto market there much more competitive than in the past.

"I would assume, however, that Japanese investors considering opening plants in the U.S. would consider the effects of excess capacity and other market conditions in their investment decisions," he said.

UAW chief labels MOSS talks 'a dismal failure'

DETROIT- UAW President Owen Bieber branded the just-completed MOSS talks with Japan on auto parts trade "a dismal failure." He said the union would stress the administration's failure to achieve anything in the talks as Congress prepares for final action on trade legislation.

"Instead of attacking head-on the closed doors facing U.S. auto parts makers trying to sell to Japanese companies and their traditional supplier firms, the MOSS talks managed only to reach agreement on the collection of data on the U.S. parts purchases of Japanese auto companies," Bieber said.

"This measurement of purchases is in no way an acceptable substitute for specific commitments to increase purchases of auto parts from U.S. companies," he added.

"The rapidly expanding U.S. trade deficit with Japan in auto parts must be reversed if we are to preserve the jobs and production in the industry that are vital to a healthy, technologically advanced U.S. auto industry," the UAW president said.

Bieber also said Japan's U.S. plants that use extremely small amounts of U.S. parts content are strangling domestic parts producers and reducing employment opportunities for American workers. He said that parts imports from Japan and elsewhere continue to soar.

Taiwan's automakers emphasize home market; first half up 30%

By Stephen Vines
SPECIAL CORRESPONDENT

TAIPEI, Taiwan — While automakers overseas are anxiously looking over their shoulder at the new competition likely to be posed by the exports from Taiwan's auto industry, Taiwanese companies are more worried by problems of meeting growing domestic demand.

The idea that Taiwan will shortly be a second Korea in auto export markets is premature. The emphasis remains on the home market, at least for the time being.

Home sales in the first half of this year rose by almost 30 percent to 73,576 units, compared with sales of 56,685 in the first half of last year. Although there may be some slight tailing off in the second half of the year, no one doubts the strong underlying growth trend. In recent years, sales have grown by an average of 10 percent.

Taiwan's domestic passenger-car market

Company	Jan.-June 1987	Jan.-June 1986
Yue Loong	25,736	22,328
Ford Lio Ho	17,020	11,854
San Yang	15,260	9,877
Daihatsu	6,597	4,699
San Fu	5,131	,471
Yeu Tyan	3,175	2,467
China Motors	657	989
Total	73,576	56,685

Automotive News estimates based on company sources.

"It would be higher," said Lin Chin-shiang, president of Honda distributors Nan Yang, "but parking problems are so bad and road conditions so restrictive that it is holding back the expansion of the market." The problem is particularly acute in the capital, Taipei, which accounts for 35 percent to 40 percent of all new-car sales.

The main reason for the sales boom is simply the rapid increase in Taiwanese living standards, created by a consistent rise in gross national product. It is providing higher wages against a background where inflation in nonexistent or minimal.

Car ownership was a mere one vehicle per 1,000 people in 1952. According to the most recent statistics available, covering 1986, ownership has risen to 77 per 1,000 and is believed to be considerably higher now.

The rise in sales comes despite the high prices in the domestic market. The top selling locally made Honda Civic, for example, retails at $338,000 Taiwan dollars ($10,600 U.S.) for the manual version.

The automatic transmission version plus extras (including air conditioning) sells for $12,800.

In part, these high prices are generated by heavy tariffs on imported components and even higher tariffs on imported cars. However, the 35 percent tax on components and the 55 percent tax on imports of built-up cars is being gradually cut and eventually a reduction of 10 percent to 15 percent in retail prices is expected.

The local manufacturers' argument for maintaining high prices has recently been slightly undermined by two new import challengers making a push in Taiwan. Fiat of Italy and Seat of Spain are vigorously entering the market with lower-priced cars. They are beginning to make some impact. Their success is all the more impressive because they have been able to price low despite heavy import taxes.

Japanese imports are banned because, in the words of one motor company source, "there's no way we could compete with them. If they were allowed in, we would all be dead."

In fact, the Taiwanese in the past would have liked to keep out all auto imports. But they were threatened with a big stick by the U.S. government. Strong pressure forced them to allow in, often on preferential terms, American-made vehicles, or risk jeopardizing its other exports to the U.S., which make up about 50 percent of Taiwan's exports.

Denied direct access to the Taiwanese market, Japanese manufacturers have joined with local companies to make cars in Taiwan. The biggest partnership is between Yue Loong and Nissan, which acquired a 25 percent stake in the company in 1985.

This has every appearance of a marriage of convenience rather than one of love. Yue Loong would like to be more independent of the Japanese, and has taken a significant step in this direction by developing its own car, the Feeling. Nissan, on the other hand, shows every sign of wanting a bigger say in the Taiwanese company.

The company is run by the formidable Vivian Wu Yen, who took over from her husband in 1976 and was named president when he died in 1981. She has a reputation for concentrating all control in her hands and has long since ceased to be regarded as a mere surrogate for her husband who founded the company.

Despite a rigorous program of up-grading quality control and ambitious expansion plans now yielding annual production of 70,000 units, Yue Loong is still fighting to stop its decline in market share.

A joint deal with Chrysler and Nissan, initiated some two years ago to co-produce a 1.2-liter passenger car, collapsed, much to the annoyance of Yue Loong, which was hoping to sell the new car in the American market. Chrysler is believed to have been paid a few million dollars in compensation to Yue Loong for its failure to fulfill its undertakings.

Yue Loong President Vivian Wu Yen has a reputation for concentrating all control in her hands.

Far happier with its international ties is Ford Lio Ho, which is 70 percent owned by Ford. It is strongly linked to Ford's Japanese partner, Mazda, which in turn is 25 percent owned by Ford. The company is fully integrated into Ford's world car strategy and became Taiwan's first major car exporter in July 1986, when it began sales to Ford of Canada.

Last month, however, Ford Lio Ho suffered a serious production set-back when its modern plant at Chungli, near Taipei, was hit by a storm that lifted the root off.

Interestingly, Lio Ho was negotiating with Japan's Toyota before it joined forces with Ford in 1972. Toyota pulled out of the talks when it decided to concentrate on mainland China rather than Taiwan.

China, however, turned out to be a bit of a disappointment, and Toyota is back in Taiwan with truckmaker Kuo Zui. It still might be back with a car-making project, despite the spectacular failure of its early 1980s proposed joint venture with the China Steel Corp.

Perhaps the most successful of the Taiwan-Japanese associations is the link between San Yang and Honda, in which Honda has a 15 percent stake. Sales growth is rapidly overtaking that of the competition, despite the fact that the Taiwanese plant is essentially a one-model operation turning out Honda Civics. Honda Accords are imported from the United States by San Yang's sales arm, Nan Yang. It is considering importing the luxury Honda Legend from Britain, where it is made by Austin Rover Group.

According to Nan Yang President Lin Chin-shiang, the more liberal import regime in Taiwan is also leading the company to look further afield for component supplies.

Renault and Peugeot of France have local production agreements that are proving to be modestly successful, not least because of a fascination in Taiwan for European design. Meanwhile, Nissan-associate Daihatsu and Mitsubishi are struggling for a toe-hold in the market.

Home sales "would be higher, but parking problems are so bad and road conditions so restrictive that it is holding back the expansion of the market."
— CHIN-SHIANG

Cadillac mulls Cimarron's future

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — The Cimarron is receiving a lot of attention from Cadillac market planners and engineers these days, and its future is uncertain.

Cadillac General Manager John O. Grettenberger said options for the Cimarron will be looked at during the next few months. Several options — keeping it, dropping it or replacing it with something more expressive — are being considered.

The one option not being considered is replacing the present Cimarron with the Opel Senator, as has been speculated.

Whatever happens, the Cimarron will have to be repositioned. The current Cimarron, Grettenberger noted, is priced several thousand dollars lower than the Nissan Maxima and Toyota Cressida. Grettenberger said every Cadillac should be at the upper end of its segment.

Grettenberger confirmed that the division is exploring the possibility of a 12-cylinder engine for a future car. He also mentioned the possibility of a 16-cylinder engine.

However, he said, such a project would be a major undertaking because it would have to be placed in an all-new front-wheel-drive car. Cadillac would be the first automaker to have a 12-cylinder or 16-cylinder engine in a fwd car.

Meanwhile, Grettenberger said Cadillac is taking "drastic steps" to make the Eldorado and Seville more expressive in the future. They will be positioned to go head-to-head with the European imports.

Cadillac's Fleetwood, built off the C-car platform shared by the Buick Electra/Park Avenue and Oldsmobile 98, will "take a leap beyond" its Buick and Oldsmobile sister cars in the 1989 model year when it is restyled to be more distinctive, Grettenberger said.

Grettenberger predicted the luxury segment will remain strong in the coming years, despite forecasts by some auto analysts that the segment will be squeezed. He said Cadillac will continue to emphasize powertrains, styling and functional features that the luxury buyer expects along with excellent quality.

For the 1988 model year, Grettenberger expects sales of 292,000 units. Sales for the 1987 model year are expected to be 278,000 to 280,000.

GROWTH: *Mid-Atlantic Toyota expands; $11 million in facilities added*

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

GLEN BURNIE, Md. — Mid-Atlantic Toyota has opened an $11 million addition to the parts warehouse and service training facilities at its suburban Baltimore headquarters.

The 170,000-square-foot addition nearly doubles the size of the parts warehouse to 316,000 square feet and also provides additional space for the distributor's service training operation. Mid-Atlantic Toyota conducts about 14,000 man-hours of classroom and hands-on service instruction per year.

Jack Brown, president and chief executive of Mid-Atlantic Toyota, said the investment reflects the company's expanding sales. Last year, the firm sold more than 88,000 cars and trucks to move past Gulf States Toyota, Houston, for second place among Toyota's three distributors, according to Brown. Southeast Toyota Distributors, Pompano Beach, Fla., is first.

Part of his company's success, Brown said, has been an almost threefold increase in truck sales, moving from about 12,000 units in 1983 to 30,000 last year.

Some of the 350 guests tour Mid-Atlantic Toyota

"When I came here in 1983, it was said that we don't have a truck market," Brown said of the five-state Mid-Atlantic area that includes Maryland, Virginia, Pennsylvania, West Virginia and Delaware. "Our market is a bit different, but our dealers have done a good job selling trucks."

While he sees sales this year remaining at or just below last year's level, Brown said that the addition of Toyota's Kentucky plant and the softness of the market for other other imports presents an opportunity for Mid-Atlantic to boost its sales and allocation of vehicles.

With increased volume, the additional parts and service training facilities will play an important role, he said.

"We're building for the future," Brown said.

Mid-Atlantic, with sales of more than $1.1 billion annually, recently signed another five-year agreement with Toyota Motor Sales U.S.A. The distributor has about 100 dealers and plans to add three or four more in the next year. It also will continue a program to upgrade the facilities of its current dealers.

PRODUCTION

Auto build is 92,461

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Domestic weekly auto production is beginning to accelerate as several assembly plants resume output after being idle for model changeover.

Automakers' targeted car production of 92,461 last week was 17.02 percent more than the previous week's 79,015 but dipped 32.80 percent from the year-ago week's 137,592.

Last week's scheduled production was shared as follows: General Motors, 42.09 percent; Ford Motor Co., 27.94 percent; Chrysler Motors, 17.30 percent; Honda of America Manufacturing Inc., 5.80 percent; New United Motor Manufacturing Inc., 4.06 percent; and Nissan Motor Manufacturing Co. U.S.A., 2.81 percent.

As reported earlier, Volkswagen of America's Westmoreland, Pa., plant is closed for model changeover. The plant was scheduled to resume production on Sept. 14 but start-up has been delayed at least a week because of the VW strike in Mexico.

Ford's Lorain, Ohio, plant was closed Tuesday until late Thursday because of a parts shortage, affecting about 2,900 workers.

On Oct. 19, GM will reduce production at its Wentzville, Mo., plant from two shifts to one, laying off about 2,700 workers. The Wentzville facility assembles the Buick Electra, Oldsmobile 98 and Oldsmobile 88 models.

Three GM plants were scheduled to resume production today after model changeover downtime. They are: Lordstown, Ohio; Detroit-Hamtramck; and the Pontiac Fiero plant in Pontiac, Mich.

GM's Arlington, Texas; Framingham, Mass.; and Doraville, Ga., plants remain idle for changeover.

The No. 1 line at Chrysler's Kenosha, Wis., plant is slated to resume output today after being down for vacation. The No. 2 line is scheduled to resume production on Sept. 7.

Ford's Kansas City, Mo., plant remains closed for model changeover.

Ford has scheduled daily overtime this week at its Dearborn, Mich., and Wixom, Mich., plants.

Truck production declines 11%

Last week's scheduled domestic truck production totaled 58,583 units, 11.82 percent below the previous week's 66,436 and 1.79 percent below the year-ago week's 59,650.

Year-to-date, 2,421,917 trucks have been assembled, 5.25 percent more than the 2,301,008 completed last year at this point.

Chrysler's Jeep plant in Toledo, Ohio, was idle last week for vacation. Ford slated daily overtime this week at its Louisville, Ky., plant.

Week's output climbs in Canada

Canadian car and truck output last week increased over the prior week's production as vacation downtime tapered off.

Last week's targeted car output of 6,937 was almost double the previous week's 3,729 but fell 47.01 percent from the year-ago week's 13,092.

So far this year, 482,127 cars have been assembled, 28.80 percent below the 677,175 completed last year at this time.

Truck output of 15,698 last week rose 18.70 percent over the prior week's 13,225 and was 20.70 percent more than the year-ago week's 13,006.

Volvo's Halifax, Nova Scotia, car plant was down last week for vacation. The plant is scheduled to resume production today.

White House tries again to end CAFE

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The Reagan administration has once again sent to Congress its proposal to eliminate corporate average fuel economy standards for passenger cars after the 1988 model year.

It was originally part of an omnibus trade package designed to make U.S. industry more competitive. Since it did not become part of the trade bills — and has received no attention at all so far — it is being resubmitted separately.

It has been reintroduced by Sen. Don Nickles, R-Okla., a member of the Senate Energy Committee. He is known to be a friend of General Motors and Ford Motor Co.

In the past, both companies have asked NHTSA to reduce CAFE standards. Chrysler Motors opposes lowering or eliminating the passenger-car CAFE standards.

Nickles described the current law as "archaic" and as a "well-meaning but misguided response by Congress to intervene in the marketplace in the hopes of reordering consumer tastes to use less energy." He said CAFE has hurt the domestic industry. And it has not helped consumers who wish to continue buying large cars.

CAFE, he added, has hurt the two largest domestic car firms. He said they have been failing to meet the standards, while foreign companies "have huge banks of CAFE credits that will enable them to flood the U.S. market with the large, higher-value-added cars for the foreseeable future."

While the administration bill would eliminate CAFE standards, it ensures that the government may complete its compliance cases. Automakers would continue to earn CAFE credits to offset their liability for any model year ending before the bill's effective date. In other words, there would be three full model years after CAFE repeal to allow full carry-back credits.

The administration bill would require information stickers about fuel economy on individual models, but they would not say how those models compare with other models. The section requiring dealers to retain — for consumer use — government pamphlets comparing gas mileage of various makes and models would be repealed. Instead, EPA would make data available to persons who request it.

The bill would require the EPA's testing and calculation procedures to "simulate conditions of actual use," but much would be left to the agency's discretion.

The bill contains a section that may be even more controversial than ending CAFE standards.

That is a "clarification" of who has standing to sue over CAFE issues. That is a complicated legal question currently before the full U.S. Court of Appeals for the District of Columbia. It stems from a case brought by the Center for Auto Safety against EPA over EPA's method of calculating a CAFE adjustment factor due to a change in its test procedure.

When the three-judge panel ruled for CAS and against EPA, GM and other auto companies, on EPA's side, moved to appeal to the full panel of 11 judges.

Other cases include the Competitive Enterprise Institute's suit to end future CAFE standards and the Center for Auto Safety's suit to increase future CAFE standards.

$ALES GIANTS

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER
Copyright 1987 Automotive News

The 10 highest volume franchises for each of America's 10 traditional domestic divisions sold some 700,000 new and used vehicles worth more than $7 billion last year and registered total dealership revenues in excess of $9 billion.

In fact, those 100 big deals that span the country — from big cities to small towns, from coast to coast — sold a total of 579,631 new cars and trucks last year.

To put that in perspective, those 100 sales giants — representing just one-quarter of one percent of the country's 36,298 Big 4 franchises — sold 5.14 percent of the 11,278,327 new cars and trucks sold by the Big 4 in the United States in 1986.

For decades, automakers have generally declined to provide their own listings of — or even answer questions about — which dealers move the most iron.

But Automotive News has compiled what is believed to be the first comprehensive list of the 10 highest-volume franchises for each of the Big 4's 10 traditional divisions — the 100 Automotive News Sales Giants.

It is the first division-by-division ranking of the largest individual domestic franchises based on unit sales — the result of 10 months of research plus hundreds of dealer interviews by Automotive News reporters.

The dealer principals at the highest-volume domestic franchises in 1986, based on total new deliveries, fleet and retail, were: **AMC,** Michael W. Lowe, Jasper Jeep Sales, Jasper, Ga.; **Buick,** Sonny King, Orange Buick, Orlando, Fla.; **Cadillac,** Edward J. Morse, Bayview Cadillac, Fort Lauderdale, Fla.; **Chevrolet,** Bill Wink, Bill Wink Chevrolet, Dearborn, Mich.; **Chrysler-Plymouth,** John Fitzgerald Jr., Lake Forest Chrysler-Plymouth, Gaithersburg, Md.; **Dodge,** Luke Potter, Luke Potter Dodge, Winter Park, Fla.; **Ford,** Jordan Kapson, Kapson Ford, Mishawaka, Ind.; **Lincoln-Mercury,** Bob Borst, Central Florida Motors, Orlando, Fla.; **Oldsmobile,** Mark Rosenstock Jr., Dale Oldsmobile, Bronx, N.Y.; and **Pontiac,** James Moran, J.M. Pontiac, Hollywood, Fla.

McDonald: 'Nice guy' with quality as passion

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — On each of his many visits to General Motors plants, President F. James McDonald preached the sermon on quality.

Quality became the theme of McDonald's career, particularly during his six years as GM's chief operating officer. McDonald closes his 47 years with GM as he retires today.

Colleagues say the quest for quality was a long, hard and often disappointing struggle for McDonald. And it was complicated by his strong sense of compassion for GM workers. Having risen through GM's manufacturing ranks, McDonald was as comfortable among the union folks in plants as he was among executives on the 14th floor of the General Motors Building. He didn't hesitate to talk tough to workers about paying attention to details.

Those who worked with him invariably refer to McDonald as a "nice guy." Some colleagues say McDonald may have been too nice.

Some say he may not have been forceful enough with workers to complete the quality job. Others say McDonald's compassion for plant workers caused GM to postpone too long the closing of several assembly and component plants.

GM began to subscribe to the religion of quality during McDonald's tenure, as its products improved in the face of worldwide competition. Yet, McDonald readily admits that he is departing before the quality job is entirely done. He points to the Chevrolet Corsica

Stempel: Product man in tune with customers

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors will spend more on developing new products in the next five years than it ever has and, appropriately, the man who takes over as president this week is acclaimed as first-class in product knowledge.

Robert Stempel, in his first interview since being named president in May, says he considers himself a product guy, concerned with the nuts and bolts. Being a product guy, he says, means looking through the customer's eyes.

"He wants it to start in the morning, he wants it to run, he wants it to be comfortable," Stempel says. It has to be crash-worthy, comfortable, able to carry fishing and hunting gear or luggage for vacation.

"And he never wants to go back to the dealership."

That point was driven home in Stempel's first job, in a service garage.

"That's where you find out what a customer really wants in a car," he says. "It's amazing how quickly the bloom comes off the shape and how much the chrome doesn't have to shine any more. He just wants it to work."

That's not to say styling isn't important. Most customers buy because of a car's appearance, Stempel says. "It's got to be exciting, and it had better be a grabber."

Stempel is an engineer by education. After graduation from Worcester (Mass.) Polytechnic Institute in 1955, he joined Oldsmobile, where he worked in vari-

GM may hold line or cut some prices

By Michelis Krebs, Jesse Snyder and Laura Clark
AUTOMOTIVE NEWS STAFF REPORTERS

General Motors is expected to hold the line with most of its 1988-model prices. New groupings of options may result in lower prices to buyers of some models.

Prices are expected to be announced in mid-September, before the start of the 1988 model year on Oct. 1.

The pricing action likely will include lower figures for option packages on specific models. It is a scheme that has worked well for Chrysler Motors; last week Chrysler expanded its successful America packaging program from the subcompact Omni/Horizon to its compact-sized K-cars, Dodge Aries and Plymouth Reliant, with resulting price cuts of more than $1,300.

But GM also will offer stripped-down versions of some models.

Chevrolet, for example, will offer price-leader models on its four small cars and the compact S-10 pickup truck in 1988, said Thomas Staudt, general marketing manager.

Buick may adopt an America-like packaging that will cut Skyhawk prices and is considering similar packages for all its models if the Skyhawk experiment is successful. Such across-the-board packaging could trim as much as $300 from Buick prices, according to a GM source.

GM dealers have been told not to pre-sell some 1988 models, some of which are now being delivered to showrooms, until Sept. 15. Typically, dealers are allowed to pre-sell 1988 models that have not been changed much from the previous year.

That restriction leads dealers to believe that a major pricing action will be announced around Sept. 15,

First peek at Saturn HIDDEN IMAGE/RON LIEBERSON

First undisguised photos of General Motors' 1991 Saturn car show a subcompact with Corsica/Beretta styling cues and a Firebird-like sloping nose. GM considered a new aluminum 1.9-liter, long-stroke four-cylinder engine but is believed to now favor an existing powerplant. In addition to the sedans photographed on an Arizona test track last week, a three-door hatchback with sloping, rounded rear end, is planned.

NADA slaps Jeep-Eagle dealer pact

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

The National Automobile Dealers Association has asked Chrysler Motors to eliminate language from its Jeep-Eagle franchise agreement that mandates binding arbitration in any dispute between the manufacturer and dealers.

NADA also was sharply critical of a provision that would allow a consumer satisfaction index (CSI) to be used to terminate dealers who perform below specified standards for a prolonged period.

And those changes in the Jeep-Eagle agreement could eventually find their way into the franchise agreements of Chrysler Motors dealers. Although a memo written by H.G. Savoy, Chrysler Motors dealer operations services manager, and provided by NADA indicated that Chrysler will not ask existing Chrysler-Plymouth and Dodge dealers to sign a similar new agreement, it will form the basis of new agreements.

Savoy said the new agreement will be used when re-signing Chrysler-Plymouth and Dodge dealers due to open points, stock transfers and dealership sales.

"Our long-term objective is to have all Chrysler Motors Corp. dealers on a uniform agreement with consistent terms and provisions," Savoy's memo said.

An NADA legal analysis of the Jeep-Eagle dealer agreement cites several unique provisions. However, the issue that most offends the dealer group is the requirement that all disputes be resolved by binding arbitration, including establishment of new dealer points, relocations and terminations.

NADA said the provision circumvents state franchise laws and the protection they give dealers.

The agreement also establishes a customer satisfaction index requirement. If the dealer does not maintain a CSI equal to or greater than the average CSI rating for the dealer's sales level group, as determined by the company, for four successive calendar quarters, this will constitute good cause for termination of the dealer.

"It appears that at any given time, one-half of all dealers will be below the average CSI rating for their sales level group," NADA said.

NADA Executive Vice President Frank E. McCarthy said NADA is also discussing with General Motors' Saturn Corp. its proposed franchise agreement.

"The draft agreement of the Sa-

UAW picking target

2nd GM offer rejected; Ford makes bid

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — As the expiration of United Auto Workers contracts at General Motors and Ford approaches, the negotiating paths at both companies and at the Big 3 in Canada are winding toward the selection of strike targets.

The contracts in both countries expire Sept. 14.

At a meeting this morning, the UAW GM and Ford councils and their bargaining committees are scheduled to discuss proposals the companies made last week. The bargaining committees, headed by Vice Presidents Donald Ephlin (GM) and Stephen Yokich (Ford), and the councils are made up of local union officers.

The UAW international executive board is also scheduled to meet today and will likely select a strike target — or dual targets — based on input from the councils.

After presenting GM's second proposal to the union last Friday, Alfred Warren, GM's top negotiator, said he had "no feel for Monday's decision. It seems to be the most difficult guess I've ever seen."

The Canadian Auto Workers

UAW Vice President Yokich

union will probably pick a strike target this week — most likely a different company than the one chosen in the United States.

If dual targets are selected in the United States, it is likely that one company will eventually be put on the back burner, as was Ford in 1984. Bargaining with one target company will step up and continue to conclusion.

If a contract is not reached by

GM looks at Opel, Aussie car for U.S.

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors is considering exporting to the United States an automobile from its Holden subsidiary in Australia.

The car is believed to be the Holden Commodore, which is scheduled for replacement in the final quarter of 1988.

GM also is once again seriously considering U.S. import for its West German Opel Omega and Senator — the cars that are understood to form the basis of the new Commodore.

The Opels likely would be sold through a franchise system separate from GM's present five divisions.

Robert Stempel, who takes over the job as GM president Tuesday, said importing Opels is under "active discussion."

Importation of Opels has been under consideration for years. There has been speculation that Cadillac would sell an Opel as its entry-level luxury offering, but Cadillac General Manager John Grettenberger said an Opel will not replace Cimarron at the bottom of the luxury division's lineup (Automotive News, Aug. 24).

Discussions also had been held with Porsche and Isuzu about selling Opels through their networks.

Stempel's background may give Opel a good chance of coming to the United States. He headed Adam Opel AG from 1980 to 1982, and counts Opel cars among his favorite automobiles. In addition, GM's overseas operations reported directly to Stempel in his job as executive vice president and continue to report to him as president.

Opel officials have been anxious to ship the cars to the United States. Opel is capacity-constrained, but Stempel said he is confident that if Opel gets the green light to export, it will add capacity.

Omega, currently at the top of Opel's line, was introduced last year and became the Car of the Year in Europe. The Senator, a lengthened, more luxurious derivative of the Omega, will be introduced at September's Frankfurt auto show.

"The Omega and Senator are both very fine road cars," Stempel said. "We keep looking at the currency situation — between the deutschemark and the U.S. dollar. I think they'd be very attractive at any price."

The Omega sells for $20,000 and up in West Germany; the Senator costs between $25,000 and $33,000.

Stempel said that while a decision to import the Opels has not yet been made, the cars probably will not be sold through existing GM divisions if they are imported.

He did not say if GM would establish a separate franchise network as Ford did with its Merkur division. He also would not say if selling imports through the Saturn network is being considered.

Stempel described the car from Australia as a very big and powerful car that "might be interesting in this country."

The current Holden Commodore VL is based on the design of the old Opel Commodore. It is powered by a Nissan straight-six-cylinder engine. Australian observers expect the new generation Commodore to be derived from the latest Opel Omega.

Subaru of America buys another distributor

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

Denver-based Subaru Inter-Mountain was sold to Subaru of America for a sum "in excess of $10 million" last week — the third independent distributor acquired by the Subaru importer in as many months.

The development came only three weeks after an unsuccessful legal challenge by Subaru Inter-Mountain, which tried to halt the shipment of 1,700 1987 models from Subaru of America. The buyout had been predicted in Subaru Inter-Mountain's lawsuit against Subaru of America.

It also came as Subaru of America reported a third quarter loss of nearly $50 million in comparison with a profit of more than $25 million in the same period last year.

In seeking an injunction to stop the shipment, Subaru Inter-Mountain said it already had a five-month supply of vehicles. It had more cars on hand than it sold to customers in its five-state region during the first six months of 1987.

The lawsuit, which was withdrawn after a Colorado judge refused to grant an injunction barring the delivery, accused Subaru of America of trying to force it and three other independents out of business by flooding them with product and then seeking a buyout at "distress" prices. Joining Subaru Inter-Mountain in the action were Subaru New England, Subaru South and Subaru Mid-America.

"The owners felt it was in the best interest to let it go if Subaru wanted it that bad," Archie Buddin, chief executive of Subaru Inter-Mountain, said. The two principal owners are Charles Thomas, a Houston car dealer, and B.J. "Red" McCombs, a Denver car dealer.

Subaru Inter-Mountain's filing for the injunction maintained, "If Subaru Inter-Mountain is required to accept and pay for the additional 1,700 1987 models in issue, Subaru Inter-Mountain and its dealers will have over a seven-month supply. Such over-supply cannot be sold without rendering Subaru Inter-Mountain insolvent and unable to function as a going concern."

The document said that the net worth of Subaru Inter-Mountain in 1987 decreased from $8.5 million to $5.5 million as a result of losses through June 1987.

Subaru Inter-Mountain said in its suit that it had annual sales of $100 million through its 55 dealers in Colorado, Kansas, Nebraska, Arizona, New Mexico and parts of Missouri. Last year, the independent distributor sold 11,457 cars.

The Subaru of America spokesman said the charges of flooding distributors with cars were unfounded and maintained that the cars were ordered by the distributors.

Subaru Inter-Mountain said Subaru based its shipments on a preliminary estimate given in January 1987 by its general manager, Joe Nunnery, that the distributor could sell 13,200 cars. The petition said, "Nunnery understood that the number he gave was not binding." Subaru of America maintained that it was.

Further, Subaru of America said that under a clause in the distribution agreement, Subaru Inter-Mountain was subject to an annual, automatic 15 percent increase in allocation each year unless the vehicles could not be delivered because of Japan's voluntary restraint agreement on auto exports.

While Subaru of America has been making more cars available to Subaru Inter-Mountain, the distributor said that sales actually dropped 15 percent this year. It said that the back-up of vehicles has caused the company to draw on $6 million of its $28 million letter of credit with Subaru last April to pay for cars it was receiving.

Subaru Inter-Mountain revealed that Subaru threatened to terminate the distributorship if the letter was not restored within 48 hours. Subaru Inter-Mountain said that following this incident, Subaru of America required the distributor to increase its outstanding guarantees to nearly $69 million.

Subaru Inter-Mountain maintained that if it accepted the 1,700 cars it would be forced to draw on its letter of credit again and risk termination.

The general decline in Subaru sales also has resulted in losses by Subaru of America. In the third quarter, the company reported losing $49.8 million, or $1.03 per share, on sales of $378.3 million.

Last year, for the same three-month period, the company had a net income of $25.4 million and sales of $517.6 million.

The company also reported a nine-month loss, ending July 31, of $15.1 million, or 31 cents per common share compared with a net income of $72.3 million for the same period in 1986. Sales for the 1987 period were $1.41 billion compared with $1.47 billion in 1986.

Subaru of America attributed the third quarter losses to various sales incentives, including up to $1,500 in cash rebates on certain models, and to higher product costs due to the decline of the dollar against the Japanese yen.

Subaru of America officials also were quoted as saying the company also expects a loss in its fourth quarter, meaning it will end the fiscal year Oct. 31 in the red, and that if sales do not improve Subaru of America might ask for a reduction in its import allocation to the United States.

Subaru of America did not attribute any of its loss to the acquisition of the three independent distributors — Subaru Inter-Mountain, Great Lakes Subaru (acquired two weeks ago) and Subaru Northwest (acquired in June). Each of the transactions was described as being in excess of $10 million.

Subaru of America now owns 8 of 13 regional distributors and controls about 50 percent of its nearly $2 billion annual sales.

Navistar profits show huge rise for quarter

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Navistar International Corp. had a sixfold increase in net income for its fiscal third quarter ended July 31.

The company reported net income of $31 million on sales of $791.1 million in the third quarter, up from net income of $5 million on sales of $762.5 million in the 1986 period.

For the first nine months, the company's sales were $2.53 billion compared with $2.43 billion in 1986.

The company reported a net loss of $21 million for the first nine months of 1987, compared with net earnings of $52 million in the first nine months of 1986.

A one-time extraordinary charge of $113 million for redemption before maturity of four high-coupon debt issues contributed to the loss.

Excluding that loss, Navistar's income for the first three quarters was $92 million, an improvement of 77 percent over last year's first nine months.

James C. Cotting, Navistar chairman and chief executive officer, credited the third-quarter results to lower interest costs, higher shipments of heavy trucks and diesel engines and improved operating margins in the company's truck operations.

Navistar cut its third-quarter interest expense by $23 million from a year ago after getting the full quarterly impact of high-coupon debt redemption.

"Trends in production are up because of (more) intercity trade freight hauling as evidenced by higher volume of goods," Cotting said.

At a press conference here, he also cited a higher gross profit margin and cost reductions as contributors to the company's earnings.

"We kept tight control on marketing and administrative expenses," Cotting said.

Asked about plans for acquisitions, Cotting said, "We want to broaden our base of business over a 5- to 10-year period."

He mentioned that "something with truck and engine operations" was a likely possibility because that is the company's business, adding, "We are interested in an acquisition if we can earn a return on it."

He also said "strategic alliances" are important. Cotting mentioned product cooperation with Dana Corp. and the import agreement with Nissan to sell Low Forward Entry (LFE) products. When asked about joint ventures, he answered, "Joint investments could make sense here and outside the United States."

Cotting predicted that North American demand for heavy trucks will increase 10 percent to about 136,000 units for the 12 months ending Oct. 31 (Navistar's fiscal year). He estimated that medium-truck sales will rise to 179,000 from last year's 177,000.

Shipments of International medium and heavy trucks and diesel engines during the third quarter were up 4.0 percent over the same period in 1986.

Heavy-truck shipments increased 6.0 percent over the third quarter last year, while medium-truck shipments declined slightly.

Diesel engine shipments to original-equipment-manufacturer customers were up 11 percent over the comparable period in 1986.

Navistar's order backlog of 12,043 heavy trucks at the end of the quarter was 60 percent higher than a year ago and 29 percent above this year's second quarter.

Backlog orders mainly were for three models introduced in May: The International 8300 conventional tractor, 9700 premium cabover tractor and 9300 Series of premium conventional tractors.

Carrier income dips

Expenses outpace increase in revenues

ALEXANDRIA, Va. — Motor carrier revenue in the first quarter of 1987 was off 3.2 percent from the 1986 period, according to a survey by the Regular Common Carrier Conference.

Generally speaking, revenues went up 2.5 percent; but expenses went up nearly twice as much, increasing 4.9 percent, the survey found.

The Regular Common Carrier Conference surveyed 108 common carriers of general freight for its findings, with 14 percent fewer responding this year than in the first quarter of 1986.

Russell B. Capelle Jr., director of the survey, said the lower number of reporting carriers was largely a reflection of their inability to meet the deadline for responding to the survey rather than their having gone out of business.

The survey found that total tonnage shipped by reporting carriers was off 7.7 percent from the first quarter of last year. Operating income, as a percent of revenue, dropped to 2.1 percent from 3.9 percent in the first quarter of 1986. After-tax net income fell to 0.7 percent from 2.0 percent in 1986.

For the largest carriers in the sample — those with more than $100 million in 1986 annual revenues — expenses increased twice as fast as revenues, and operating income per ton was cut almost in half in the first quarter of this year compared with a year ago.

The overall ratio of expenses to revenues for the largest carriers increased to 97.4 from 94.9 last year.

During the first quarter of 1987, surveyed carriers had expenses of $2.88 billion, down from $2.92 billion in 1986. However, the decline in expenses reflected the fact that only 108 carriers responded to the survey this year compared to 126 in 1986.

Overall carrier revenues of $2.94 billion during the period were off from $3.04 billion in the same period of 1986.

The conference attributed the poor first-quarter results to depressed revenues resulting from continued rate discounting generated by extreme competition in a shrinking market and to sharply higher expenses, particularly for fuel and labor.

New Skoda for U.S.?

By Knut Moberg

Interest in the new Skoda sedan to be introduced at the Brno trade fair in Czechoslovakia is increasing, especially in markets outside the Iron Curtain.

Exports are planned for Canada, and discussions on shipments to the U.S. have started. Sources in Czechoslovakia say they are expected to be handled by import companies currently established in the U.S.

Shipments to North America will likely start when the Automobilove Zavody Narodni Podnik factory in Czechoslovakia reaches production capacity.

Exports will have a high priority, because the Skoda factory needs all the hard currency it can get to pay foreign suppliers and consultants who helped design the new car.

Export plans for North America are at a point where inquiries have been sent to shippers for possible delivery of small numbers of cars starting next year.

Officials of the Skoda factory in Mlada Boleslav and the Motokov export company have been studying the progress of the Yugoslavian-built Yugo in the U.S.

Since Skoda is based on a new front-wheel-drive design, it is unlikely to be price-competitive with the less-advanced, rear-wheel-drive, $3,990 Yugo.

Jimdra Nevrla, Motokov export manager, is unwilling to give more information about the new car, which is in the Volkswagen Golf class. The wraps will be kept on until the Brno fair, which opens Sept. 12, during the Frankfurt auto show in West Germany. The car will not be shown at Frankfurt.

The Skoda isn't ready for production, which starts later this year. Then it will take time for production to reach sufficient volume for exports to begin, although importers and dealers in Western Europe have been told limited deliveries will start in 1988.

Italian firm Carrozzeria Bertone S.p.A. designed the exterior and interior of the new sedan. Porsche System, of West Germany, handled engineering and testing.

Output of the old rear-wheel-drive Skoda will continue, but at a reduced rate as the new model moves into production.

The new model doesn't have a name yet. An auto magazine in Czechoslovakia has asked readers to suggest one, although the car may get different names in various export markets. ■

Currency crisis keeps Nigerian M-B truck assembler waiting and hoping

By Peter Ezeh

ENUGU, Nigeria — Nigeria's local Mercedes-Benz truck manufacturer had to suspend production temporarily here and reduce working hours by more than 50 percent early this month.

The events raised doubts about an early improvement in the slump the company has been suffering during the past four years.

Officials of Anambra Motor Manufacturing Co. (Anammco), said none of the 700 workers, out of an initial 1,200, would be dismissed outright, following two previous employment reductions in three years. No date was given for a return to full production.

Anammco's West German partner, Daimler-Benz AG, holds 40 percent of the company, worth 60 million naira ($15 million). Nigeria's federal government is the second-biggest shareholder with 35 percent. The remainder is held by state governments and private investors.

Anammco occupies an imposing 984,000-square-foot site in this industrial suburb, the capital of Nigeria's southeastern state of Anambra. It is one of the largest auto factories in Africa, south of the Sahara. It was officially opened July 3, 1980, by former president Shehu Shagari.

Production began in 1981 with Mercedes-Benz L-911 trucks. They are popular among transport operators who need dependable trucks, and companies that operate passenger-carrying vehicles known locally as "mammy wagons."

Business boomed at the start. In less than two years, Anammco produced 10,000 Mercedes trucks. In October 1983 it installed an annual production capacity of 7,500 trucks on one shift, and opened a spare parts depot.

Initial business successes encouraged company managers to plan production of the prestigious Mercedes-Benz sedan. But car production never got off the ground, although small volumes of four-wheel-drive vehicles and 24- and 32-seat buses were built, in addition to trucks.

"Out of five commercial vehicles above five-tons payload sold in Nigeria today," notes company public relations officer Eugene Madu, "more than two are Mercedes-Benz units originating from Anammco."

Like other auto factories here, Anammco is basically an assembly operation. Components are imported and put together for the local market.

Since introduction of the quasi-free foreign exchange market with less official control, the value of the local naira currency has fallen drastically, seriously depleting the capital of most manufacturers — including major ones such as Anammco.

The situation was worse during the previous military administration of General Buhari (1983-'84), when the government introduced a series of tough protectionist measures to try to discourage imports. Anammco dismissed more than 500 of its 1,200 workers at that time.

Madu says there is no plan for outright dismissal of workers at the present time. He says the latest move was taken to enable the company to wait for the foreign exchange crisis to improve. How soon that happens is anybody's guess. ■

$ALES GIANTS

continued from page 1

Among the largest of the large — the 10 highest-volume franchises regardless of make — there were four Chevrolet dealerships, three Ford dealerships, two Pontiac dealerships and a lone Oldsmobile dealership.

However, that sole Oldsmobile franchise, Dale Oldsmobile, Bronx, N.Y., was the highest-volume domestic franchise in the United States last year; it was the biggest of the big deals.

Those 10 biggest deals also ranked high on the list of big dealers with big fleet sales. They are scattered across the United States from New York to Florida, through the Midwest into Texas and on to California.

Although the 100 individual franchises ranked in the Automotive News Sales Giants have common denominators, there are differences.

Nine dealers have two franchises that made the Sales Giants 100. Two of those nine dealers had their two ranking franchises in the same dealership: Arnold Palmer Motors, Latrobe, Pa., with the sixth-largest Oldsmobile franchise and the fourth-largest Pontiac franchise; and Polkowitz Motors, Perth Amboy, N.J., with the ninth-largest Buick franchise and the third-largest Cadillac franchise.

No dealer had two No. 1 dealerships. However, one dealer claimed a first place and a second.

John Fitzgerald Jr. had the largest Chrysler-Plymouth franchise, Lake Forest Chrysler-Plymouth, Gaithersburg, Md., and the second-largest Dodge franchise, Colonial Dodge, Kensington, Md.

And Edward Morse had the largest Cadillac franchise, Bayview Cadillac, Fort Lauderdale, Fla., and is the financial backer of the second-largest Chevrolet franchise, Ed Morse Chevrolet, Lauderhill, Fla., operated by his son, Edward J. Morse Jr.

Sixty of the Automotive News Sales Giants were single-line dealerships; the other 40 were dualed.

Seventy-eight of the top franchises were in the eastern half of the United States.

Ninty-nine of the franchises were in dealerships owned or operated by men; Maria Smith, owner of Town & Country AMC-Jeep-Renault, Seattle, was the only woman among the Automotive News Sales Giants. Her dealership was ranked eighth in sales for AMC-Jeep-Renault.

DOLLAR $ALES

10	Jim Lupient Oldsmobile	Golden Valley, Minn.	165.59

*Estimated

Many of the dealers in the top 100 were heavy fleet sellers, but 14 of the franchises reported no fleet or daily-rental sales at all.

One dealership, Sewell Village Cadillac-Sterling, Dallas, reported that it has been in business for 76 years. It is the No. 6 volume Cadillac store.

In exactly the opposite position, 1986 was the first full year that Hanley Dawson III operated Patrick Pontiac-GMC, Libertyville, Ill., the sixth-largest Pontiac franchise.

Three other dealers held one Automotive News Sales Giants franchise for just two years, but in each case the dealer had another big franchise on the list.

The various marketing divisions, despite their protestations about the importance of various customer satisfaction indices and the de-emphasis of sheer volume, still internally rank dealers by the number of cars and trucks they sell.

Size, volume and profitability are important even in these days of megadealers and "portfolios" of franchises. But profitability may be the ultimate list to head.

"Some guys get a big kick out of saying that they are the biggest dealer, but the bright ones say, 'I made the most money no matter what the volume,' " said Raphael Cohen, a one-time Chrysler dealer and long-time dealer advocate.

American Motors

American Motors' 10 largest-volume dealers say success is a four-letter word spelled J-E-E-P.

Strong demand for the popular four-wheel-drive Jeeps, along with locations near high-growth and large metropolitan areas helped boost sales and service performances of AMC's top 10 in 1986.

While many of the leading General Motors, Ford and Chrysler dealers are dualed with outside makes, all of AMC's top performers handle only AMC-Jeep-Renault products. Michael W. Lowe, owner of Jasper (Ga.) Jeep Sales, the top-volume AMC dealership in 1986, said exclusivity has given him a marketing advantage among 4wd enthusiasts.

"We're considered Jeep specialists in this area, and we have the knowledge of the four-wheel-drive product," Lowe said.

AMC's top 10 dealers are retail-oriented: Only half reported any fleet or lease sales in 1986, and among those who did report fleet/lease business, those sales generally represented a small percentage of their total volume.

When asked what factors made their franchises successful in 1986, a majority of the dealers listed their emphasis on service and customer satisfaction. Gary Gray, owner of Orange Coast AMC-Jeep, Costa Mesa, Calif., said he hired a customer satisfaction coordinator for his store last year.

Promotional events during the year also helped AMC's top 10 to get in touch with current and potential customers.

Lowe said his Jasper Jeep dealership sponsors a 4wd Mud Run and Jeepers Jamboree race each year to promote itself among 4wd enthusiasts. Doug Steed, general manager of Buerge AMC-Jeep-Renault, West Los Angeles, said the store hosted a family day, complete with "live" cartoon characters and roasted hot dogs.

Service and parts dollar volume as a percentage of total sales ranged from 4.48 percent at Jasper Jeep Sales to 16.45 percent at Kings Plaza AMC-Jeep-Renault, Brooklyn, N.Y. All but one of the top 10 said the Jeep Cherokee was the best-selling nameplate in 1986.

Manhattan AMC-Jeep-Renault was the only company-owned store in the AMC top 10.

Buick

Fleet and lease sales buoyed the business of the 10 largest-volume Buick dealers in the United States in 1986.

Nine of the 10 said that less than 50 percent of their total sales were to retail customers last year. The volume of fleet cars as a percentage of total sales ranged from 25.50 percent at Buick Mart, Cerritos, Calif., to 89 percent at Polkowitz Motors, Perth Amboy, N.J.

Sonny King, owner of Orange Buick, Orlando, Fla., the largest-volume Buick dealer in 1986, said the fleet business has become highly competitive, even among Buick outlets, with dealers sometimes taking as little as $20 in profit from a car.

Rental-car companies, large corporations and leasing companies were named as some of the biggest customers for the large fleet-oriented Buick stores. Many of the biggest fleet dealers are located near major airports, including Miami, Newark and Chicago.

Like many of its GM sister divisions, Buick's 10 top-volume dealers for 1986 were most frequently dualed with other franchises. Six of the Top 10 Buick dealers housed a second brand in the same facility; however, only two of the six were GM makes.

When asked what factors were most important to their success, nearly every top-volume Buick dealer emphasized service.

"The most successful thing is treating our customers well," said Maury Wilkins, owner of Wilkins Buick-Isuzu, Glen Burnie, Md., the fourth-largest Buick dealer in 1986.

"It's very different selling a car today, you've got to stress the service," Wilkins said.

Some dealers said the high-income and older customers who are attracted to the Buick nameplate demand high-quality service from everyone from the salesman to the mechanic.

"It's important that we deal on a high-level basis," said Lew Webb, president of Buick Mart, Cerritos, Calif., the Buick dealer with the highest retail sales.

Bob Stillman, Stillman & Hoag, Englewood, N.J., said service is also the key to maintaining a good fleet business.

"To compete only on price doesn't serve the customer's best interest; some dealers do compete only on price and don't stay in (the fleet business) very long," Stillman said.

Other factors for success cited by Buick's Top 10: an in-house advertising agency at Orange Buick; once-a-month sales events at Stillman & Hoag; a $683,000 ad budget at William Lehman Buick, Miami; longer service hours at Wilkins Buick-Isuzu; square dances and holiday parties at Bob Brest Buick-Nissan, Lynn, Mass.; special equipment on display cars at Bauer Buick-Isuzu-Sterling, Harvey, Ill.; and direct-mail programs at Loren Buick, Glenview, Ill.

— Laura Clark

Cadillac

National Cadillac sales recovered last year, and along with that recovery came prosperity for the 10 top-performing Cadillac dealers.

Most of the largest Cadillac dealers reported that the DeVille was the best-selling model. One dealer, William E. Hartigan, Heritage Cadillac, Lombard, Ill., capitalized on Brougham, making it his best seller.

Only four of the 10 largest dealerships were exclusively Cadillac outlets. Four of the dualed dealerships also had Sterling franchises, not surprising because Norman Braman, chairman of Sterling importer Austin Rover Cars of North America, owns Braman Cadillac, Miami. Braman's dealership

Fleet business is B-I-G business

58% of sales by Top 100 are to lease and rental customers

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

Success is fleeting, so to speak.

Last year, there was a direct correlation between being one of the biggest fleet dealers and being among the top-volume franchises.

In fact, the list of the top five fleet dealers is identical to the list of the top five total-sales dealers. Eight of the Top 10 fleet dealers also were in the total-sales Top 10.

The 123,363 fleet deliveries by the 10 highest-volume fleet dealers accounted for 36.53 percent of the 337,715 fleet units sold by the Top 100 franchises.

Total fleet sales by the 100 accounted for an astounding 58.28 percent of all sales by those franchises.

Dealers with the big-fleet franchises reported that their sales went to a variety of customers including daily rental companies, fleet lease companies and their own in-house lease and rental companies.

However, there are some big franchises and megadealer operations that do well without fleet sales and, of course, dispute fleet sales as a true measure of franchise volume.

Robert Potamkin, of the Potamkin megadealer organization, for example, said that retail sales are the real measure of a successful dealer.

Nonetheless, there are many dealers who unabashedly sell cars they never see. They simply shuffle paperwork and happily pocket the profits of $20 to $50 per car.

The second-largest fleet dealer, Bill Wink, Bill Wink Chevrolet, Dearborn, Mich., said he has a lot of fleet accounts and many long-standing customers whom he strokes.

Other big fleet dealers credit geography for fleet sales success.

"I'm in the perfect location for fleet business," said Stanley Z. Penn, owner of Penn Pontiac, Baltimore. "I sell to fleet customers from other cities all over the seaboard."

The geographical distribution of the Top 10 fleet franchises was almost entirely in the Eastern half of the United States.

There was one in Connecticut, two in the New York City area, one in Baltimore and two in Florida. In the Midwest there was one in the Chicago area, one in the Detroit area and one in Indiana.

The California franchise in the fleet sales Top 10 was the only one on that list west of the Mississippi River.

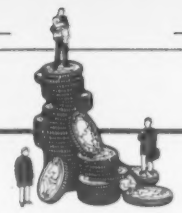
$ALES GIANTS



continued from page 38

ranked as the eighth largest Cadillac outlet last year.

Three of the Top 10 Cadillac dealerships are in Florida, including the largest-volume dealer, Bayview Cadillac, Fort Lauderdale. Dealer Edward J. Morse did about two-thirds of his Cadillac volume in fleet business.

The only other Top 10 Cadillac dealer who did more fleet than retail business last year was Maurice Polkowitz, Polkowitz Motors, Perth Amboy, N.J., who sold his dealership at the end of the year. Polkowitz also was one of the top Buick dealers in his final year.

Morse attributed his success last year to three factors. "We strengthened the sales department by upgrading salespeople and the sales management team," Morse said. He said the dealership also constructed a new parking garage that will accommodate 500 cars and that he spends a lot on advertising.

Most of the successful Cadillac dealers reported that satisfying the customer is a crucial factor, as is developing personnel for expansion and promotion.

"Everyone in this dealership understands that the customer is doing us a tremendous favor," said Carl Sewell, Sewell Village Cadillac-Sterling, Dallas. "We treat you like a Cadillac owner."

Sewell said his dealership offers all-day Saturday service department hours and 150 loaner cars for service customers who bought their cars new at his dealership.

— Edward Lapham

Chevrolet

The top 10 Chevrolet dealers sold 101,621 cars and trucks in 1986, or 3.43 percent of the Chevrolets sold in the United States last year.

High-volume dealers said Cavalier, followed by Camaro and Celebrity, were the year's best sellers — except in Texas where Suburban trucks led sales at one dealership.

Bill Wink Chevrolet in Dearborn, Mich., outpaced other volume dealers by a significant margin. Fleet deliveries made up more than 90 percent of the dealership's unit sales. Bill Wink, owner of the dealership, said sales were due to a "lot of stroking of customers."

Other big-volume dealers said the 2.9 percent financing program that closed out the 1986 model year contributed to their success.

"The 2.9 percent was a big shot in the arm here in Dallas because of the oil crunch," said Jim Johnson, of Jim Johnson Chevrolet, Richardson, Texas.

Some dealers said they spent more money in 1986 than 1985 but earned less. "Net profits were half of the year before and you had to spend more money to get people into the dealership," Johnson said.

Jeffrey Legum, of Legum Chevrolet, Baltimore, said television advertising played a role in the dealership's success in 1986.

"We have one of the largest television advertising budgets for dealerships in the country and there is a correlation there," he said. "We dominate the local TV market."

Legum said extended hours for the service department, taking advantage of factory incentives and dualing with Nissan helped. "Nissan brings in younger buyers," he said.

Mark Eddins, owner of Friendly Chevrolet in Dallas, said the dealership upped its advertising budget and worked to dramatically improve customer satisfaction.

Making the customer happy seemed to be the overall ticket to success for dealers. Said Nicholas A. Celozzi, of Celozzi—Ettelson Chevrolet in Elmhurst, Ill.:

"We take care of our customers and they know we will beat any deal in town, so we get a lot of repeat business. The customer who has had 13 cars in 16 years from us is typical."

— Charles M. Thomas

Chrysler-Plymouth

While waves of factory incentives and rebates rolled in and out of showrooms in 1986, the top 10 Chrysler-Plymouth dealers reported renewed consumer interest.

The best-selling model at the top 10 dealerships ranged from Horizon to Reliant, Voyager and Fifth Avenue.

Chrysler's volume-leading dealers reported the third-highest parts and service dollar volume, behind Cadillac and Chevrolet. That was due in part to South Bay Chrysler-Plymouth, Torrance, Calif., which reported the highest parts and service sales of all dealers surveyed — $82 million. That was more than triple the sales of its nearest rival.

Fleet sales also represented a major chunk of the top C-P dealers' 1986 unit sales. Overall, 67 percent of the 50,039 units sold by the top 10 dealers were to fleets. In fact, five of the top 10 dealers reported that fleet sales comprised more than three-fourths of their new-unit sales. Nine-tenths of the 7,509 units sold at Glavic Chrysler-Plymouth, Parma, Ohio, were fleet.

Many of the top-performing dealers cited Chrysler's diversified product line, along with hard work, as important factors for their success in 1986.

However, there were exceptions.

At Liccardi Motors in Green Brook, N.J., the working family was credited with the profit.

"Our success is based on the entire Liccardi family working together and being more aggressive in promotions," said General Manager Kevin Liccardi.

Tom Demarest, owner of Mid-City Chrysler Plymouth, Arlington, Texas, said the customer is his most important asset.

"You must treat the customer as you wish to be treated," he said.

— Theodore G. Coutilish

Dodge

Dodge's 10 most-productive dealers in 1986 agree that Dodge boys have more fun.

Among top dealers, Dodge boys also know how to roll up some big numbers.

Luke Potter, of Luke Potter Dodge, Winter Park, Fla., exemplifies the Dodge boy spirit. He outdistanced all other Dodge dealers with 9,433 retail and fleet sales last year.

"Chrysler has exceptional credibility with the public," said owner Luke Potter.

The Top 10 Dodge dealers sold an average of 5,662 units apiece for the year.

Fleet sales were a major part of that figure in 1986. Fleet sales comprised more than half the total sales for eight of the Top 10 Dodge dealers.

Caravan was cited most often by the top-performing Dodge dealers as their individual best-selling model. The Ram Van and Aries were right behind Caravan on the list.

Many of the dealers cited a good economy and quality incentive programs and products as reasons for increased sales in 1986.

Individual Dodge dealers offered slightly different perspectives in explaining their rankings on the Top 10 list.

Potter said he became successful by updating his facilities, remodeling and improving training programs.

At Warnock Dodge in Livingston, N.J., owner Don Warnock said "very aggressive incentive programs" led the way to a productive sales year.

Chuck Swift, of Swift Dodge in Sacramento, Calif., said he is glad the factory is staying competitive. "We have the right product at the right price," he said.

Another California dealer, James Clark, Del Amo Dodge, Torrance, included location as a key factor. Clark also had one of the top-volume Chrysler-Plymouth dealerships last year.

The winning combination at Ourisman Dodge in Alexandria, Va., was great team morale, customer satisfaction and "treating customers right," according to owner Dan Korengold.

— Theodore G. Coutilish

10	Koons Ford	Baltimore, Md.	4,719

Ford

The biggest-volume Ford dealers in the United States were a pretty happy lot last year. They were happy with the Ford product lineup and their ability to compete for retail sales as well as fleet business.

The top 10 performers, located in eight states from coast to coast, reported a variety of reasons for success, and seven of the 10 said Escort was their sales leader.

Mustang and Thunderbird also received first-place votes, and Taurus was second for many of the dealers.

Surprisingly, none of the top 10 Ford dealers named the nation's best-selling model, the full-size Ford pickup, as their individual volume leader.

However, Jordan Ford, Mishawaka, Ind., cited the E-150 van as its best seller. Jordan Ford, No. 1 among Ford franchises, reported 83.19 percent of its deliveries were to fleets. It also was the third-largest domestic-make franchise in the United States last year.

Although the dealership was big in Ford van chassis sales to nearby recreational-vehicle manufacturers, dealer Jordan Kapson said "sales are made one at a time" through customer satisfaction and awareness and doing "whatever it takes" to make the sale.

Virtually all of the leading Ford dealers gave much of the credit for their sales success last year to the quality of the product they sell.

"I think having the best American product there is and good retail-minded programs were the keys to success," said David Sinclair, Dave Sinclair Ford, St. Louis.

Kapson called it "the right product," and Bob Karlin, owner of Santa Monica Ford, Santa Monica, Calif., said his success was due to "better product."

Most dealers also discussed the virtues of hard work, customer satisfaction, cooperation, integrity and teamwork.

Others mentioned large advertising budgets, dealership reputation, a stable workforce and the physical appearance of the dealership.

James Koons had two Koons' Ford dealerships in the top 10, one in Falls Church, Va., and one in Baltimore. He said his greatest asset was a "real young organization," that has enthusiasm. "We're just getting started," Koons said.

One of the top performers on the list is Rice and Holman Ford. The company has a car and light-duty truck facility in Mt. Laurel, N.J., and a truck-only facility in Pennsauken, N.J., which specializes in Ford's heavy-duty models.

Half of the top-selling dealerships achieved success primarily through retail sales, without the big numbers engendered by fleet sales to leasing and daily rental companies.

— Edward Lapham

Lincoln-Mercury

Lincoln-Mercury's Top 10 U.S. dealers say they owe much of their 1986 success to GM — the Grand Marquis, that is.

All but two of the dealers said Grand Marquis was their best-selling model in 1986. Along with Grand Marquis, the luxury Lincoln Town Car and the restyled Cougar led the way to a solid sales year.

Star Lincoln-Mercury, South-

Dohner's Ford truck deal rings up sales of $100 million

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

Philadelphia Ford dealer John P. Dohner sold 3,715 new vehicles last year, not enough to be listed among the 10 largest Ford franchises, but a respectable total nonetheless.

What set Dohner apart was that his total did not include a single Escort, Thunderbird or Taurus. Dohner's dealership, Liberty Ford Truck Sales, is a truck-only outlet. The best-selling model at Liberty Ford last year was the LN-8000 heavy-duty truck.

Gross sales for the Ford-only store, which Dohner owns, were "just under $100 million," he said, including $2.5 million in parts sales and $750,000 in service labor charges.

Less than 10 percent of total new-truck sales — just 360 units — were retail deliveries. The majority of Liberty Ford's sales were to fleet customers, including the Ryder System, the state of Pennsylvania and the city of Philadelphia.

Liberty's appeal to customers apparently is more than just price. Dohner credits a highly computerized ordering system that allows customers to verify an order with a printout on each vehicle before the order is sent and the truck is built and shipped.

He also has a "total open door policy" that involves opening his books to his customers so that they know everything about his operation, including his profit.

"People aren't opposed to you making a fair profit," he said, "and it's a very clean way to do business. When you take the mystery out of the sales system, it takes the sting out of it."

Midway Ford Truck Center, Kansas City, Mo., another truck-only store, sold 962 units last year, 20 percent of which were retail, making 1986 its "lightest year in some time." However, Midway traditionally is one of the top truck sales centers; during the first half of this year, it delivered 1,200 units. Total dealership volume last year, including all departments plus Hino truck sales, was $39 million.

Dealer Gary McClung and his two partners, Donald C. Ahnger and R.D. Edwards, have a philosophy that's different from Dohner's. They know the heavy-duty truck fleet business is cyclical, so they emphasize parts and service. Of total dollar volume last year, McClung said, $9.1 million was in parts and $2.9 million in service labor charges.

"Our first goal is service," McClung said.

"I like to think we're aggressive in parts and service business," he said. "The sign of a good shop operation is if at least 20 percent of the business is from other-make vehicles."

Truck sales were important to dealers selling cars, too.

One dealership, Rice and Holman Ford, has a car facility in Mt. Laurel, N.J., and a truck-only center in Pennsauken, N.J. That operation sold 400 heavy-duty trucks and reported $10 million in parts and service sales.

Four of the top-performing automobile dealers said a truck was their best-selling model last year — and that does not include the "trucks" that pass for cars. Nine AMC-Jeep-Renault dealers said Cherokee was their best-selling model. Three Chrysler-Plymouth dealers said the Voyager minivan was their biggest seller. Three Dodge dealers said the Caravan minivan moved best for them.

The top-volume car dealers relied on trucks in other ways: Five of the General Motors dealers in the listing were dualed with GMC trucks, and 10 other dealerships with car-only franchises were dualed with an import or domestic line that included trucks.

Potamkin stresses retail sales

Megadealer moves 50,000 vehicles a year from 15 outlets

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

The Potamkin organization moves a lot of iron — nearly 50,000 new vehicles were retailed last year — but only one of its dealerships was among the Top 10 for any make.

The reason is simple: Potamkin dealerships emphasize retail sales, not fleet sales.

The Potamkin outlets handle the products of seven of the 10 domestic car divisions — no Buick, Oldsmobile or Pontiac — plus imported makes including Isuzu, Hyundai, Yugo, Sterling, Mitsubishi, Volkswagen and Toyota. Still, the only makes that they sell to fleet or lease companies are Cadillac, Chevrolet and Ford. Only 4.1 percent of Potamkin's new-vehicle deliveries are fleet sales.

Although the organization has 41 franchises at 15 dealerships and served as the prototype and archetype for the "megadealer," it is probably best known for its Manhattan Cadillac operation, which the Potamkins reportedly have considered selling to another megadealer operation, the Penske Group, headed by ex-racer Roger Penske.

Imported units accounted for 37.10 percent of total Potamkin new-vehicle deliveries last year, while General Motors makes — Chevrolet and Cadillac — accounted for 30.15 percent and Chrysler makes — Chrysler, Plymouth and Dodge — accounted for 26.83 percent. Ford Motor Co. and American Motors lines made up the balance.

The three Potamkins — father Victor plus sons Robert and Alan — are able to manage the organization easily because each of the dealerships is operated by an equity partner with as much as one-half ownership in that dealership.

Every Potamkin dealership employee receives incentive pay based on factors he or she can control on a day-to-day basis.

The system has paid off for the Potamkins and has led to rapid growth for the organization. Last year, the Potamkins and their 10 equity partners managed $1 billion in sales.

POTAMKIN 1986 UNIT SALES

Make	Retail	Fleet	Total New	Used	TOTAL

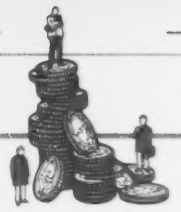
$ALES GIANTS



continued from page 43

field, Mich., reported that its number one seller was the big Town Car, accounting for 703 sales.

Eagle Lincoln-Mercury, Dallas, said the Cougar was its sales leader.

Major reasons cited for individual success by Lincoln-Mercury dealers were service and "a fantastic product line."

Joe Chiavaroli, executive vice president and general manager of Pompano Lincoln-Mercury, Pompano Beach, Fla., said this is the best product line since Ford Motor Co. dedicated itself to quality improvements in 1980.

Other factors cited by the Top 10 dealers for increased retail sales included: Ford's extended-service plan, higher-quality cars, honest and fair service provided by the dealers and styling.

Leading the pack with more than 4,000 retail and fleet units sold was Bob Borst, owner of Central Florida Motors in Orlando, Fla. Borst attributed the success of his 47-year-old dealership to a super reputation for offering excellent customer service.

"We provide honest and fair service and we stay away from gimmicks," he said.

When asked about marketing techniques, most of the high-performing dealers said long-standing community reputations and maintaining strong customer satisfaction were their marketing tools, not promotional gimmickry or sideshows.

— Theodore G. Coutilish

Oldsmobile

The largest-volume Oldsmobile dealers last year were successful for a variety of reasons, but most agreed that the Cutlass Ciera was their best-selling model.

Six of the Top 10 Oldsmobile dealerships were exclusives. Dualed franchises ranged from a full house of General Motors lines to Volkswagen, Isuzu, Suzuki, Sterling and Vixen motor homes.

Dale Oldsmobile, Bronx, N.Y., the highest-volume domestic dealership last year, depended on fleet sales to take the crown. Dale had 1,850 retail sales and 24,715 fleet sales for a total of 26,565 units.

Mark E. Rosenstock Jr., of Dale Oldsmobile, said the Oldsmobile 98 and Cutlass Ciera were his best-selling models, but that his real success comes from "reputation and hard work."

Two Minnesota dealerships attributed 1986 sales success to the 2.9-percent loans during the model-year closeout: No. 2 Oldsmobile franchise Jim Lupient Oldsmobile, Golden Valley, and Wally McCarthy Oldsmobile, Richfield.

Many dealers emphasized the need to treat customers well.

W. Clay King, King Motor Co., Fort Lauderdale, Fla., said "it all starts and ends" with customer satisfaction.

Jack Sayer, general manager of Z. Frank Oldsmobile, Des Plaines, Ill., put it succinctly: "We treat every customer as if he or she were a referral of Mr. (Zollie) Frank personally."

There also was agreement on the need to maintain first-class facilities and to develop a dependable, stable workforce.

"It's simple," said Henry Faulkner, Henry Faulkner Inc., Philadelphia. "We made a major investment in the facility and a major investment in people."

— Edward Lapham

Pontiac

The A- and N-bodies made the difference for most of the top Pontiac dealers, as Grand Am and 6000 proved to be their most popular models in both fleet and retail sales last year.

The one notable exception among the 10 largest Pontiac dealers was Peninsula Pontiac, Torrance, Calif.

"This is a beach area," said dealer Cecil B. Willis, "so we get a lot of younger buyers and they buy Fiero."

Location seemed to be a factor in more than model preference: Stanley Z. Penn, Penn Pontiac, Baltimore, said his location near Baltimore's harbor and gentrified neighborhoods, plus his proximity to Washington, contributed to his ranking.

Penn also sells boats, and that helped too. "I have people coming in to buy boats all the time," Penn said. The boats attract customers from a larger geographic area, and his boat customers often become car customers as well, he said.

While Penn was the only dealer selling boats in the same facility, just four of the Top 10 dealers, including Penn, have no other brands of automobiles in the same showroom.

Stephen Barberino sells seven additional makes at Stephen World of Wheels, Bristol, Conn.

Patrick Pontiac-GMC carries Mitsubishi and Suzuki in addition to Pontiac and is part of the Hanley Dawson multi-franchise, 14-acre complex in Libertyville, Ill.

Most of the biggest Pontiac dealers cited the standard factors for their sales success: satisfied customers plus dedicated and well-compensated employes.

C. Harvey Wilkins, Wilkins Pontiac, St. Louis Park, Minn., emphasized good management including a good general manager and a good general sales manager. Above all, he said, a successful dealer "must apply himself and use good selling sense."

Fleet sales also were important to the Pontiac Top 10. Only two of the 10 dealers reported more retail deliveries than fleet sales last year: Willis at Peninsula and Henry Faulkner, Faulkner Pontiac-GMC, Trevose, Pa.

— Edward Lapham

Automotive News Staff Reporters Kathy Barbaglia, Mary Connelly, Louise Kertesz, Michelle Krebs and Philly Murtha contributed to this special report.

Just call him Mega-Dean

Roger H. Dean was a megadealer before the word was invented.

None of his stores is large enough to make the Top 10 list of any given brand. Nevertheless, gross sales are expected to top $1 billion this year.

Dean acquired his first franchise 40 years ago. Today, Roger H. Dean Enterprises, headquartered in West Palm Beach, Fla., has 52 franchises, and Dean expects to add a half dozen or more this year. The franchises represent 23 makes in 43 locations, mainly in Florida, Ohio and West Virginia.

His 1986 results: nearly 93,000 sales and volume of $914 million.

Dean attributes his success to hard work, good people and taking risks. He said he puts hard-working young people in key spots, eventually putting them into their own dealerships as partial owners.

Forty years ago, Dean was a traveling salesman. His car broke down in Welch, W.Va., and the Lincoln-Mercury dealer took him to lunch. He told Dean he took in $10,000 the previous month.

Dean was interested. He obtained an L-M deal in Athens, Ohio, and acquired three more stores the first year.

In 1955, when Ford wouldn't allow Dean to expand any more, he sold his Ford and L-M outlets and bought Chevrolet dealerships in the same towns.

Big markets, big fleets lead to big dealers

49 of Top 100 outlets located in four states

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

The top-performing domestic-franchise dealers tend to be clustered in high-density metropolitan areas and high air-travel areas with large lease and daily rental fleets.

The formula is simple: The biggest markets have the biggest dealers.

Florida, with its large daily rental fleets, superb Dade County demographics and numerous tourist attractions, accounted for 16 of the 100 top-performing franchises. In fact, every one of the 10 domestic divisions except Ford had at least one of its top dealers in Florida.

The highest concentration is among luxury makes: Four of the top 10 Lincoln-Mercury outlets are there, including the best-selling L-M franchise, Central Florida Motors, Orlando. Three of the top 10 Cadillac dealerships are in Florida, including top-performer Bayview Cadillac in Fort Lauderdale.

Illinois ranks second to Florida, with 12 of the top 100 clustered in the Chicago area. There, top-selling General Motors dealerships abound, including three of the top Oldsmobile franchises, two each from Buick, Chevrolet and Pontiac, plus one of the top Cadillac dealerships.

California, with the third-largest collection of top franchises (11), has a well-balanced mix, with two each from AMC-Jeep-Renault, Cadillac, Dodge and Pontiac. Only Chevrolet, Oldsmobile and Lincoln-Mercury had none of their top dealerships in California.

WHERE THEY ARE

Maryland, neighbor to Washington and in the highly populated eastern corridor, was home to 10 of the top 100 franchises. It proved to be well diversified: There were two top performers each from Dodge, Chrysler-Plymouth and Chevrolet, plus one each from Oldsmobile, Pontiac, Buick and Ford.

Those four states accounted for 49 of the 100 top-performing dealers.

The densely populated eastern metropolitan areas also have their share of big dealers.

New Jersey and Pennsylvania each had seven of the top-performing dealerships. The New York City region, which includes some cities in New Jersey, had nine of the big franchises — two Cadillac, two Buick and two AMC, plus one each from Oldsmobile, Dodge and Chrysler-Plymouth. Four of those franchises were in New Jersey.

Texas had seven, including three Chevrolet, two Cadillac, one Lincoln-Mercury and a Chrysler-Plymouth. Five of the big Texas deals were in Dallas; one was in nearby Irving; and one was in Arlington, also in the Dallas area.

The Detroit area had six of the ranking franchises, including three Lincoln-Mercury dealerships and one store each from Dodge, Chrysler-Plymouth and Chevrolet.

The other states with more than one of the top 100 outlets were Minnesota with five, Massachusetts with three and Ohio and Virginia with two each.

Safety center seeks recall of one million GM models

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Technical bulletins sent to General Motors dealers indicate that some 1986 and 1987 cars may stall because of electronic problems.

The Center for Auto Safety called the stalling problems serious. It said that complaints it has received indicate the problem may continue even after servicing.

It has asked NHTSA to investigate the defect and recall some one million cars potentially involved.

A spokesman for GM acknowledged the problem and said, "Some '86 and '87 models may experience a stalling condition, which dealers may remedy through a change in an onboard computer memory module."

The December 1986 and February 1987 service bulletins sent to dealers said GM will issue parts or kits to correct the problem. Involved, according to the safety center, are all 1986 and 1987 C-, H- and E-body cars, as well as A-body cars with 3.8-liter engines.

The February dealer bulletin listed the following 1986 models as cars that may "intermittently not stay running" or "stop running:" Oldsmobile Delta 88, 98, Toronado and Cutlass Ciera; Buick LeSabre, Electra, Riviera and Century; and Cadillac Deville and Fleetwood.

The bulletin cited fuel and throttle problems or failures of electronic idle components. The center said that all the cars have power steering and power brakes, making them difficult to stop or steer when the engine stalls.

The center said motorists have described severe "back-order" problems for the service kits and waits of up to five months for parts. A Maryland dealer repurchased a 1986 Buick Century from a customer after it had been in the shop six times for a total of 43 days for stalling, the center said.

The center said the problem continues in some 1987 models. It cited a recent accident involving a 1987 Buick LeSabre that stalled on a highway exit ramp, and an instance of a driver losing control because of the loss of power brakes and steering.

Dodge Daytona Shelby joins cars going to Europe

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Chrysler Motors has added the Dodge Daytona Shelby Z sports car to the list of models it will sell in Europe beginning early next year.

In addition, the U.S. automaker is expected to announce within the next several days the formation of a European sales headquarters to be located in the Frankfurt area.

Chrysler officially disclosed its return to the European market at the Geneva auto show last March and is expected to offer further details at the Frankfurt show next week.

The company said previously it would sell the Chrysler LeBaron Turbo coupe and convertible, Dodge Lancer ES and Shadow ES and Plymouth Voyager minivan, and it held out the possibility of adding the Daytona to its line.

A Chrysler spokesman last week confirmed that the turbocharged sports car will be marketed in Europe. It will be called the Chrysler GS Turbo II.

The Daytona has reportedly been well received during European market tests in recent months. Pricing has not been settled, but Chrysler is expected to position the Daytona beneath the low end of the Porsche spectrum. It could fit between the Volkswagen Scirocco and Porsche 924, challenging the likes of Mazda's RX-7 and VW's forthcoming Golf-based Corrado sport coupe.

Chrysler has decided on Frankfurt as the base of operations for its new European sales effort. Staffing for the new office is expected to be announced at or before the auto show, along with the completion of some agreements with independent distributors.

Chrysler apparently has not reached a European distribution deal with either Fiat or Renault. Renault distribution of Chrysler products was suggested after Chrysler agreed earlier this year to buy American Motors. However, nothing has developed.

Renault currently distributes Jeep in Europe, and Chrysler Motors Vice Chairman Bennett Bidwell said recently in Detroit that the situation is unlikely to change soon.

"I think Renault will stay on," he said. "I would think that over time we would build . . . an independent distribution system. But that will take a while."

A Chrysler spokesman said the company is finalizing agreements with independent distributors. At Geneva, Michael Hammes, vice president — international operations, said the automaker had two distributors under contract and three others nearly signed.

The spokesman last week said a distribution contract has been signed for Switzerland. One country for which an agreement has not been finalized is West Germany, which Chrysler expects to be its key market.

In France, there has been talk that Chrysler may link with the French import firm Sonauto, whose contract with the Spanish carmaker Seat recently expired. Sonauto is an affiliate of Porsche A.G.

Once a distribution system is in place, Chrysler expects to have a European network of about 500 dealers.

Sales will start in West Germany, Austria, Switzerland, the Netherlands, Belgium and Luxembourg. France will be added as cars are converted for leaded fuel and Spain, Italy and the Scandinavian countries are expected to be added several months after the first launches.

The initial sales target is about 5,000 units for the first year, though Chrysler is reportedly pushing for volume of 50,000-100,000 by the mid 1990s.

Among the featured attractions at the Frankfurt show will be Chrysler Corp. Chairman Lee Iacocca, who will herald the company's return to Europe after a nine-year absence.

The Chrysler boss and executive vice president Robert Lutz will conduct a press conference at the Frankfurt stock exchange. Iacocca is also expected to meet with West German Chancellor Helmut Kohl, among others, during a luncheon with the management board of the Deutsche Bank.

The U.S. automaker's other showcase at Frankfurt will be a Chrysler-designed concept car based on the Lamborghini Jalpa. The show car could preview plans for a new U.S.-bound collaborative effort in 1990.

NADA

FROM PAGE 3

turn franchise does contain a provision for binding arbitration similar to Chrysler's," McCarthy said. "We have had several meetings objecting to the provision. Saturn has not made a final decision."

McCarthy said some import franchise agreements, such as the Mazda sales contract, also concern NADA.

"They don't go quite as far as Chrysler, but they do create some concern regarding arbitration provisions," he said.

"Under this agreement, dealers would be precluded from pursuing rights and remedies under state law before motor-vehicle boards or court systems," the NADA legal analysis said.

In a prepared statement, Chrysler said it "feels binding arbitration of disputes between our dealers and Chrysler Motors Corp. is by far the most equitable and cost-effective method of settling disagreements. And many of our dealers agree."

"By NADA's own survey," Chrysler said, "Chrysler has the best relationship with dealers in the domestic industry. We feel that says something about our judgment in writing the new agreement."

In a telegram sent to Chrysler Corp. Chairman Lee Iacocca and Chrysler Motors Chairman Gerald Greenwald, McCarthy and NADA President James T. Caplinger said, "NADA opposes mandatory binding arbitration because it bypasses the very systems established to resolve franchise disputes and clearly contradicts the laws of not less than 13 states.

"At the worst," the telegram said, "binding arbitration offers no assurance either that dealers' substantive rights under state law will be properly enforced or that prior board or court decisions will be followed."

NADA described the state franchise laws enacted over the last three decades as "an effort to equalize the tremendous difference in economic power between the two parties to the franchise agreement."

NADA said it supports voluntary, non-binding arbitration and is notifying its members of the "risks" in the Jeep-Eagle agreement. It is not asking dealers to refrain from signing the agreement.

"The NADA accusation that our new franchise agreement is illegal in at least 13 states is incorrect," Chrysler said.

"We passed our new agreement through a battery of very knowledgeable attorneys before we presented it to our dealers. The arbitration provision is covered under the federal arbitration act," Chrysler said.

Chrysler is currently re-franchising former American Motors dealers as Jeep-Eagle dealers following its acquisition of AMC.

Chrysler Motors Vice Chairman Bennett Bidwell said earlier this month that the company expected to complete signing of the new sales agreements within 90 days.

The NADA analysis of the Jeep-Eagle agreement said the contract contains "several unique termination provisions."

"If a dealer has more than one agreement, the termination or notification of termination of one agreement will result in the termination of the second agreement," the NADA review said.

"If the Eagle agreement is terminated, the Jeep agreement will also terminate even if there are not independent grounds for terminating the Jeep agreement."

The new agreement also provides that if a dealer negotiates to sell the dealership's assets, Chrysler has the right of first refusal to purchase the dealership.

"Unlike other agreements, dealers are not given an opportunity to withdraw the entire sale once (the company) indicates that it is going to exercise its purchase option," the NADA review said.

NADA said a unique feature of the agreement is a requirement that all dealers be members of the dealer advertising association.

The agreement also addresses lemon-law notification.

A dealer must notify the company when a vehicle has been in for repairs one-half the number of times required to trigger repurchasing or replacement provisions under state law or whenever a vehicle has been out of service for one-half of the number of days required to trigger any repurchase or replacement provision.

If a dealer fails to notify the company, the dealer will be required to buy back the vehicle or provide a replacement vehicle.

"This may not be objectionable," the NADA review said. "But it does present a new area of potential liability for a dealer who does not effectively monitor its service operations."

NADA said the agreement also follows an industry trend by requiring dealers to notify a customer in writing any time that a modification, equipment, accessory or part is installed or used that is not supplied by the manufacturer and is not included in the manufacturer's warranty.

Crash data criticized

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The Center for Auto Safety has criticized NHTSA for its failure to identify cars equipped with driver-side air bags or passive belts when they are crashed at 35 mph into a barrier.

The crashes are done under the agency's experimental program to allow purchasers to compare occupant protection among new cars.

For instance, the consumer group said that the average person would not know that the 1987 Mercury Topaz has a driver air bag. Neither would they know that the 1987 Ford Escort and 1987 Mitsubishi Starion had motorized automatic belts.

Automakers must produce 10 percent of their 1987 cars equipped with passive restraints.

CAS said that those with passive restraints offer better occupant protection, citing NHTSA data on head injury criteria.

In doing the comparison, the group noted if the car had sheet metal changes, its model year and whether it is a two-door or four-door model.

The center says air bags probably protect heads better than any type of belt, and that passive restraints provide superior protection because they are most likely to be used.

However, it should be noted that in NHTSA's New Car Assessment Program, the dummies used get maximum protection. They are always properly and tightly belted — in contrast to the public-at-large — and all cars are new.

Incentive plans hike mid-month sales 17.7%

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Mid-August domestic-car sales surged ahead 17.76 percent over the same period a year ago. Cash rebates and financing incentives boosted Aug. 11-20 sales 38.43 percent above those in the first 10 days in August this year.

Sales totaled 235,866 cars compared with 200,296 a year ago. The daily selling rate increased to 26,207 units, up from 22,255 in 1986.

Ford Motor Co. chalked up 10-day sales of 66,907, a gain of 24.05 percent over last year's 53,935.

General Motors sold more cars in mid-August than in any other mid-month period of the 1987 model year. Sales totaled 126,887, up 18.41 percent. Cadillac sold 59.01 percent more cars due to $2,000 rebates on three car lines.

Chrysler Motors' mid-month sales, which include Eagle Division estimates, dropped 20.09 percent to 26,200 compared with the year-ago total. Last year's total includes AMC estimates. However, Chrysler sold more cars in the mid-August period than it did in the first 10-days when it sold 17,568.

Nissan sales grew exponentially to 5,527 cars compared with 14 a year ago when the Tennessee plant had just resumed production. Honda's sales advanced 82.07 percent to 7,563 in the mid-month period. Toyota sold 1,188 U.S.-built cars; last year it did not produce cars in the U.S. Volkswagen sold 1,594 cars, a 28.90 percent drop.

Michigan stamping plant slated for Mazda

IRVINE, Calif. - Mazda (North America) and three Japanese auto parts firms have formed a joint venture to produce metal stampings in Tecumseh, Mich. Beginning in the fall of 1989, the new company will supply stampings to Mazda Motor Manufacturing (USA) Corp.'s assembly plant in Flat Rock, Mich.

The new firm, Lenawee Stamping Corp., will build a $70 million plant employing 360 workers to make a variety of stampings, such as body pillars, side sills and cross members.

Construction of the plant will begin in September, with production scheduled to start in the fall of 1989.

In addition to Mazda (North America), the partners are Miura Kogyo, Ondo Kosahusho and Yamamoto Kozai, all of Hiroshima, Japan. Each of the partners will hold 25 percent of Lenawee Stamping.

All the Japanese firms currently supply stampings to Mazda Motor Corp.'s assembly plants in Japan. Mazda owns one-third of Miura Kogyo.

A spokesman for Mazda (North America) said formation of the new company will result in a change of sourcing for those stampings from Japan to the United States.

According to the companies, Tecumseh was chosen as the location for the plant because of the skilled labor force in the area and the support extended locally and by the state of Michigan.

It was reported that the state will provide $1.3 million in labor training assistance, and Tecumseh has applied for $520,000 in community development block grant funds to make plant-site improvements and to meet infrastructural needs.

A spokesman said the partner companies investigated using U.S. suppliers for the components, but decided in the interest of speed and efficiency to form a joint venture among Japanese firms. He said it was more efficient in this instance to rely on Japanese firms, which have the tooling and technical knowledge to fill Mazda's needs.

U.S. car output on steady climb

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

U.S. auto production continues to increase as plants resume production after being idle for model changeover.

Last week's targeted output of 128,113 cars was the highest in almost two months. The week's estimate was 24.04 percent more than the previous week's 103,286 but 8.00 percent below the year-ago week's 139,253.

So far this year, 4,704,707 cars have been assembled, 11.15 percent below the 5,295,087 completed last year at this point.

Companies split last week's scheduled production as follows: General Motors, 54.59 percent; Ford Motor Co., 21.84 percent; Chrysler Motors, 14.99 percent; Honda of America Manufacturing Inc., 3.90 percent; New United Motor Manufacturing Inc., 2.65 percent; and Nissan Motor Manufacturing Co. U.S.A., 2.03 percent.

Volkswagen of America's Westmoreland, Pa., plant remains idle for model changeover. The plant is scheduled to resume output Sept. 21. It had been slated to return Sept. 14, but production was delayed a week because of the VW strike in Mexico. The strike was settled last week.

GM announced a three-week extension of the second shift at its Buick City plant in Flint, Mich. The shift was originally scheduled to be dropped Sept. 17. A GM spokesperson said the extension is due to an increase in dealer orders for the 1988 LeSabre.

GM's Corvette plant in Bowling Green, Ky., and its Fiero plant in Pontiac, Mich., are closed until Sept. 8 because of a parts shortage.

The Cadillac Allante line at the Detroit-Hamtramck plant was idle last week for model changeover. Output is scheduled to resume Wednesday.

Three GM plants remain closed for model changeover. They are: Arlington, Texas; Framingham, Mass.; and Doraville, Ga.

Ford's Kansas City, Mo., plant is expected to resume operations today. The plant has been idle for model changeover.

Daily overtime is slated this week for Ford's Dearborn, Mich., and Wixom, Mich., plants.

Big 3 built 18,118 cars in Mexico

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Automotive News this week begins reporting monthly production figures for the U.S. Big 3 automakers building cars in Mexico.

The three automakers built 18,118 cars in Mexico in July. The year-ago July total was not available, but the July total was depressed from the usual rate because a strike against Ford reduced output.

General Motors, which produces the Chevrolet Celebrity for export to the United States, plus Oldsmobile Cutlass Ciera and Buick Century models for the Mexican market, built 5,195 cars during July. That compares with 1,367 assembled during the year-ago month.

By the end of July, GM had built 20,749 cars this year in Mexico, more than double the 9,838 assembled during the first seven months of 1986.

Ford Motor Co. reported 4,223 Mexico-built cars. Of that total, 3,368 were Tracers — built in Hermosillo, which was strike-free. The remaining 855 units were Topaz, Thunderbird, and Cougar models, which are sold exclusively in Mexico. The plant that assembles those three models was idled for most of July by the strike. Ford's year-ago numbers were not available at presstime.

Chrysler Motors assembled 8,700 K-cars in Mexico last month, 49.23 percent more than the 5,830 assembled in July 1986. It exports the Aries and Reliant models to the United States.

Chrysler's year-to-date total at the end of July was 43,784 cars, up 54.94 percent from the year-ago period's 28,259.

U.S. makers keep trucks steady for week

U.S. truckmakers scheduled production of 60,582 units last week, 1.39 percent below the previous week's 61,436 and 9.87 percent below the year-ago week's 67,219.

Year-to-date, 2,485,352 trucks have been assembled, 4.35 percent more than the 2,381,812 completed last year at this time.

Two weeks ago, Chrysler Motors reported that its Jeep plant in Toledo, Ohio, was closed for vacation; however, the plant was operating. This week's production figures reflects the adjustments in the Jeep totals.

General Motors' Janesville, Wis., plant remains down for model changeover. Production is scheduled to resume Sept. 8.

Ford Motor Co.'s Louisville, Ky., plant is slated for daily overtime this week.

Canadian cars take 60% leap

Last week's scheduled Canadian car production was nearly 60 percent higher than the prior week's build when several plants were idle for vacation.

Automakers targeted 11,100 cars last week, 59.23 percent more than the previous week's 6,971, but 22.02 percent below the year-ago week's 14,234.

So far this year, 493,261 cars have been assembled, 28.64 percent below the 691,373 completed last year at this point.

Scheduled truck production of 14,254 units last week was 10.58 percent below the prior week's 15,941 but 19.03 percent more than the year-ago week's 11,975.

Year-to-date, 536,462 trucks have been built, 5.95 percent below the 570,385 assembled last year at this time.

AM General awarded pact for 1,114 Hummers

DALLAS — AM General Division of LTV Missiles and Electronics Group has received a $33.6 million contract to produce 1,114 Hummer High Mobility Multipurpose Wheeled Vehicles for GTE Tactical Systems Division.

GTE will equip the vehicles with communications systems.

Tent sales fuel un-civil war in South

Toyota warriors clash at state line

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Dealers from Mid-Atlantic Toyota Distributors Inc. peered out from their tent — down Battlefield Boulevard and across the Virginia border into North Carolina — and spied the enemy. It was Southeast Toyota Distributors Inc.

Near the sleepy hamlet of Moyock, N.C., the two independent Toyota distributors waged a fierce battle during the last four days of August with each side firing salvos at the other. And in the end, both claimed decisive victories.

"I think we won," said Ed Snyder, president of Checkered Flag Inc. in Virginia Beach, Va. "We sold 46 cars, gave out 750 fishing poles and diverted more than a thousand potential customers back into Virginia."

But dealers from Southeast Toyota who held a tent sale a half-mile down the street in North Carolina aren't so sure. They sold roughly 250 cars — claiming more than half were purchased by residents of neighboring Virginia, which is just outside the company's five-state distribution area.

A Southeast Toyota spokesman characterized the 1,000-car North Carolina tent sale as a huge success, saying the company will continue to plan special promotions at state lines to lure customers away from dealerships in other distribution areas.

Bieber: contract at Ford should be an "industry contract"

UAW counts on Ford to set 1987 pattern

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

In choosing Ford Motor Co. as its strike target, some say the UAW has decided it's time to recover the many concessions made since 1982.

In bargaining first with the most profitable automaker, the union apparently believes it needn't give up anything to gain job security — at least at Ford.

The union decided against grappling first with problem-ridden General Motors, whose aim of divesting itself of unprofitable operations would probably have involved more "takeaways" from the union in exchange for job security.

Joe Wilson, president of UAW Local 15, which represents the Buick-Oldsmobile-Cadillac Group's Fleetwood plant in Detroit that is scheduled to close at the end of the year, said that the improved contract the union will get at Ford will strengthen its hand with GM.

But Wilson said the union

Problems mount; Subaru slashes import schedule

By John A. Russell and Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTERS

Subaru of America, beset by its first financial loss in more than 12 years and prospects of red ink for the entire fiscal year, is reducing its import schedule by 12,000 cars this fall in an effort to sell off a 70,000-car backlog.

That huge stockpile — as of last week, 46,000 units in distributor and dealer lots and 24,000 parked at U.S. ports awaiting shipment by Subaru of America — amounts to a 103-day supply based on the August selling rate, the highest of any Japanese importer.

Meanwhile, in Japan, the losses and other problems at Subaru of America are proving a major setback to its supplier and principal stockholder, Fuji Heavy Industries of Japan.

Koji Endo, auto analyst with Nomura Securities in Tokyo, even speculated last week about whether Fuji can survive what he called "these car wars" in the United States in the long run.

Thomas Gibson, president of Subaru of America, said the reduced shipments mean that the only 1988 models imported this fall will be those currently in short supply — the Justy, hatchback, XT and several other lower-priced models.

Monthly shipments from Fuji to Subaru will be reduced by 4,000 units to 12,000 units in October, November and December. The plan is that shipments in the following three months will be increased by 4,000 units per month.

Gibson flatly denied reports that Subaru would ask Fuji to cut production and lower its quota. "We're aiming to hit the MITI quota," he said. "We will sell our way out of it."

The deterioration in Subaru of America's performance comes, ironically, at a time when it is trying to buy out its remaining independent U.S. distributors. That action has attracted legal charges from some of those distributors, who claim Subaru is forcing them out of business by dumping unwanted cars on them.

The quota established by Japan's Ministry of International Trade and Industry falls under the voluntary restraint system of exports of automobiles from Japan to the United States. Each manufacturer has a quota of cars it can export. In Fuji's case, Gibson said it is between 190,000 and 195,000 cars.

He said the current inventory mix is 30 percent lower-priced cars (those under $10,000) and 70 percent upper-priced models (those over $10,000).

The import reduction by Subaru closely follows the announcement of a third-quarter loss of $4[illegible]8 million. The loss for the first nine months of its fiscal year was $15.1 million.

FRANKFURT

German roadsters bow; they're headed for U.S.

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

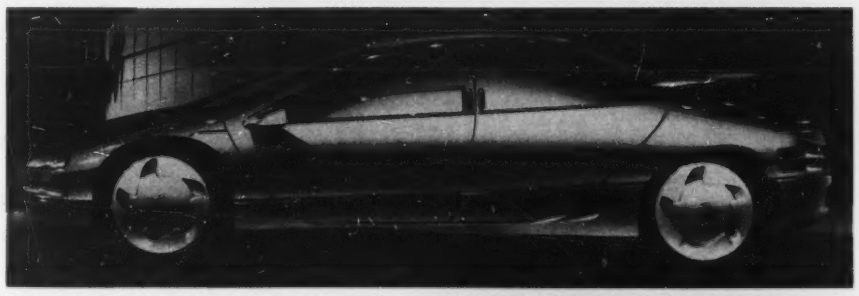
FRANKFURT, West Germany — A group of hot, new German roadsters, each aimed squarely at the American market, will debut this week at the Frankfurt auto show.

BMW, Porsche, Bitter and Treser will present sports convertible prototypes or scale models here.

Also debuting at Frankfurt this week are the Ferrari F-40, a limited-edition supercar, and BMW's 3-series-based Touring station wagons. Panther Car Co. will show a heavily revised Solo.

The Portofino, a mid-engined Chrysler concept car powered by Lamborghini, could preview a renewed Lamborghini Jalpa two-seater in 1990.

Ford is showing its HFX Ghia Aerostar, a $7 million concept vehicle developed with the comp[illegible]



Chrysler Portofino, based on the Lamborghini Jalpa, will be unveiled in Frankfurt by Lee Iacocca

March, the new Opel Senator and the Alfa Romeo 164, also will make their international debuts here.

But not everything expected to be here a few months ago will be shown. The new Mercedes SL roadster, Audi's 300 V-8, Volkswagen's Taifun/Corrado coupe and new Passat and the new BMW 5 series will all be absent, barring last-minute surprises.

The show has other attractions. Edzard Reuter, who took over as the new chairman of Daimler-Benz last week, is expected to make his first public appearance as chairman.

Import stores top domestics for first time

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

For the first time in the four decades that imported cars have been a factor in the United States, there are now more dealerships selling foreign-built cars than domestic-built cars.

On July 1, a record 23,984 dealerships were selling imported cars in the United States, and 20,331 were selling domestic cars. Most domestic dealers now handle captive makes imported by their domestic factories.

There were 4,927 dealerships selling just imports, and 19,657 dealerships selling both domestic and import makes.

In fact, Automotive News now estimates that by the end of the year, there will be fewer than 1,200 new-car dealerships that do not

First Mazda rolls at Flat Rock
The first 1988 Mazda MX-6 GT sport coupe was assembled at Mazda Motor Manufacturing (USA) Corp.'s new $550 million plant in Flat Rock, Mich., last week. The 2.7-million-square-foot plant has a capacity of 240,000 units annually. It is Mazda's first full-scale manufacturing facility outside Japan. The plant will begin building the Ford Probe next spring.

L-M de-emphasizes Merkur name

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — In a change of advertising strategy, Lincoln-Mercury Division will attempt to sell its Merkur products without referring to them as Merkurs.

The badge, which has had trouble capturing shoppers' enthusiasm, will no longer be used in L-M's national advertising for the West German imports, a spokesman said. Merkur will still appear on dealer signs, promotional materials, local advertising and the cars themselves.

The division is making the move so it can focus more attention on the individual Merkur products, the XR4Ti sport coupe and the Scorpio luxury sedan, said the spokesman. With the debut of the Scorpio in May, there are two cars in the Merkur franchise for the first time.

Until then, Merkur had been largely synonymous with the XR4Ti. The car, which was introduced in 1985, never met L-M's expectations. And so far this year sales are down 42 percent from last year's levels.

The Merkur name, meanwhile, has been the target of second-guessers who find the word difficult to pronounce and easy to forget. Merkur means Mercury in German.

"I wouldn't shed a tear if we started calling it a Ford product that was manufactured in Germany," said one dealer.

L-M officials have defended the name while conceding that they've learned some lessons from the XR4Ti launch. Some were applied to last May's introduction of the Scorpio, and so far the car is doing well.

In just over three months, Merkur dealers have sold more than 3,500 Scorpios. L-M had predicted sales would be in the 5,000 to 7,000 range by the end of the year.

"We have realized that it takes a lot longer than we expected to establish the name for a franchise," the spokesman said. "We also believe that the Merkur name will be helped by the addition of the Scorpio to the franchise."

Discarded dealers battle Volvo GM

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Volvo GM Heavy Truck Corp. has unleashed a torrent of bitterness and legal action by many Volvo White and GMC dealers slated to lose their heavy-truck franchises Dec. 31.

The rancor even includes some dealers who are being retained, but feel the new company has done a poor job of carving up its franchise territories.

Volvo GM Heavy Truck will begin operation Jan. 1, with about 250 out of 550 previous franchise holders.

Among those being canceled are some of Volvo White's oldest, strongest-performing and most loyal dealers.

"We probably got as good a screwing as anybody on the planet," said Benjamin Lucas, a principal in Lucas Truck Sales in Charlotte, N.C., who plans a court fight for his franchise. He lost out to a local GMC/Peterbilt dealer.

Lucas was Volvo White's largest dealership in 1981, 1984 and 1985; and, according to Lucas, "possibly their largest privately owned dealership (excluding factory branches) since 1981."

"We were assured from the beginning, from the lowest guy (at Volvo) to the top guy, we'd be the dealer" in the Charlotte market, Lucas said. "After months of negotiations, without any negatives thrown at us, they sent in two guys who had never been involved before and dropped a one-page form letter on the desk, with absolutely no reason for the cancellation."

In Las Vegas, Nev., Ivan B. Cannon recited a litany of turmoil he survived in the heavy-truck business over the past 10 years, including White's divorce from Freightliner, its subsequent bankruptcy and its purchase by Volvo.

"I survived everything — except this," Cannon lamented, adding that his Vegas Truck Center is losing its franchise to Desert GMC.

"I delivered White a far higher share of market in my AOR (franchise territory) than they ever had nationally," Cannon said, claiming a 23 percent Class 8 share in his area based on first-half orders this year and registrations for competitors.

"I've also given them the largest share of the parts business that any OEM gets in my area," he said. "I built and equipped and staffed the largest and most modern Class 8 facility in Southern Nevada. We took on White when they were dead last, and now they're in the best position of anyone in this area, except (market leader) Harvester."

Cannon said he plans to appeal to the Nevada Department of Motor Vehicles in a hearing scheduled for Oct. 3.

Larry Carter, owner of Desert GMC, Las Vegas, and GMC line representative for the Natonal Automobile Dealers Association's American Truck Dealers Division, said he feels Volvo GM made a "fair decision" in 95 percent of cases, that it "probably chose what were the best dealers in the area in most cases," and that it is all simply a "survival of the fittest."

Said Carter, "We wanted fewer dealers. How do you protect the dealer who's been canceled?"

But another dealer countered

Chrysler seeks content requirement for subzone vehicles

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Chrysler Corp. has asked the Department of Commerce to impose domestic-content requirements on all users of foreign trade subzones. Chrysler took the action despite the fact that it operates seven subzones covering automobile assembly and automotive electronic plants in the United States.

Robert A. Perkins, Chrysler vice president of Washington affairs, made the request Aug. 28 in a letter to Commerce officials.

Every auto assembly plant in the United States is either covered by a foreign trade subzone or has an application pending. Subzones have the effect of reducing tariffs paid on imported vehicle parts.

Diamond-Star Motors, a joint venture between Chrysler Motors and Mitsubishi Motors Corp., has also applied for a foreign trade subzone. Perkins said Chrysler supports Diamond-Star's application, but added, "We would expect to follow any new policies or standards the (Commerce Department) establishes for trade zones, including those in which Chrysler has an interest."

"It has become obvious to Chrysler that we and other domestic manufacturers are being and will continue to be placed at a competitive disadvantage vis-a-vis foreign transplants unless some changes are made in the criteria for operating subzones," Perkins said.

He said Chrysler suggests "implementing a public interest evaluation program for foreign trade zones and establishing simple domestic-content criteria for the operation of existing and future foreign trade zones."

The letter was filed as part of the public record on the application of Toyota Motor Manufacturing, U.S.A., for a foreign trade subzone in Georgetown, Ky., where Toyota is building an assembly plant. The Commerce Department's Foreign Trade Zones Board is expected to rule on Toyota's application this fall.

Perkins said an Aug. 12 public hearing on Toyota's subzone application provided strong evidence that if the application is approved, Toyota will enjoy a significant per-vehicle cost advantage over Chrysler and other domestic manufacturers.

"Chrysler Motors estimates the benefit of its foreign trade zone operations to be worth $5 per vehicle, on average, for vehicles produced in subzones," Perkins said. "By comparison, Toyota states its benefit will be in the $30 to $40 range.

"If the Toyota application is granted," he said, "Toyota will be rewarded for its high imported content vis-a-vis Chrysler and other North American-based manufacturers, whose high-levels of North American content have contributed to employment not only at its own North American plants, but to the large North American parts industry, which supplies our assembly plants."

The letter said, "Chrysler urges the Foreign Trade Zones Board to consider requiring a minimum domestic content requirement for all vehicles shipped from a subzone.

"Such a limit would have a positive influence on creating domestic jobs and prevent a company from making hollow promises of domestic content while controlling within their corporate structures the definition of 'domestic content' to fit their own ends."

Perkins suggested that the U.S. government adopt as simple a domestic-content definition as possible, perhaps limiting it to the actual value of domestically produced parts and components.

Toyota has made conflicting claims about the amount of U.S. content in cars that will be assembled in Kentucky, Perkins said.

He said that although Toyota officials have told the U.S. government the vehicles will contain 60 percent U.S. content, a recent Japanese press report quoted a Toyota official as saying, "We have not calculated the ratio of auto parts we will procure from U.S. makers alone to all car components used at the Georgetown plant."

The Toyota official said that the 60 percent domestic-content figure applies only to those components the company does not make itself, such as tires and headlamps.

Perkins said, "These kinds of conflicting statements, when added to the uncertainty of whether other transplant manufacturers have or will accomplish a true high domestic content in subzones, cause Chrysler to make these comments."

In another action last week, Chrysler applied for foreign-trade-subzone status for five parts plants in the Detroit area.

Chrysler said the plants employ approximately 4,800 workers.

In its application, Chrysler claimed that tariffs on components imported for use at the parts plants are as high as 11 percent. Foreign trade subzone status would drop the tariffs to 2.5 percent when the parts are used on automobiles sold in the United States.

GM wants trade subzone status for Michigan luxury-car plants

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — General Motors has applied for foreign trade subzones covering its Detroit-Hamtramck and Orion Township, Mich., plants.

GM's Detroit-Hamtramck plant assembles the Cadillac Eldorado, Seville and Allante, the Buick Riviera and the Oldsmobile Toronado. Orion Township builds the Cadillac DeVille and the Oldsmobile 98. Employment is 4,900 at Detroit-Hamtramck and 7,000 at Orion Township.

GM said both plants import about 2 percent of their parts and components. The foreign items include radios and cassette players, wiring harnesses, instrument panel pads and steering wheels, according to the application. The Allante body is imported; it is made by Pininfarina of Italy.

Subzone status would allow GM to defer duty payments on the imported items until they are shipped from the factory, either individually or as part of a finished vehicle. Imported components that are used for vehicle assembly will be subject to a tariff of 2.5 percent rather than the average duty rate of 4.3 percent on foreign parts. There is no tariff on cars or parts that are exported.

7-million Chrysler recall sought

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The Center for Auto Safety has asked NHTSA to investigate and recall 7 million 1978-87 Chrysler front-wheel-drive vehicles.

Included are vehicles for which Chrysler has issued "driveability kits." The center said the kits usually contain carburetor, fuel line or computer sensor components to overcome engine problems.

The center asked the safety agency to reopen an earlier analysis of engine performance problems in 1978-84 Chrysler fwd cars. NHTSA had found reports of stalling in one out of every 700 cars, and the agency dropped the investigation last December.

The center noted that during an expanded investigation of stalling in Chrysler cars, NHTSA had asked the company to recall two million 1978-82 models for faulty carburetors. Chrysler refused, and NHTSA later closed its investigation.

Since then, the center said, it has received 1,300 complaints of stalling in those vehicles. The center has asked NHTSA to require that Chrysler send defect notification to owners of vehicles that exceed the eight-year statute of limitations for a recall.

In its December 1986 closing memo, NHTSA noted that Chrysler had replaced 4,700 carburetors for a cold stalling problem.

A Chrysler spokesman said that during the NHTSA probe into stalling in 1978-84 Chrysler cars, the incidence of reported stalling was only about one for every 1,000 cars. The investigation was conducted from September 1984 to December 1986.

During that period, Chrysler told NHTSA of 17 reports of accidents allegedly caused by engine stalling.

Chrysler noted that engines sometimes stall because of poor quality fuel, lack of proper maintenance or vehicle misuse. It said its frequency is about the same as for vehicles made by competitors.

The company added that introducing electronic fuel injection on some engines has brought a significant improvement in driveability since the 1983 models and a "marked reduction in complaints."

The center said that all pre-1983 Omni/Horizon cars plus other 1981-82 Chryslers with 2.2-liter engines are covered by a service kit containing aluminum carburetor spacer plates, or "isolators." The original rubber isolators could deteriorate and cause stalling.

The following were cited by the center:

- Fuel foaming and vapor lock: 1981-1985 cars and 1985-1987 Dodge Caravan and Plymouth Voyager.
- Carburetor icing: 1981-1983 cars with 2.2-liter engines and 1984-1987 minivans with 2.6-liter engines.
- Driveability problems: 1981, 1982 and 1983 cars with 2.6-liter engines; all 1984 cars; 1984 minivans with 2.6-liter engines; 1985 cars with 2.2-liter and 2.6-liter (California) engines; all 1985 minivans; 1986 cars with 2.2-liter engines; 1986 minivans with 2.6-liter engines; 1986 minivans with 2.2-liter engines and manual transmissions; 1987 cars with 2.2-liter and 2.5-liter engines; 1987 minivans with 2.6-liter and 3-liter engines; and 1987 minivans with 2.2-liter engines and manual transmissions.

AUCTION NEWS

Southwest Auto Auction has broken ground for a new headquarters in Chandler, Ariz.

The facility's 55-acre parcel is expected to be developed by early 1988. Plans call for a 25,000-square-foot building that will house eight auction lanes, general offices and a restaurant. In addition, a separate 15,000-square-foot structure will provide appearance reconditioning services, including a body shop.

Southwest Auto Auction, currently in Phoenix, was acquired by Manheim Auto Auctions, Atlanta, in October 1983.

The recent 2nd annual **Monterey Vintage Sports & Race Car Auction** raised $52,000 for the Children's Services Center of Monterey, Calif. The auction sold $4.4 million worth of cars, with 82 percent of entered cars sold.

Ferrari models brought the top dollar, including: a 1971 Daytona Spyder, $490,000; a 1967 275/365 GTB/4 prototype, $455,000; a 1967 365 GTB/4, $300,000; and a 1967 275 GTB/4 $255,000.

GE Credit Corp. has acquired auto auctions in San Antonio and Fort Worth, Texas. The two auctions had combined sales last year of 50,000 units. GE Credit, headquartered in Stamford, Conn., now owns 13 auctions with anticipated annual sales of 450,000 units. GE Credit has assets in excess of $26 billion.

CENSUS

FROM PAGE 1

sell at least one import make.

That benchmark coincides with the 10th anniversary of Henry Ford II's statement to reporters that imports were in for "one helluva battle" from the domestics.

"We'll push them right back to the shores," he said on Sept. 1, 1977, at Ford's 1978 national new-model press conference.

The old import-outlet record was 17,100 on Jan. 1, 1979, a little more than a year after Henry Ford's battle cry.

The latest Automotive News import dealer census shows that the number of dealerships handling imported cars rose 40.31 percent in the first six months of the year — chiefly because of imports introduced by Ford Division (Festiva), Mercury (Tracer), Pontiac (LeMans) and American Motors (Renault Medallion). The Jan. 1 total was 17,093.

The total number of import-make franchises rose 34.85 percent in the six-month period — to 33,-635 from 24,943 — again, chiefly because of the new captive imports.

The franchise total and the dealer total differ because of dualing — two or more franchises often are combined in a single outlet.

All 2,975 Pontiac dealers now sell the Korean-built LeMans. All 2,754 Mercury outlets sell the Mexican-built Tracer. Only 738 Lincoln-Mercury dealers also had the Merkur franchise on July 1.

The number of import outlets will continue to grow as Daihatsu begins operations and as Nissan and Toyota finalize plans for second, premium-make franchises.

Adding to that growth will be Ford: A total of 1,358 Ford Division dealers had Festiva on July 1, but by October the division plans to extend Festiva to all of its 4,600 U.S. dealers.

That means that of the 10 traditional American domestic marketing units, only Oldsmobile, Buick and Cadillac divisions will not have captive imports to sell. But many of those dealers are dualed with Chevrolet or Pontiac, thus giving them a captive, or they handle an independent import make.

The first-half-1987 addition of the Pontiac, Mercury and Ford captives also altered the ranking of source nations, catapulting Korea to second place, inserting newcomer Mexico into third place and pushing West Germany into fourth.

Also in the first half of 1987, 36 dealers acquired Range Rover franchises, although those numbers are not reflected in the totals because Ranger Rover is not classified as a passenger car.

Among the imports, Mitsubishi, Acura and Hyundai remained the only franchises with totally exclusive dealership outlets.

Despite recent dealer network troubles, mostly in the Pacific Northwest, Nissan remained the non-captive import leader with 1,-108 franchises in the continental United States on July 1. Toyota continued to be a close second with 1,086 in the continental United States. Both totals exclude Hawaii, where the two Japanese makes use separate, independent distributors.

The number of Japanese-make import franchises rose 1.60 percent in the first six months of the year, largely due to gains by the still-developing retail networks at Isuzu, Acura and Mitsubishi.

Elsewhere, franchise declines by BMW, Audi, Merkur and Porsche cut the West German total 0.44 percent.

Two new Saab franchises pushed the Swedish total up slightly.

Declines by Alfa Romeo and Maserati dropped the Italian total 4.17 percent.

The reintroduction of Renault as an import boosted the franchise total for French makes despite the loss of 15 franchises by Peugeot.

Meanwhile, a gain by the still-growing Sterling organization pushed the United Kingdom total up 1.39 percent, despite fewer franchises at Jaguar, Rolls-Royce/ Bentley and Aston Martin Lagonda.

Yugo's developing organization added 52 franchises in the first half of the year, boosting Yugoslavia's total 20 percent, while the addition of Pontiac and Ford captives and the growth of Hyundai fattened South Korea's total an astronomical 2,705.59 percent.

SUBARU

FROM PAGE 1

Problems hit Subaru for the first time this year, just as they hit other marketers of Japanese automobiles. A rise in the value of the yen against the dollar, making Japanese cars more expensive, came at a time of generally increased competition and incentives in the marketplace.

Once, Subaru of America could do no wrong, either in the marketplace or on Wall Street. From 1975 to 1986, steady sales increases were the norm.

In 1975, it sold 41,587 vehicles. But the real glory years started in 1977, when it nearly doubled sales over the previous year to 80,826. Sales increased steadily until they reached an all-time high of 183,242 last year.

For the first seven months of this year, the company sold 91,950 units compared with 107,031 in the same period of 1986. At the beginning of August, Subaru also had about 70,000 cars, which was a 126-day supply, based on the slower July selling rate.

The latest filings at the Securities and Exchange Commission indicate that the value of Subaru of America's inventory soared from $78.6 million at the end of October last year to $133.3 million at the end of April this year.

The company's stock price kept climbing until May 1986, when it was split eight for one. For 12 years, Subaru had not reported a quarterly loss — until two weeks ago.

The losses were not surprising to analysts on Wall Street, however. Most expected a loss, but not the amount that was reported.

Scott Merliss, auto analyst for Morgan Stanley, said, "When any company joins the rebate game, earnings can disappear overnight."

Subaru has been heavily in the rebate game. To move product, it has various incentives, with up to $1,500 in rebates on selected models. It also is offering financing of 3.9 percent.

Those incentives are costly. Gibson said the company has spent $72 million to date — and this is only Subaru's share.

Independent distributors have been taking things into their own hands, too. Ernie Boch, president of New England Subaru, said he is offering the $1,500 incentive and 3.9 percent financing as well as extended warranties at no charge.

At Subaru South, based in Little Rock, Ark., John Matt, president, said sales are down 20 percent. He is offering incentives to dealers, salesmen and sales managers to spark sales.

Subaru got into the rebate game because of the present richness of its model mix. Historically, Subaru's advertising tagline was, "Inexpensive and built to stay that way."

But this year, the bulk of the model mix was the in GL lines, which carry many accessories. That quickly boosted prices, generally to over $10,000 and in many cases to $12,000-$15,000.

Boch, whose New England territory accounts for 20 percent of Subaru sales, said the "management got greedy."

Gibson and other executives agreed that the model mix was too rich. The model mix has to be adjusted, so that Subaru "returns to its roots" with less expensive cars.

Gibson said last year at introduction time that the model mix was 15 to 20 percent under $10,000 cars, and the balance in the upper end.

This year, he is looking for a more even split, with as much as 55 percent in the lower price range. Dealers will see some of the lower-priced, and short-supply cars, in November.

That is the strategy until at least the beginning of next year, when Gibson anticipates the 1987 inventory will be cleared out.

However, Wall Street analysts view Subaru's situation as unique in many respects. Subaru of America is not a subsidiary of the manufacturer. While Fuji Heavy Industries is the chief shareholder with 49.7 percent, Subaru of America is an independent company traded on the stock exchange.

According to Ann Knight, auto analyst for Paine Webber, Subaru is being squeezed from two directions.

First, there is Fuji and its desire to increase prices, to move upscale to balance the declining dollar against the yen and to retrieve higher production costs.

On the other side is the marketplace, which will not accept Subaru's higher priced cars.

While Subaru has been fighting a losing sales war — it is running 14 percent behind last year's pace — its remaining independent distributors have expressed their displeasure.

Four recently joined in litigation against Subaru of America, claiming the company was forcing too many cars on them. While the suit was dropped (Automotive News, Aug. 17), a key point was that Subaru was forcing independent distributors into a financial situation where Subaru could buy them out at a low price.

Subaru has been steadily buying its independent distributors. The network of 13 distributors was reduced to five independents last week when Subaru of America acquired Denver-based Inter-Mountain Subaru.

While buyout prices have not been announced, each has been described as being "in excess of $10 million."

Gibson denied the allegations that the buyouts were part of a plot to force the distributors out of business.

The money for the purchases comes from a cash surplus built up by Subaru during the good years. Last week, Subaru said that cash in hand was $235 million.

Filings with the Securities and Exchange Commission indicate that Subaru of America has a $525 million line of credit with 14 banks through June 1988.

The third-quarter loss was attributed not to the buyouts, but to the cost of incentives and to exchange rates between the dollar and the yen.

The importance of Subaru of America to Fuji Heavy Industries should not be underestimated. Although Fuji also makes airplanes and trains, its major profit base — 80 percent — is in cars. And up to 80 percent of its car business is in the U.S. market.

As a result, Nomura's Endo said, the company does not have many alternatives to compensate for the losses.

Analysts believe, however, that the company is ready to offer a financial plan to increase income. That may not happen immediately, however, since the present financial environment in Japan is not regarded as ideal, but a move is expected within the next 12 months.

The loss in profits combined with the increase in capital investment due to the joint U.S. venture with Isuzu, has put pressure on Fuji. That venture is an assembly plant in Indiana.

In June, Fuji forecast a net profit of 8 billion yen ($56.7 million) for the current fiscal year. Analysts now say the company will come up short, perhaps as much as 10 percent.

The situation in the American market, for Subaru in particular, is perceived in Tokyo as "much worse than expected."

All of this may affect the joint venture with Isuzu.

For Fuji Heavy Industries, Endo said, the operation "cannot fail." He is confident the company will put up enough cash to make it work.

But analysts noted that if Subaru of America is having problems selling the product now, an increase in production will not make the task any easier.

Import gain hikes August sales

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Despite a wide range of incentives during the month, August sales of U.S.-built cars failed to match the year-ago total.

But a hefty increase in sales of imported cars pushed the overall total above the 1986 figure.

Total August sales of U.S.-built and imported cars edged up 1.14 percent to 962,615, compared with last August's 951,809. Two years ago, the August count was 1,075,171.

August's total rose 5.54 percent above July's 915,830 units.

Domestic car sales slipped 2.87 percent to 653,974 units, compared with last year's 673,311. Of the Big 3, Ford Motor Co. was up; General Motors and Chrysler Motors were down.

Import-car sales rose 10.82 percent for the month with a total of 308,641 compared with 278,498 last year. Imports accounted for 32.06 percent of the August market this year.

In terms of market share for August, GM had 35.85 percent; Ford, 18.99 percent, and Chrysler (including Eagle Division), 7.81 percent. Honda's share was 3.09 percent; Nissan's was 1.34 percent, and Volkswagen's was 0.50 percent. Toyota had 0.36 percent of the domestic market. Imports accounted for 32.06 percent.

Aug. 21-31 sales of domestic cars dropped 22.46 percent to 248,873 units, compared with 320,980 in the 1986 period. There were nine selling days in each period.

The selling rate in August averaged 25,153 units per day this year, compared with 25,896 a day in 1986. There were 26 selling days in the month in both 1986 and 1987.

Only one of the Big 3 reported a sales gain in August. Ford Motor Co. was up 12.83 percent over last year.

General Motors boasted of record sales for its 1988 Chevrolet Corsica/Beretta in August, and Cadillac also set a record. But GM's overall sales declined 8.87 percent from 1986. Chrysler Motors' sales, including Eagle Division estimates, dropped 29.19 percent.

Honda reaped a 40.28 percent increase in August compared to last year. Nissan sales rose to 12,856 from 49 a year earlier when the Smyrna, Tenn., plant was down for model changeover. More inventory and aggressive promotions boosted Toyota sales to 3,500 units in August; it was not selling U.S.-built cars a year ago. Volkswagen reported a 25.63 percent drop for the month.

Last year's excitement over incentives at the end of August didn't carry over for domestic manufacturers in this year's final 10 days. GM sales dropped 34.02 percent.

"Although sales were strong from Aug. 21-31, they were below last year because the comparable period included the explosive Aug. 28 kickoff of GM's 2.9 APR financing incentive," said C.N. "Bud" Moore, vice president, GM Customer Sales and Service Staff.

Ford's rosy sales glow ebbed by 0.22 percent in the final 10 days. Chrysler sales, including Jeep/Eagle products, were off 32.75 percent from the comparable period in 1986. However, Chrysler sold more cars in the final period than it did in the first or mid-month 10-day periods.

Honda's sales rose 9.18 percent and Nissan reported selling 6,281 cars compared to 29 a year ago. Toyota sold 1,744 cars in the last 10 days. Volkswagen was down 17.26 percent.

As noted, imports accounted for 32.06 percent of August's sales. Japanese automakers had more inventory, and European automakers like BMW and Mercedes introduced incentives for consumers and at the dealer level.

Isuzu reported a 73.83 percent surge in August car sales for an all-time monthly sales record. Subaru, working from a high inventory and buoyed by incentives, also reported its best August on record with a gain of 31.5 percent over last year. Hyundai also had stellar August sales, reporting a 28.90 percent rise in Excel sales compared to last August.

Michigan college wins architecture competition

SOUTHFIELD, Mich. — A team from Lawrence Institute of Technology here won an architectural and design competition for its conceptualization of a 21st-century factory.

The competition was sponsored by General Motors and the Association of Collegiate Schools of Architecture.

Teams were asked to design a plant that would produce a specific product at a given rate using a specified manufacturing process.

August car output is 5-year low

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Domestic automakers built 412,717 cars in August, the lowest total for that month since 1982 when 353,656 cars were assembled.

Last month's production was 16.26 percent more than July's 354,980 but 14.17 percent below the year-ago month's 480,857.

Last week's targeted auto output of 131,594 was 12.26 percent more than the previous week's 117,220 and slightly higher (0.82 percent) than the year-ago week's 130,529.

So far this year, 4,825,408 cars have been assembled, 10.99 percent below the 5,421,265 completed last year at this point.

Companies split last week's scheduled production as follows: General Motors, 51.46 percent; Ford Motor Co., 24.42 percent; Chrysler Motors, 15.27 percent; Honda of America Manufacturing Inc., 4.74 percent; New United Motor Manufacturing Inc., 2.13 percent; and Nissan Motor Manufacturing Co. U.S.A. 1.98 percent.

As reported earlier, Volkswagen of America's Westmoreland, Pa., plant is idle for model changeover until Sept. 21.

GM reported production figures for its new GM10 Pontiac Grand Prix model last week for the first time. Twenty-five were assembled. The new model is built at GM's Fairfax, Kan., plant.

Production of Buick Skyhawk and Oldsmobile Firenza models built at the Leeds, Mo., plant was halted for two days last week because of a parts shortage.

GM's Corvette plant in Bowling Green, Ky., and its Fiero plant in Pontiac, Mich., are slated to resume production this week. Both plants were idle because of a parts shortage.

Ford had Saturday overtime scheduled for its Dearborn, Mich., plant. Chrysler slated daily overtime this week at its St. Louis (No. 2) plant.

All assembly plants are closed today in observance of Labor Day.

Truck build sets record

Domestic truck production last month was the highest for any August. The month's output of 299,145 topped the previous record of 295,114 built in August 1985.

Last month's production was 8.44 percent more than July's 275,857 and 10.62 percent more than the year-ago month's 270,430.

Truckmakers scheduled production of 69,429 units last week, 7.07 percent more than the previous week's 64,844 and 0.45 percent more than the year-ago week's 69,121.

Year-to-date, 2,559,043 trucks have been built, 4.79 percent more than the 2,442,000 completed last year at this point.

General Motors' Janesville, Wis., plant is scheduled to resume production tomorrow. The plant has been idle for model changeover.

Ford Motor Co.'s Louisville, Ky., plant is slated for daily overtime this week.

Canada cars dip for month

August production of cars in Canada totaled 27,411, the lowest for that month since August 1981 when 19,015 cars were built.

Last month's build was 24.24 percent below July's 36,183 and 43.89 percent below the year-ago month's 48,852.

Targeted production of 15,852 cars last week was 27.16 percent more than the previous week's 12,466 and 17.25 percent more than the year-ago week's 13,520.

So far this year, 510,479 cars have been built, 27.94 percent below the 708,436 completed last year at this time.

Truck production for August totaled 58,229, 38.98 percent more than July's 41,899 and 13.88 percent more than last year's 51,133.

Last week's scheduled truck output of 15,544 was slightly higher (0.70 percent) than the prior week's 15,436 and 41.59 percent more than the year-ago week's 10,978.

Ford Motor Co.'s Oakville, Ontario, car plant is down for model changeover until early October.

Nissan to build all U.S. trucks at Smyrna plant

SMYRNA, Tenn. — In October, Nissan will begin producing all of its 1988 pickup trucks for the U.S. market at its assembly plant here.

In the 1986 calendar year, Nissan's pickup sales in this country consisted of 96,943 domestically produced and 126,608 imported units.

The company said the Smyrna line rate will change in October from 34.6 cars and 28.4 trucks per hour to 46.5 trucks and 17.5 cars per hour. The Sentra subcompact is assembled at the plant. Employment will not be affected, Nissan said. There are 3,200 workers.

Nissan will continue to import to the United States specialty trucks, including its Pathfinder sport-utility vehicle and its passenger van.

Pickups will be produced in Japan for sale in markets other than the United States.

Pickups assembled in the United States in 1988 will be the 4x2 in regular bed, long bed, cabin chassis and King Cab versions and the 4x4 in regular bed, long bed and King Cab versions, the company said.

Nissan has assembled pickups at the Tennessee plant since 1983. It began building the Sentra here in 1985.

By changing its sourcing, Nissan will no longer pay a 25-percent tariff on trucks shipped from Japan to the United States. The vehicles also will be less susceptible to the changes in the yen-dollar relationship. Retail prices have risen and profit margins have narrowed as the dollar has weakened against the yen.

In an interview earlier this [illegible] Nissan President Yutaka [illegible] said the Japanese company plans to build 25 percent of its vehicles outside Japan by the early 1990s and may even close plants at home if the dollar continues to fall (Automotive News, April 6, 1987).

Atsushi Muramatsu, the Japanese automaker's executive managing director, said that Nissan plans to double its production capacity outside Japan. The company currently builds 12.5 percent of its vehicles overseas.

5-millionth Jeep

TOLEDO, Ohio — The 5-millionth Jeep was produced Aug. 27 at the main Jeep plant here. Jeep production began here at the start of World War II.

Ford, GM take early price step

6% hike at Ford, 3.3% for GM fleets

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Ford Motor Co. last week gave its dealers tentative 1988 prices that show an increase of nearly 6 percent on most models carried over from 1987. Meanwhile, General Motors is close to deciding whether to make across-the-board price cuts on its 1988 models.

It is not clear how large any price cuts may be nor how they would be accomplished. GM told its dealers last week that fleet prices tentatively would increase an average of 3.3 percent.

The Ford prices are only tentative, are not sales weighted and do not account for the industrywide trend toward equipping 1988 models with more standard features than 1987 models. Chrysler Motors, for example, in August issued to dealers tentative price hikes of 7 percent but said afterwards that prices would actually rise only 1 percent when changes in equipment and prices of all models are considered.

Ford, in most cases, will be offering more standard features and other changes along with the higher price tags. To cite the most dramatic example, the base price on the Mercury Sable GS sedan will jump 14.6 percent to $14,145 — but air conditioning, tinted glass, interval wipers, digital clock and other features will become standard.

At the other extreme, the price of the popular Escort GL two-door has remained steady at $6,949. The car is unchanged for fall, with a restyled version expected to take its place as a 1988½ model next spring.

According to preliminary figures sent to dealers, manufacturers suggested retail prices on this fall's Fords will increase an average of 5.4 percent. Mercury sales tags will climb 6.5 percent.

The averages don't include the Ford Tempo and Mercury Topaz — two models that have been extensively restyled for 1988 and won't come out until mid-fall.

Although the pre-sale figures are tentative, they historically vary little from the final prices, a Ford spokesman said. The 1988 models officially go on sale Oct. 1, but some will be available before then.

The averages also don't include the Ford Festiva and Mercury Tracer — two cars introduced as 1988 models last spring.

Lincoln cars haven't been included either. The 1988 versions of

Japanese grab spotlight; Honda unveils new Civic

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Two months before their own extravaganza in Tokyo, Japanese carmakers were stealing much of the thunder at last week's preview of the Frankfurt auto show.

At the last minute, Honda uncorked its latest-generation Civic — perhaps the most consequential production-car launch at the show. In addition, three all-new and widely praised concept vehicles were unveiled by Toyota, Subaru and Daihatsu.

Furthermore, Japan's Mitsubishi Motors Corp. figured in the most significant business announcement of the German show. Daimler-Benz said it is talking with Mitsubishi about joint production and distribution of commercial vehicles in Europe as well as distribution of Mercedes-Benz cars through Mitsubishi sales outlets in Japan.

Most of the big attractions last week had been widely previewed. Among them, the U.S.-bound BMW Z-1 roadster seemed to draw the biggest crowds.

The third-generation of Honda's 15-year-old Civic line is due on the Japanese market next month and will also debut in the United States this fall.

Honda presented three-door hatchback and four-sedan versions and a redesigned CRX sport coupe.

The new Civics have smoother, more aerodynamic shapes and more interior space, but the basic styling is little changed. However, Honda has developed new engines, suspensions and drivetrains for the cars — only four years after the second-generation Civic was introduced, also at Frankfurt.

The tall-body Shuttle is the only member of the Civic family continuing in its present form. A new Shuttle will arrive in early 1988, Honda said.

The new, compact four-cylinder, 16-valve engine, with aluminum cylinder block and head, is available in 1.3-, 1.4- and 1.6-liter versions.

The new CRX has a lower hood, made possible by its more-compact double-overhead-cam engine. The highest point is now 1.18 inches lower than that of the previous CRX. Honda puts the drag coefficient on the new car at 0.30.

The contingent of industry design leaders on hand at Frankfurt enthused about the Japanese concept vehicles.

"The Japanese really surprised us with three all-new show cars," said General Motors design chief Chuck Jordan.

"The Japanese cars are all examples of good design," added Mercedes styling boss Bruno Sacco.

Porsche Speedster at Frankfurt echoes 1950s model

The futuristic lineup included the TA-X80 from Daihatsu, a synthetic-bodied small-car design exercise on an aluminum frame. The TA-X80 has permanent all-wheel drive and is powered by a 1-liter turbocharged engine.

Subaru offered the all-wheel-drive, 24-valve, twin-turbocharged F-624 Estremo, with highly computerized cockpit functions, and Toyota presented its FXV-II, a running prototype that it conceives as a forerunner to high-performance specialty coupes of the future.

The permanent all-wheel-drive FXV-II, the most fully developed of the three show cars, is widely seen as the precursor to the next-generation Soarer planned for the United States. It is powered by a 3.8-liter, 32-valve, V-8 experimental engine.

Another attention-getting show car was the mid-engined, Lamborghini Jalpa-based Chrysler Portofino. The prototype was fashioned by Chrysler Motors' international design team.

"I think it's the best (design) Chrysler has ever done," said Jordan.

Ford showed its HFX Ghia, a $7 million concept vehicle out of its Ghia Studio in Italy. The car is stocked with 26 onboard computers.

BMW announced a German selling price of 80,000 marks ($45,000) for the 325i-based Z-1 from BMW Technik Gmbh, the company's advanced-concept center. Production starts next year at the rate of six per day.

Regarding Z-1 sales in the United States,

GM to sell Opel in U.S. as 1989 car

By Richard Johnson and Andrew R. McGill
AUTOMOTIVE NEWS STAFF REPORTERS

FRANKFURT, West Germany — General Motors is "ready to go" with a plan to import upscale Opel cars to the United States beginning as early as next year.

Introduction of the Opels will likely take place at an as-yet unspecified U.S. auto show in 1988, according to John Smith, president of General Motors-Europe Passenger Cars. Smith said GM will sell three Opel lines under a separate franchise.

Speculation is that the European imports will appear first at the Chicago Auto Show next February, perhaps to be announced by GM Chairman Roger Smith at his appearance before the National Automobile Dealers Association convention in San Francisco a few days earlier.

The Opel line is expected to go on sale in the United States for the 1989 model year.

Though GM has long cited the weak dollar vs. the German mark as the main obstacle to Opel imports, GM President Robert Stempel last week said the exchange rate is less an impediment than finding a suitable distribution system.

Stempel said GM will not sell Opels through an existing division and that the company's new Saturn dealer network "is certainly No. 1 on the list" of potential distribution outlets.

Hyundai leads dealer sales

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Eight Asian and two U.S. car and truck manufacturers captured the top 10 places in Automotive News' semiannual analysis of average car and truck sales per dealership.

Three of the top 10 in overall average sales per store sell only cars. The three were: Hyundai, Honda and Acura. The remaining seven sell both cars and trucks.

At the halfway mark, Hyundai ranked No. 1 in average car sales per dealership. Hyundai's 186 dealers sold an average of 730 cars per outlet by July 1. This was a 68.59-percent increase over the first six months a year ago when Hyundai was new on the American scene and already averaging sales of 433 cars for each of its 75 outlets.

The six-month average total put Hyundai 294 units ahead of its nearest competitor, Mitsubishi. Mitsubishi's combined average car and truck sales edged up 4.3 percent to 436. At midyear, Mitsubishi sold an average of 273 cars and 163 trucks per outlet, putting it in second place. It ranked third one year earlier, with average combined car-truck sales of 418.

Toyota dropped from second to third place in the first half. Combined average car and truck sales of 382 per outlet were almost 10 percent lower than the first half of 1986, when the average was 423 per outlet. Toyota sold an average of 240 new cars and 142 trucks per outlet.

World-class is Cadillac's goal for '90s

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

MONTEBELLO, Quebec — Cadillac is eyeing a smorgasbord of new-technology componentry for its 1990-era cars in its quest to become a world-class competitor in the international luxury-car market.

Warren Hirschfield, Cadillac's program coordinator of future vehicle technology, said consumers may see all-wheel drive, four-wheel steering, traction control and a new family of larger, high-output engines as optional or standard equipment on Cadillac models by the early 1990s.

Which technologies will be implemented or scrapped will depend on the needs of Cadillac buyers, competitive pressures and capital from General Motors.

"We can't do everything at once; for instance, we can't do traction control and all-wheel drive" at the same time, he said.

"We have to decide which technology we are going after."

Companies such as Daimler-Benz, Honda, BMW, Jaguar, Mazda, Audi and Ford have already implemented several of the new technologies into their products. An all-wheel-drive Pontiac 6000 STE is being offered by GM in the 1988 model year and active suspension is planned for future Chevrolet Corvettes.

Cadillac sources told Automotive News in July that GM was developing an all-new 12-cylinder engine to be used exclusively by the division. GM or its Lotus subsidiary could build the engine.

Thomas Standen, Cadillac director of planning, said GM is already testing some of the technologies on prototype vehicles. Success at the proving grounds could move such technology into future GM cars.

Hirschfield said Cadillac will be considered along with other GM divisions for the all-new technology.

"Cadillac is to initially market things that apply to luxury and security," Hirschfield said.

"Oldsmobile might be first with things that are performance-oriented," he said.

Hirschfield said luxury or security apply to items such as active suspension and antilock brakes. He described all-wheel drive and four-wheel steering as driver convenience features.

Chrysler plant vital

Canadian strike could shut U.S.

By Alex Law
SPECIAL CORRESPONDENT

TORONTO — A strike by the Canadian Auto Workers, which would stop production at Chrysler Canada's Ajax, Ontario, trim plant, could begin to shut down Chrysler's U.S. operations by late next week.

A strike at Chrysler's four manufacturing plants in Canada seemed likely for midnight tonight since at the end of last week, the company and the CAW were still far apart on the main issue of indexed pensions.

Dennis DesRosiers, of DR Automotive Research Inc., Toronto, said, "It would take 6 to 10 days to affect Chrysler operations in the United States."

After Chrysler presented the union with a contract proposal here last Wednesday, CAW President Bob White told reporters it was a "blueprint for a strike." He reiterated the union's position that there would be a strike if Chrysler did not agree to indexed pensions.

A few minutes later, Bill Fisher, Chrysler's chief negotiator, called the proposal a "good foundation for a settlement." He said that Chrysler was still strongly opposed to putting indexed pensions in an agreement.

Of Chrysler's four Canadian plants, only the trim plant, 10 miles from Toronto, could shut down the firm's entire North American production. The Ajax plant employs some 2,000 workers and makes door panels, seat covers and other soft trim.

White: Chrysler's contract proposal is a "blueprint for a strike."

According to a Chrysler Canada spokesman, the Ajax plant makes hundreds of parts, some exclusively, so the loss of production would shut down U.S. assembly plants "within a matter of weeks."

Union officials believe Chrysler could operate some U.S. plants for 10 days while others might run longer. It depends, union officials said, on how much stockpiling the company has done.

A strike in Canada would halt production of Chrysler's minivans and full-sizes vans. The Windsor, Ontario, assembly plant is the sole source for the short-wheelbase minivans and the Pillette Avenue truck plant in Windsor is the company's only facility for full-sized vans.

Chrysler's castings plant in Etobicoke, a suburb of Toronto, produces pistons, brake cylinders, torque converters, transmission cases and air conditioner compressors, none of which are exclusive to that plant.

Ford talks heat up as deadline nears

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — With tonight's midnight deadline looming, Ford Motor Co. and UAW negotiators scheduled bargaining sessions through the weekend.

Until last Thursday, both sides were playing down the possibility of a strike. But early Friday afternoon, UAW President Owen Bieber said, "We're still grappling with the hard issues. We are not moving on these issues. Unless something begins to happen and happen quickly, then I am not optimistic that we can reach that deadline."

It was a sign of how quickly things can change in a bargaining situation.

The problem, Bieber said, was that the job security issue — the union's top priority — had not been resolved.

The mood last week was such that neither dealers nor industry watchers expected that a strike at Ford — if indeed it comes — will be more than brief.

Stanley J. Surma, Ford's top bargainer and executive director of labor relations and employee development — Employee Relations Staff, said that job security and economics were being discussed last week, though Ford had made no second proposal.

He said early in the week that the company was still against the union's demand for a return of the annual improvement factor raise.

A Ford spokesman said negotiators planned to "work intensely through the weekend" and would schedule a full day today.

A UAW spokesman said that, historically, the union's practice has been to authorize strikes shortly after midnight following the expiration of a national contract, rather than extend the contract.

A notable recent exception was the year-long extension of the national contract at Ford's Rouge Steel subsidiary. That agreement was reached in July.

Last Tuesday UAW President Owen Bieber asked Ford to guarantee the jobs of the current workforce of about 107,000 hourly employees for the length of the agreement. That guarantee would mean no workers would be permanently laid off for any reason whatsoever.

The number of jobs could remain

Chevrolet to dealers: Beat Ford or stay home

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — A dealer can win Chevrolet's latest sales contest and not win a thing.

Panic-stricken Chevrolet has kicked off an unusual nationwide dealer contest in its attempt to beat Ford Division in sales for calendar 1987.

The contest, called "All for One," gives trips to Europe and Caribbean cruises to dealers who meet sales targets set by the division. If a dealer exceeds the sales target, he receives $3,000 in cash to spend on the trip.

But here's the catch: If Chevrolet does not beat Ford in combined car and truck sales for the calendar year, no one collects a prize even if he meets his individual sales target.

Unlike past programs, the dealer does not have to pay anything to participate in the contest.

Robert Burger, Chevrolet general manager, and Robert Starr, Chevrolet sales and service manager, outlined the program to dealers on a closed-circuit television program aired to zones throughout the United States last Thursday.

Burger and Starr admitted Chevrolet would be beat by Ford for the model year but that they were determined the division would maintain its traditional No. 1 spot for the calendar year.

The "All for One" contest runs from last Thursday through Dec. 31. Meanwhile, local contests in zones also have been launched.

GM plastic minivan a bit larger than A-car

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

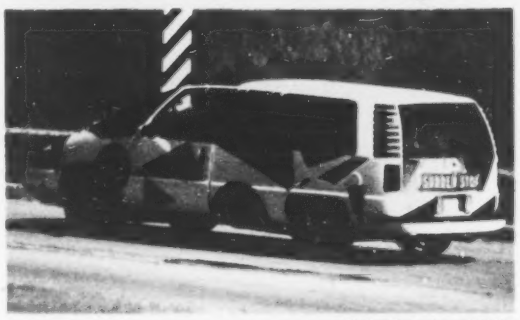
DETROIT — General Motors' new plastic-bodied front-drive van, tentatively called the Trans Sport, will be slightly larger and heavier than GM's A-body cars when it debuts in the spring of 1989.

Its 110-inch wheelbase will be one inch less than the current Chevrolet Astro/GMC Safari and five inches more than the A-cars, Automotive News has learned.

The interior will be 58 to 60 inches wide. The minivan also will have a 17-inch clearance between the door and the curb, sources said.

GM is aiming the minivan at the Plymouth Voyager/Dodge Caravan and Ford Aerostar.

The new van is expected to go into production at GM's Tarrytown, N.Y., plant in February 1989, in time for spring introduction as a 1990 model. Pilot production is scheduled to begin in June 1988, sources said. The Pontiac Trans Sport will be available in two models, a base version and a highline Trans Sport SE. Chevrolet is planning its own version of the vehicle.



POPULAR MECHANICS JIM QUINN

Expected to go into production in February 1989

Built on the A-body (Celebrity) platform, the seven-passenger (a third bench seat is optional) minivan will feature a 3.1-liter V-6 when it is introduced.

It will subsequently get a more powerful 4.3-liter V-6 in 1992, Automotive News learned.

The new van will have a payload-carrying capacity of 1,700 pounds and a maximum trailer-towing capability of 2,000 pounds.

The base vehicle will feature a five-speed manual transmission, power front disc brakes, power rack and pinion steering, remote control mirrors, sliding side door on the passenger side, rear hatchback, a black roof treatment and two-tone paint.

The black roof treatment, a GM spokeswoman explained, is a black acrylic that gives the illusion of transparency. GM currently uses it on the Pontiac 6000 SE wagon and Fiero GT.

Sources said inside features will include reclining front bucket seats with armrests, a second-row three-passenger bench seat, an electronic liquid crystal display cluster, electronic fuel gauge and digital speedometer, a leather-wrapped steering wheel and overhead console storage.

Five exterior colors are expected to be offered, sources said.

The base model will have 14-inch wheels, and the SE model will have 15-inch wheels.

GM is predicting production of 220,000 units the first year, shared between Pontiac and Chevrolet.

Pininfarina created the design for the new all-purpose van.

Passenger units take 77% of Chevy Astro sales

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

WARREN, Mich. — Aided by van converters, Chevrolet is selling 77 percent of its Astros as passenger models, making it a far stronger personal-use vehicle than originally anticipated.

Chevrolet officials plan to fuel Astro's popularity among converters next year by offering them a heavily discounted special optional-equipment package.

Astro is already very successful in the conversion market. About 39 percent of Astro cargo vans are being shipped without seats to converters, according to Robert Rieth, former Chevrolet special vehicles manager.

Rieth retired Aug. 31 after 33 years with Chevrolet. His successor is not expected to be named for another month or so.

Rieth said Chevrolet is currently selling 63 percent of its Astros as passenger vans. Of the 37 percent sold as cargo models, 39 percent are going to the conversion market, adding another 14 percent to Astro's passenger-configuration mix.

Originally, GM officials had expected as many as half its M-vans to be sold for commercial purposes like hauling plumbing fixtures.

But the number sold for personal use has been growing steadily.

"Our initial marketing studies indicated that (M-van) was going to be a strong commercial vehicle," Rieth said. "But the price of fuel went down, so that the big G van (full-sized Chevrolet van) became more attractive again to commercial users. They chose to stay with the bigger van for the volume."

As noted, Chevrolet plans to increase Astro's appeal to converters in the mid-1988 model year by offering them a specially discounted optional equipment package, which includes all the Astro options ordered 98 percent of the time by converters.

Items will include power steering, power brakes, power door locks and tilt wheel. Free air conditioning, worth $664 at dealer cost, is part of the package.

Chevrolet offered a specially priced equipment package last year for converters on its full-sized G-vans, but excluded seat-delete Astro models. The package included a free V-8 engine worth $421 wholesale.

Rieth said the Astro package is designed primarily to make it easier to order Astros. But it also includes special suspension parts that turn what is essentially an 05 work chassis into an 06 passenger van.

Chevrolet officials want to make certain the ride quality of upfitted models matches that of regular passenger-model Astros.

Astro accounts for about 35 percent of Chevrolet's total shipments to the conversion market, based on figures for vehicles going through its bailment pool system.

Chevrolet's total van shipments to converters are up 25 percent this year to about 70,000, Rieth said. That includes 50,000 G-vans and 18,000-20,000 Astros. The 25-percent increase is almost entirely in G-van shipments.

Chevrolet accounts for about 40 percent of the industry's van conversion shipments, Rieth added.

General Motors is running at full overtime on M-van production, he said. There are no possibilities — or plans — for expanding production further.

The new plastic passenger van that Chevrolet and Pontiac will introduce in the 1989-1990 time frame is expected to dig into the M-van's market, and GM is saving capacity increases for that model.

Last summer, Chevrolet, along with some of its competitors, had a high days' supply of vans going into the new model year. Dealers backed off from ordering 1987 models. Then domestic manufacturers offered a low-interest financing program that cleaned converters out and, for several months, there was a shortage of products because of a lack of early orders.

Currently, Chevrolet's van inventories, which had been rising gradually through May, June and July, are down to the same level as on April 1, Rieth said.

He attributed it to a "good retail market because there sure was availability out there."

2 RV makers introduce new van lines

BREMEN, Ind. — Enterprise Motor Corp. here and Carriage Inc., Millersburg, Ind., have introduced new products for the van conversion market.

Enterprise Motor introduced a new front-wheel-drive standup van. The low-profile, all-fiberglass van has 6 feet, 4 inches of headroom, more than 200 cubic feet of cargo space and a 1,500-pound capacity, exceeding that of conventional minivans.

It is built on Dodge's Mini Ram Van chassis, featuring a 2.5-liter Chrysler engine and Chrysler mechanical components. The 13-foot vehicle is geared to fleets, delivery service and mobile food unit use.

A 17-foot model is scheduled to be introduced later this year.

Carriage Conversions introduced a Surrey Coach in its 1988 lineup of van conversions.

It also has new color decors on its full-sized Royale model, new electronic features on its top-of-the-line Cameo, a sportier look for its Cachet minivan and an upgraded chassis for the Carriage Suburban.

The Surrey Coach has a lower price, designed to broaden its market appeal, while featuring the same quality construction and many of the other amenities of Carriage conversions, according to officials.

It features automotive fabrics, vinyl upholstery, Flexsteel seating, privacy drapes and large bay windows. The exterior includes running boards, fiberglass spare tire cover, logo treatment and paint schemes match to a choice of interior colors.

The Carriage Royale has six new color decors. A redesigned dual sunroof and optional electronic compass have been added to the interior. It also has new "Eurolace" wheels, all-weather driving lights and auxiliary brake lights.

The Carriage Cameo has a new full Sony sound and video system, including an eight-inch television monitor, 8 millimeter video cassette recorder, AM/FM tuner and disc compartment that automatically chooses from a selection of 10 discs.

Biggest show for RVIA

418,000 square feet of space assigned

RESTON, Va. — The Recreation Vehicle Industry Assn. is gearing up for its largest annual RV trade show.

The event will be staged Nov. 3-15 at Dodger Stadium in Los Angeles.

Bob Lee, chairman of RVIA's 1987 Los Angeles Show Committee and president of Country Coach, Junction City, Ore., said 400,245 square feet of manufacturer exhibit space and 18,000 of supplier exhibit space have been assigned for the show. That tops the previous record of 387,000 square feet at the 1985 show.

To date, 77 RV manufacturers' exhibits and 224 supplier booths have been assigned.

Approximately 10,000 square feet of manufacturer exhibit space and 4,000 square feet of supplier exhibit space are still available.

The show is expected to draw 9,000 RV dealers and executives during industry-only days Nov. 3-4 and 50,000 consumers when it opens to the public, Nov. 6-15.

The event will feature seminars ranging from management strategy to new first-time buyer research.

A survey of West Coast RV dealers found most were interested in attending seminars during the industry portion of the show.

An educational program will be held Nov. 2 at the Hyatt Regency prior to the show's opening. It will lead off with an all-new seminar on expanding the RV market provided by public relations agency Burson-Marsteller. The program includes videotaped interviews with non-RV owners and dealers.

Subsequently, Fred Pryor, an authority on business management, will discuss techniques for opening lines of communication and, increasing productivity, employee morale and managerial skills.

Then, Art Niemann, president of Art Niemann and Co., specializing in personnel management for auto dealers, will explain how to select and hire the right person.

There also will be an insurance seminar sponsored by the Recreation Vehicle Dealers Assn. and conducted by George J. Higgins, president of the American Business Insurance Agency, Kansas City, Mo.

Conquest emphasizes retail sales features

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

GOSHEN, Ind. — Conquest Division of Gulf Stream Coach has been making its mark in the van conversion market. Officials attribute its growth to an emphasis on retail sales.

Conquest has doubled sales to 200 units a month this year and projects 3,500 to 5,000 sales in calendar 1988, depending on chassis availability.

It has about 250 dealers, has been signing five to 10 new ones weekly and expects to continue adding dealers for two years.

The company devised a strategy to help it compensate for the stiff competition in the conversion market and the high turnover among auto dealership salespeople, said Kevin Slater, Conquest Division manager.

The rapid turnover at dealerships often leaves few salespeople who are knowledgeable about a converter's products, Slater said.

Salespeople generally shy away from conversions anyway, he said, because of lack of knowledge and the patience often required to close a conversion sale.

Conquest, in its sales strategy, has been offering base units and option packages priced attractively enough to generate wholesale orders, but including features to help them sell themselves at retail as well.

It typically blends the most popular conversion items with some unique ones.

"We include a few of those features we think unique in each of our packages and price them competitively," Slater said. "The competitive price sells the dealer. The features sell the customer."

The distinctive items are designed to be immediately apparent to salespeople and customers.

"Even the salesperson who is not terribly knowledgeable about our product can immediately start pointing them out and pitching the vehicle," Slater added.

Typically, there might be a lot of "solid oak features" that will "give the salesman something to talk about because they are immediately apparent. It keeps him flowing through his presentation, keeps that customer there and gets him into the conversion," Slater added.

He said many converters don't pay enough attention to retail, concerning themselves more with selling the dealer than the retail customer.

"They will get on the lots, and naturally they're going to sell. But what has happened for us is that we tend to sell a little faster than some of the other converters," he said.

Proof of that, he said, comes from Ford, which tracks retail turn rates of its pool companies' products.

"We have consistently been ahead of the group average in our daily turn rate, and we also have consistently fewer 90-day units than the group average," Slater said.

Conquest has pool accounts with Ford, Chevrolet and GMC and also converts Dodge chassis that it buys from dealers.

During the past few months, it has begun doing well with a new Aerostar "high top mini" package that includes television.

"What we tried to do on the minivan is offer a package that costs the dealer about the same as a loaded factory unit, but offers something the factory can't," Slater said.

Its dealer cost on a full-sized converted van generally runs from $14,200 to $19,000, covering five different models.

Depending on the package, dealer cost on a minivan might range from $13,900 to $15,900, for chassis and conversion.

Conquest orders well-equipped chassis.

"We have found that if we put a low-priced conversion on a well-spec'd (equipped) chassis, it will sell quickly," Slater said. "The dealer can still advertise a competitive price, but our unit will have the things that the luxury van buyer really wants."

Conquest is developing a high-priced package, designed specifically for sportsmen and hunters.

GM produces milestone M van
General Motors employees and officials at the Baltimore plant celebrated building their 500,000th M van, a Chevrolet Astro, in August. The GM Truck & Bus Group began producing the Astro/Safari M vans in Baltimore in 1984 after a $270 million investment to upgrade the facility.

Light trucks set August record

Month's sales total 413,838; year-to-date mark also best ever

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Light-duty U.S. truck sales set another record in August with most domestics and imports sharing in the bonanza.

Dodge's August sales were an all-time record, according to Jerome B. York, Chrysler vice president, Truck Operations; while GMC sales were an eight-year high for the month, according to Duncan A. Brodie, GMC general sales manager.

Light-truck manufacturers retailed 413,838 vehicles last month, up 11.50 percent from 371,150 a year ago.

For the first seven months of 1987, industry sales were a record 3,179,984, up 4.73 percent from 3,036,152 for the same period in 1986.

Most manufacturers, with the exception of Ford, Nissan and Subaru, scored solid increases in August.

Subaru is practically out of the truck business, retailing only 66 units for the month.

Ford was fairly close to its year-earlier level, retailing 114,622 light trucks compared to 115,515 in August 1986.

Interestingly, for the second month in a row, the pendulum has swung back for Ford's full-sized pickups vs. Chevrolet's. Earlier in the model year, Ford's F-series pickups were scoring sales increases while Chevrolet's R/V and C/K series models were off.

In August, though, the F series, with 44,884 sales, was off 8.2 percent while Chevrolet's C/K and R/V models totaled 38,165 sales, up 9.2 percent.

GMC sales of C/K and R/V models totaled 10,866 units, up from 8,598 a year earlier.

GM last month bucked a trend in which Dodge and Jeep full-sized pickup sales were off.

Dodge's 6,782 Ram pickup sales were off 34.6 percent from the same period last year. Sales of Jeep's J10/J20 pickups totaled a scant 44 units, down from 200 a year earlier. Company insiders have already said those Jeep models are due to be phased out in the near future.

Chrysler's overall sales of 58,400 in August were up 39.2 percent while Chevrolet's overall sales of 110,428 were up 11.7 percent.

Chrysler's sales total does not include Jeep products.

GMC's sales of 28,535 light trucks were up 24.2 percent while Jeep sales of 15,681 were up 4.7 percent.

Generally, the importers, led by Mazda, Mitsubishi and Suzuki, had a good August, with retail sales of 86,172, up 12.08 percent from 76,880 a year earlier.

Suzuki has resumed officially reporting sales after a two-month lapse during which time its sales had to be estimated.

Suzuki retailed 7,905 Samurais in August, more than double the 3,596 it sold a year earlier.
The importers' performance generally bucked an earlier trend in which their sales had been running below year ago.

For seven months of this year, importers retailed 610,802 units, off from 622,291 last year.

PUT YOURSELF IN AN EXCITING NEW PICK UP.

Introducing the new GFF-70. A 7,000 pound capacity lift for cars and light trucks. With features that will lighten your work load considerably.

To begin with, it has asymmetrical swing arms with rotated columns, which not only take up less bay space, but also position the vehicles away from the geometric center of the lift so doors can be more easily opened.

You get unobstructed floor space too, for transmission jacks and other equipment. Because the GFF-70 is a free floor lift. And it has optional height adaptors, too.

In short, we've got a great lift. With a great warranty, too. Five years on parts, labor and travel. So send us the coupon and find Gilbarco out more about it.

Mail to: Gilbarco Inc., PO Box 22087, Greensboro, NC 27420 USA.

Queens dealer tries off-price marketing

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Car shopping supermarket-style without haggling over price characterized the recent opening of the NY Auto Outlet. The concept was started by a Queens, N.Y., auto dealer.

Taking a 250,000-square-foot warehouse that was used basically for pre-delivery preparation and inventory storage, Paul Singer, president of Paragon Oldsmobile and Honda as well as five other stores, created an auto outlet that will be open once a month.

Michelle Singer, his daughter and general manager of Paragon Hyundai, manages the sale days at the outlet.

She said a factor that prompted the use of the warehouse for sales was limited space at the dealerships. In some of their locations, not all the inventory could be displayed. This is especially true of the Hyundai store, she said.

By using the warehouse, customers could see most of the inventory and make their decisions.

The first experiment was a direct mail campaign to approximately 100,000 persons in the immediate Queens marketing area.

That private sale went well, she said. The next step was to go to the public. An advertising campaign was launched in the local media for the NY Auto Outlet — the name the company uses to promote the warehouse.

It was a one-day Sunday sale, she said, and about 1,000 people went through the warehouse. On display were 1,000 cars made by Oldsmobile, Honda, Hyundai, Subaru, Sterling and Acura.

Michelle Singer said every car was clearly marked with the price. One goal was to eliminate price haggling and make the atmosphere in the warehouse relaxed.

The warehouse sale was staffed with 55 sales persons, 12 finance managers, 8 greeters and 15 managers from the various dealerships.

Asked their preferences and needs, the customers were then referred to an "auto agent," or sales person, who would show them the cars in the color and style they were seeking.

She said there was no negotiation on the price. Every car was marked "was" and "is," indicating the price markdown. She said they found there was a quicker decision by the customer without haggling over price.

While the sold numbers on the second sale were not completed by the middle of last week, the first sale generated 150 deals.

The intention, she said, is to have one sale per month at the warehouse, under the banner of NY Auto Outlet. She is thinking of new ways to promote the outlet, including special events tied to the sale. But the key is to have the customers become aware that it will be monthly and to expect it.

The outlet does not use the names of the dealerships in its advertising. The concept is to promote the outlet.

DEALERS

FROM PAGE 1

Following Hyundai, Mitsubishi and Toyota were Nissan in fourth place with 353 sales per dealer and Suzuki in the fifth spot with 338.

Honda's car sales declined to 317 from 332 in the first half last year, moving it from fifth to sixth place.

Ford Division led the domestics with an average of 309 cars and trucks sold per outlet. Although it only ranked seventh, Ford's dealerships sold an average of 24 more units per store in the first six months compared with a year ago.

In the first half of 1986, almost one-third of Honda's average sales per store were domestically produced cars. This year, almost 54 percent of Honda cars sold per dealer were made in the United States.

Eighth position in the ranking went to Acura, Honda's upscale brand, which averaged 304 sales per store. Acura sold almost 2½ times as many cars per store in the first six months than it did a year ago when its average was 125.

Chevrolet dropped to ninth place from seventh, with average car and truck dealership sales of 262 units versus 290 a year ago.

Mazda lost average car-truck sales per dealership and fell from ninth place with combined sales of 232. But it hung onto 10th place in the first half of this year, with 194 average sales per outlet.

In last year's first half, Oldsmobile ranked 10th with average sales of 175 per store. This year Oldsmobile dropped to 13th, with 120 car sales per dealership.

In the first half, seven of the top 10 manufacturers with the highest average sales per dealership were Japanese. One was Korean and two were domestic makes. A year ago, six were Japanese, one was Korean, and three were domestic. Two years ago, five of the top 10 were U.S. lines and five were Japanese.

New-car deliveries per dealership for the first half of 1987 averaged 192 for General Motors, a drop from 242 in last year's first half. Ford Motor Co. dealerships sold an average of 188 new cars, up five from 183 in the first half of 1986.

Chrysler Motors' dealerships sold 120 cars in the first half or 22 less than in the first half a year ago. American Motors-Renault turned over about half as many cars in this year's first half. Average sales per store dropped from 25 to 12. Volkswagen's domestic new-car deliveries slipped to 39 from 45 in the first six months of 1986. VW dealers also sold an average of 72 imported cars this year vs. 87 a year ago.

Looking at domestic sales of U.S.-built cars per dealer by market class (see accompanying table), Nissan Sentra took honors as the most popular subcompact with an average of 58 sales per dealer — almost double last year's first-half number. In addition, Nissan dealers sold an average of 54 imported Sentras this year, compared to 66 last year.

Honda Civic was close behind in the subcompact field with 55 and Volkswagen Golf, last year's leader, dropped to 30. Honda dealers also sold an average of 65 imported Civics vs. 130 last year.

Another favorite, Ford Escort, slipped from 43 to 42 for the first six months.

In the compact class, Honda Accord was favored for the second time, selling an average of 116 cars per outlet compared with 104 a year earlier. Honda dealers also sold an average of 49 imported Accords this year, compared with 57 last year.

Chevrolet Cavalier was next in popularity with 34, and Ford Tempo held onto third place with 27.

Cutlass Ciera stole the show in the intermediate class with 41 (53 in 1986), although Taurus rose from 22 sales per outlet to 38 in the first half. This year's new entry Corsica/Beretta managed 16 sales per store, putting it in ninth place among the intermediates.

Among standard-size cars, which all lost ground in the first six months, Olds 88 still led the way with an average of 28 sales per franchise. Following were Buick LeSabre, Mercury Grand Marquis and Chevrolet Caprice.

Cadillac held onto first position in the luxury class. It averaged 60 car sales per franchise, off 13 from last year's first-half number. The new Cadillac Allante managed averaged one car sold per outlet.

Sales per dealership are based on the average number of outlets from Jan. 1 to July 1.

There's a big difference in Moloney Coachbuilders limousines. Dealer profit.

True, there are many differences that set Moloney Coachbuilders limousines ahead of all others. It's the combination of unmatched Cadillac quality *and* the mastercraftsmanship that Moloney adds to the custom conversion: the world's standard in limousines.

But there is another difference. A big one. And that is the dealer profit factor. Moloney is the recognized name in extended limousines. Limousine operators want the design, the interior features and the performance of Moloney Coachbuilders limousines.

Are you missing this big profit opportunity? Call or write today. We'll be sure to give you the Moloney Coachbuilder Dealer Profit story. You'll like it.

TV ad spending climbs to record $1.2 billion in first half

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

Television ad spending for new cars and trucks rose 21.31 percent in the first six months of 1987 to a first-half total of $1,178,906,400.

It was the first time that automotive spending for television advertising has topped $1 billion in the January-June period, according to statistics complied by the Television Bureau of Advertising from Broadcast Advertisers Reports.

The overall increase in television ad spending for cars and trucks was paced by the continued growth in spot television spending by the manufacturers and their dealer advertising associations.

In fact, the January-June period marked the first time that spot market spending exceeded network spending, according to the TV Bureau.

"There has been a complete turnaround in the way the car companies are spending their money," said Roger D. Rice, TV Ad Bureau president. "Instead of putting it all into network advertising, they are spending it market by market, and that's reflected in the development of strong dealer associations," Rice said.

"If you look back just three years, you can see the trend clearly," he said.

Spot, or market-by-market advertising, in the January-June period rose 31.61 percent to $524,710,200 from $398,677,800 in the same period of 1986.

OF FOUR-WHEEL DRIVE VANS

Engineering Product Manager

BE A REVOLUTIONARY!

There's an exciting revolution about to take place in our industry and now is the time for you to join its leader. We're ELGIN SWEEPER the world's leader in the design and manufacture of street sweeping equipment. Currently we are seeking a success-oriented Engineering Product Manager for a challenging opportunity designing and/or modifying entire product lines.

The degreed professional we select will possess a minimum of 10 years in product development, excellent interpersonal/communication skills and a desire to be part of a creative team that may change an entire industry.

We have a lot to offer, including the opportunity to utilize our 3-D CAD/CAM system. Join the revolution. Help us reshape an industry. For immediate confidential consideration call Steve Bloomfield at (312) 741-5370. EOE/AA.

It's a 'class' study at NHTSA

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

ANN ARBOR, Mich. — NHTSA is thinking about changing the 20-year-old way it classifies cars and trucks.

It already has granted a petition from the Insurance Institute for Highway Safety to reconsider how it classifies passenger cars, trucks and multipurpose passenger vehicles.

The powerful agency will make a concerted effort to learn if its category system still is appropriate in today's fast-lane manufacturing and marketing pace.

Any changes will be important to vehicle makers and retailers because safety regulations vary widely by vehicle classification.

An advance rule-making package on classifications will be ready for public review by mid-October, Barry Felrice, assistant administrator for rule making, told a meeting with industry technical representatives here.

It will include seven or eight alternatives, he said.

"We're looking at everything from simply eliminating the multipurpose passenger-vehicle category to setting up subcategories of passenger cars, perhaps setting up a light-truck category — trucks under 10,000 pounds or 8,500 pounds gross vehicle weight.

"We're looking at the issue of off-road use and maybe there should be separate categories for vehicles with off-road capabilities. And, if so, how should one define off-road capabilities? Is the presence of four-wheel drive sufficient?

"Is a passenger car with 4wd significantly different from other passenger cars that it should have a separate category?

"We're looking at retaining the MPV vehicle category but maybe redefining what goes in it. The basis for any redefinition into subcategories could include anything from weight rating cutoffs — gross vehicle weight, curb weight or unloaded weight — or height above ground.

"You put all these variances together and you have a huge matrix of what could be done. We believe the subject is very complicated. There are no simple answers," Felrice said.

"For example, the MPV category includes vehicles that have little relation to each other. There are minivans used either as substitutes for station wagons, which are passenger cars, or for carrying cargo. It includes full-size vans and utility vehicles. Those have little resemblance to each other," he said.

TV SPENDING

FROM PAGE 68

Spot market spending accounted for 44.51 percent of total automotive television ad spending in the period.

Total network spending in the first half of 1987 was $463,005,800, up 14.94 percent from $402,811,400 in the same period of 1986. Network spending in the first half of the year accounted for 39.27 percent of all automotive television spending in the United States.

Among the largest television advertisers, General Motors, Nissan, Toyota, Hyundai, Subaru, Mitsubishi, Isuzu, Suzuki and their dealer associations spent more in the spot markets than on network.

However, Ford Motor Co., Chrysler Motors, Honda, Mazda, Volkswagen, American Motors, BMW and Mercedes-Benz spent more on network advertising.

Local-market spending by individual dealers rose 9.30 percent to $183.3 million from $167.7 million in the same period one year ago, and accounted for 15.55 percent of total television spending.

The remainder of the television ad expenditures were for national syndication spots by automotive companies. Syndication spending in the first half of the year was up 192.59 percent to $7.9 million from $2.7 million last year, according to the TV Bureau.

Much of the growth in that market came from manufacturers and importers that used syndication in 1986: GM, Ford, Chrysler and Toyota.

However, TV Bureau analysis showed no 1987 spending on syndication packages by Nissan, which did buy syndication in 1986.

In addition, Mazda, Subaru, AMC and BMW all showed 1987 syndication spending that was not shown in the same period of 1986.

In the individual dealer spending category, pioneer television ad spender Cal Worthington, Los Angeles, again led the pack with more than $2 million in local ad spending during the first half of 1987. Two other Cal Worthington operations — in Seattle and Sacramento — also made the TV Bureau's list of big spenders, although spending by those two operations declined in the January-June period.

The biggest local-market spending increases were posted by Nationwide Motor Sales, Baltimore; Kott Ford, Los Angeles; and Rosenthal Autos, Washington.

The TVB statistics are derived from Broadcast Advertisers Reports that come from monitoring network and local television broadcasts.

$250,000,000
will get your name in it.

$25,000
will get you a page in it.

Some people would kill to get in. Don't let a missed deadline kill your chance.

The Forbes 400 has become an annual phenomenon. A national institution.

Each year Forbes' Rich List provides an inside look at how 400 individuals and 80 families got to the top of the current Richest heap. And what happened to the surprising number from last year's 400 who fell out of this year's. Also, which industries produced the big ones and how they're using their enormous wealth.

Not only is this list headlined in all the news media, it's the nation's dinner-table talk day after day, week after week.

The Forbes 400 issue is an extraordinary best seller. In addition, because it is regarded as *the* reliable source for information on the country's richest citizens, it's referred to and quoted all year long. This gives the ads in it a fabulous life span. Nevertheless, Forbes' regular advertising rates and frequencies apply, and all advertisers can take advantage of the reader service card.

It's because Forbes knows what's important to those in business—not because of expensive premiums or giveaways—that Forbes subscribers are among the very most affluent. Just take a look at some of the findings in Forbes' latest subscriber study done by the independent research firm of Don Bowdren Associates:

- Average Personal Income: $139,403.
- Average Household Income: $161,775.
- 1 out of every 3.1 is a millionaire.

If you have anything to sell to the people who can afford to buy, there is no better buy in the world.

It takes more than $200,000,000 to get your name on the 400 Richest List—but only $24,930 per black & white page or $37,890 per 4-color page to reach 3.3 million of America's movers and shakers with your message.

No issue of any publication is read with such intensity or for so long by so many.

Closing date for advertising: September 28.

After September 28, all the money in the world won't get you in.

Eurosprint

Recreational Designs, White Pigeon, Mich., has added the Eurosprint to its line of specialty styling concepts. Based on the standard Firebird (pictured) or Camaro, the styling package includes full ground effects, hood scoop, front fender louvers, rear hatch with trunk rack and spoiler, side molding panels, exhaust pipes, two-tone paint, wheels and tires. The two-seater version features a trunk that opens like the factory hatch and also offers access to the trunk from the passenger compartment. Eurosprint vehicles are available through new-car dealers.

Inventories hit 9-month low

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — The Sept. 1 stockpile of cars built in the United States was the lowest in nine months. Domestic inventories also were slimmer than a year ago. In fact, stocks were the leanest they have been since November 1986.

Making way for 1988 model introductions, September opened with an inventory of 1,436,835 domestic cars, an 57-day supply, which was two weeks shorter than last month's 71-day supply.

The stockpile dropped 13.34 percent below the previous month's 1,657,974 cars on hand. September's inventory of U.S.-built cars dipped 7.73 percent below the stock in the same month a year ago. Last year, the September inventory was 1,557,291, a 60-day supply and a low point for that year.

Leaner inventories matched with low production numbers — August car output was the lowest for the month in five years — could be cause for concern in light of Ford Motor Co. and General Motors contract negotiations with the UAW and the possibility of strikes, especially at Ford, the union's target.

Auto analyst Ann Knight, Paine-Webber Inc., pointed out that "incentives got things moving" last month. Asked whether the low inventories mean Ford or GM were caught off guard, she said, "It's important to realize that automakers were not planning an inventory level around a strike. They couldn't predict whether a strike would occur."

Another analyst, Michael M. Luckey, Shearson Lehman Brothers, said: "Most of us were surprised by the programs GM introduced in early August. Our feeling was that it would have made more sense for GM to wait and see. GM could have been the target.

"GM's stocks were clearly excessive. Ford's inventories have been tight all year. Ford had to match GM's incentives to stay competitive. But I don't think there's going to be a strike. If there is, their supply could become tight very quickly."

Many dealers said their stocks are down, but said they were not worried about a strike seriously depleting them.

By company, Sept. 1 domestic-car inventories were divided this way: GM, 54.80 percent; Ford, 24.94 percent; Chrysler Motors (including Eagle Division), 16.67 percent; Nissan, 1.30 percent; Volkswagen, 1.03 percent; Honda, 0.64 percent, and Toyota, 0.62 percent.

Last month's split was: GM, 56.10 percent; Ford, 25.55 percent; Chrysler, 13.75 percent; Nissan, 1.29 percent; Volkswagen, 1.16 percent; AMC, 0.85 percent; Honda, 0.78 percent, and Toyota, 0.52 percent.

Shares by size class Sept. 1 were: subcompact, 16.31 percent; compact, 18.14 percent; intermediate, 44.30 percent; standard, 11.59 percent, and luxury, 9.66 percent.

Both GM and Ford reduced their inventories by more than 15 percent from Aug. 1 to Sept. 1. GM had an estimated 787,400 cars on hand Sept. 1, a 59-day supply. A month earlier the biggest of the Big 3 carried about 930,150 units, a 78-day supply. On Sept. 1, 1986, it had a 63-day stockpile.

Ford's inventories dwindled to an estimated 358,400 cars, an 51-day stock, down from Aug. 1, when it had about 423,600 cars, an 62-day supply. Ford's stocks also diminished from last year's 57-day stockpile.

All inventory numbers include finished cars at factories, those en route to dealers and on dealer lots.

TALKS

FROM PAGE 1

the same or increase, but it could not decrease, even through attrition. Ford would have to call back a worker on layoff or hire a new worker for every one who retires. The guaranteed number would be broken down by plant and unit, Bieber said.

Ford has indicated it will require strong language on flexible work rules in exchange. Ford has also said it must maintain quality and the flexibility to outsource when necessary.

Russ Leone, chairman of the tool and die unit of UAW Local 600, which represents the Rouge complex, said that flexible work rules and the combining of job classifications were being addressed at the national level.

He said that once the principle of work-rule flexibility, including the team concept, was established at the national level, the locals would have to "work it out."

Bieber said he thought he could take the proposal on job guarantees and fit it to General Motors, without necessarily "dotting every 'i.'"

But GM Chairman Roger Smith said last week that GM's high degree of vertical integration makes it different from Ford and that GM requires a different contract.

Asked whether GM could guarantee a certain number of jobs, Smith answered, "Not in any meaningful amount because of the cyclical nature of the automotive industry."

But if Ford workers get a job guarantee, GM workers will expect the same.

A coalition of local union presidents at GM plants, headed by Pete Kelly (Local 160 — Tech Center), Donny Douglas (Local 594 — Pontiac), Dave Yettaw (Local 599 — Flint) and David Frey (Local 735 — Ypsilanti), told reporters at a press conference Friday that they will accept nothing less than what Ford workers get.

"We have enough people concerned about the direction of this union to affect ratification" of the GM contract, Douglas said.

The situation seemed less threatening at Ford. Leone said the Rouge local's executive board met last Thursday to set up the mechanics for going on strike, "but it doesn't sound like they're really serious."

For instance, he said, the international has not set up any support system to keep the Rouge Steel plant operating in the event of a strike at Ford. Rouge Steel's contract stipulates that the plant — which supplies other customers besides Ford — will keep operating though Ford may be on strike.

A Ford Diversified Operations spokesman said Ford submitted to the UAW a list of plants that supply Chrysler Motors and GM.

Ford has 17 assembly plants and 37 manufacturing plants in the United States. A nationwide strike would soon affect facilities in Canada, according to a Ford of Canada spokesman.

He said that because of reduced inventories, most Ford plants could not operate more than three days in the event of a strike.

Michael M. Luckey, an analyst with Shearson Lehman Brothers said a conservative estimate is that Ford would lose $15 million a day if its U.S. plants shut down.

Staff Reporter Dave Versical contributed to this article.

Korean labor unrest ends; Hyundai, Daewoo operating

By Oles Gadacz
SPECIAL CORRESPONDENT

SEOUL, South Korea — Hyundai Motor Co. and Daewoo Motor Co. resumed operations last Wednesday, bringing an end to a series of strikes that started in August.

About 8,000 Daewoo workers reported for work at the Pupyong plant, 30 miles east of Seoul. The month-long suspension of operations at Daewoo meant a loss of 51 billion won (about $63 million), company officials said. Another source placed the loss at 103 billion won ($128 million).

Hyundai's Ulsan plant, which halted operations for 11 days, is turning out 2,000 to 2,300 cars per day. The company had been crippled by on-again, off-again operations, but assembly plants are now running two 10-hour shifts a day.

The Daewoo plant was hit by a violent protest on Sept. 3. Eighteen executives including the company president, Kim Chong-Ung, were detained by workers before being freed by police. Production is steadily returning to normal, but it will be a few days before full production of 850 units a day is reached.

One problem that remains to be ironed out is the election of a new union at the Daewoo plant. The chairman of the workers' union resigned Sept. 6, clearing the way for a new election of union representatives and a possible rewriting of the company's rules on the election of union officials.

All workers will vote Sept. 21 on whether to elect new union officials by a direct or indirect method. Currently, union officials are elected by a committee that is installed by a vote among workers.

Hyundai's 15,000 workers selected a new union chairman last Tuesday. He is described as somewhat moderate in his views, a Ministry of Trade and Industry official said.

Kia Motors' Sohari plant has been operating at below capacity since August. The erratic parts supply situation is responsible for the slowdown.

While workers are demanding higher wages at Korea's auto plant, analysts are cautioning about the adverse impact of such wage increases on Korea's auto export goals. The nation had set its sights on exporting $3.3 billion worth of cars this year.

According to a report released by the Korea Institute for Economics and Technology, a 10 percent wage increase will result in a $35 million drop in automobile export sales. In addition, the strikes are expected to cut Korea's exports to 550,000 units for 1987, 100,000 fewer than was predicted earlier this year.

PRODUCTION

Labor Day cuts car build

By Karen Detkowski
SPECIAL CORRESPONDENT

Last week's targeted domestic auto production totaled 113,077, 10.15 percent less than the previous week's output of 125,852. Production was reduced due to the short work week in observance of Labor Day.

The automakers' estimated output last week was 25.12 percent below the 151,008 produced in the year-ago week, which was not shortened by a holiday.

Last week's targeted production was split as follows: General Motors, 50.41 percent; Ford Motor Co., 25.46 percent; Chrysler Motors, 15.74 percent; Honda of America Manufacturing Co., 4.16 percent; New United Motors Manufacturing Inc., 2.39 percent; and Nissan Motor Manufacturing Co., U.S.A., 1.84 percent.

As reported earlier, Volkswagen of America's Westmoreland, Pa., remains idle until Sept. 21, for model changeover.

Ford scheduled daily overtime at all its assembly plants excluding the Lorain, Ohio; Kansas City, Mo.; and Chicago plants.

Chrysler will resume production of its Omni and Horizon America models this week in their new home, Kenosha, Wis., a former American Motors plant. Production ended March 6 at Chrysler's Belvidere, Ill., plant.

Chrysler began production Sept. 8 on its new Dodge Dynasty model at the Belvidere plant. Belvidere began assembling the Chrysler New Yorker in mid-August

Chrysler slated daily overtime this week at its St. Louis No. 2 and Kenosha (Wis.) No. 1 plants. Each is scheduled to work two nine-hour shifts. St. Louis No. 2 also was scheduled to work two shifts last Saturday.

GM's Arlington, Texas, plant resumes production today, building the 1988 Chevrolet Caprice Classic sedan and wagon and the Oldsmobile Custom Cruiser. The Framingham, Mass., assembly plant resumes operation today after being down for model changeover. The Tarrytown, N.Y., assembly plant will go down today for two weeks for rebalancing of the line; the production rate will be reduced when the plant reopens.

GM reported production of 25 units of its new GM10 Pontiac Grand Prix in the week ended Sept. 5. Those were pre-production models. Regular production is scheduled to begin Oct. 5.

Truck output dips in short week

Truckmakers scheduled production of 61,439 units last week, 9.05 percent below the previous week's 67,550 and 21.86 percent below the year-ago week's 78,625.

Plants were closed on Monday for Labor Day.

Ford slated daily overtime at all of its truck plants this week and Saturday overtime last week at its Louisville, Ky., plant. Ford also scheduled overtime next Saturday for its Michigan truck plant in Wayne, Mich.

General Motors scheduled Saturday overtime last Saturday at its Baltimore plant.

Holiday trims Canadian assembly

Automakers in Canada scheduled production of 13,272 cars last week, 6.32 percent below the previous week's build of 14,167. The total was 34.48 percent below the 21,574 turned out in the year-ago week.

Scheduled truck production also was off with 13,177 assembled last week, 10.15 percent below the previous week's 14,665 and 7.26 percent below the year-ago week's 14,208.

All car and truck assembly plants were closed last Monday for the Labor Day holiday.

Chrysler odometer suit filed

Civil suit names dealer, service firm

By Jack Bernstein
SPECIAL CORRESPONDENT

ST. LOUIS — An auto dealer, a bank and two companies dealing in service contracts are cited along with Chrysler Corp. in a lawsuit filed in St. Louis Circuit Court over odometer tampering.

Brian and Kendra Carpenter, Ballwin, Mo., charge that the odometer of their 1986 Chrysler LeBaron was disconnected before the car was sold to them.

The couple seeks rescission of the contract and alleges breach of contract, odometer fraud and nonconformity to the motor-vehicle warranty.

Named in addition to Chrysler Corp. in the suit were: Chrysler-Plymouth West, Ballwin; Mechanical Breakdown Protection, Kansas City, Mo., the service contract seller; Omaha Indemnity Co., a subsidiary of Mutual of Omaha and underwriter of the contract; and Mercantile Bank of St. Louis, which financed the vehicle.

According to the lawsuit, "Chrysler Motors Corp. and Chrysler-Plymouth West well knew that the odometer didn't register the true mileage of the vehicle or should have known that the car, when sold to plaintiffs, was already in a used, depreciated and worn condition."

The Carpenters said in the suit that they paid $20,000, including trade-in, for the vehicle and a short time later the car developed mechanical problems that necessitated frequent repairs.

They asked the court to cancel the sale of the vehicle and to grant them a refund less a reasonable amount for its use, $4,500 in damages from Chrysler and a $497 refund on the service contract. They also asked the court to cancel their car loan from the bank and to reclaim any interest from the contract.

Several similar lawsuits are pending against Chrysler. The automaker operated an overnight test-drive program using company employees and new vehicles in which the odometers were detached.

Chrysler and two of its executives also were indicted on odometer tampering charges by the federal government.

OBITUARIES

Frederick W. Lang

WARREN, Mich. — Frederick W. Lang, 55, assistant director of occupational safety and ergonomics for General Motors, died Sept. 3. He began his career at GM in 1965 as a safety engineer for Buick.

Donald D. Berglund

CRESTED BUTTE, Colo. — Donald D. Berglund, 60, a former auto dealer in Roanoke, Va., died Aug. 27. He was chairman of Berglund Chevrolet Inc., Roanoke, a group of auto dealerships that included Berglund Chevrolet-AMC-Jeep-Renault; Miracle Ford; Berglund Pontiac; Berglund Mazda; Superior Ford, Wytheville, Va.; and Berglund Chevrolet-Oldsmobile, Hillsville, Va.

Kume, left, and Celeste: a new era for Honda-Ohio partnership

HONDA: *2nd Ohio assembly plant to spark quest for domestic automaker status*

By Jesse Snyder and David Versical
AUTOMOTIVE NEWS STAFF REPORTERS

COLUMBUS, Ohio — Honda North America's ambitious five-part plan to create a self-reliant U.S. operation is aimed at reaching "domestic automaker status" by 1991.

President Tetsuo Chino said last week that Honda's strategy includes exporting U.S.-built Hondas, constructing a second Ohio assembly plant (Automotive News, Aug. 10), increasing domestic content of U.S.-built cars to 75 percent and expanding production engineering and research and development in the United States by 1991.

It also will put Honda on target for one million North American car sales by 1991 — 850,000 in the United States and 150,000 in Canada. By that time, Honda will have the capacity to produce 510,000 cars in Ohio and 80,000 in Alliston, Ontario. It plans to export 70,000 units from Ohio to markets abroad.

Honda is determined to be considered along with the Big 3 as a truly American automaker and not a Japanese transplant, Chino said.

"If we achieve 75 (percent) domestic content, if we become the No. 1 exporter in the U.S. auto industry, if we employ more than 10,000 (including sales personnel), then yes, I think we will be a domestic automaker," he said.

"We have always tried to localize ourselves," said Tadashi Kume, president of Honda Motor Co. Ltd., the Japanese parent company. "As a result of this announcement, if we become more like an American manufacturer, we will be most gratified. It was really a major step for that."

In Tokyo, Koichiro Yoshizawa, executive vice president, Honda Motor Co., said Honda is "entering a new stage of internationalization" with its expansion plans in Ohio. He said the United States would become another supply base for world distribution.

Most of Honda's strategy will unfold during the next four years, but the first U.S. exporting step will come in January. Next year, 3,000 units of a new Accord-based sporty coupe — produced exclusively at Honda's Marysville, Ohio, plant — will be exported to Japan.

Ford-UAW pact may prove tough for GM to follow

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — Following their unprecedented extension of a national contract, the UAW and Ford Motor Co. now await the rank-and-file's ratification of an agreement that provides job guarantees on a scale unequalled in U.S. industry.

Those job guarantees will cost Ford $500 million over the life of the contract, according to UAW documents.

Although some union dissidents say Ford is requiring across-the-board work-rule changes in return, most UAW members disagree, saying the contract leaves such changes up to the locals. The contract sets up a joint committee at each local, which must submit within six months a plan for improvements in quality and efficiency at its plant.

According to the UAW, this plan could include "exploration of new forms of work organization," which includes team production.

The tentative three-year agreement with Ford, reached last Thursday, guarantees that no Ford worker will be permanently laid off for any reason except volume losses due to sales drops. Even in those instances, Ford must recall workers when sales improve.

The current job level of about 107,000 workers will form the basis of the so-called Guaranteed Employment Numbers.

UAW documents say that the contract provides for Ford actually increasing the number of jobs, although the summary conflicts on whether these increases are actually mandated or are merely under consideration by Ford. Ford reportedly will create 4,700 new jobs at 10 facilities by increasing its investment. Ford also will save

see UAW, page 54

Contract at a glance

Job guarantees

- Guaranteed Employment Numbers for each plant.
- No layoffs for any reason — including outsourcing — except reductions forced by sales reductions. Laid off workers must be recalled when sales improve.

Economics

- Three-percent wage increase in first year and lump-sum bonuses of 3 percent in second and third years.
- Cost-of-living formula maintained, and 81 cents of current COLA "float" of 86 cents folded into base wages.
- Pensions, insurance benefits, profit sharing and payments to laid-off workers improved.
- Child-care assistance begun.

Outsourcing

- Stronger curbs against outsourcing.

Plant closings

- Moratorium on closing for most plants.
- If an operation is sold, buyer must assume Ford's contractual obligations.

Japanese pickups tumbling

Bloom is off the boom; makers work to recover

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — The pickup truck market in the United States, once so lucrative for Japanese makers, has turned sour.

Japanese makers do not appear to be moving aggressively to protect market share. They may be taking a more cautious approach, at least for the time being, according to one analyst, because of continuing accusations of dumping.

Nissan Motor Co. and Toyota Motor Corp., which developed the market in the first place, are taking steps to meet the decline.

Nissan will drop "almost all" production of pickups at its Kyushu plant and increase production in Tennessee instead.

Reports in Japan indicate the mix at Smyrna will change from 130,000 passenger cars to 50,000, with an increase in trucks from 110,000 to 190,000.

Nissan would not confirm exact figures, but said that changes have already begun. Nissan said it is making the change for "greater efficiency."

The move allows Nissan to concentrate on meeting its car export quota despite heavy inventory in the United States, and at the same time produce pickup trucks without the burden of a 25-percent tariff.

Toyota announced a reduction in its total export target from 1.82 million to 1.74 million for this year. While it would not be specific about which models will be cut back, it did acknowledge that pickups have been affected by a sluggish market. Analysts sug-

Henry Ford II fights pneumonia

DETROIT — Henry Ford II remained in serious condition in the intensive care unit at Henry Ford Hospital Friday evening. He is suffering from pneumonia.

The 70-year-old former chairman of Ford Motor Co. was hospitalized 10 days ago.

Ford is a Ford Motor Co. director and is chairman of the company's powerful finance committee. He resigned as chief executive in 1979 and retired as chairman of the board in 1980.

The grandson of company founder Henry Ford, the young Henry Ford II wrested control of the faltering company from his failing grandfather four decades ago and resuscitated Ford Motor Co. He became a director in 1938, president in 1945 and chairman in 1960.

Vixen shuts RV plant for five months

Poor sales blamed; new model on tap

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Vixen Motor Co. shut its plant for five months beginning Sept. 9 due to lagging sales of its motor homes. It laid off 100 of its 145 employees.

Gerald Bryce, Vixen's chief operating officer, said the company will "continue to distribute its vehicles through franchised dealers during the (shutdown) period."

Meanwhile, the company is gearing up a more traditionally equipped product, due to be introduced in February.

Vixen has sold only about 350 motor homes since it started in January 1986 — less than 10 percent of its original projections.

The company planned for a market that never materialized. With low gasoline prices, motor home buyers have been more interested in roominess and comfort than in the kind of fuel efficiency afforded by Vixen's manual-transmission, diesel-engine models.

Vixen also was squeezed by currency exchange rates that drove up the price of its imported BMW engines and Renault transmissions.

Together with higher-than-anticipated manufacturing costs, the price of Vixen motor homes has risen [illegible] 0,000, forcing Vixen to compete ...ore heavily in the traditional motor home market rather than in the $30,000 yuppie market it originally targeted.

In February, Vixen will go after a more traditional-type motor home buyer with new models featuring automatic transmissions, gasoline engines, conventional heating and air conditioning systems and other conservative appointments.

The company's new units will carry GM's 2.8-liter V-6 gasoline engine.

Paul Carleton, economic development advisor to the city of Pontiac, Mich., one of Vixen's financial backers, said he still feels Vixen can become successful once it gets more in synch with market trends.

Carleton said that the gasoline engine, for example, will open up the big California market to Vixen. Its diesel powerplant couldn't meet that state's emissions standards.

COLIN CURWOOD

Chrysler's K-car successors

Photographs of the new Chrysler Motors A-body sedan indicate that Chrysler is relying on traditional styling for its K-car replacement. Chrysler opted for a similarly traditional look in its new C-body Chrysler New Yorker and Dodge Dynasty, which debut this fall. The A-body cars are expected to be introduced as 1989 models in the fall of 1988. They will be built at Chrysler's Newark, Del., assembly plant. Photo above is believed to be the Dodge version; below, the Plymouth version.

Chrysler kills New Yorker 'E' after short run

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Chrysler Motors ended production of its 1988 Chrysler New Yorker Turbo sedan little more than a month after production began.

The car was phased out because a new series of front-wheel-drive sedans is being introduced this fall bearing the New Yorker and New Yorker Landau names. The new cars are the flagship models in Chrysler showrooms.

Chrysler will continue to produce the Plymouth Caravelle and the Dodge 600. Those E-body cars are companion models to the New Yorker Turbo. All have been produced at Chrysler's Jefferson Avenue, Detroit, plant.

Chrysler began production of the 1988 New Yorker Turbo models in August and assembled an estimated 9,631 before killing the model. On Sept. 1, the company had a 130-day supply.

The changeover to the 1988 model involved little cost, a company source said, because there were no changes in exterior sheet metal and there were few other changes. The company did, however, equip the 1988 model with a 2.2-liter turbo engine and made standard a number of equipment features.

In the 1987 calendar year, the New Yorker E-body represented 4.9 percent of Chrysler Motors' total sales. The model accounted for 16 percent of Chrysler brand sales.

The larger 1988 C-body New Yorker and New Yorker Landau are powered by a 3-liter, fuel-injected V-6.

Dole exit was expected

Dole served in the sometimes sensitive cabinet post longer than anyone else in the department's 20-year history

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Transportation Secretary Elizabeth Dole announced last week that she will resign Oct. 1 in order to devote full time to the campaign of her husband, Sen. Robert Dole, R-Kan., who is seeking the Republican presidential nomination.

Her departure from the Reagan cabinet was described as "inevitable" and "expected" by Washington representatives of the automobile industry.

Dole's resignation had been rumored for months, as observers speculated she might seek elected office herself and as problems in the aviation sector increased.

Last Friday, the White House had not released a list of possible successors to Dole.

With only 16 months left in President Reagan's term, it is unlikely that her successor will initiate any ambitious new proposals in the administration of U.S. motor vehicle safety laws.

Dole, 51, became secretary of transportation in February 1983, succeeding Drew Lewis, Reagan's first secretary of transportation. Dole served in the sometimes sensitive cabinet post longer than anyone else in the department's 20-year history.

Although the job required tough decision making on several fronts, one of the most difficult and controversial was approving a requirement that all new automobiles sold in the United States be equipped with passive restraints by the 1990 model year.

Dole's handling of the passive-restraint issue — one that had bedeviled politicians and industry executives for almost 20 years — was considered masterful.

During the Carter administration, NHTSA ruled that passive restraints be phased in starting with the 1982 models, but that decision was reversed by Raymond Peck, a later NHTSA boss. After Peck's action, a court order demanded NHTSA to take a second look at the passive-restraint requirement.

Dole agreed to a proposal that gave the industry time to begin building vehicles equipped with such devices, while at the same time aggressively promoting state seat-belt laws.

Dole's decision requires that 10 percent of all vehicles sold in the United States by each manufacturer be equipped with automatic belts or air bags in the 1987 model year. The figure rises to 25 percent in the 1988 model year, to 40 percent in the 1989 model year and to 100 percent in the 1990 model year.

There also is an escape clause: the passive-restraint requirement will be dropped if states with two-thirds of the U.S. population pass mandatory seat-belt-use laws meeting federal standards by April, 1989. Those standards have not yet been issued.

The auto industry, while fundamentally opposed to government-required air bags or automatic seat belts, appreciated features of the passive-restraint rule that phased in the devices over four model years. Later, they liked the delay in passive restraints on the passenger side if driver-side air bags are installed.

Consumer and insurance groups opposed any delay in requiring passive restraints, but counted Dole's decision as a victory — if somewhat postponed — for better vehicle safety.

In addition, they were pleased by the appeals court decision asking them to return to court at once if there were serious danger that mandatory belt-use laws in the states would rescind passive restraints automatically.

Both the auto industry and the safety lobby continue to push for state laws requiring seat-belt use.

Dole's administration of NHTSA has been marked by repeated charges of delays in implementing safety standards, of less than imaginative responses to both existing and emerging vehicle safety problems and an almost half-hearted response to allegations of safety defects in motor vehicles.

She has generally been praised within the industry as making good on Reagan's promise to reduce government regulation of the automobile industry. She defied a good many members of Congress, Chrysler Corp. and consumer groups by agreeing to hold down corporate average fuel economy requirements at the request of Ford Motor Co. and General Motors.

Her most visible contribution to automotive safety is a regulation requiring a center high-mounted stoplight on all new automobiles. That regulation took effect with the 1986 model year.

Chrysler revamps Jeep-Eagle pact

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Chrysler Motors has revised its Jeep-Eagle franchise, including binding arbitration and consumer satisfaction index provisions, following criticism by the National Automobile Dealers Association.

Jeep-Eagle dealers will begin signing the new agreement this week. The previous agreement will be void.

The new agreement, which will cover 1,453 former American Motors dealers, will also be used when re-signing Chrysler-Plymouth and Dodge dealers because of open points, stock transfers or dealership sales.

In a letter to dealers, E.T. Pappert, Chrysler Motors group vice president — sales, said the company revised the franchise agreement following meetings with members of the franchised dealer councils and NADA line chairmen.

NADA had been particularly critical of franchise language mandating binding arbitration in any dispute between the manufacturer and dealers. NADA said that provision circumvented state franchise laws.

Revised language accepted by the advising dealers states that rights granted under state laws will apply in the arbitration process.

NADA also had objected to a provision that would allow a consumer satisfaction index (CSI) to be used to terminate dealers who perform below specified standards for four consecutive quarters.

Instead, Chrysler now will review a dealer's CSI performance at least once a year and allow the dealer 180 days to meet CSI requirements before beginning termination proceedings. Chrysler also revised a provision covering its right of first refusal to purchase a dealership and other language in the agreement.

NADA said Chrysler's response appeared to be a positive step toward addressing a number of dealer concerns.

"However," said Frank McCarthy, NADA executive vice president, "it still does not satisfy legitimate dealer concerns because it forces mandatory binding arbitration on dealers, denies dealers access to courts and commissions, and there is no assurance dealer rights under state and federal law will be honored."

Import inventories slide again

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Inventories of imported cars and trucks in the United States shrank for the second time in two months.

A hefty increase in August sales helped reduce the stockpile at the beginning of this month. Imported light-truck sales also rose and ate into the Sept. 1 inventory of vehicles at dealerships, in ports and en route in between.

September opened with combined imported car and truck inventories of 810,982 units, a 52-day supply, down 4.17 percent from last month's 846,350 unsold imported vehicles, a 57-day supply.

The total of unsold imported vehicles was 25.47 percent higher than the year-ago stockpile of 646,356, a 48-day supply. Two years ago, combined imported car and truck inventories numbered only 393,016 vehicles, a 33-day supply.

Since import-car sales rose a hefty 10.82 percent in August, inventories were slimmer than on Aug. 1. At the beginning of September, imported-car inventories declined to 606,500, a 51-day supply, compared to last month's 628,337 units, a 54-day supply.

The leanest stockpiles again this month were Honda's imported cars, which stood at 11 days' worth. Honda and its dealers had another 8 days' worth of U.S.-built cars in inventory. The Japanese company's upscale Acura inventories were also down, to a 27-day supply from 33 a month earlier.

Ford's Korean-built Festiva inventories were depleted from a 124-day supply Aug. 1 to 63 days at the start of this month.

Inventories of imported Renaults were still high because of poor sales last month, although inventories were down to 237 days from a 266-day supply in August.

The imported light-truck stockpile fell from 218,013 vehicles, a 66-day supply, on Aug. 1 to 204,482 units, a 56-day supply, on Sept. 1. That was lower than last year's Sept. 1 light-truck stockpile of 209,059 units.

The Sept. 1 inventory of imported cars by country of origin was split up this way: Japan, 67.55 percent; Germany, 13.78 percent; and other countries: 18.67 percent.

Last month's inventory share by country was: Japan, 65.64 percent; Germany, 14.58 percent; and other countries, 19.78 percent.

On average this month, German carmakers were the only group to increase its days' supply of cars.

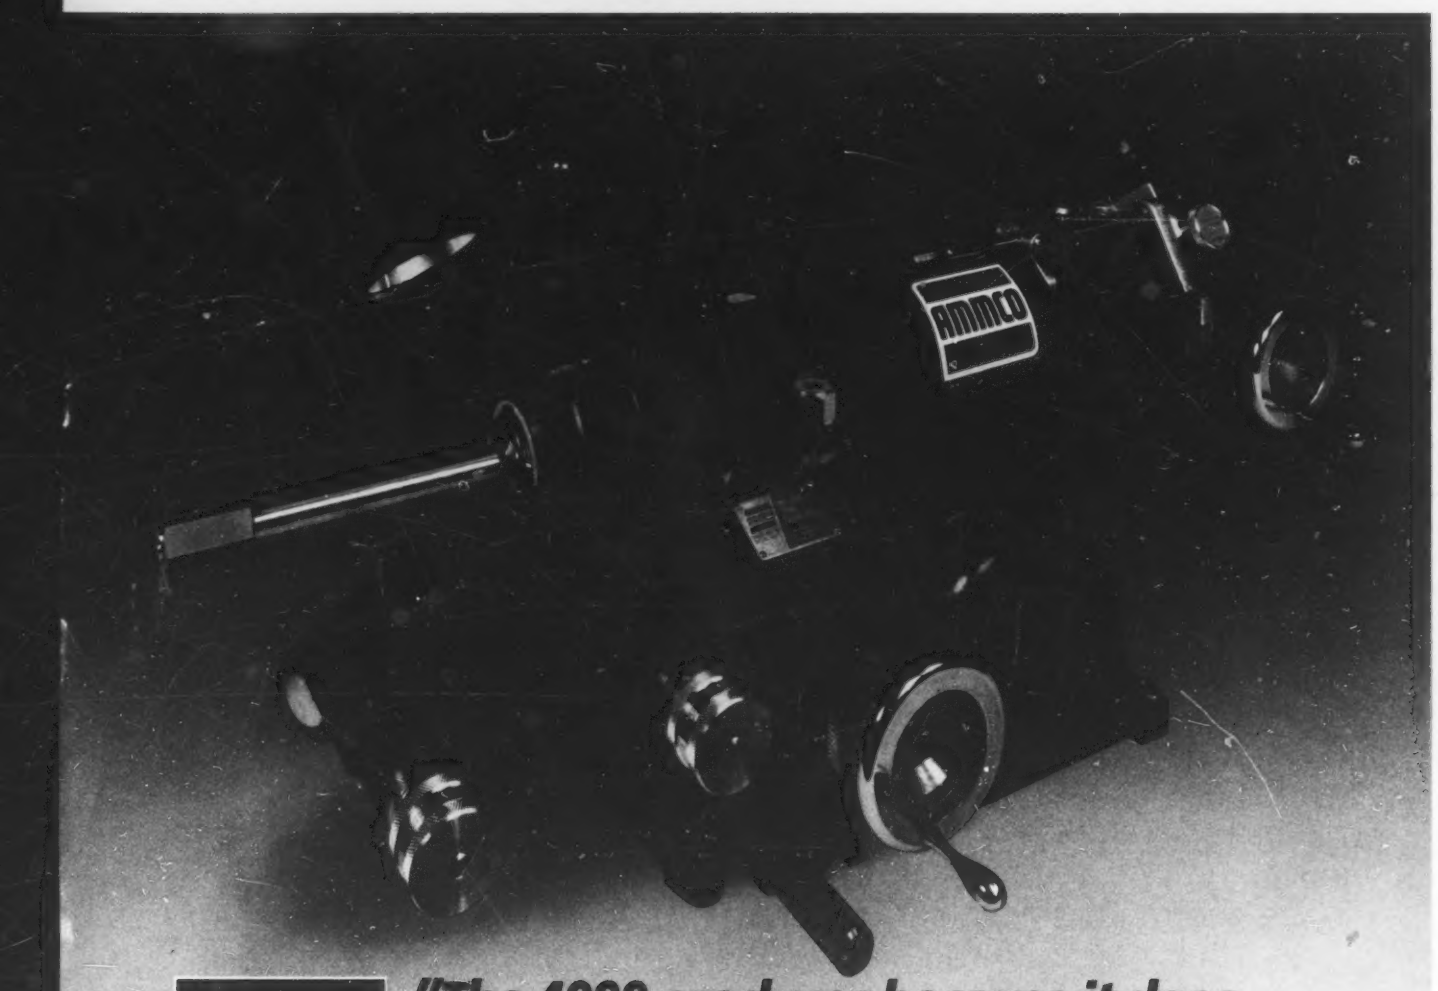
Correction

Several words were dropped from the Sept. 14 story, "Ford, GM Take Early Price Step," which may have resulted in confusion over Ford's pricing action.

The story should have said the prices given to dealers are only tentative, are not sales weighted and do not include all models. The 6 percent average hikes also reflect the industrywide trend toward equipping 1988 models with more standard features than 1987 models.



"The 4000 produces because it does both drums and rotors. That's great-brake work is 20% of our business."

Chris Hernandez, Service Manager, North Central Ford, San Antonio, Texas

The machine Chris Hernandez describes so favorably is AMMCO's Model 4000 Drum/Disc Lathe – a best seller for years.

Three spindle speeds let his technicians select the proper RPM for the job, and the twin-cutter tool lets them resurface both sides of a rotor at the same time.

What's more, they can switch from rotors to drums in less than a minute.

Not only is the unit productive – as Hernandez points out: "The durability is proven. Parts are readily available. The service my AMMCO rep provides is first class.

"And it's not complicated at all – no confusing dials. Easy to get a reading. That saves time and effort when you're breaking in someone new."

Hernandez has looked at some off-shore models that claim to do more and be more. But, he says "No way, Jose. What about parts? What about service? What about the technical support I enjoy now? They just aren't there."

If you invest in AMMCO equipment, you'll enjoy the same returns as Chris. But don't just take his word for it. Find out for yourself. Call 1-800-322-6626 for a free product demonstration and profit analysis. (In Illinois call (312) 689-1111, Ext. 533.) Do it today.

Medium, heavy trucks continue sales gains

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Retail sales of medium and heavy trucks in the United States continued to show solid gains in August and for the first eight months of 1987.

Total domestic retail truck sales of 438,387 last month were up 11.77 percent from 392,234 a year ago, according to reports from individual manufacturers and the Motor Vehicle Manufacturers Association.

For the January-August period, sales of 3,373,925 trucks were reported, up 4.98 percent from 3,214,023 in 1986. During August, medium-duty Class 4-7 sales of 13,553 units were up 6.10 percent from 12,774 last year.

And Class 8 heavy sales of 10,506 were up 31.19 percent from 8,008 in the same period of 1986.

Within the individual segments, Class 4 accounted for 85 sales last month compared to zero a year earlier.

Class 5 accounted for 625 sales, off from 797 a year ago; Class 6, 4,211, up from 4,114; and Class 7, 8,632, up from 7,863.

Year-to-date, the industry retailed 3,184,714 light duties, up 4.82 percent from 3,038,315 in like 1986. It retailed 103,111 medium-duty trucks, up 1.69 percent from 101,392 last year. And it retailed 86,100 Class 8 models, up 15.86 percent from 74,316 in like 1986.

Most individual medium and heavy-duty manufacturers are faring well in the relatively robust market.

Freightliner, for example, had sales of 2,201 in Class 8 last month, up 62.80 percent from like 1986. For the eight-month period, its retail sales of 15,218 were up 35.43 percent.

Similarly, Mack retailed 1,721 trucks in August, up 12.12 percent from a year ago. For the eight months, Mack's sales of 16,094 were up 10.54 percent from a year ago.

Kenworth had a sizable gain, though its August deliveries include an estimate for Class 7 models.

Kenworth retailed 1,245 trucks in August, including 1,235 actual reported deliveries for Class 8 and a 10-unit estimate for its Class 7 deliveries. That was up 42.94 percent from last year's 871 deliveries.

For the January-August period, Kenworth's sales of 9,295 were up 41.39 percent from a year earlier.

Navistar, the Class 8 leader, had total sales of 6,213 in August, up 1.4 percent from last year. For the eight-month period, its total of 47,228 was up 2.04 percent from a year ago.

New Mack creeper

Transmission, Western truck introduced

By Sheryl Harris
SPECIAL CORRESPONDENT

ANAHEIM, Calif. — Mack Trucks announced a new T2080 super-low-hole (creeper) transmission for 1988 models at the International Trucking Show here. It also displayed a new Western market model and announced additional warranty coverage.

Terry L. Warmkessel, Mack's director of marketing product planning, said five prototypes of its new "Baby 8" trucks will be introduced during the fourth quarter of 1987.

They are expected to be in production by January and to be officially unveiled at a mid-January press conference in Tampa, Fla.

Mack also said it is replacing the MR model with a new LE600 model.

A new E-7 12-liter engine will replace the 11-liter engine.

Paul Ritter, Mack Trucks' senior vice president — sales, added that Mack will have an all-new product line in place by 1991. The company does not, however, plan to replace its MH model.

The new T2080 8-speed transmission is designed for construction and refuse applications.

It offers a 20.1:1 gearing reduction. When used with rear axle ratios common to Mack's Maxidyne Plus engines, it will provide a gearing reduction in excess of 120:1, company officials said.

The T2080 gives West Coast customers in paving, construction and similar vocations the opportunity to use Mack's Balanced Design powertrain for the first time, according to Warmkessel.

It is designed for use with Mack's Maxidyne Plus engine and is built with Mack transmission components.

It has a torque rating of 1,700 pounds-feet and allows top speeds of 60-65 mph. It consists of a T2060/T2070 mainbox coupled to a T2090/T2100 compound, resulting in eight shiftable steps, two reverse gears, a 20.1 first low gear and 0.60 overdrive fifth gear.

Warmkessel said the transmission was designed with input from Mack's advisory council to be stronger, lighter and have better overall reduction than competitive models.

The T2080 is warrantied by Mack with three-year/300,000-mile coverage on major powertrain components.

"It allows customers requiring extremely low-speed, continuous operation equipment to specify an all—Mack powertrain," Warmkessel added. It also enhances the concept of Mack's new Western Contractor model.

The Western Contractor is a lightweight version of Mack's RD model, called the RD-600S. It is designed for specific West Coast-only regional needs.

It has a 14,700-pound chassis weight and 20,000-pound-capacity front axle. The cooling system has been redesigned and uses smaller and lighter components. The Western Contractor has a standard Mack EM6-275L Maxidyne Plus engine that produces 275 horsepower at 1,750 governed rpms.

Mack also is offering an on/off-highway version of its Bulldog Protection Plan, designed for coal or refuse haulers, concrete mixers, dump trucks, loggers and similar applications that require occasional off-highway use.

Customers can buy protection either for parts and labor or parts only.

APAA

Parts show keyed to world market

By Julie Whitmore
SPECIAL CORRESPONDENT

CHICAGO — The international market proved to be the focus of the Automotive Parts and Accessories Association's show here.

Toyota Motor Corp. and Saudi Arabia sent large delegations, and international buyers were welcomed at a hospitality suite in the McCormick Place.

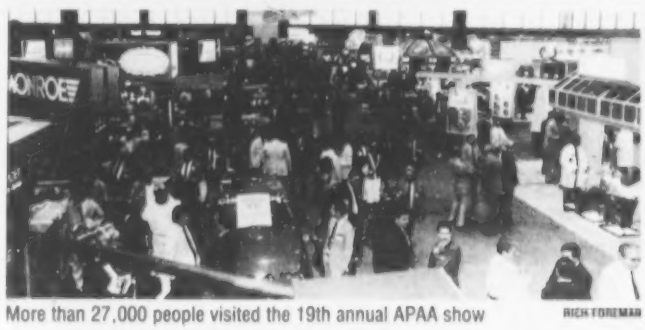
Toyota reportedly did not place any orders, but Naft Express Corp., a Saudi Arabian firm, announced plans to buy $300 million worth of automotive parts to maintain a 5,000-vehicle government fleet.

U.S. Department of Commerce representatives were on hand to assist overseas purchasers, and "Find a Product" television monitors also were used.

In addition, Kentucky Highlands Investment Corp., which provides venture capital and term loans to businesses that locate in "America's Automotive Alley," was looking for parts and accessories firms to complement its present automotive parts and assembly plants.

"There are some signs that things are changing" in the overseas market, said Katherine Hoffman, director of government relations for the Automotive Parts and Accessories Association.

The new price structure created by the appreciation of the yen in particular, has given foreign buyers a stronger incentive to look at U.S. products, she said.



More than 27,000 people visited the 19th annual APAA show
RICK FOREMAN

Although the mood of the exhibitors was optimistic, there were indications that sales to international customers were not as strong as expected.

Chuck Krauss, president of Trimbrite Products, a division of Spartan Plastics, which makes self-adhesive decorative trim products for the marine and RV industries, said, "We're not worried, we're just going to wait them out."

Many new products were introduced at the show.

Pentron Products, a manufacturer of electronic products including automotive bar gauges and tachometers, unveiled an electronic vehicle security system.

The new Page Alert VP4300 security system is priced at $150, and the new packaging system is said to require 40 to 50 percent less warehousing space and allow the customer to see the product without removing it from the box.

Floor traffic at the Pentron Products booth was more than 20 percent greater than at the 1986 show, according to company officials. Other exhibitors, however, claimed no increase in floor traffic.

Pentron's international sales have quadrupled in the last eight months, and the company has established an international sales department.

Among the new products at the show was the $49.95 Electric Heat Seat from Automan Imports, which plugs into a car's cigarette lighter. Cal Comfort displayed an audio armrest that doubles as a can cooler and speaker. Elkins Group International showed the Original Car Shirt, basically a T-shirt for a car seat.

Although the show emphasized the need to expand to global markets, many of the 1,000-plus exhibitors were working hard to meet the needs of domestic customers.

Borden Consumer Products Division, for example, used the meeting to let buyers know about the realignment of its Elmer's adhesive, Krylon spray paint and Rain Dance car wax businesses. Retailers now can buy from a single account manager, rather than each brand having its own salesperson.

More than 27,000 people visited the 19th annual Automotive Parts and Accessories Association show.

Nissan parts system revised to aid dealers

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

CARSON, Calif. — Nissan Motor Corp. in U.S.A. has developed and put into operation a computerized parts system that makes it easier for dealers to place and track orders.

The parts system is called Nissan Motor Parts System and was five years in the making. It was launched nationwide at Liberty Nissan, Virginia Beach, Va.

Placing the initial order from Liberty Nissan was Brock Nelson, dealership owner and president of the National Nissan Dealer Advisory Board.

Jerry Butts, Nissan parts vice president, said the system has changed the way Nissan conducts its parts business.

"While Nissan had a computer-driven parts system in place, the company found that it had outgrown its capabilities," Butts said. "So we turned over to our staff and Nissan's informational systems department the problem of developing a new system that would accommodate our business volume."

Butts said the computer hardware used by dealers under the old system is compatible with the Nissan Motor Parts System.

"There is no enrollment fee for NMPS," he said. "Dealers use their own hardware, but we supply specifications for the required software."

The Nissan Motor Parts System design began in August 1982, according to Renee Lentz, parts systems manager. "We weren't interested in just refining the existing system," she said. "Our assignment was to come up with a system that would do everything from making parts ordering easier and more efficient to assisting management in making more accurate and timely business decisions."

The system is designed to assist Nissan dealers in a number of ways. "Not only will it reduce the time between order placement and receipt, but it will allow us to provide dealers with more information regarding other aspects of their business," Lentz said.

The system can tell a dealer immediately if the part is available, if it has been packed or if it's on the truck.

"For customers, especially those with vehicles off the road, that can alleviate a lot of anxiety," she said.

Lentz said the new system is designed to get any vehicle-off-the-road order that's received by noon shipped by 5 p.m. the same day.

Some 850 of Nissan's 1,107 dealers have on-line ties to Nissan headquarters and are able to take advantage of the new program, Lentz said. Those not in the program are mostly small outlets not willing to invest in the necessary computer hardware.

"While some of our smaller dealers still process their orders by phone or mail, we are working on a program to assist them in that area also," Lentz said.

Shop volume rises again; up 6% for month

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — The Automotive News Service Index increased in July for the second straight month.

Service and parts business at new-car dealerships rose 6.1 percent over the July 1986 figure.

In June, the Service Index increased 5.9 percent. Shop business during the first seven months of 1987 was up 3.0 percent over the same period in 1986.

Dealers attributed the increased business to the hot weather, advertising and improved customer relations.

A Midwest Ford dealer said the hot summer resulted in more tow-ins than normal. The dealership also had an increase in warranty repair work.

On the other hand, a Midwest Buick-Pontiac dealer said hot weather and customers on vacation resulted in a service decline.

The dealer also said, "Improved product seems to have some effect on our service business."

An East Coast Chevrolet dealer said service increased as a result of direct-mail advertising.

A Northwest Chevrolet-Honda dealer attributed increased service business to improved management and customer relations.

A Northwest Dodge-BMW dealer said service business slipped because the dealership was "unable to find competent mechanical help."

All indicators showed gains in July, and gross profit on all labor, parts and accessories sales led the list with an increase of 9.7 percent.

Labor sales (customer paid and warranty) climbed 8.0 percent; shop parts sales (customer paid and warranty) rose 5.4 percent; sales of all parts and accessories increased 4.8 percent; and repair orders written were up 2.5 percent.

Parts and accessories sales to off-premise customers climbed 4.2 percent in July.

For the January-July period, gross profit on all labor, parts and accessories sales was up 6.4 percent.

Sales of all parts and accessories increased 5.3 percent; shop parts sales rose 3.8 percent; and total labor sales climbed 2.0 percent.

Repair orders written fell 2.7 percent.

Parts and accessories sales to off-premises customers were up 6.5 percent for the first seven months of this year.

SERVICE INDEX
106.1★

	July, '87 vs. July, '86	7 mos., '87 vs. 7 mos., '86
Gross Profit on All Labor and P&A Sales	+9.7%	+6.4%
Repair Orders Written	+2.5%	−2.7%
Total Labor Sales (Customer & Warranty)	+8.0%	+2.0%
Shop Parts Sales (Customer & Warranty)	+5.4%	+3.8%
Sales of All P&A	+4.8%	+5.3%

★— Survey by Automotive News shows that dealers' service and parts business in July 1987 was 106.1 percent of business in July 1986. Service business in the first 7 months of 1987 was 103.0 percent of business in the corresponding period in 1986.

Service easy on new Buick Regal

SHOP TALK

ARTHUR FLAX

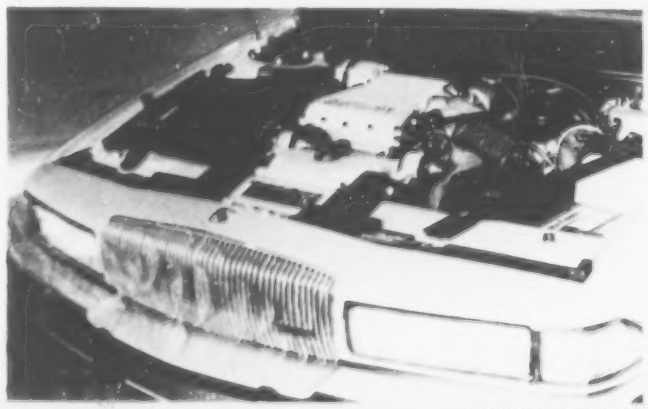
A lot of design work apparently went into making the new Buick Regal easy to maintain. The Regal is the first of the GM10 cars to reach the market.

The 2.8-liter V-6 is neatly laid out, and large, well-marked fluid caps and oil and transmission dipsticks have been installed. The fuse box is easy to reach, just inside the right fender.

Changing the spark plugs, however, will prove a bit tricky. The rear bank of plugs can be reached from underneath the car or by rotating the engine forward. That procedure, according to Buick engineers, is not as complicated as it sounds because it requires the removal of only two bolts. The engine is said to be balanced to be rotated easily.

Beyond changing the oil, fuses or spark plugs, the do-it-yourselfer will find little to do. The ignition is distributorless, and the engine never needs timing. The multiport injection system cannot be easily repaired by the amateur.

The MacPherson strut front suspension, however, has been designed to make repair easy for the professional or the amateur. Shock absorber cartridges can be reached and removed by a technician leaning over the fender.



AUTOMOTIVE NEWS ARTHUR FLAX
Regal's engine is neatly laid out and has large, well-marked fluid caps

Rolls accents service

As part of its program to improve U.S. sales and service, Rolls-Royce Motor Cars Inc. requires that each of its 60 dealers employ mechanics who work solely on Rolls and Bentley cars. Rolls-Royce also requires that the cars be repaired in service bays dedicated to the company's products.

There are an estimated 100 Rolls-Royce mechanics at the 60 dealerships throughout the United States. Mechanics undergo a week's training at Rolls' Lyndhurst, N.J., training center, with appropriate updates as design changes dictate, according to a company spokesman.

Because a dozen of its U.S. dealers are in California, the company periodically moves its training to Thousand Oaks, Calif.

While salaries vary by location, they are generally quite competitive with those of mechanics who work on other luxury cars.

At Steve Foley Cadillac, Northbrook, Ill., Rolls-Royce mechanics are paid a flat hourly rate just over half the $45 hourly billed rate.

Although Rolls-Royce and Bentley autos are more complex than other cars, the hourly labor charge is the same as that for servicing a Cadillac, according to Steve Foley Jr. That translates into an annual salary in the $45,000 to $55,000 range for a Rolls-Royce mechanic.

SALES

Sales no match for last year

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Early September domestic-car sales dropped off 51.85 percent from last year's blockbuster, record-high Sept. 1-10 sales period.

In this September's first 10 days, U.S.-built car sales totaled 177,512, down from last year's 368,680.

The daily selling rate declined to 22,189 from 46,085 for the same period a year ago. Last year's daily selling rate was the highest for any non-introductory selling period. Both periods had eight selling days, and were covered by low financing and/or rebates.

Analysts expected a downturn in sales of 40 percent to 50 percent based on last September's rocket-high 10-day numbers. Even though low financing rates and rebates have continued, many dealers were not clearing floors fast enough. They also were missing some top-selling models. A pay-back period was expected, analysts said, but it seems to have come earlier this year.

Some dealers suggested the glow of incentives has worn off.

"I sometimes think that people have gotten used to the rebate program. They put off buying a car and figure there will be a better one next month," said Dennis Korpetz, sales manager, Watkins Burdette Dodge, Frederick, Md.

The Big 3 automakers reported that sales were down 30 percent to 60 percent in the first 10 days of September compared to a year ago. Ford Motor Co.'s sales slumped to 51,243, down 33.01 percent from last year's 76,499. Lincoln sales rose 41.92 percent in the first 10 days, however, an increase attributed to greater availability.

Chrysler Motors' sales plunged 55.64 percent to 22,659 cars compared to last year's 51,082. But some dealers suggested that high inventories may bode well for the next few weeks, considering the Canadian Auto Workers strike at Chrysler plants, which has already begun shutting U.S. plants, as well.

"We have plenty of cars — a 100-day supply. We're not concerned about the strike because we have inventory. It might even be a good thing. Our early September sales are off 50 percent from a year ago," said Doug Toland, sales manager, Warnock Dodge, Livingston, N.J.

John Hippen, owner of Hippen Motor Co. (Chrysler), Aplington, Iowa, was worried about the strike: "Sales have not been too good. Yes, I'm worried about the strike. We hope to get rid of our inventory."

In spite of an eight-week incentive program, which concludes Sept. 30, General Motors' sales plummeted 60.79 percent to 91,075, down from last year's stellar 232,252.

"Given that we don't have as rich a program, we're doing all right," said David Sackaroff, general manager, Potamkin Cadillac, New York. "Inventories are low. Yes, we're down 35 percent. But on average we are ahead 15-20 percent of the Aug. 1-10 period."

Nissan's U.S.-built car sales bounded up 256.42 percent to 3,222 units in the first 10 days of the month compared with 904 last year. Honda reported a slight increase of 1.88 percent over the year-ago period, and Toyota sold 1,398 U.S.-built cars. Domestic Corolla production started a year ago in September. Volkswagen's sales of U.S.-built cars dropped 12.48 percent from last September's first 10 days.

Car sales dip in Canada; trucks strong

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Sales of North American-built cars in Canada dipped slightly in August despite sales incentives offered by most automakers.

Canadian new-car dealers delivered 53,481 domestic cars, down 4.45 percent from 55,969 in August 1986.

Truck sales in Canada remained strong. Dealers sold 31,198 domestic light trucks in August, up 26.57 percent over 24,649 last year. General Motors, Ford Motor Co. and Dodge set truck sales records.

Ford and Volvo reported that August car sales were slightly higher than last year's. Sales were down for GM and Chrysler.

American Motors now is part of Chrysler Motors. Sales of the AMC Eagle and the Renault Alliance are included in Chrysler's domestic-car figures, and Jeep sales are included in Chrysler truck totals.

GM showed the biggest drop in car sales. GM dealers delivered 27,425 domestic cars in August, down 10.62 percent from 30,685 last year. During August, the company offered financing as low as 3.9 percent or $750 in cash rebates on selected cars and light trucks. Only rebates were offered in Ontario due to a provincial law that prohibits offering both.

Despite the addition of AMC, Chrysler sales were off in August. Dealers delivered 10,594 domestic cars, down 8.23 percent from 11,544 in August 1986.

The Chrysler domestic sales included 464 Renault Alliance and GTA models and 32 AMC Eagles.

Chrysler, Plymouth and Dodge dealers offered rebates of $500 to $1,500. Jeep-Eagle dealers offered no sales incentives in August. However, Chrysler added Renault Medallion, Alliance and GTA to its incentive lineup on Sept. 8. Rebates are $1,250 on Medallion and $750 on Alliance and GTA.

Ford sales were up slightly. Dealers delivered 13,661 domestic cars, up 0.93 percent from 13,535 in August 1986. Ford also offered financing as low as 3.9 percent or $750 cash rebates.

Volvo dealers sold 210 domestically built cars, up 2.44 percent from the 205 sold in August 1986.

Honda dealers sold 1,591 Canadian-built cars — all Accords — in August.

As noted, GM, Ford and Dodge set truck sales records for August. GM sold 13,891 domestic trucks, up 19.97 from 11,579 in 1986. The previous August record was set in 1978 when GM sold 12,459 trucks.

Ford sold 10,530 trucks in August, up 14.25 from 9,217 in August 1986. Ford's previous August record was 10,352 in 1979.

Chrysler Motors sold 5,183 Dodge trucks and 1,594 Jeeps in August. That compares to 3,853 Dodge trucks and 915 Jeeps sold in August 1986. Chrysler's previous Dodge truck sales record for August was 4,275 in 1974.

In addition to North American-built cars, GM in August sold 1,605 Suzuki-built Chevrolet Sprints, 1,421 Suzuki-built Pontiac Fireflys, 122 Isuzu-built Chevrolet Spectrums, 97 Isuzu-built Pontiac Sunbursts and six Isuzu I-Marks.

Ford sold 829 Mercury Tracers, 44 Merkur Scorpios and 75 Merkur XR4Ti models. The Tracer is built in Taiwan; the Scorpio and XR4Ti are built in West Germany.

Chrysler sold 1,187 Mitsubishi cars, 15 Peugeot cars and 192 imported Renault cars.

Honda sold 2,754 Japanese-built Hondas a 55.60 percent drop from the 6,203 sold a year ago. Honda also sold 615 Japanese-built Acura cars in August.

Volvo sold 451 Swedish-built Volvo models in August.

Florida auction claims sales record

ORLANDO, Fla. — Management at the Florida Auto Auction of Orlando believes it has set a national record for a single day's gross sales of $41 million on a volume of 4,095 units, or 68 percent of the 6,026 vehicles on consignment.

The dealer sale was held July 14 and was attended by 691 buyers and 327 sellers from 37 states, said Joe Greco, general manager of the auction.

He said employees spent 41 days reconditioning more than 2,000 cars for the event, which was held to celebrate the auction's 15th anniversary.

Florida Auto Auction of Orlando is one of 17 auto auctions operated throughout the United States and Canada by Manheim Auctions, Atlanta.

NADA to continue fight on franchise arbitration

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The National Automobile Dealers Association will continue to oppose new franchise agreements that require binding arbitration in factory-dealer disputes.

Frank McCarthy, executive vice president, said that NADA will carry on the fight to protect state laws giving dealers the right to pursue remedies in the courts and before boards established by such legislation. He added that NADA will explore changes in federal arbitration laws that would provide additional relief for dealers.

"We're looking at all aspects," McCarthy said during the group's annual Washington Conference last week.

NADA has opposed Chrysler Motors' Jeep-Eagle franchise agreement containing binding arbitration provisions. Chrysler said last week that the arbitration provisions in the agreement have been revised to ensure that rights granted by state law are applied in cases of binding arbitration.

However, NADA said the revised Jeep-Eagle franchise agreement "still does not satisfy legitimate dealer concerns" regarding binding arbitration.

Robert Wade, executive director of NADA's legal and regulatory affairs group, reported that three other agreements call for mandatory binding arbitration. They are Mitsubishi Motor Sales of America, Mitsubishi Fuso Truck and Mazda Motors of America (Central).

"Dealers have had no choice in accepting binding arbitration," Wade said of those agreements, which have been offered on a "take it or leave it" basis. "It's unfair to existing dealers of a line."

Wade promised a fight and said, "When all is said and done, 1987 will probably go down as the year the state (franchise) laws were hit by a one-two punch, but didn't go down."

While the dealers are girding for a fight with manufacturers over the franchise system, they were also warned of several political issues and tougher economic times on the horizon that will affect their businesses.

Among those political issues are moves to increase the minimum wage, mandate minimum health-care coverage for all employees, limit the deductibility of advertising expenses and impose excise taxes on cars costing more than $20,000.

If passed, they mean higher operating costs — costs that NADA said are continuing to climb against a backdrop of declining sales and profits.

John Ferron, NADA vice president, said that vehicle sales will decline 11 percent in 1987 and will continue to slide downward in 1988. However, he said, "We see no recession in 1988."

While sales are declining, advertising costs are increasing, Ferron said. Total advertising expense as a percentage of net profit on each car climbed from 42 percent in 1985 to 65 percent in 1987, he said, or an average of $256 per unit. Ferron said more of the ad money is being spent on the product itself rather than trying to sell the dealership to the public.

In addition to rising ad costs, dealers are faced with higher floorplan expenses as increases in the prime interest rate have accompanied slower sales, Ferron said. The sales slowdown means more days in inventory per unit and higher floorplan costs.

Those costs are averaging $147 per unit, compared with an average of $87 as recently as 1983. Last year, the average floorplan cost was $129. Ferron said the most dramatic rise is among Japanese imports, which report average floorplanning costs of $167 per unit, an increase of more than 50 percent over last year.

Ferron reported that personnel costs this year are about seven percent higher than in 1986. As a result of rising costs and a softer market, Ferron said, overall dealer performance probably will be down this year.

He said dealers had a strong fourth quarter last year due to the strength of the used-car market, despite the 2.9 percent financing program to clear out new-car inventories, and because of the tax code changes that spurred new-car buyers to act before the end of the year.

NADA gets Capitol lowdown

Dealers briefed on outlook for trade, taxes, labor

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — State and national leaders of the National Automobile Dealers Association heard few discouraging words from federal government officials who addressed the association's annual Washington Conference last week.

Lawmakers praised NADA members for their work on important national issues, including energy, tax, trade and labor policies. Dealers were lauded especially for bringing small business concerns before the federal government.

Rep. Dan Rostenkowski, R-Ill., chairman of the House Ways and Means Committee, told the dealers that his first interest as leader of the House conferees on trade legislation is to adopt a tough trade policy that will open foreign markets.

"The U.S. has every right to demand a level playing field (in international trade)," he said, "but it is a sign of weakness when we demand points before the game begins."

Rostenkowski said he is against any changes in U.S. trade law that result in outright protection for American industries. He predicted that Rep. Richard Gephardt, D-Mo., will not have the votes to win adoption of a mandatory trade-deficit-reduction measure that is known as the Gephardt amendment.

Much of the U.S. trade deficit is due to the size of the federal budget deficit, Rostenkowski said. He blamed the budget deficit on President Reagan's refusal to raise taxes.

Rostenkowski promised he would attempt to raise additional revenue before Congress adjourns this fall. He expressed doubt that an excise tax on motor vehicles would be approved and said he sees no increase in corporate or individual income tax rates.

Revenue most likely will be raised by closing more tax loopholes, broadening the tax base and adopting more user fees for federal services, Rostenkowski said.

U.S. Trade Representative Clayton Yeutter told the dealers the White House believes there is the potential for a constructive trade bill, but he said the president has the votes to uphold a veto of trade legislation if that becomes necessary.

The United States should not become confident that either shifts in exchange rates or trade legislation can turn around the nation's $170 billion trade deficit, Yeutter said.

Policy changes must be adopted by both the United States and by its trading partners if current world trade friction is to be reduced, he said. According to Yeutter, the key issue in the United States is reducing the federal budget deficit; other nations, principally Japan and European countries, must increase their own economic growth.

Yeutter cautioned that relying on exchange rate manipulation to boost U.S. competitiveness may be misguided. He said foreign firms can absorb the effects of a weak U.S. dollar by cutting costs, holding down profits and boosting quality.

U.S. companies must demonstrate that same tenacity if they are to guard their market share and win back export markets, he said.

Sen. Dan Quayle, R-Ind., warned dealers about a number of labor bills pending before the House and Senate. Although he expressed the belief that White House and Senate opposition will prevent their implementation, he asked for dealer assistance in turning back mandatory parental leave, minimum health benefits, an increased minimum wage and notification to workers of plant closings.

Sen. Don Nickles, D-Okla., said dealers should be concerned about America's increasing dependence on foreign oil. He predicted that the United States will be using 50 percent imported oil by 1990 and 60 percent by the mid-1990s.

Nickles reminded dealers of the dislocation in the auto industry caused by past energy shortages and suggested that dealers support some type of limitation on oil imports. He predicted that Congress will approve an energy tax of some type as a means of reducing the federal budget deficit.

Above, NADA President James T. Caplinger, right, welcomes U.S. Trade Representative Clayton Yeutter to the opening breakfast at NADA's annual Washington Conference; below, House Ways and Means Committee Chairman Dan Rostenkowski gives delegates the latest view of tax legislation pending before Congress

PICKUPS

FROM PAGE 1

gest the pickups will account for most of the reduction.

Fuji Heavy Industries, the smallest Japanese contender in the pickup segment, will stop all shipments of Subaru pickups to the U.S. market starting in October. There are no plans to introduce a 1988 Brat in the United States.

Subaru's U.S. truck sales have been dwindling steadily. They totaled a mere 66 in August compared to 471 a year earlier.

Japanese makers have suffered sharp losses in the pickup market. For example, Toyota pickup sales of 177,406 for eight months were off 19.2 percent from 1986.

Similarly, Nissan pickup sales of 115,675 were off 24.44 percent. Mazda pickup sales of 92,440 were off 7.57 percent, and Isuzu sales of 30,596 were off 16.84 percent.

Mitsubishi had the only gain in pickup sales among Japanese exporters. Mitsubishi-built pickups sold by Dodge under the Ram 50 name totaled 47,475 during the first eight months, off 1.2 percent from last year. But Mitsubishi Motor Sales of America's pickup sales totaled 24,926, up 39.06 percent.

Despite heavy incentives and marketing competition in the small pickup market, a Mitsubishi spokesman in Japan said the company is still making "a little profit" on its U.S. pickup sales.

Mazda indicated it is "breaking even" on pickup sales, but is encouraged by gains during August and September.

Overall, however, the future of the pickup market for Japanese makers appears to be rather grim.

Yoshihide Kondo, analyst with Daiwa Securities, said the Japanese companies have "lost their competitive edge" due to the high yen, the 25-percent tax and competition from the U.S. Big 3.

While the Japanese are down, year-to-date sales for Ford Ranger are up 16.03 percent; Chevrolet S-10 pickup sales are up 12.87 percent; and Dodge Dakota sales totaled 71,526, up from a mere 1,745 last year when it first went on sale.

The Japanese companies' inability to match continual and heavy incentives by domestic manufacturers may be the final line.

A Mazda spokesman acknowledged that the Japanese companies "cannot compete" against incentives offered by U.S. makers.

The American companies can offer what amounts to a $1,500 incentive, he said, while the Japanese can offer only one-third of that.

Kondo said the prices for Japanese models may already have reached the maximum for U.S. consumers.

If the pickup market has lost its golden glow, other segments may show promise.

Hino Motors has indicated a strong interest in the Class 5 truck market where competition tends to be light.

The Class 7 and 8 market segments also may offer new markets for the Japanese to develop. Kondo indicated that the Japanese companies are interested in creating new markets for themselves there, much as they did with pickup trucks.

Staff Reporter Joseph Bohn in Detroit contributed to this report.

PRODUCTION

5-millionth car built

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Domestic automakers built their five-millionth car of the year last Wednesday, 33 days behind 1986.

So far this year, 5,065,847 cars have been assembled, 11.51 percent below the 5,724,666 built last year at this point.

Last week's targeted auto production totaled 137,936, or 27.43 percent more than the previous holiday week's 108,245, but 6.38 percent below the year-ago week's 147,341.

Automakers shared last week's scheduled production as follows: General Motors, 50.21 percent; Ford Motor Co., 25.83 percent; Chrysler Motors, 15.12 percent; Honda of America Manufacturing Inc., 4.57 percent; New United Motor Manufacturing Inc., 2.39 percent; and Nissan Motor Manufacturing Co. U.S.A., 1.88 percent.

GM's Tarrytown, N.Y., plant remains idle for rebalancing of the line, affecting 4,500 workers. The plant is scheduled to resume operations Sept. 28.

Chrysler's Belvidere, Ill., plant is down this week because of the strike against Chrysler in Canada. About 1,400 workers are affected at Belvidere. Although a tentative agreement was reached in Canada last Thursday, Chrysler was not sure when the Belvidere plant would resume production.

GM announced a two-week extension of the second shift at its Wentzville, Mo., plant. The shift originally was scheduled to be dropped on Oct. 19. A GM spokeswoman said the extension is due to an increase in market demand for the Oldsmobile 98 and Delta 88 and Buick Park Avenue models.

Ford has slated daily overtime this week at all of its car plants except Edison, N.J.; and Kansas City, Mo.

Overtime is slated next Saturday for Ford's Dearborn, Mich., plant.

Truck output rebounds to 71,505

Last week's scheduled domestic truck production of 71,505 was 17.08 percent more than the previous holiday week's 61,076 but 5.46 percent below the year-ago week's 75,638.

General Motors' Pontiac, Mich., and Fort Wayne, Ind., plants were closed last week because of a parts shortage due to a fire at GM's Saginaw Axle plant in Detroit, which supplies parts to both plants.

Overtime was scheduled last Saturday at Ford Motor Co.'s Wayne, Mich., plant.

Ford slated daily overtime this week at all of its truck plants.

Canadian car output increases

Canadian automakers scheduled production of 17,047 cars last week, 39.39 percent more than the previous 12,230 but 27.85 percent below the year-ago week's 23,627.

The prior week's build was reduced by the Labor Day holiday.

Truckmakers targeted 12,519 units to be built last week, 8.92 percent below the previous week's 13,745 and 12.52 percent below the year-ago week's 14,310.

Last week's estimated truck production was affected by a strike that began Sept. 15 at all Chrysler operations except the Brampton, Ontario, plant, which Chrysler acquired when it purchased American Motors. The strike cost Chrysler about 5,500 trucks.

Although Chrysler and the Canadian Auto Workers reached a tentative agreement last Thursday, no date had been set for resumption of production.

General Motors cut production at its Oshawa, Ontario, truck plant last week because of a parts shortage caused by a fire at GM's Saginaw Axle plant in Detroit.

Plastic idea sheds light on Liberty

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — A car shown last week at a small plastics meeting here provided a first glimpse of one route Chrysler Motors is taking in new-car development via its hush-hush Liberty Project.

Liberty is a strategic program aimed at increasing flexibility and speed in product differentiation by sharply reducing model-change costs and leadtimes.

Called a composite intensive vehicle (CIV), the car was displayed by Budd Co. and Chrysler at the Advanced Composites Conference and Exposition. The event was held at the Westin Hotel by the Engineering Society of Detroit and ASM International, formerly the American Society for Metals.

An engineering paper on the vehicle was presented by Stephen Rawe, of Liberty, and Richard B. Freeman, manager of materials at Budd's new Technical Center in Auburn Heights, Mich.

A duplicate of a Dodge Lancer SE, the CIV consists of two sections.

One is a lower "universal platform" of steel, and the other is the cage-like upper section of plastic. That cage is a jointless, hollow-molded one-piece structure.

Advantages would lie in the fact that just a few large pieces of formed plastic with little interior trim could be bonded to universal platforms to create new cars quickly and at costs lower than currently encountered.

Now, platforms sometimes are used, but exterior changes to create new models are made by replacing metal piece by piece.

The CIV's styling-sensitive composite upper portion consists of bonded-together instrument panel module, roof, body sides, front and rear headers and a rear cross-member panel.

The platform includes the engine compartment and a simplified ladder assembly of steel stampings behind the dash panel.

The car's front end is steel to preserve crash-crush characteristics.

The large hollow pieces are made by a proprietary Budd process using low-pressure inflatable bag cores — instead of conventional foam cores — and fiberglass-reinforced resin transfer molding.

"Six molded parts replaced 106 steel parts of a comparable production upper structure," Rawe and Freeman said. "This excellent part integration capability resulted in the CIV being more than competitive in variable cost and less investment intensive than the corresponding steel part."

The developers called the car's design approach "process driven" and referred to needs for smaller facilities, fewer and simpler tools and fewer steps.

"The platform's simplicity allows easy track and wheelbase change with little, if any, investment," they said.

"Future differentiation requirements suggest that unique upper structures would be produced in annual volumes well below 100,000 units," the developers said.

Rawe said elements requiring further study include cost analysis, long-term endurance, impact testing, cycle times, scrap disposal and minimizing impact on existing plants.

Dealers see soft market for '88 cars

By Edward Lapham, Michelle Krebs and Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTERS

The 1988 model year that officially begins this week will be softer and more competitive than 1987 and will be riddled with retail incentives.

That's the prevalent view of domestic-make new-car dealers interviewed last week.

Despite what their factories say, domestic-make dealers generally agreed that the next 12 months will be more difficult, at least for the other guy, and that even dealers who maintain sales volume will find it tougher to make money.

Most General Motors dealers expect the 1988 model year to be the same as 1987 model year. Some are optimistic that their dealership will do better in 1988 than in 1987 or that the division they represent will do better.

GM predicts 1988 model-year sales will be 15.0 million: 10.3 million cars, 4.7 million trucks. That represents a drop from the 15.5 million units that GM estimates for the 1987 model year. However, all of GM's five car divisions have projected a 1988 model-year sales increase.

"We're going to have serious problems with the overabundance of production," said Anthony Ursomarso, owner of Union Park Pontiac-GMC, Wilmington, Del.

"There won't be that many buyers and we won't sell more cars, but there will be more manufacturers trying to sell."

His dealership is investing in its facility — upgrading its Pontiac showroom to attract more young buyers and doubling the size of the body shop to increase business.

Don Bullock, Don Bullock Chevrolet, Rocky Mount, N.C., said

AUTOMOTIVE NEWS/JOE WILSSENS

Lofty goal for Chrysler's newest cars
Chrysler Motors has new upscale models for 1988, and Chrysler Corp. Chairman Lee Iacocca expects them to attract 140,000 to 150,000 buyers during their first year on the market. The newcomers are the Chrysler New Yorker, New Yorker Landau (above) and Dodge Dynasty. **See story, Page 6.**

AD WOES: *NFL strike upsets makers' plans for promoting 1988 cars, trucks*

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

A lengthy strike by the National Football League Players Association could dampen the introduction of new cars and trucks by the nation's automakers, which traditionally use the league's televised games to advertise their new lineups.

The makers' advertising and marketing executives met with their advertising agencies last week to decide whether they would pull the costly, pre-paid advertising spots for NFL broadcasts or advertise on replacement programing including games played by non-union players.

As of midday Friday, Buick, Ford Motor Co. and Chrysler Motors had decided to run their pre-paid ads during replacement programs on ABC, CBS and NBC "at greatly reduced prices." A 30-second ad during a regular NFL game costs $200,000. The reduced prices given to those automakers were not disclosed.

Only Chrysler said it would not advertise on games using non-union players. Both General Motors and Ford said they were undecided about airing ads on games played by non-union players, and two GM officials said their relationship with the UAW — which supports the striking players — is being taken into consideration.

NFL team owners have threatened to use non-union players in place of striking players; however, the networks said Friday they had not decided if they would air those games.

The NFL strike is costly for both the automakers and the networks. If the regular NFL players do not play, automakers could lose exposure for new 1988 models at a time when car sales are already soft.

The television networks could lose millions of pre-paid advertising dollars. Replacement programs — such as movies — do not generate the same advertising revenue as NFL games because the audience is generally smaller and the networks must reduce their prices.

A Detroit-based CBS executive estimated that 20 percent of the network's NFL advertising spots are purchased by automakers. "The strike hurts all the advertisers, but it is particularly tough on the automotive industry since they are anxious to show off their new lineups," said Dick Masilotti, vice president of Detroit sales for CBS Television Network.

Officials from the Big 3 automakers said their contracts do not require them to advertise when programming is changed, and they said they are evaluating which replacement programs can generate the audience closest to that of the NFL games.

"We want the same quantity and quality of audi-

Car output to fall 9% for year

Dip could be more in long GM strike

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Domestic automakers will build 9 percent fewer cars this year than in 1986.

The 7,108,000 cars that U.S. makers are expected to build this year compares to last year's total of 7,829,697.

Automakers scheduled fourth-quarter production at 1,821,502 cars, 4.31 percent below last year's fourth-quarter total of 1,903,517.

However, analysts predicted that fourth-quarter output will wind up even lower than scheduled, with the bulk of the cuts coming from General Motors.

Ronald Glantz, Montgomery Securities analyst, said that if the makers build what they are currently projecting for the fourth quarter, they will end up with about 300,000 units in excess of demand.

"Everyone is overly optimistic heading into the new model year, with Chrysler Motors and GM the most vulnerable," Glantz said.

Glantz expects a three-week to five-week strike against GM. A three-week strike would leave GM with too much inventory, he said.

Thomas O'Grady, Integrated Automotive Resources analyst, agreed that the automakers' fourth quarter forecasts are too high.

"If the industry builds as scheduled, it will have close to an 80-day supply of cars at the end of December," he said. "The norm at the end of the year is considered to be between 68 and 72 days."

Stocks up despite incentives

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Low-interest finance programs have failed — by and large — to blow out domestic car and truck inventories as they did a year ago.

The programs, which end this week, appear to have lost a lot of their steam.

As a result, domestic manufacturers have a large stockpile of 1987 models as they enter the 1988 season, which means more incentives or production cutbacks, or both.

Combined, the Big 3 had an estimated 1.54 million cars in stock on Sept. 20, a 73-day supply, compared to 1.39 million cars a year earlier when sales were much brisker.

General Motors, for example, had stocks of over 875,000 cars on Sept. 20, up from approximately 800,000 a year ago.

Stocks include units on dealer lots as well as those in transit to dealers.

Chevrolet's estimated stock of approximately 380,000 cars is 95,000 higher than a year ago. Its estimated 290,000 trucks is about 30,000 more.

GMC's estimated stock of about 95,000 trucks is roughly 20,000 higher than 1986.

Ford Division's car stocks were estimated at about 250,000, up 30,000 from last year, although Ford's truck stock was estimated at 260,000 units, down roughly 12,000 from last year.

Chrysler's inventory, including Eagles, is approximately 25,000 more than 1986. Truck inventory of 190,000, including Jeep, is up about 15,000 from last year.

Jeep accounted for about 55,000 units, down about 5,000 from a year ago. Dodge truck inventories of about 135,000 are up about 20,000 from a year ago.

Part of that is due to added production capacity in extended-wheelbase Caravans and Voyagers, which weren't in production last year.

Proton arrival pushed back; volume slashed

By Stephen Vines
SPECIAL CORRESPONDENT

HONG KONG — Plans to export Malaysia's Proton Saga car to the United States have been delayed several months and the volume of planned imports has been slashed significantly.

A Proton official in Malaysia, who asked to remain anonymous, said that it will not be possible to start shipping cars to the United States until the fourth quarter of 1988. The first shipments will be modest in size, building up to a planned export of 20,000 cars the following year, the official added.

However, in New York, William

Honda's new two-door Accord coupe will be built in Ohio and exported to Japan

SUB-CIVIC

Honda developing entry-level U.S. car

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPOVTER

LAS VEGAS, Nev. — As a bigger, more expensive 1988 Civic debuts, Honda Motor Co. is already developing a smaller model for the 1990s that would become Honda's entry-level U.S. car, positioned below Civic.

Honda acknowledged the development program within its research and development subsidiary, but said the project has not achieved corporate approval or even consensus among product planners and senior executives.

Honda North America President Tetsuo Chino has become the program's champion.

"We need a new entry-level car in the U.S. because of Civic's evolution," Chino said in an interview after a press introduction here. The new Civic is the size of the first-generation Accord. "There is a vacuum below Civic, so we have asked r&d to develop a new entry-level model."

The car is in the earliest stages of Honda's dual-track development system and is unlikely to debut before 1991. Honda's development lead time is currently three years and several months, said Nobuhiko Kawamoto, president of Honda R&D Co. Ltd., Saitama, Japan. Chino noted that r&d already is very busy developing new Acura division products in addition to developing successors for existing products for the United States and Japan.

Honda's growing U.S. manufacturing complex in Ohio is the leading candidate to produce the sub-Civic model, although Japan or Canada would be considered despite capacity constraints at both locations.

The Ohio plant already has been selected to be the exclusive factory for the 1988½ Accord two-door coupe. Two models will be offered; the car is expected to bow in February. The new coupe will be the first vehicle built by a Japanese company in the United States to be exported to Japan for sale.

As for the sub-Civic model, cost is Honda's biggest stumbling block. Because the City and Today models sold in Japan are considered unsuitable for the U.S. market, any sub-Civic model would have to generate here most or all of the sales volume necessary to achieve profitability, Chino said. But he said he also believes other world markets exist for it.

AUTOMOTIVE PRESS SERVICE PHOTOS

Short trunk lid and new roof treatment

Unless the development project is combined with a City replacement, about two years away, a below-Civic model would need minimum 100,000 annual volume to be worthwhile, Kawamoto said.

Chino believes Honda needs to protect its low-price heritage against new low-end import competition. An entry-level Honda creates owners loyal to Honda over the long haul, especially important now that the company has established its upscale Acura division with prices into the mid-$20,000s, he said.

The 1988 Civic, which ranges from $6,095 to $9,675 in base price, is the perfect entry-level U.S. car, said Yoshihide Munekuni, president of American Honda Motor Co.

"We do need a product under $6,000, but that is not the big part of the entry-level market," Munekuni said. "The heart of that market is in the $6,000 to $8,000 range. That is where we have to succeed."

Chino said dealers have supported a below-Civic entry for several years, since the last generation Civic was introduced.

But the depth of dealer demand is questioned by Honda management. If Honda approves a below-Civic entry, it will be because the company believes it is necessary, not because of dealer demand, Kawamoto said.

Thursday is strike deadline, union tells Ford of Canada

By Alex Law
SPECIAL CORRESPONDENT

TORONTO — The Canadian Auto Workers will strike Ford Motor Co. of Canada at 10 a.m. Thursday unless an agreement is reached that guarantees partly indexed pensions for the firm's 13,000 current workers.

That was the unequivocal message delivered by CAW President Bob White to Ford officials in Toronto last week, where a new three-year agreement is being negotiated.

White was adamant that the workers would walk off the job on that date unless a contract is reached that is similar to the one that was ratified by an overwhelming margin by Chrysler Canada workers.

"We won't walk away from here without the pattern settlement. We expect no less," White said.

He also said there would be no extensions, unlike the situation in the United States under which an agreement was reached between Ford Motor Co. and the UAW.

Donald McKenzie, Ford's chief negotiator, did not attend the meeting with the CAW because of his father's death, but company spokesman Jim Hartford said he thought the deadline date was "quite reasonable."

He said the company was reviewing the Chrysler agreement to see how it would apply at Ford.

Members of the CAW work at nine Ford plants and offices in five Ontario cities — Oakville, Windsor, St. Thomas, Niagara Falls and Brompton. A strike in Canada would have a quick effect in the United States because plants in Windsor supply engines for Ford truck assembly plants in Lorain, Ohio; Kansas City, Mo.; Norfolk, Va.; and Wayne, Mich. Windsor casting operations supply parts for engine plants in Lima, Ohio; Cleveland; and Dearborn, Mich., plants.

In addition, the following vehicles are produced in Canada for the U.S. market: Ford Escort, Tempo and Crown Victoria; Mercury Topaz and Grand Marquis; and Ford light-duty trucks.

Chrysler workers struck for seven days (five of which were work days) to get a six-year indexing formula for future retirees and a three-year contract on wages and other benefits. The agreement also included increased benefits for present retirees.

"There's no reason for a strike here. We have good labor relations with Ford, and we have established a pattern with Chrysler," White said.

In response to reporters' questions, White said he would ask Ford of Canada to explain the contract its parent firm has with the UAW.

There have been reports that the guarantee-of-jobs arrangement in that contract puts Canadian jobs at risk. White said that if Canadian jobs are threatened by the U.S. agreement, he would negotiate for their protection.

After it comes to terms with Ford, the CAW will turn its attention to General Motors of Canada. GM has about 38,000 workers at 13 plants in Oshawa, Windsor, St. Catharines, Scarborough and London (all in Ontario) and at St. Therese and St. Eustache in Quebec.

REGAL: *First GM10 car better equipped, but price increases 4% to 8%*

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Buick announced that the base price on its all-new Regal is 7.7 percent higher on the Custom model and 3.9 percent higher on the Limited than the 1987 versions of the Regal.

Buick said the Manufacturers Suggested Retail Price for the Regal Custom is $12,449, or $887 higher than the 1987 model, and the Limited is $12,782, or $479 above the 1987 price.

However, Buick General Manager Edward H. Mertz said that the new Regal includes a long list of standard equipment that the 1987 Regal did not have, including automatic transmission with overdrive and four-wheel, power-assisted disc brakes.

When the new Regal is equipped with the options most people would order, Mertz said the Regal Custom would be only $298 more than its 1987 counterpart, and the Regal Limited would be $185 less than the old Regal Limited.

Based on Buick's figures, the 1988 Regal Custom would cost $13,809, if ordered with the most popular options, compared with $13,511 on the 1987 model. The Regal Limited would cost $14,567, compared with $14,752.

The Regal, the first of the GM10 front-wheel-drive mid-sized cars to be introduced, will go head-to-head with the Ford Thunderbird and Mercury Cougar, Ford Taurus and Mercury Sable and Chrysler LeBaron. Only tentative prices have been announced on those models.

The new Oldsmobile Cutlass Supreme and the Pontiac Grand Prix, also part of the GM10 family, are expected to see base-price increases similar to the Regal when they are introduced in the spring.

Subaru stock price declines to 52-week low

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — The impact of Subaru of America's third-quarter losses are being felt in the stock market as the company hit a 52-week low in trading last week.

Some analysts believe there is no near-term solution to the company's problems. One said he expected the stock price to reach single-digit figures before there is a turnaround.

Last week, Subaru traded at a 52-week low of $10.25 a share compared with a price of $27.24 a year ago. Since the company announced a $49.8 million third-quarter loss on Aug. 27, the stock has declined from $12.13 a share.

The National Association of Securities Dealers reported that on Sept. 15, more than 750,000 of Subaru's 49 million shares had been sold short in the preceding month. In a short sale, an investor bets that a stock price will decline. It is sold in anticipation of buying it back later at a lower price.

Ann Knight, analyst for Paine Webber, said the report of the loss is catching up with the company in the market. She said she sees no short-term solution to the problem. Most of the factors affecting the company are "out of Subaru's control," she added.

Knight has previously described Subaru's situation as being squeezed from two directions. The manufacturer, Fuji Heavy Industries in Japan, has tried to move upscale to recoup production costs and to offset the effects of a declining dollar against the yen. But the market will not accept higher-priced Subaru cars.

Subaru President Thomas Gibson outlined recently (Automotive News, Sept.7) the actions the company is taking to place the company in a better position next year, including reducing monthly shipments for the next three months and shifting the mix to less-expensive models.

However, even with the reduction in shipments, Subaru intends to meet its quota, Gibson said.

However, analysts continue to predict a fourth-quarter loss for the company. Daniel Dalton, director of investor relations for Subaru, said that over the past year, changes in exchange rates have had an impact on earnings. And the decline in earnings has an impact on the stock prices, he said. The quarterly loss is being reflected in the market now, he said.

While the company enjoyed record August sales of 17,745 cars, he said that the continuing impact of the loss is being felt.

Joseph Phillippi, analyst for E.F. Hutton, was more pessimistic. He projected another loss in the fourth quarter as well as a "tough first half" for the company.

It was Phillippi who predicted the company would hit single-digit stock prices before it turns around.

While terming the projected fourth-quarter results as "pretty grim," he said he believed they would not be as bad as the third quarter.

Dalton said, "We need to demonstrate less of a loss and a turnaround in the financial picture" to have the stock show positive movement.

Dalton said the company views the current situation as temporary and expects next year to be a turnaround period.

Next year's moves include adjusting the model mix. Subaru wants to start next year with a model mix of 55 percent of its cars under $10,000 — which was not the case for 1987.

Imports top mpg list; Chevy Sprint is leader

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The Chevrolet Sprint Metro, a subcompact weighing 1,875 pounds, has the highest EPA mileage ranking for the second consecutive year.

The 1988 Suzuki-made vehicle, with a five-speed manual transmission, gets 54 mpg in the city and 58 mpg on the highway — the same numbers achieved by the 1987 Sprint ER.

The worst gas guzzler, according to the EPA, is the 1988 Lamborghini Countach, which gets 6 mpg in the city and 10 mpg on the highway. The gas-guzzler tax on that car is $3,850.

Other high-mileage vehicles, all with five-speed manual transmissions, include:

- Honda Civic CRX HF, 50 mpg city, 56 mpg highway. The car has a shift indicator light, which improves gas mileage.
- Honda Civic CRX HF, 45 mpg city, 53 mpg highway. It does not have the shift indicator light.
- Pontiac Firefly, Suzuki Forsa and another Chevrolet Sprint, 44 mpg city, 49 mpg highway. The Firefly is sold in Canada and Puerto Rico; the Forsa is sold in Puerto Rico and Hawaii.
- Ford Festiva, 39 mpg city and 42 mpg highway.
- Daihatsu Charade, 38 mpg city and 42 mpg highway.

Next in line are four cars that tied at 38 mpg city and 40 mpg highway. They are: a Ford Festiva with four-speed manual transmission and a Pontiac Firefly, Suzuki Forsa and Chevrolet Sprint, all with three-speed automatics.

The EPA data comes from emission-certification results submitted by automakers from early prototype models tested under controlled laboratory conditions. But EPA confirms about 30 percent of the data at its Ann Arbor, Mich., laboratory.

In releasing the data on 1988 models, EPA stressed that about 51 percent of the cars have a multipoint fuel-injection system that permits very precise fuel-metering over a wide range of operating conditions. About 83 percent of the models have fuel injection.

EPA is no longer providing a list of the domestic models with top fuel economy. The agency said that there is a growing tendency to produce cars in the United States through joint ventures between domestic and foreign firms. Many of those vehicles are perceived to be "domestic" even though they do not meet the domestic-content requirements required under the fuel economy law.

Dealer pact is revised by Peugeot

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Peugeot Motors of America has sent a new franchise agreement to its dealers. It marks the first major revision in the agreement in 15 years.

William Kelly, Peugeot general sales manager, said the new agreement was rewritten with the cooperation of an ad hoc committee of the Peugeot Dealer Council and the advice of the National Automobile Dealers Association.

It takes into account changes in policy at Peugeot as well as changes in the laws governing the sale of motor vehicles in the United States, Kelly said.

Like the old agreement, the new franchise is perpetual. "We don't refranchise every year," Kelly said.

Several key issues have been addressed. Kelly said procedures for dealing with lemon laws and recalls have been included.

For recalls, if there is a substantial delay in supplying parts for cars in dealer inventory, the dealer can obtain floorplanning relief. In extreme cases, he has "putback," or reimbursement, rights.

In the future, Peugeot will immediately credit dealer accounts for transportation damages.

Kelly said dealers wanted to service gray-market vehicles. He said the agreement permits that, provided customers are made aware of the fact that Peugeot Motors of America is not under obligation to warrant the cars.

Under the new agreement, the time for record retention has been reduced from three years to two years, Kelly said.

The dealer development plan, instituted by Peugeot last year, becomes part of the agreement. The plan sets minimum standards in sales, service and parts, including training. A minimum customer satisfaction index also is established.

The standards for the year are established by dealers and Peugeot Motors of America in individual meetings. Dealers will sign the new franchise agreements at the meetings, which are scheduled to begin in October, Kelly said.

Bob Lewis, president of the Peugeot Dealer Council, said the council contributed to the new agreement. He also said NADA was very helpful.

Lewis termed the agreement "nothing earth-shattering" and said that there was give and take on both sides — Peugeot and the council.

He said that signing the agreement was up to the individual dealers, but he said he believed that Peugeot has tried to write a franchise that is fair to both parties.

Poland, Fiat sign deal for '91 small-car output

TURIN — Fiat Auto officials have signed a $500 million contract with Poland's Pol Mot trade organization for a new small car to be built in Poland, beginning in 1991.

The new model, to replace the Fiat 126, will be built by FSM and sold in western Europe by Fiat dealers. Output is expected to reach 160,000 a year by 1995.

There is still no confirmation of whether Fiat or Japan's Daihatsu has the contract to build medium-sized cars in Poland with FSO.

Volvo's futuristic center

Visitors rub their eyes in disbelief. Not just because of the space-age architecture, but mostly at the sight of the unlikely combination of IBM and Digital computers, interlinked and working in harmony on Volvo passenger-car development projects in Gothenburg, Sweden.

Called the CAE (computer-aided engineering) Application Centre, one of its objectives is to cut Volvo's product-development lead time by 25 percent from concept to job-one assembly. (See related story on page 39.)

The CAE Application Centre encompasses all Volvo operations from product development to marketing.

All Volvo computing systems are simulated in four areas, called quadrants. They include product development, production, commercial systems and futuristic-idea development. The fourth quadrant also includes projects which do not fall naturally into one of the other quadrants.

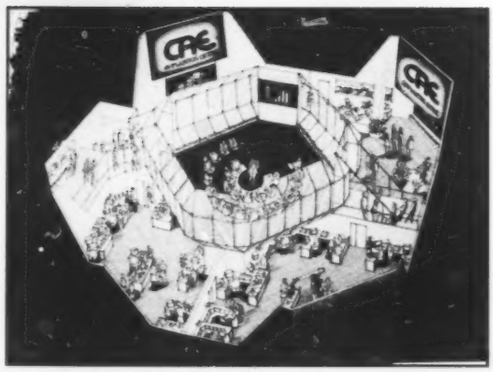
A major use of the quadrant system is checking out new equipment and techniques — including simulated trial runs of processes and products — without interrupting vehicle production.

Swedish Telecom has the job of linking together the various computers and terminals within and between the quadrants, and to the outside world. It does this by using a wide-band network.

Two channels currently are being used to test standardized manufacturing automation protocol (MAP), which is expected to be adopted industry-wide by auto manufacturers in the early 1990s.

Also being investigated and tested is technical office protocol (TOP), which involves handling engineering drawings and documents.

The CAE Application Centre also is used to hold global video conferences via remote-controlled cameras.



Artist's rendering of Volvo's CAE Application Centre shows how computing systems are simulated in four areas, called "quadrants."

For example, during a meeting between engineers in Sweden and another part of the world, pictures from a camera located in one of Volvo's robot laboratories can be switched in to permit a manufacturing process to be visualized and studied.

Among hundreds of research projects under way is Odette, which involves transferring administrative information between vehicle manufacturers and component suppliers. Its format has been agreed on by all European automakers, and pilot tests are under way. ■

WORLD NEWS BRIEFS

Volvo taps Kuilman

Martin Kuilman, 61, has been appointed chairman of the supervisory board of Volvo Car BV in the Netherlands. Kuilman, vice-president and vice-chairman of the board of management of N.V. Philips' Gloeilampenfabrieken, succeeds the late Wim Bogers, who had served as Volvo BV chairman for the last six years.

New engine for Opel

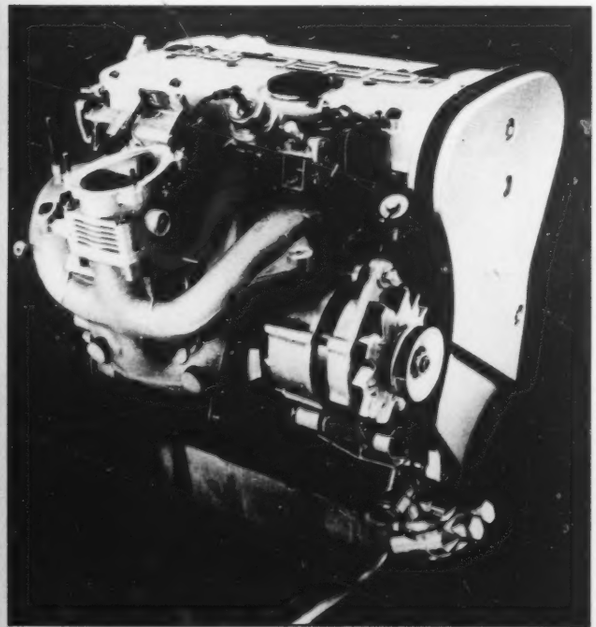
Adam Opel AG next spring will unveil a special version of the Kadett GSi, equipped with a brand-new 150-horsepower 2.0-liter 16-valve 4-cylinder engine (pictured below), featuring Bosch-Motronic fuel injection. The new engine, which made its debut earlier this month at the Frankfurt auto show, is said to propel the GSi 16V from 0-60 mph in about 7.8 seconds.

RVI finally sees black

Renault Vehicules Industriels, the French government-owned truck manufacturer, has emerged from the red for the first time since it was formed through the merger of two French commercial vehicle makers 13 years ago. RVI achieved a consolidated net profit of 30 million francs ($5 million) in the first half of 1987, and RVI chairman Philippe Gras said the unit will finish the year in the black. The improvement reflects an 80-million franc profit in the first half by Mack Truck, RVI's U.S. subsidiary. RVI lost 50 million francs during the period, compared to a loss of 460 million francs in the first half of 1986. Gras said both RVI and Mack will be profitable in the second half. Control of Mack transferred from the parent company, Renault, to RVI earlier this year. RVI was created in 1974 by the merger of Saviem and Berliet in France.

Perkins links with Bus

Perkins Engines and Bus Engineering Ltd., a wholly owned subsidiary of London Regional Transport, have agreed in principle on a joint venture to assemble Gardner diesel engines at a Bus plant in London. The joint venture would build some 1,000 Gardner engines for bus, coach, marine and truck applications during the first year of operation. The engines would continue to be sold and marketed by Gardner, which is part of the Perkins Engines Group.



Opel's new 2.0-liter 16-valve engine will appear in Kadett GSi next spring.

Africa gets MAN trucks

Lonhro, the British-based trading company, will market MAN heavy trucks to several African countries through a barter arrangement. Lonhro, MAN's importer in the U.K., will supply up to 100 West German-built trucks to Uganda, Kenya, Tanzania and Zambia in exchange for agricultural products.

Rover sells Indian stakes

The British government-owned Rover Group has put up for sale its 40 percent stake in Ashok Leyland, India's second-largest truck and bus maker, and its 50-percent holding in Ennore Foundries, a components maker in India. Ashok Leyland produces about 6,000 vehicles annually. Earlier this year, Rover sold its Leyland Trucks and Freight Rover units to Leyland-Daf, a new joint company owned by the Dutch truck manufacturer.

Jaguar's German expansion

Jaguar has formed a leasing joint venture in West Germany between the automaker's local sales unit and Lombard North Central, the financing arm of the National Westminster Bank in London. The newly formed Jaguar Leasing GmbH will market cars through Jaguar's approximately 100 dealers in West Germany. The British luxury-car maker expects to sell about 2,500 cars in Germany this year.

Thailand prefers Daimler

Thailand has placed an order with Daimler-Benz AG for 1,800 1¼-ton four-wheel drive military trucks. The deal is worth 250 million German marks ($139 million). Deliveries are scheduled to start by the end of the year.

Export drive pays off

Austin Rover, passenger-car unit of Britain's state-owned Rover Group, more than doubled its revenue from export sales during the first half of 1987 to 350 million British pounds ($560 million). Exports increased 15 percent to more than 70,000 cars, including 6,381 Sterlings sold in the U.S. since the car's mid-February launch. Austin Rover's largest export market is France, with first-half sales of more than 18,000.

Nissan financial moves

Nissan will set up three financial subsidiaries in Europe. The Japanese automaker plans to establish Nissan Motor Acceptance Corp. (Netherlands) to provide consumer car loans and other financing to customers and dealers. The unit is expected to begin operations by the end of the year. By the end of this month, London-based Nissan International Finance (Europe) Ltd. and Nissan International Finance (Netherlands) BV will have been formed. Both entities will issue commercial paper to investors.

Nissan snags land

Nissan has exercised its option to acquire the full 736-acre site in Washington, England, where it began production of Nissan Bluebirds last year. Nissan Motor Manufacturing (U.K.) has been occupying just under 300 acres of the site. Nissan previously announced plans to increase production substantially in Washington by the early 1990s.

GKN posts loss

GKN, the British automotive components and engineering giant, has reported a 10-percent drop in pre-tax profits to 67 million British pounds ($107 million) in the first half of 1987. GKN said earnings were affected by lower prices in its auto parts business in the United States.

Saab-Scania honors 3 researchers

STOCKHOLM, Sweden — At a ceremony here in historic City Hall, where the Nobel Prize is awarded, King Carl XVI Gustaf of Sweden recently presented the first Saab-Scania Prize to three auto industry researchers.

One German and two Swedish engineers shared the prize for their seperate work in development of emission control equipment and refinements to the turbocharged engine.

Saab-Scania initiated the new biennial award to recognize technical achievements in areas related to the Swedish manufacturer's automotive and aerospace operations.

"We like to look on ourselves as a technically oriented company," said Saab-Scania president Georg Karnsund. "This is very much according to the philosophy of this company to recognize important things."

Karnsund said the contest and its 250,000 krona ($40,000) cash value will be open to technical innovators around the world, not just Saab-Scania employees.

The first Saab-Scania Prize was shared by Gunther Baumann of Robert Bosch GmbH of West Germany and Bengt Gadefelt and Per Gillbrand of Saab-Scania.

CLAS GORAN CARLSSON

Left to right: King Carl XVI Gustaf; Baumann; Gadefelt; Gillbrand.

In the early 1970s, Baumann headed a research team involved in development of a control system that was a prerequisite for the three-way catalytic converter technique used worldwide for cleaning exhaust emissions.

Development of the system took on enormous significance at the time because of the adoption of strict new auto emissions regulations in the U.S.

Volvo in 1976 became the first car manufacturer to introduce the Bosch system in the U.S., with Saab following a few months later. Large-scale production of the system began in 1980.

Baumann, 57, has been head of Bosch's central research department since 1982. His share of the prize was 125,000 krona.

Gadefelt was honored for being among the leaders in the development of Saab's turbocharged engine. Introduced in 1977 on a version of the Saab 99, the Saab turbo touched off a worldwide automotive trend.

Gillbrand was also recognized for his contributions to Saab's turbocharging research and for his key involvement in the turbo engine's Automatic Performance Control (APC), a patented system which enables the turbo engine to perform optimally without prior adjustment when using fuels of various octane levels. The APC complement to the Saab turbo has been in serial production since 1981.

Gadefelt, 53, is now head of the engine design sector of the Scania Div. Gillbrand, 53, is head of engine experiments at the Scania Div. The two men each received 62,500 krona as their share of the cash award. ■

Vehicle Production in Japan

	7 mos., 1987	7 mos., 1986	% change

AUCTION BRIEFS

Chrysler Motors Fleet Operations presented **Joe Maltese,** president of Aptco Auto Auction in Detroit, with an award for being the leading auto auction in nationwide dollar volume of Chrysler vehicles in 1986. Aptco sold 5,020 Chrysler corporate fleet vehicles in 1986 for a gross total of $45,786,375. Aptco is a subsidiary of Anglo American Auto Auctions Inc.

The Greater Twin Cities Collector Car Auction, featuring 250 cars valued at about $5 million, will be held Oct. 17 at the Minnesota State Fair Grounds in St. Paul, Minn. The auction will be conducted by Indiana-based Kruse International. Early entries include a 1929 Ford Model A roadster with a rumble seat, a 1957 Chevrolet Bel Air convertible and a 1956 Ford Thunderbird.

Anglo American Auto Auctions Inc., Nashville, Tenn., has named **Mike Franklin,** of Nashville Auto Auctions Inc., fleet-lease manager of the year. Franklin, who is fleet-lease manager and assistant general manager of the Nashville auction, won the award for his consistently high performance throughout the year. Nashville Auto Auctions is a subsidiary of Anglo American Auto Auctions Inc.

Greater Miami Auto Auction Inc., Miami, named Michael A. Penn president. Penn had been employed by Sun Chevrolet Inc., Miami.

Indiana-based Kruse International will sponsor the fourth annual **Ozarks Auto Show Auction** Oct. 31-Nov. 1 at the Ozarks Auto Show museum in Branson, Mo. The show will feature a restored 1930 Duesenberg LaGrande Phaeton. Other classic cars at the show will include a 1902 Oldsmobile, a 1941 Packard 110 Deluxe convertible, a 1936 Cord Model 810 Westchester and a 1967 Ferrari 330 GT 2+2.

Anglo American in limo market

2nd auction is this week; Chicago's Arena expects 150 cars

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Arena Auto Auction Inc. will break new ground in the Chicago area Oct. 2 when more than 150 limousines go on the block.

The auction hopes to find a market for limousines among Chicago-area livery services, hotels, dealers and funeral directors.

"Ninety-nine percent of the trade will be among dealers and airport livery and limo services," said Mike Eggleston, manager of Arena Auto Auction.

But he also said there could be a narrow market for the hybrid vehicles among Chicago-area funeral homes.

This will be the second auction in the nation devoted exclusively to the sale of limousines — the first was held July 17 at the Baltimore-Washington Auto Exchange Inc. in Maryland.

Limousine auctions are being promoted by Anglo American Auto Auctions Inc., Nashville, Tenn., which also has expanded into heavy-truck auctions in recent months. It also plans a boat auction. Arena Auto Auction and Baltimore-Washington Auto Exchange are part of the Anglo American network.

Michael J. Richardson, president of Anglo American, said "the limousine market is maturing and presently there is not a fully developed market with price guides and monitoring. We hope to develop that in the future."

But the introduction of limousines into Anglo's chain of auctions poses several challenges to the company's auction managers. Among them are determining prices for limousines and identifying exactly who might buy them.

"We didn't know who would come to the auction for a limousine sale," said Bud Burdge, manager of the Baltimore-Washington Auto Exchange. "The first customers who came to mind were hotels, livery companies and funeral directors." Most of the customers who came were dealers, but after the auction he received calls from hotel representatives.

Although Burdge was encouraged by the results of the sale, he said other problems included estimating prices for the vehicles and determining what bids owners would accept for the vehicles.

For example, when a 1982 Rolls-Royce went on the auction block, the final bid was $35,000 or roughly the price Burdge expected it would bring. However, it turned out the seller wanted $50,000.

"I think the owner was just getting a feel for what it was worth," Burdge said. "The main thing was that we got a lot of curiosity seekers in to see what a limousine could do at an auction."

Seventy limousines went through the auction and 18 were sold. Average selling price was $15,500. Seventy-five dealers attended along with 36 sellers and 15 buyers.

A seller rejected a $1,000 bid for a 1965 Lincoln, and a 1985 Mercedes limousine drew the top selling price of $23,000. The majority of the vehicles were stretched Lincoln Town Cars but there also were custom-extended Cadillacs, Chrysler LeBarons and Pontiac 6000 models. Mileage ranged from 20,000 to more than 100,000.

Limousines for the Chicago sale will be consigned from corporate fleets, manufacturers, financial institutions, leasing and rental companies and dealers.

Burdge said most limousines had reserve bids of $9,000 to $10,000 for the Maryland auction.

The Chicago sale will be open to the public and dealers.

Lansing auction to sell GSA units

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

For the first time, the federal government is relying on a private contractor to sell its vehicles.

Greater Lansing Auto Auction Corp., Lansing, Mich., signed a three-year agreement with the U.S. General Services Administration to dispose of its vehicles. The first public auction will offer 650 1981-84 cars and trucks and will be held Oct. 10.

"We are in the midst of a three-year replacement cycle and needed somewhere to sell a lot of cars in a hurry," said Gene Hatfield, GSA deputy director of fleet services.

The GSA employs its own auctioneers but decided to contract with a private company because of the large number of cars it has to unload.

Greater Lansing Auto Auction will be paid a flat rate of $103 per vehicle sold and $97.50 each for reconditioning, storage and transportation, according to Gary Bender, vice president — fleet and lease group. There will be no fee for buyers, and all vehicles will have a minimum bid.

Hatfield said this is the first time the GSA has sold vehicles through a private auction. Cars and trucks will come from five states — Michigan, Wisconsin, Minnesota, Illinois and Ohio.

A broad range of makes and models will be auctioned including Plymouth Reliant; Chevrolet Citation, Celebrity and Beauville vans; and Ford Bronco.

Vehicles all have between 50,000 and 60,000 miles, Hatfield said. Government agencies selling the vehicles include the military, Federal Aviation Administration, Department of Agriculture, National Weather Service and Housing and Urban Development.

Vehicles do not carry any government identification.

"The federal government stopped putting insignias on painted surfaces several years ago to reduce vandalism of its cars," Hatfield said.

Bender said early response to the sale by dealers has been positive even though it will be a public sale. The Greater Lansing Auto Auction is normally a dealer-only sale.

"We felt it would be a good way to expose the general public to another market," Bender said. "The buying public is not used to buying cars through auctions."

AUCTION DATES

Sales famine continues; mid-September down 45%

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Despite the approaching conclusion of the Big 3's consumer rebates and 1.9 percent financing, mid-September domestic-car sales declined 45.14 percent from a year ago. Most of the incentives are due to die this week.

Only Nissan and Honda reported gains, and Honda's was only three units.

Sales for the Sept. 11-20 period slumped to 161,633 compared with a record 294,641 last year.

There were eight selling days in the period this year and nine last year. The mid-month daily selling rate dipped to 20,204, down 38.29 percent from an average of 32,738 in 1986.

Mid-September's sales decline was not as steep as early-September's 51.85 percent dropoff. For the first 20 days of September, sales were down 48.87 percent — 339,145 this year and 663,321 in 1986.

The Big 3 automakers reported sales declines of 39 percent to 57 percent in mid-September compared to a year ago. Ford Motor Co.'s retail deliveries were down 38.84 percent to 47,228 from 77,224 last year.

General Motors sold 79,675 cars in the period compared to 157,534 a year ago for a drop of 49.42 percent. The dip was less severe than in early September when GM sales plummeted 60.79 percent from the year-ago period.

DOMESTIC SALES

	Sept. 11-20, 1987	Sept. 11-20, 1986
Eagle	550	2,580
Chrysler	7,836	16,458
Plymouth	5,964	12,684
Dodge	7,360	18,524
Chrysler Motors	21,710	50,246
Ford	31,053	51,391
Mercury	12,105	18,888
Lincoln	4,070	6,945
Ford Motor Co.	47,228	77,224
Buick	15,000	23,018
Cadillac	6,107	13,492
Chevrolet	30,895	53,392
Oldsmobile	15,148	39,952
Pontiac	12,525	27,680
General Motors	79,675	157,534
Volkswagen	1,281	2,092
Honda	5,553	5,550
Nissan	3,313	1,995
Toyota	2,873	0
U.S. Industry Total	161,633	294,641

Chrysler Motors' sales were off 56.79 percent. Chrysler dealers delivered 21,710 cars from Sept. 11-20 compared to 50,246 in 1986. Last year, Chrysler reported that mid-September sales, including imports, set a record for any mid-month period in its history.

Nissan reported a 66.07 percent gain in sales for mid-September with 3,313 vs. 1,995 a year ago. Honda's figures were 5,553 for the period compared with 5,550 last year. Volkswagen's sales of 1,281 were down 38.77 percent from 2,092 in 1986. Toyota's total was 2,873; it was not selling U.S.-built cars at this time last year.

OUTPUT

FROM PAGE 1

O'Grady also agreed that GM will most likely be struck for a minimum of two weeks but, more likely, closer to a month. The strike would trim some units off GM's schedule but the carmaker may also have to make some production cuts in the fourth quarter, he added.

GM's fourth-quarter schedule calls for 887,350 cars 9.16 percent below the year-ago period's 976,803.

Michael Luckey, Shearson Lehman Brothers analyst, said GM's production schedule seems too aggressive. Assuming GM's estimate, it will have about a 100-day supply on Dec. 31, he said.

A strike against GM seems highly likely and could prove to be lengthy — probably one month, he said. GM may not mind taking a strike to get a better contract while trimming its inventory, he said.

Luckey said Chrysler's fourth-quarter forecast also appears to be too aggressive. Chrysler's car sales have slowed down in the last couple of months, he said. Assuming its market share rebounds in the fourth quarter because of sales of the Omni/Horizon America and Aries/Reliant America models, Luckey is predicting that Chrysler will end the year with about a 110-day supply of cars.

Chrysler's forecast of 303,000 cars for the fourth quarter is down 2.48 percent from the year-ago quarter's 310,715. Chrysler numbers include those of its Jeep-Eagle Division and its predecessor, American Motors.

Ford Motor Co. boosted its fourth-quarter schedule 8.43 percent to 474,000 compared to the year-ago period's 437,136.

Honda of America Manufacturing plans to build 77,420 cars in the fourth quarter, almost unchanged from the 77,095 built during the same period of 1986.

Volkswagen of America expects to assemble 22,000 units in the fourth quarter, 5.11 percent more than the 20,930 built during the same time last year.

Nissan Motor Manufacturing Co. U.S.A. projects that 15,232 cars will be built in the quarter, 54.58 percent below the 33,539 assembled in the fourth quarter of 1986. The decrease is due to the company's plan to start building more trucks and fewer cars at its plant in Smyrna, Tenn.

New United Motor Manufacturing Inc. scheduled 42,500 units for the fourth quarter, 10.15 percent below the 47,299 completed in the same quarter of 1986.

Mazda Motor Manufacturing, which recently began building cars in Flat Rock, Mich., was not able to estimate its fourth quarter build.

FOURTH QUARTER AUTO PRODUCTION
1987 forecast vs. 1986 actual

FOOTBALL

FROM PAGE 1

ence we anticipated when we signed up for the NFL games," a Ford spokesman said.

"We presume that the ratings would be lower for games played with substitute players and we will work with the networks for alternatives if it becomes necessary," he said.

"The value of advertising on the Detroit Lions vs. the Chicago Bears, and the value of advertising on the Cookie Monsters vs. some other non-descript team is not the same," said a Chrysler spokesman.

Since most of the available slots for advertising on the networks have been purchased, automakers may have to buy out other advertisers on programs at premium prices or wait until there is advertising time available later. The latter is less desirable since automakers are anxious to tout their new models now to get buyers in showrooms.

Of all the GM divisions, Buick could feel the effects of the NFL strike the most since it is the only GM division that is introducing an all-new model this fall. Buick will introduce its 1988 Regal, the first product to come out of GM's $5 billion GM10 program, on Thursday.

Jay Qualman, Buick general director of advertising, said the NFL games were "a major part of the promotion of the Regal," but he said he did not expect the strike to affect sales.

"If the strike lasts a month, it could adversely affect advertisement on the Regal by 5 to 10 percent" if Buick chooses to shift its money to other shows later in the model year, he said.

Buick is set to launch its Regal television advertising campaign tonight during ABC's broadcast of the movie "Star Trek III," which replaces "Monday Night Football."

Qualman said approximately 10 percent of Buick's total television budget has been set aside for advertising spots on NFL games.

Other GM divisions, such as Chevrolet and Cadillac, were said to be looking at contingency plans for their NFL ads.

Toyota, another big NFL advertising sponsor, is planning to launch its 1988 television advertising campaign Oct. 22 during an NFL game on CBS. A Toyota spokesman said it is too soon to say what the company will do if the NFL players are still striking at that time.

RENAULT

FROM PAGE 2

would conduct a third investigation into state aid provided to Renault over the past three years.

Renault received from the state, its sole shareholder, some 10 billion French francs ($1.65 billion) in fresh capital between 1985 and 1987.

Two days later, Madelin announced a plan to modify Renault's extraordinary statutes so that it would become a company "like the others."

Renault's current statutes, which date back to nationalization by General Charles de Gaulle in 1945, are such that the company cannot go bankrupt, even though its balance sheet is currently negative to the tune of 16.4 billion francs ($2.7 billion).

But, before the government can give Renault the legal statutes of a normal private or nationalized company, it must restructure the group's balance sheet. It would not technically be possible to launch a new "Renault Motor Co. Inc." with a negative equity — not to mention some 54 billion francs in ($8.9 billion) debts.

The government has not given an explanation of its plan. But at the Frankfurt auto show earlier this month a few ideas were provided by Renault's Levy.

Levy expects to receive fresh capital from the state, but he does not know how much. He sent a letter to the government last spring asking for financial help, just as Georges Besse, then-president of Renault, had done in July 1986.

Levy provided the government with more details about Renault's condition and the company's outlook for 1988-89 in another letter sent in July. In that letter, Levy reportedly announced that Renault would make a corporate net profit of more than 1 billion francs ($165 million) in 1987.

Levy said in an interview, "If I get a reasonably restructured balance sheet, I can engage myself to go on without any further state aid. I reckon that I could soon go public to some extent and float some Renault shares on the financial market."

He declined, however, to further discuss the possible privatization of Renault or to mention capital injection requirements.

Calvet, although he strongly opposes the government's new restructuring plan for Renault, admitted that more problems at Renault would mean bad news for the entire French car industry.

"I remember saying one day before to some reporters that I hoped that Renault would recover, even at the expense of Peugeot. Those press men choked and said, 'But how can you say such a thing, it's unreasonable!' It is, I said. You must be practical and logical. Obviously, if Renault recovers, we at PSA will feel the heat, at least in the French market.

"Why do I say so? Because I'm a Frenchman first. I'm very much involved with PSA but I remain a Frenchman first. And I believe that it is very important that my country has two big carmakers, just like Germany has got four or five. I wish for only one thing: Renault's recovery. But a recovery through Renault's own internal forces and in a context of fair competition."

Calvet suggested his own plan for Renault: It should be privatized as soon as it viable, and then the government should decide whether Renault needs a capital injection.

"But anyway, (it should be) nothing like the completely insane amounts of the taxpayers' money that some are currently talking about," he added.

The Minister of Finance confirmed that changing Renault's statutes should not be viewed as groundwork prior to privatization. But he failed to give any details about the exact legal statute Renault might receive, about the amount of money the state might inject in the new company, or about the timing of the operation.

Last week, none of the parties involved were making any more comments.

DEALERS

FROM PAGE 1

his 1987 model year was level with 1986 and he is optimistic 1988 will be better for his dealership because the local economy is better.

He expects more incentives.

"As long as competition continues as it is, incentives will continue — whether the factory does it or I do it," he said.

Like many other dealers, Bullock is restructuring his used-car business to augment flagging showroom margins. He doubled his inventory of late-model used cars to cover that segment of the market that can't afford new cars.

Although much of the traditional unbridled October optimism is tempered with realism this year, there is still a high-degree of self confidence and divisional pride among dealers.

Juanita Baranco, general manager of Baranco Pontiac, Decatur, Ga., said she expects a better 1988 because of the strong Pontiac line, particularly the new Grand Prix and the LeMans.

Robert Fleming, R.H. Fleming Buick-Pontiac, Indiana, Pa., expects a better 1988 because he believes some people held off buying and because GM has an improved product line.

John Bergstrom, Bergstrom Chevrolet-Buick, Neenah, Wis., said 1988 will be flat for him with "no dive but no upswing either."

Bergstrom, who has Chevrolet, Cadillac, Buick, Oldsmobile and GMC franchises, believes Regal will be a big plus for Buick and the longer Eldorado will be a big plus for Cadillac.

Ford Motor Co. will not make its 1988 industry forecast until tomorrow at its national news conference. However, there is no mistaking the enthusiasm of its Ford and Lincoln-Mercury dealers.

The primary worries seem to be that dealers will not be able to get enough of the right product to sell and that inventory will not reach sufficient levels until November.

Ford and Lincoln-Mercury dealers believe it will be a tough market with increased competition from the imports. Most also believe that GM dealers will have it much worse.

Bob Karlin, owner of Santa Monica Ford, Santa Monica, Calif., said he and partner Wayne Harding expect 1988 model sales to increase by 50 percent.

"Ford really has a name now," Karlin said. "We're ordering more cars and will have higher stocking levels than ever."

Craig Kapson, owner of Jordan Ford, Mishawaka, Ind., and Jordan Lincoln-Mercury-Merkur, Elkhart, Ind., sees an overall industry decrease in 1988-model sales but expects Ford dealers to increase their penetration.

Kapson said he will not be able to get all of the models with automatic and automatic overdrive transmissions he wants, but he will prosper in 1988's more competitive market by merchandising what he can get.

"We already are planning promotions to take advantage of car lines other dealers don't want," Kapson said. "Weaker dealers will lose market," he said, "but we'll have an excellent year."

Stu Evans, owner of Stu Evans Lincoln-Mercury, Southgate, Mich., and Stu Evans Lincoln-Mercury, Garden City, Mich., said the overall market will be tougher than it has been for last two years.

Evans said he has already spent $100,000 on each store to increase customer comfort and will spend even more. In addition, he has increased his advertising budget.

"If we do the job right, we're not going to get hurt," Evans said.

Mark Berger, sales manager of Rock River Ford, Rockford, Ill., expects good sales next year, although sales won't be up much because 1987 was so strong.

Berger said it will help that 1988 is a presidential election year, and it won't hurt that prices will go up.

"What we're seeing is the clientele of our market change. We are getting Cadillac and Mercedes people coming in and looking at Tauruses," he said.

Even one oil belt Lincoln-Mercury dealer who has watched his local economy collapse and his new-car business decline, refused to be depressed. "I'm not rippin' a new hog or anything like that," he said, "but I'm holding my own."

The majority of Chrysler-Plymouth and Dodge dealers said they expect the 1988 model year at best to reach 1987 levels. Some predicted a slight decline in overall domestic sales.

Officially, Chrysler Motors is projecting 10.0 million cars and 4.9 million trucks for the 1988 model year, below the 15.5 million cars and trucks it expects will be sold in 1987.

Its dealers, however, did not predict the same outcome for their own dealerships in the 1988 model year.

Jeep-Eagle dealers interviewed were optimistic about their own franchises in 1988 because they are now a division of Chrysler Motors.

With only one exception, dealers said they expected their own sales in the 1988 model year to reach, or exceed, 1987 levels.

However, several dealers said that dealership profits will drop despite steady sales.

Dealers said the sales will be won in an increasingly competitive market that is oversaturated with vehicles.

"The competition is just multiplying like ants," said Chuck Swift, owner of Swift Dodge, Sacramento, Calif.

Swift predicted 1988 industry sales will reach 1987 levels. However, dealer profits will drop, he said.

Prices are a concern.

"I think there will be a leveling off in the 1988 model year. We'll have our hands full just keeping up sales at 1987 levels," said Bill Manus, vice president and general manager of Central Chrysler-Plymouth and Dick Shirley Chevrolet, Burlington, N.C.

"The average person can't pay $15,000 to $18,000 for a four-door sedan with automatic and air conditioning. The average monthly payment is prohibitive to the average buyer. People are not excited about buying cars," Manus said.

"People are buying more because of need than whim buying," said Ray Slavin, owner of Slavin Ford Dodge, Youngstown, Ohio.

Slavin foresees domestic industry sales dropping 15 percent to 25 percent in the 1988 model year.

Jeff Walther, owner of Jeff Walther Dodge, Dayton, Ohio, foresees domestic-industry sales dropping 5 percent to 10 percent in the 1988 model year, but he expects his own sales to increase by 10 percent.

"I think 1988 will go as well as 1987," said Luke Potter of Luke Potter Dodge, Winter Park, Fla. "Our fleet is even bigger than it was last year."

Potter said he has increased his fleet order from approximately 9,000 units in 1987 to more than 11,000 units in 1988.

"We're optimistic," he said.

PRODUCTION

Auto production in Mexico gains despite idle plants

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Mexican car production in August increased over the year-ago month's total despite downtime at three assembly plants.

Last month's output was 15,749 units, 12.85 percent more than the last year's 13,956.

For the first eight months of this year, 155,440 cars were assembled in Mexico, 17.40 percent more than the 132,402 completed during the same period last year.

Chrysler Motors' Mexican plant was idle for most of August due to model changeover. Output of 1,654 K-cars in Mexico was down 80.99 percent from July's 8,700 and 15.22 percent from last August's 1,951.

By the end of August, Chrysler had built 45,434 cars, up 50.39 percent over the 30,210 last year. Chrysler exports Aries and Reliant models to the United States.

Ford Motor Co., which has two plants in Mexico, reported production of 5,769 cars in August. All were Tracers for the United States. The plant that assembles Cougar, Thunderbird and Topaz for sale in Mexico was idled by a strike for the entire month.

Ford's August output was more than four times the year-ago month's 1,405, when the Tracer had not yet gone into production.

The year-to-date total for Ford was 37,751, compared to 14,201 last year.

General Motors produced 2,326 cars in Mexico during August, 55.23 percent below July's 5,195 but 60.64 percent more than the year-ago month's 1,448.

By the end of August, GM had built 12,778 cars, 13.22 percent more than the 11,286 assembled by the end of August 1986.

GM produces the Chevrolet Celebrity, Oldsmobile Cutlass Ciera and Buick Century in Mexico. Of those, the Celebrity is the only car exported to the United States.

Volkswagen's plant in Mexico was idle during August due to a strike. During the year-ago month, VW assembled 4,152 cars. For eight months, VW car production totaled 22,177, 51.12 percent below the 45,373 built during the 1986 period.

VW's Mexican plant assembles the Golf, Jetta, Beetle and Korsar (Quantum in the United States), all for the Mexican market.

Nissan produced 6,000 Sentras in August, 20 percent more than the 5,000 built in 1986. Through August, Nissan had built 37,300 cars, 19.05 percent more than the 31,332 completed last year.

Total North American auto production for August including the United States and Canada was 455,877, 16.15 percent below the year-ago month's 543,665.

The year-to-date North American car output at the end of August was 5,435,408, 11.13 percent below the 6,116,187 built in the same period last year.

Auto output climbs 8% to 142,447

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Last week's targeted domestic auto production of 142,447 was 8.49 percent more than the previous week's 131,295 but 7 percent below the year-ago week's 153,170.

Companies split last week's scheduled production as follows: General Motors, 49.58 percent; Ford Motor Co., 26.42 percent; Chrysler Motors, 15.23 percent; Honda of America Manufacturing Inc., 4.27 percent; New United Motor Manufacturing Inc., 2.46 percent; Nissan Motor Manufacturing Co. U.S.A., 1.83; Volkswagen of America, 0.14 percent; and Mazda Motor Manufacturing U.S.A. Corp., 0.07 percent.

Mazda reported production for the first time last week at its Flat Rock, Mich., plant. It said 93 MX-6 models were built the week ended Sept. 19, and Automotive News estimated that 100 were built last week.

VW's plant in Westmoreland, Pa., resumed production last week. The plant had been idle for model changeover since July 20.

Chrysler's Belvidere, Ill., plant resumed output today. The plant had been down because of a strike against Chrysler in Canada.

Truck assembly steady for week

Domestic truckmakers scheduled production of 75,755 units last week, slightly more (0.90 percent) than the previous week's 75,077 and 3.58 percent more than the year-ago week's 73,140.

Year-to-date, 2,769,072 trucks have been assembled, 3.15 percent more than the 2,684,444 built last year at this point.

General Motors' Pontiac East plant in Pontiac, Mich., and its Fort Wayne, Ind., plant resumed production last week. Both plants were idled the previous week because of a parts shortage due to a fire at GM's Saginaw Axle plant in Detroit.

GM's Pontiac Central plant in Pontiac, Mich., resumed output today. The plant had been idle for inventory adjustment.

Cars, trucks rise in Canada

Last week's targeted Canadian auto production of 18,831 was 20 percent more than the previous week's 15,692 and 24.89 percent more than the year-ago week's 15,078.

So far this year, 555,547 cars have been built, 27.31 percent below the 764,283 completed last year at this point.

Truck production was scheduled at 19,372 units last week, 89 percent more than the previous week's 10,250 and 30.66 percent more than the year-ago week's 14,826.

The prior week's output was affected by a strike against Chrysler. The strike was settled Sept. 17.

Year-to-date, 595,676 trucks have been built, 4.66 percent below the 624,786 assembled last year at this time.

VW, Fiat groups battle for sales crown in Europe

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Volkswagen Group's Audi and Seat models were the fastest-growing marques in the European industry through August, offsetting a flat sales year for the VW brand in Europe.

Volkswagen's soaring prestige-car and small-car subsidiaries enabled the group to nearly match Fiat Group's 1987 sales, according to industry estimates compiled by Automotive News.

During the first eight months, 8,528,600 cars were sold compared with 8,059,600 for the same period last year, a 5.8 percent increase.

Fiat — with Alfa Romeo's 1.5 percent share included — has led the European sales race through most of the year after finishing second to VW Group in 1986. Fiat acquired Alfa Romeo late last year.

Audi's sales through August increased 23.5 percent to 232,600 units in western Europe. The VW division benefited from strong reception to its new 80/90 models, which will be introduced Nov. 1 in the United States as a replacement for the 4000 series.

Seat, acquired by VW last year, was up 33.2 percent to 169,700 units. The Spanish vehicle maker has ridden the crest of a runaway domestic market in that country and has registered sharp improvements in several other European countries.

Volkswagen was up 1.5 percent to 853,900 units through August, while VW Group sales were 1,256,200, 8.6 percent better than last year and good for 14.7 percent of the European market.

Fiat Auto, including Fiat, Alfa Romeo, Lancia and Ferrari, held 14.8 percent of the market through August with sales of 1,261,500 units. The Fiat marque was up 10.1 percent to 947,400, largely on the strength of the Italian market.

At the eight-month mark last year, the VW group was the leader with 1,157,000 sales to Fiat Auto's 1,140,300.

Among Europe's other volume producers, Ford retained third place with a 12.1 percent share and sales of 1,029,700 through August, up 7.6 percent compared to the same period last year. Sales of the fourth-place Peugeot Group increased 9.1 percent to 988,300 units, an 11.6 percent share.

General Motors was fifth with 10.9 percent market share and sales of 932,900 units, an improvement of 2.1 percent over the same period the year before. Renault was sixth among Europe's volume producers with sales of 877,500, a gain of 8.2 percent for a 10.3 percent share.

The Japanese manufacturers' combined sales were 958,200 units, 11.2 percent of the European market through August. That compares with 11.6 percent for all of 1986.

The Japanese, led by Nissan and Toyota with 2.9 and 2.8 percent shares, respectively, have pulled even with their record 1986 sales pace. Japanese sales plummeted in the first quarter following reduced shipments to Europe late last year.

Despite a slump early this year, West Germany remained the largest single western European market with sales of 1,948,700 units through August, an improvement of 2.6 percent over last year's record pace. The United Kingdom was second at 1,459,700, a gain of 4.7 percent; followed by Italy, 1,418,200, up 11 percent; and France, 1,308,400, up 5.9 percent.

Spain continues as the fastest-growing market in Europe. Eight-month sales were up 43.3 percent to 620,100 units and are on pace for a record year of better than 900,000 sales.

Fiat's six-month sales jump 39%; profits rise 11%

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — With Alfa Romeo and several other new acquisitions in tow, Fiat S.p.A. group sales jumped 39 percent in the first half of this year, but the company's recent surge in profits slowed.

The six-month pre-tax earnings of 1.82 trillion lira ($1.38 billion) continued a string of Fiat profit gains, but the 11 percent rise was the smallest since the early 1980s. Pre-tax profits nearly doubled in each of the last two years.

Revenue grew to 19.85 trillion lira ($15 billion) in the first half from 14.32 trillion lira ($10.8 billion) in the same period last year.

But the year-to-year comparison is complicated by the addition of Alfa Romeo; Iveco-Ford UK, the commecial-vehicle joint venture with Ford; SNIA BPD, a textile, petrochemical, defense and aerospace company; and Astra, a small Italian commercial-vehicle manufacturer. Fiat said that without those four units, its sales for the first half would have been 16.6 trillion lira, an increase of 16 percent over the same 1986 period.

Fiat said group profitability before taxes increased despite a higher first-half research and development budget of 600 billion lira, an increase of 50 percent; greater depreciation; lower income due to the weak dollar; and "the poor financial position of certain recent acquisitions." Alfa Romeo had lost money for 13 consecutive years before it was acquired by Fiat from an Italian government-controlled industrial holding company late last year and merged with Lancia.

Giuseppe Tramontana, Alfa-Lancia Industriale managing director, said recently that the Alfa Romeo/Lancia unit will break even or show a small profit this year.

Firm to halt gray-market Citroen imports

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

A Georgia-based gray-market importer of Citroen cars has agreed to halt activities in order to settle a lawsuit brought against it by the French car company.

Citroen Importers of North America, which had been importing Citroen CX models, must also cease using the Citroen name and is enjoined from selling, distributing, or assisting in the importing of any automobiles built by Automobiles Citroen. Also named in the suit were Eurocar Ltd., an affiliated company, and Robert Boston, owner of the Roswell-based companies.

While Citroen Importers of North America will no longer be allowed to import Citroens under the agreement, it will be able to sell about 40 cars already in the country provided they are modified to meet U.S. regulations. However, the vehicles must be sold without advertising and with a disclaimer that the vehicle was not designed by Citroen to be sold in the United States and that the French company is not responsible for service, parts or warranties.

Citroen Importers must repurchase vehicles it sold that do not comply with federal regulations.

Citroen was able to press its case in the United States with the help of its sister company, Peugeot. A Peugeot Motors of America spokesman said that Citroen is aware of other companies importing the CX, but hasn't decided if it is going to pursue those cases.

Gerard Vion, commercial manager of overseas countries for Automobiles Citroen, said his company is analyzing a possible return to the U.S. market.

New Bentley for the young and rich
Rolls-Royce's four-door Bentley Mulsanne S is aimed at the "35-to-45 age bracket, about 10 years younger than the typical Rolls-Royce driver," says a company spokesman. The British luxury car is powered by a 6.75-liter V-8 and can be had for $107,500.

AUDI: *N.J. vehicle inspector hurt as car accelerates, hits tree*

By John Russell
AUTOMOTIVE NEWS STAFF REPORTER

CHERRY HILL, N.J. — A New Jersey Motor Vehicle inspector was injured last week when an Audi 5000 apparently suddenly accelerated during a routine vehicle inspection and hit a tree.

State officials have launched an investigation, according to H. Arthur Smith, a spokesman for the New Jersey Division of Motor Vehicles.

Smith said this was the first time an incident of this type has happened at a New Jersey inspection facility.

New Jersey has a mandatory annual inspection program for vehicles. Approximately 6 million are performed annually, and more than 80 percent are performed at state-owned inspection stations.

Audi has been plagued with incidents of unintended acceleration. In January, the company recalled 170,000 Audi 5000 models with automatic transmissions to install a shift lock that is supposed to prevent drivers from shifting the vehicle out of park unless the brake pedal is depressed. The car involved in this incident was equipped with the device.

The incident here occurred while an inspector, Daniel Farrell, was testing the 1984 Audi 5000's brakes. Reports said the car went out of control, but Farrell avoided a truck and another inspector before the car hit a tree and stopped.

Smith said Farrell was thrown out of the vehicle when it struck the tree. The inspector's injuries include fractured ribs. He was hospitalized.

Smith said a state investigation team along with Audi of America representatives were on the scene gathering information. The state also called in American Standards Testing Co., an independent investigating unit.

Smith said results of the initial tests probably would be available late this week.

A Volkswagen of America spokesman said the incident is under investigation and the company won't have the reports until next week.

Porsche to cut output of 4-cylinder models

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Porsche AG will cut production of its slow-selling four-cylinder cars during the next two years and will concentrate on the more profitable 911 and 928 models.

Porsche officials said four-cylinder output may eventually be cut by as much as 50 percent, but a spokesman last week denied that the company will stop making four-cylinder cars altogether.

Four-cylinder models represented 56 percent of the company's sales last year, and most analysts agree that abandoning four-cylinder production would put the company in an untenable position with its dealers around the world.

The spokesman said Porsche plans to cut two models from its current four-cylinder lineup, which consists of the 924-S, 944, 944-S and 944 Turbo. No timetable has been set, and the spokesman said it is not been decided what models will be dropped. However, the company is expected to phase out the two intermediate 944 versions and retain the bottom-level 924 and top-end 944 Turbo.

The drop in four-cylinder production is relatively painless for Porsche since it leases capacity from Audi in Neckarsulm, West Germany. The move will enable Audi to produce more of its new hot-selling 80/90 compact models at that plant. The 80/90 line was introduced in Europe late last year.

As it stands, Audi will probably have to divert cars from European markets to supply the United States. The new line is slated to replace the 4000 series there. U.S. introduction is slated for Nov. 1 and is seen as a crucial step in Audi's effort to improve its image.

Porsche said weak sales of 924 and 944 models, especially in West Germany, accounted for lower overall volume and revenue for the fiscal year ended July 31. Unit sales in the United States rose during the fiscal year, but have declined so far in calendar 1987.

Shrinking sales in Germany only add to what many analysts believe to be Porsche's most serious problem — an overdependence on the U.S. market that makes it vulnerable to currency swings.

Porsche has blamed its slide in profits on reduced demand for four-cylinder cars and the fall of the dollar against the German mark. The luxury carmaker won't disclose 1986-87 profit figures until February, but last week a spokesman termed its results "satisfactory."

Earlier this year, Heinz Branitzki, Porsche deputy chairman and chief financial officer, forecast net earnings of 50 million to 70 million German marks ($27.5-$38.5 million). That would represent a drop of 7 percent to 33 percent from 1985-86 net profits of 75.3 million marks ($41 million). That year's profits were down 37 percent from the year before.

Analysts expect Porsche to report a net profit of about 50 million marks, and they look for about the same total for the 1987-88 fiscal year.

"The results they've announced in terms of production and sales are quite revealing," said Stephen Reitman, West German industry specialist at Phillips & Drew in London. "It shows the squeeze they are having on four-cylinder cars. They've come quite clean on it."

Last week, the company an-

CADILLAC

Next Cimarron to be all-American

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

BLOOMFIELD HILLS, Mich. — Cadillac will replace its entry-level Cimarron with an all-American car rather than bring in an import.

Cadillac General Manager John Grettenberger acknowledged at last week's 1988 press preview that the division had looked at importing the Senator from Adam Opel AG, General Motors' West German subsidiary, to replace the Cimarron. But the division ultimately ruled it out.

"We want to capitalize on the fact that we are an American manufacturer of luxury cars," Grettenberger said. "Our future best lies in re-establishing Cadillac's position as an American car that is domestically produced . . . rather than trying to patch a situation by bringing in another import."

Contributing to Cadillac's decision may have been the fact that GM plans to import upscale Opel cars to the United States as early as next year and sell them through a separate franchise network.

Grettenberger said that the division is not pleased with Cimarron's sales. Sales in the 1987 model year totaled about 15,000, down from a high of 24,209 in 1986.

He said the car has reached first-time Cadillac buyers, women and import buyers, but sales have not been helped by the fact that the other four GM divisions sell cars built from the same platform.

AUTOMOTIVE NEWS: EDWARD PEABODY

John and Jane Grettenberger go for a spin on a carrousel at Cadillac's preview

"The next generation Cimarron, or what we hope to do in the future in regard to a near-luxury entry, must be totally distinctive to Cadillac," Grettenberger said. He did not offer details.

Grettenberger painted a picture of an intensely competitive luxury market.

He noted that in 1966, the total luxury-car market totaled 629,000 units, or about 7 percent of the total new-car market. Imports accounted for 6 percent of the luxury market. A decade later, the luxury market had grown to 905,000 units, or 9 percent of the total market, and imports nearly doubled their share to 11 percent. In 1986, luxury cars totaled 1.47 million units, or 11 percent of total sales, and imports took 43 percent.

"In five years," Grettenberger said, "we expect this market to increase by 300,000 more units."

While the segment will grow, new entries including Honda's Acura, Nissan's Infiniti and Toyota's Lexus are "a significant threat," he added.

"It can't just be relied on or taken for granted that it will take the Japanese a longer time to establish themselves in the luxury market because they're historically entrenched in the entry and mid-range," Grettenberger said. "I think that's a fallacy. If you think in those terms, they'll pass you by without you ever knowing what happened."

2 dealer groups fight Jeep-Eagle arbitration

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

A grass-roots movement among dealers is afoot to quash the mandatory binding arbitration clause in Chrysler Motors' new franchise agreement being circulated to Jeep-Eagle dealers.

Statewide dealer meetings were held last week in New Jersey and Texas as Chrysler dealers and former American Motors and Jeep dealers gathered to discuss the pact.

Charles E. Walton, executive vice president of the New Jersey Automobile Dealers Association, told about 80 dealers in his state that the arbitration clause was a ploy to "strip the dealers of their rights."

Walton made it clear that the association is prepared to battle Chrysler in court, either by joining an individual dealer's suit or as a class action. "We are going to move in one way or another," he said.

He termed the move by Chrysler to require binding arbitration in its franchise a "serious, slick attempt to change the whole ballgame."

The New Jersey dealers threw their support behind the efforts of the National Automobile Dealers Association to negotiate with Chrysler to develop a new agreement without binding arbitration. They also agreed to ask their association to provide legal assistance to dealers who may refuse to sign the arbitration agreement as presently proposed.

Meanwhile, NADA President-elect Jimmy Payton and other NADA executives were scheduled to meet Friday with the Texas dealer association on the matter. According to Payton, when Chrysler Motors found out about the meeting, it asked and received permission to attend. Thomas Pappert, group vice president of sales, was expected to be on hand.

The latest developments are in contrast to a statement made two weeks ago at a press conference by Joseph E. Cappy, Chrysler Motors group vice president — Jeep-Eagle marketing.

Asked about NADA's criticism of the binding arbitration provisions in the Jeep-Eagle franchise, Cappy, said, "The dealer advisory councils of the three dealer networks — Chrysler-Plymouth, Dodge and Jeep-Eagle — don't have any problem with the contract the way it stands. They are the ones we have to sign to the franchise, not NADA. You have to ask NADA what their problem is. Our dealers don't have a problem."

Cappy: "You have to ask NADA what their problem is because our dealers don't have a problem."

The sales agreement, announced by Chrysler in late August, has met with strong opposition from NADA. The corporation revised the agreement somewhat in response to that opposition, but did not drop the binding arbitration.

Instead, the company said dealer rights under state law will apply to the arbitration process.

An NADA spokesman said last week that while there is concern over other issues in the agreement, such as linking termination procedures to a customer satisfaction index, the main sticking point remains binding arbitration.

NADA is opposed to binding arbitration because dealers have no choice and surrender legal rights; because mandatory binding arbitration operates to "bypass" the procedures established under state law for the resolution of manufacturer/dealer disputes; and because there is no assurance that substantive dealer rights will be guaranteed in binding arbitration.

NADA also said the Federal Arbitration Act strictly limits the ability of a federal court to set aside an arbitration decision. That can only happen if the decision is obtained by corruption or fraud, or if there is misconduct by the arbitrator. NADA has said it can accept optional arbitration.

While Chrysler's action affects only AMC dealers signing the Jeep-Eagle franchise, there is a belief it will spread throughout the industry.

Ed Mullane, president of the Ford Dealers Alliance and a long-time activist for dealer interests, said if Chrysler is successful, "it will spread."

"They (Chrysler management) are probing and if dealers take it, they're dead," he said.

Walton said dealers are concerned about a recent U.S. Supreme Court ruling involving Southland Corp. and one of its 7-Eleven franchises that said once a franchise agreement involving binding arbitration is signed, the franchisee forfeits his or her rights under state law.

Staff Reporters Edward Lapham and Mary Connelly contributed to this story.

GM reviewing Penske-Potamkin deal

By John Russell
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — General Motors is playing a key role in the Penske Group's move to acquire control of the New York City Potamkin Cadillac operations.

The Penske Group and Victor Potamkin recently reached an agreement in principle that now awaits GM's approval. The automaker is reviewing the agreement since it involves a complex real estate leasing arrangement along with the normal franchise approvals.

Alan Potamkin, vice president of the Potamkin organization, confirmed that an agreement in principle has been reached between the two organizations. However, he said that if GM approval is not received this week, the negotiations will end.

Potamkin said the agreement is very complex and would involve GM leasing the Potamkin facilities from Potamkin and in turn sub-leasing them to Penske.

Potamkin has a large Cadillac facility on 11th Avenue in Manhattan and a satellite facility about one mile away on York Avenue. Each location has two buildings, housing service and sales. The agreement calls for leasing one building at each location.

Negotiations between the Penske Group, headed by Roger Penske, and Potamkin, one of the largest dealer organizations in the nation, were made public in late June. Since then, the two organizations have not disclosed details, saying only that they were talking.

The real estate transaction had been mentioned in several reports in June as being one of the elements in the negotiations, but this is the first time it has been confirmed. Also, this is the first time that the GM connection in the negotiations has been confirmed.

Alan Potamkin declined to reveal any details.

Both the Potamkin organization and the Penske Group fall into the megadealer class. The Potamkin organization has 41 dealerships in five states. In 1986, it had $1 billion in sales.

In New York, Potamkin operates three dealerships handling Chrysler, Dodge, Plymouth, Sterling, Mitsubishi, Toyota and Volkswagen in addition to Cadillac. Potamkin Cadillac sold 5,013 new units in 1986.

Alan Potamkin said the company's other New York franchises are not affected by these negotiations.

The Penske Group, another $1 billion operation, has seven dealerships, Hertz-Penske Truck Leasing, and other automotive-related enterprises, including an Indy car racing team.

Last year, Penske Group purchased Longo Toyota, El Monte, Calif., the largest-volume Toyota dealership in the United States. Penske Group also has a Cadillac operation in Downey, Calif., where it sold 3,195 new units in 1986.

Both Potamkin Cadillac and Penske Cadillac are included in Automotive News' list of the Top 10 Cadillac dealerships in the United States in terms of new-car sales. Potamkin was second and Penske fourth.

Old and new meet at GM Ohio stamping plant

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

At one end of General Motors' stamping plant in Mansfield, Ohio, a press transforms a flat piece of sheet metal into a rear door for a Chevrolet Corsica.

When it is time to switch to another part, the press stops. An overhead crane positions new dies weighing up to 40,000 pounds next to the press. Five or six men hook chains to the dies and drag them up into the press. Then they jockey the dies into place.

The process takes 8 to 12 hours, and there may be several more hours of adjustments and tryouts before a usable part is produced.

Within the same plant, new transfer presses also turn out Corsica doors. As the time approaches to switch from stamping out doors to another part, an overhead crane lifts the new dies onto a sliding platform as the press continues to run. The press stops. An overhead door, much like a garage door, opens on one side of the enclosed area that surrounds the press. The dies in the press drop onto a platform, which slides through the doors.

At the same time, doors on the other side of the press area open. The new dies slide into the press on the moving platform and lock themselves into place.

Texan sentenced for role in Missouri odometer case

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

ST. LOUIS — A 53-year-old Dallas businessman was sentenced to three years in prison and ordered to pay restitution to 480 persons victimized in the 166 Auto Auction odometer-rollback scandal.

Lee R. Spradling pleaded guilty to one count of conspiracy to commit odometer fraud in U.S. District Court for the Western District in St. Louis. Maximum penalty is five years in jail and a fine of $10,000.

U.S. District Court Judge George F. Gunn Jr. ordered Spradling to pay $60,000 in restitution to the victims within five years.

Spradling conducted business as Texas Suburban, a company purchasing late-model, high-mileage lease vehicles.

All vehicles, whether obtained through the auction or other markets, were purchased with funds provided by the 166 Auto Auction, said U.S. attorneys.

After Texas Suburban purchased the vehicles, Spradling ordered auction employees to reset mileages, according to the indictment.

Then the company resold the vehicles through the auction after obtaining new titles from Oklahoma in the names of a variety of bogus companies, said U.S. attorneys.

Between 1981-83, according to the federal indictment, financial paperwork for all of the vehicles bought and sold by Texas Suburban went through the 166 Auto Auction.

Federal officials said more than 3.5 million miles were erased from autos involved in the scam.

In other action, R. Joe Kellhofer, 42, of Springfield, Mo., was indicted by a federal grand jury two weeks ago and charged with transporting a forged car title — a felony — and misdemeanor charges of odometer fraud and making false odometer statements.

Kellhofer, an auction employee and used-car salesman, allegedly tried to sell a car with a false title and a rolled-back odometer in the fall of 1982.

Melvin Reid, the owner of 166 Auction, pleaded guilty in August in U.S. District Court in the Western District of Missouri to six counts of odometer fraud on behalf of the auction. The company was fined $300,000 and told to establish a trust fund of $300,000 to reimburse victims.

Reid was not charged in the indictment. "A corporation cannot go to jail so the owner was permitted to plead guilty for the auction to specific charges of odometer fraud," said federal officials.

Two 166 Auction employees and a businessman who used the auction as a business address also pleaded guilty to charges of conspiracy to commit odometer fraud and are expected to be sentenced within the next few weeks, said federal officials.

Special Correspondent Jack Bernstein in St. Louis contributed to this report.

Eaton, GTE team to develop ceramic engine parts

CLEVELAND — Eaton Corp. and GTE Corp. are joining forces to develop engine components made of ceramics.

The companies said they foresee a substantial market developing for such components. It is expected that the work will lead to a joint venture, the companies said.

GTE Laboratories, Waltham, Mass., last year announced development of a silicon nitride ceramic composite it said could "deliver a significant advantage in the evolution of high-quality, durable ceramic components."

Development work will be done at Waltham and at Eaton's Corporate Research and Development Center in Southfield, Mich.

The companies declined to disclose how much money will be invested in the development project.

PRICES

FROM PAGE 1

ticket features as automatic transmission on models like the J-cars that do not have it as standard equipment and air conditioning.

GM claims that the "typically equipped" 1988 A and J models are priced lower than their 1987 counterparts.

The Buick Skyhawk is an extreme example of how the new pricing strategy works. The 1988 base price on the Buick Skyhawk coupe is $8,884, compared with a 1987 base price of $8,522. However, the 1988 price includes more than $1,000 worth of items that were options in 1987 and are now standard equipment. Included are power steering and AM/FM stereo radio.

In addition, a "typical" Skyhawk buyer would pay $10,221, or $1,000 less in 1988 than in 1987, by ordering air conditioning and the automatic transmission option package, which also includes cruise control, tilt steering wheel and a cassette/radio.

The savings are less pronounced on other A-cars and J-cars.

GM dealers contacted by Automotive News praised the automaker for adopting the approach — long used by the Japanese — of putting more standard equipment on some of its cars. Dealers said that if it works for Honda, it should work for GM. They added that they seldom order stripped models; they load cars with the equipment customers usually order.

However, dealers blasted the corporation for increasing prices at a time when GM is losing market share and GM dealers are struggling for sales and profits.

A California dealer called the price hike "a damn poor move." He added, "GM is taking advantage of the depreciation of the dollar to whip the consumer in the marketplace."

GM claims that prices of its entire fleet of 1988 cars rose an average of 1.9 percent because of the lower prices on comparably equipped models. Automotive News estimates the 1.9 percent is $275. The increases on some cars, particularly GM's most popular models, are sharply higher than 1.9 percent.

GM President Robert Stempel said the prices are tentative, depending on the outcome of the contract talks with the UAW.

GM's added-equipment pricing procedure is not new, nor is this the first time GM has tried it. GM did it in 1981 when it introduced the first of its J-cars — the Chevrolet Cavalier and Pontiac J2000 (now Sunbird).

It didn't work for GM then. GM priced those models way out of line with what the market would take. It added equipment but it put that equipment on the cars at full retail prices without the discounts now being offered. Buyers were turned off, and the J-cars got off to a miserable start. Adjustments later put the J-cars on a faster track.

Chrysler Motors didn't make GM's mistakes when it developed the Omni/Horizon America concept in 1986. The America models were considerably lower priced than the Omni/Horizon units they replaced. Chrysler trimmed the list of options available, put them in packages and simplified the manufacturing process, thereby cutting costs, a savings passed along to the customer. Chrysler is doing the same with its Aries/Reliant America models for 1988.

Ford Motor Co. has used the option packaging approach for several years and has had considerable success with it.

But this marks the first time GM or any other domestic automaker has used the loaded-car/option-packaging strategy on such a widespread scale. And the scale is likely to broaden if this is successful.

Stempel called the new strategy an experiment and said that customer reaction to the new plan will be closely monitored in the next three months before GM decides whether to expand it.

GM chose to focus on the A-cars and J-cars for its experiment because they are high-volume lines, accounting for more than one-third of its annual car sales, and are situated in highly competitive market segments.

The J-cars are the Chevrolet Cavalier, Pontiac Sunbird, Buick Skyhawk and Oldsmobile Firenza; the Cadillac Cimarron J-car doesn't figure in the program. The A-bodies are the Chevrolet Celebrity, Pontiac 6000, Buick Century and Oldsmobile Cutlass Ciera.

GM itself benefits most from the strategy of added standard equipment and option packages. It claims it can save money in manufacturing the cars and can pass the savings along to consumers. Stempel also says it can build better-quality cars by building the same ones over and over.

The advantage to the dealer is that the cars are easier to order. Dealers say they don't have to carry as much inventory from stripped-down to loaded models.

But there are serious pitfalls. Chief among them is the choice of equipment to be made standard or offered in the packages. If GM has chosen items that buyers can easily do without, the corporation is asking buyers to pay a price penalty for the extra goodies.

Even if the added equipment items are desirable, the new sticker price may be higher than the buyer can afford. The customer may turn to another make of car that is less-lavishly equipped.

There are no delete options in the GM plan. What you see is what you get — and what you pay for.

GM argues that it has chosen items that are ordered by at least 80 percent of the car buyers. Price analysts suggested that GM may find that 80 percent is an overly optimistic break point.

The GM program will call for a Herculean amount of promotion and extensive and explicit advertising. Dealers admit they will have to educate consumers to the benefits.

On many models, GM's base prices show some fancy increases. Without adjusting for equipment changes, a Chevrolet Caprice four-door went up $1,015; a Corvette jumped $1,481; a Buick Skylark Custom coupe climbed $727; a Cadillac Coupe DeVille rose $1,733; and the Cadillac Allante moved up $1,833.

REBATE

FROM PAGE 1

rebate on the purchase of a 1987 rear-wheel-drive Cutlass Supreme or 1988 rwd Cutlass Supreme Classic and a $500 rebate on the purchase of any 1988 or prior year Oldsmobile model. The program also offers competitive-make owners a $300 cash rebate on any 1988 Cutlass Calais or 1987 Calais.

No financing incentive or dealer participation is included in the program.

GM did not extend its cleanup incentive program on 1987 models. It expired on Sept. 30 despite Ford Motor Co.'s decision to continue rebates and low-interest financing on Ford Tempo and Mercury Topaz models until Oct. 14.

Ford Chairman Donald E. Petersen predicted last week that some form of consumer incentives would be offered by automakers throughout the 1988 model year.

Low-interest financing and rebates have been offered by all of the domestic automakers throughout the 1987 model year to prop up slow sales and reduce vehicle inventories. Even many importers — who traditionally have not needed to offer incentives to sell their cars and trucks — have resorted to the sales gimmicks this year.

In a 10-week program earlier this year, GM offered selected GM owners in four test-market areas rebates ranging from $200 to $1,500.

The rebates were offered in addition to other incentives in effect during that period. That program, called "Owners First," met with much enthusiasm from dealers and GM owners. Oldsmobile and Buick continued the program to help reduce heavy inventories of 1987 cars.

The Buick and Oldsmobile programs went nationwide on July 16 and included mailings to competitive-make owners in addition to their own owners. The Buick and Oldsmobile rebate programs were expanded to include reduced interest rates; those rates were in addition to the corporation-wide cleanup program. All GM programs expired Sept. 30.

GM would not say how many cars were sold under either of the programs; however, divisional marketing executives said the programs were effective and that they would consider similar incentive programs in the future.

4 hopefuls vie in hot NADA race

Candidates differ on group's policies

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

The political race for first vice president of the National Automobile Dealers Association — normally a popularity contest with little emphasis on hard issues — this year has more candidates than ever and is focusing on tough national issues as well as the way in which NADA itself conducts business.

The autonomy of the NADA staff, association tactics and controversial national issues like factory franchising policies, fleet subsidies, customer-satisfaction indexes and binding arbitration are being raised in an unusually vigorous campaign that will determine the future NADA president.

One outspoken candidate, Ron Tonkin, wants to "harness the horsepower" of dealers and threatens to move to Washington to more closely control NADA's 382-person professional staff, which has grown substantially over the past few years.

At the other end of the spectrum is Herbert Adcox, who is not likely to tamper with staff autonomy at all. And in the middle are Richard R. Smith and David A. Banks, who would be most likely to make only minor changes in the officer-staff relationship.

When NADA directors meet next week at the Ritz-Carlton Naples (Fla.) hotel to elect new officers, they will have to choose one of the four candidates for first vice president — the person who will lead the organization into the 1990s.

It is a foregone conclusion that

Big 3 profits may slip 20% for quarter

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

The Big 3 automakers are expected to report combined third-quarter profits of just under $1 billion, about 20 percent less than they earned in the third quarter of 1986.

General Motors and Chrysler Corp. will have much lower profits in the third quarter compared with 1986, with GM reporting a significant operating loss, analysts predicted. Ford Motor Co. earnings are expected to be about the same as or slightly lower than earnings for the third quarter of 1986.

EARNINGS FORECAST

averages, in millions, from 9 auto analysts for GM; 10 for Ford and Chrysler

	3rd quarter 1987	3rd quarter 1986
GM	$ 100	$ 264
Ford	660	693
Chrysler	235	324
Big 3	995	1,281

GM will announce earnings the week of Oct. 19. Ford will report late that week or the following week. Chrysler's announcement will be Oct. 27.

Based on an average of forecasts by 10 auto analysts, the Big 3 will report combined earnings of about $995 million for the third quarter. That compares with $1.28 billion in the third quarter of 1986.

GM's earnings are anticipated to be about $100 million, a 60-percent drop from the $264 million earned in the year-ago third quarter. Estimates from analysts vary widely, however. Jean-Claude Gruet, of Salomon Brothers, is the only analyst who predicted that GM will report a net loss.

Earnings estimates could prove too low if GM implements a major accounting change in the quarter, but analysts expect the automaker will hold off on that change until the fourth quarter.

Analysts generally agree GM will suffer an operating loss even larger than the one in the third quarter a year ago. They estimate the operating loss will range from $200 million to $500 million.

That compares with operating losses of $339 million in the third quarter of 1986 and $21 million in the third quarter of 1985.

Analysts said this year's operating loss will be larger than last year's because of high incentive costs for the 1.9-percent financing program that yielded lower sales than the 2.9-percent model-year-closeout incentive last year. GM's sales have been lower throughout the year,

NICHE: *Makers find market for cars under $6,000*

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

While much of the auto industry plots its moves upscale, an invasion of under-$6,000 cars into the U.S. market this year confirms that buyers have not lost their appetite for reliable transportation at no-frills prices.

In quick succession, the Subaru Justy, Volkswagen Fox, Mitsubishi Precis, Ford Festiva and Pontiac LeMans have rolled in from offshore factories, nearly doubling the number of sub-$6,000 nameplates sold in the United States.

And largely on the strength of their price tags, they have managed to build some momentum. Though sales numbers vary widely, each car has a good shot at reaching its first-year sales target.

At their current pace the five models collectively could claim more than 190,000 sales in 1987 — nearly two percent of the total U.S. car market. That total can only rise next year, when each car will have 12 months of sales to tally up. In the meantime, though, other makers will be crowding the segment with entries of their own.

Analysts and company officials say a big chunk of the activity has come from would-be used-car

Chrysler offers incentives to buyers, dealers

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Chrysler Motors last week followed General Motors as it mailed coupons worth up to $1,000 toward the purchase of a new vehicle to 15 million owners of Chrysler cars and competitive makes.

Chrysler Motors also began dealer cash incentives on 1987 Chrysler LeBaron coupes and selected Dodge cars and truck models.

It also extended retail incentives on Plymouth Reliant and Dodge

DETROIT — The UAW General Motors council, made up of 300 local union leaders, is meeting in Chicago this morning to review the tentative three-year agreement with GM announced last Thursday.

Although no official details have been released, a UAW source said the pact "has no major departures from the Ford agreement."

Even union dissidents said the membership is likely to ratify the contract, despite significant vetoes from skilled tradesmen who believe new work rules will proliferate under the new pact.

However, local union leaders had not seen the contract by Friday, and more opposition could surface as details come to light.

The 50,000 workers at plants slated for closure might also present a problem to ratification, unless they are placated by a beefed-up voluntary retirement plan reportedly included in the new pact.

Tracking the Ford contract, the GM pact would guarantee the jobs of its entire workforce except workers at plants already slated for closing.

About 300,000 workers would be protected for three years against layoffs for any reasons except volume losses due to poor sales.

The tentative pact also would give GM workers a 3-percent wage increase in the first year and lump-sum bonuses of 3 percent in the second and third years. The profit sharing would track Ford's, the cost-of-living allowance formula would be maintained, and pensions would be improved.

Following Ford's lead under the new agreement, GM is expected to press for work-rule changes on a plant-by-plant basis.

The speed of contract negotiations amazed — and in some cases dismayed — industry observers. The rapid progress defied the widespread belief that an inevitable and bitter confrontation between the union and GM had been building for months.

The UAW and GM began intensive bargaining toward the pattern agreement only after the new contract with Ford was signed last Monday. Three days later, they announced a tentative settlement.

But as recently as last Tuesday, GM Chairman

Texas dealers fight Jeep-Eagle contract

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Thirty former American Motors dealers in Texas filed a complaint with the state, charging that Chrysler's plan to terminate their franchise agreements is illegal under state law.

Meanwhile, the movement against the replacement Jeep-Eagle franchise agreement picked up further steam last week as Chrysler Motors dealers in the Washington area joined the dealer protest. Controversy has mounted since the National Automobile Dealers Association in August protested a clause in the agreement calling for mandatory binding arbitration to settle disputes between dealers and manufacturer.

NADA Executive Vice President Frank E. McCarthy said Thursday the association has requested a meeting with Chrysler and that the company indicated a willingness to meet. McCarthy said he expected the meeting to be held this week.

Members of the Automotive Trade Association, National Capital Area added their support to NADA's efforts to negotiate with Chrysler to develop a new agreement without a mandatory binding arbitration clause.

The dealers there join those of the Texas Automobile Dealers Association, which advised Jeep-Eagle dealers to seek legal counsel before signing the franchise agreement. The New Jersey Automobile Dealers Association also met with its membership to discuss the contract.

More than 30 former AMC dealers filed a protest Oct. 2 with the Texas Motor Vehicle Commission charging Chrysler has not complied with franchise termination provisions under Texas law.

More than 40 of the 69 former AMC-Jeep-Renault dealers in Texas were notified by Chrysler that their AMC franchise agreements will terminate Dec. 31, 1987, according to Gene N. Fondren, president of the Texas dealer group.

Those dealers are franchised with AMC under an agreement that says termination is possible with 30 days' notice if dealers are offered a new agreement, Fondren said. Not all AMC agreements have that clause.

However, Fondren said Texas law states that despite franchise language, a franchise agreement may not be terminated unless a dealer and the commission have been given 60 days' notice.

In addition, if a protest is filed, the manufacturer must show good cause for the termination or it will be nullified.

Fondren said the motor vehicle commission will act following a show-cause hearing.

NADA says that requiring binding arbitration in any dispute between dealer and manufacturer circumvents state laws and the protection those statutes give dealers.

"This poses a potential threat to the franchise system," said Gerard N. Murphy, president of the Washington-area dealer association. "We would like to see Chrysler go back to the drawing board on this."

NADA has said that fighting the binding arbitration clause in the Jeep-Eagle contract is imperative because it may be applied in the future on a broader basis throughout the franchise system. General Motors' Saturn Corp. has a similar binding arbitration agreement.

H.G. Savoy, Chrysler Motors dealer operations services manager, said last Thursday that Chrysler has no plans to further amend the Jeep-Eagle franchise. Chrysler in September had revised the binding arbitration clause to say that rights granted under state laws will apply in the arbitration process.

Chrysler has described mandatory binding arbitration as "by far the most equitable and cost-effective method of settling disagreements." The company also disputes allegations that the clause may violate state laws. It said the provision is covered under the federal arbitration act.

Dealers in Texas, however, were told by their dealer association's legal counsel that nothing in the contract requires arbitrators to follow state law. According to Fondren, a 1984 U.S. Supreme Court decision states that the federal arbitration act pre-empts state law.

In addition, the Texas association criticized a clause that says if a dispute is determined "non-arbitrable," Michigan law will be followed.

According to Fondren, the clause does not define "non-arbitrable." Texas dealers also object to the change of venue outside Texas, he said.

Foreign group buys 5-point U.S. dealership

By Michelle Krebs and Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTERS

Foreign investors, who have been buying up U.S. hotels, casinos and office buildings, have widened their focus to another piece of lucrative U.S. real estate — car dealerships.

Most recently, Currie Motor Group, the U.S. division of Cursin Investment Ltd., United Kingdom, closed on the purchase of a five-point dealership located 35 miles northwest of Chicago, bringing to 14 the number of new- and used-vehicle dealerships owned by the British firm.

Currie Motor Group purchased Heritage Auto Village in Elgin, Ill., for an undisclosed amount. The deal included five stores on the nearly 10-acre complex. Mike McGrath, Heritage owner, retained a Chrysler-Plymouth outlet. The locations that were sold handle Pontiac, GMC Truck, Mazda, Lincoln-Mercury and Subaru.

Cursin Investment owns several dealerships in the United Kingdom, and Currie Motor Group acquired its first U.S. dealership — a Chrysler-Plymouth franchise — in 1981.

It has been building a small empire ever since and plans to expand even more. Saul Rosen, vice president of operations for the Currie Motor Group, said that restrictive franchising rules in the United Kingdom forced the firm to grow offshore. He said the United States, being the largest and richest vehicle market in the world, was the obvious choice.

The choice is obvious to other foreign investors, as well. Industry observers say the trend toward foreign ownership in U.S. dealerships has barely begun. Investors from Japan and other Pacific Rim nations as well as Europe have landed on U.S. shores recently and are actively shopping for dealerships.

The interest in U.S. dealerships is heightened by currency exchange rates that make the United States more attractive for investment than their homelands.

Lex Service PLC, also of the United Kingdom, announced earlier this year that it planned to enter the U.S. car market through acquisition of a U.S. megadealer and expand from there.

Lex is a $1.8 billion publicly held British automotive and electronics group and one of the largest car retailers in the world. The company, which has established its U.S. beachhead in San Francisco, has said it is interested in buying a multi-point dealership with sales of $100 million to $150 million. It then plans to build a U.S. network with volume of at least $500 million, which would make it one of the biggest dealer groups in the country.

David Beck, president of Lex North America Automotive Inc., said the firm is actively looking for a dealership, but no timeframe has been set for such an acquisition.

James Jones, executive director of Action Brokers & Management Consultants in California, said he has put together one deal involving foreign investors and is working with investors from Japan, Germany and England interested in purchasing dealerships. He declined to reveal the identities of his clients.

Car sales dip 6% for model year; trucks climb to another record

By Joseph Bohn and Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — Sales of U.S.-built and imported cars in the 1987 model year declined 6.04 percent from the total for the 1986 model year, but sales of domestic and imported trucks inched up slightly to set another record.

The total number of cars and trucks sold in the United States during the 1987 model year was 15,496,105, down 5.53 percent from 16,115,804 in the 1986 model year.

In the 1987 model year, car sales totaled 10,536,273 units, a decline of 6.04 percent or 677,035 from 11,213,308 in 1986. Slightly more than 30 percent of the 1987 deliveries were imports.

Truck sales reached new heights. They grew by 1.17 percent or 57,336 units in the 1987 model year. Total sales of light, medium and heavy trucks were estimated at 4,959,832, up from 4,902,496 in the 1986 model year. Final figures from medium- and heavy-duty truck manufacturers were not available last Friday.

Car sales by U.S. automakers dropped 8.92 percent in the 1987 model year — Oct. 1, 1986 to Sept. 30, 1987. There were 7,340,482 U.S.-built cars delivered in the 1987 season vs. 8,059,039 in 1986.

Imported cars accounted for 30.33 percent of the U.S. market in the 1987 model year. A total of 3,195,791 foreign-built cars were sold, up from 3,154,269 in the 1986 model year.

In spite of the final infusion of incentives — low finance rates and rebates — only one of the Big 3 reported a sales gain in the 1987 model year. Ford Motor Co. dealers retailed 2,073,845 cars, an increase of 5.44 percent over last year's 1,966,829.

Sales of U.S.-built Honda and Nissan models grew in the 1987 model year. Honda's sales rose 93.62 percent, and Nissan's sales jumped 149.59 percent. Toyota, which started selling U.S.-built cars last December, sold 34,206 domestically produced cars.

General Motors and Chrysler Motors lost sales during the model year. GM's total of 3,719,267 was down 18.30 percent from 4,552,762 in the 1986 model year. Chrysler's sales dropped to 1,012,512, down 17.74 percent from 1,230,884. Volkswagen's sales declined 10 percent. Mazda began producing cars in the United States in September and reported no sales of U.S.-built cars for the 1987 model year.

The top three domestic nameplates in the 1987 model year had combined sales of more than one million units. They were Ford Escort, 394,999; Ford Taurus, 376,507; and Chevrolet Celebrity, 331,647.

Rounding out the top 10 domestics were: Chevrolet Cavalier, 295,316; Oldsmobile Cutlass Ciera, 264,850; Ford Tempo, 234,663; Honda Accord, 226,907; Pontiac Grand Am, 216,065; Chevrolet Caprice, 189,027; and Oldsmobile Delta 88, 184,402. The Accord total includes only U.S.-built models.

Chevrolet's Corsica/Beretta got off to a late start, but managed to capture 11th place with sales of 179,057 cars in the 1987 model year.

It was a good year for truck manufacturers. Light-truck sales set another record in the 1987 model year, their third straight, but domestic manufacturers are generally looking for a slight falloff in the 1988 campaign.

The question of whether 1988 sets another record is purely technical. By everyone's account, it is still expected to be very good year, meaning a lot of profitability in the truck business — and 100,000 sales, more or less, aren't expected to make a great deal of difference to this 4.6 million-unit market.

It was an interesting model year from the respect that domestic truck companies checked the growth of the imports. The major domestic manufacturers accounted

Sales charts compiled by Karen Dziewanski

SALES

for 80.33 percent of the light-truck market, exactly identical to their year-earlier share.

Ford had the industry's top-selling vehicle with its F-series pickup, which accounted for 519,704 model-year sales, down slightly from 544,191 last year.

Chrysler had the biggest gain among domestic companies. Its sales of 703,894 trucks were up 25.38 percent from the 1986 model last year and topped the company's previous high of 608,364 set in 1985. Ford light-truck sales were up slightly, and GM was down 8.70 percent.

Chrysler's Jeep operations reported a record 210,076 sales, slightly ahead of last year's 109,842, the previous high.

Imported trucks amassed a record 910,683 sales, up from their previous high of 901,500 in the 1986 model year.

Among importers, Isuzu, Mitsubishi and Suzuki all posted new highs, while the major imported truck marketers, Toyota, Nissan and Mazda, had fall offs from 1986.

September sales of domestic and imported cars trailed the year-ago total, despite a slight surge for the domestics in the final 10-day period.

The month's sales fell to 899,964, a drop of 26.01 percent from a year ago, when 1,216,390 cars were delivered. Domestic-car manufacturers sold 613,208 cars compared with 924,919 a year ago. Sales dropped off 33.70 percent. The import total also dipped. Imported-car sales were 286,756, down 1.62 percent from 291,471 last year.

The Big 3 reported September sales declines of 18 percent to 48 percent. Ford's deliveries were down 17.55 percent. GM sales declined 40.81 percent, and Chrysler's September sales, which included Jeep-Eagle Division, plunged 47.70 percent compared to last year.

Honda's sales edged up less than 1 percent for the month; Nissan reported a 145.51 percent gain because the Smyrna, Tenn., plant had just resumed production a year ago. Volkswagen's U.S.-built car sales dropped 26.18 percent for the month. Toyota, which was not making cars in the U.S. last September, sold 4,956 this year.

The imports took 31.86 percent of the September market. Domestic shares were: GM, 34.14 percent; Ford, 20.12 percent; Chrysler, 8.81 percent; Honda, 2.63 percent; Nissan, 1.39 percent; Toyota, 0.55 percent; and Volkswagen, 0.50 percent.

The Big 3's incentives helped boost Sept. 21-30 sales 5.30 percent for the domestics.

The total for the third 10-day period was 275,461, up from 261,598 a year ago. But there was one more selling day this year, so the daily selling rate dropped to 30,607 from last year's average of 32,700.

Ford, GM, Honda and Nissan sales numbers rose in the final 10 days.

Ford's sales were up 25.38 percent; GM sales edged up 5.56 percent; Chrysler's sales fell off 30.53 percent.

Honda delivered 32 more cars than it did a year ago and Nissan sold 5,981 cars for a 171.99 percent increase over the Sept. 21-30 period. Volkswagen's U.S. built 10-day sales were off 22.83 percent.

Nine-month car sales in the United States were 7,857,248, down 10.39 percent from last year's 8,768,927.

Domestic car sales were down 13.56 percent and import sales were down 1.91 percent.

For the first nine months, U.S. automakers sold 5,528,742 cars compared with 6,386,671 last year. Import-car sales for the first three quarters of calendar 1987 were 2,336,506 compared with 2,382,056 in the same period a year ago.

Among the domestic automakers, Ford's year-to-date sales were up 7,338 units or 0.47 percent compared with last year's first nine months. Nissan reported a 230.37 percent increase in U.S.-built car sales and Honda tallied a 53.34 percent sales gain.

GM's sales declined 22.46 percent, and Chrysler's sales dropped off 24.51 percent. Volkswagen reported a 14.19 percent downturn.

NHTSA cites 3 cases in X-car appeal

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — NHTSA is using three sample consumer complaints out of thousands about "premature rear brake lock-up" in General Motors X-cars on dry roads to rebut GM's defense that "all cars skid."

The agency is pressing its appeal of a court decision favorable to GM in the case involving 1980 X-cars.

The X-cars, which are no longer built, were Chevrolet Citation, Pontiac Phoenix, Oldsmobile Omega and Buick Skylark.

The latest government reply brief noted that the three complaints were made well before any NHTSA announcement of its lawsuit on the alleged brake defect or adverse news stories.

The brief counters GM claims that expert testimony from NHTSA supported GM's position that its early X-cars were no different than similar models offered by other manufacturers. It also accuses GM of obfuscation and bad faith, specifically in charges that GM received different treatment than the agency gives other automakers.

GM Chairman Roger B. Smith, in town for a 1988-model showing to Congress on the day of oral argument of the X-car case, compared the X-cars with the Corvair. It was a design, he said, that was vindicated after the car had gone out of production.

"We'll be vindicated on the X-car, but the X-car is gone," he said.

An NHTSA official, who asked not to be named, disagreed. Rather, he said he feared that the 1980 X-cars may all be junked if the appellate court takes as long to rule as U.S. District Judge Thomas Penfield Jackson did. Jackson took more than two years, and then reached what the government thinks is the wrong decision.

During oral argument before the appellate court, Douglas Letter, speaking for the Justice Department and NHTSA, said Jackson's decision did not follow court precedent allowing consumer complaints to show a "performance defect" without any necessary explanation of the technical cause.

That rests on three early GM defect cases — Kelsey-Hayes wheels, pittman arms and the Quadrajet carburetor — all of which GM lost.

The government contends the real-life experience mirrors GM's own document trail of complaints from its professional test drivers to high GM officials before GM started producing the early front-drive vehicles.

Thomas Gottschalk, of Kirkland and Ellis, speaking for GM, claimed that no government engineer could show that complaining consumers had not skidded on a slick road covered with oil or on a road not properly maintained.

He added that GM's two early recalls were efforts to improve brakes but were not evidence of a defect. Finally, the "surge" in consumer complaints to NHTSA resulted from "intense, massive and adverse" publicity, he said.

The government responded that half the consumers complaining after the publicity had complained before the television coverage.

The three-judge appellate panel consisted of Judges Harry T. Edwards, Douglas H. Ginzburg and Kenneth W. Starr.

Inventories lowest in 12 months

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — The Oct. 1 stockpile of U.S.-built cars was the leanest in 12 months, but the days' supply could not match last October's 35-day supply, lowest in 14 years.

Nor could it match Oct. 1 two years ago, when there was a 36-day supply of cars.

Stocks diminished during September to 1,396,454 cars on Oct. 1, a 57-day supply. That was 40,381 units lower than last month's 1,436,835, also a 57-day supply based on a slightly faster daily sales rate.

On Oct. 1, 1986, the stockpile was 1,291,280 unsold cars. Last year, U.S. carmakers had unusually effective incentives in place to clear stocks, so the Oct. 1 stockpile would have been sold in only 35 days. Chrysler Motors, General Motors and Ford Motor Co. were offering 2.4 or 2.9 percent financing rates — the first time they used such low rates to clear out inventories. American Motors promoted a 0.0 percent rate.

Two years ago, the Big 3 offered 7.5 or 7.7-percent financing.

This September's flurry of low-interest financing and rebates was part of continuing inducements from manufacturers, diluting their effectiveness. Some analysts and dealers suggest consumers were waiting for 1988 models to be introduced.

Ford had the leanest inventory of the Big 3, a 46-day supply on Oct. 1, compared with 51 days at the start of September. Chrysler's stocks were larger but its days' supply dropped to 79 days from last month's 83. GM's Oct. 1 unit count was down from last month's, but because of slack sales, GM was left with a 62-day supple vs. 59 days on Sept. 1.

Honda began October with an 11-day supply of U.S.-built cars compared with 8 days' worth a month earlier. Volkswagen's domestic-car stocks dipped 30.28 percent and resulted in a 57-day supply, down from 80 days last month.

Toyota's stock of U.S.-built cars was down by a third, leaving a 33-day supply vs. 66 days on Sept. 1. Nissan's inventory of U.S.-built cars dropped to a 29-day supply compared with last month's 38 days.

Companies shared the Oct. 1 inventory as follows: GM, 54.94 percent; Ford, 24.08 percent; Chrysler, 17.98 percent; Nissan, 1.02 percent; Honda, 0.77 percent; Volkswagen, 0.74 percent; and Toyota, 0.47 percent.

Last month, the shares were: GM, 54.80 percent; Ford, 24.94 percent; Chrysler, 16.67 percent; Nissan, 1.30 percent; Volkswagen, 1.03 percent; Honda, 0.64 percent; and Toyota, 0.62 percent.

The domestic shares by size class on Oct. 1 were: subcompact, 10.77 percent; compact, 22.74 percent; intermediate, 44.64 percent; standard, 20.45 percent; and specialty, which is made up of Allante, Corvette and Fiero, 1.40 percent.

Stocks of specialty-class cars grew in September. Cadillac's Allante inventories were equal to a 497-day supply, and Chevrolet Corvette had 155 days' worth. Pontiac Fiero' unit count was down, but the days' supply was at 79 vs. 71 last month.

Burnley nominated to head DOT

WASHINGTON — James H. Burnley IV, who has been acting head of the Department of Transportation since the resignation of Elizabeth Dole last month, was nominated to succeed her as transportation secretary last week.

Dole resigned from the cabinet to assist her husband, Sen. Robert Dole, R-Kan., in his presidential bid.

Burnley, 39, has been deputy secretary since November 1983. He is expected to face some congressional opposition because of his confrontational approach to critics of the department's handling of aviation safety.

As deputy secretary, Burnley was the top policy adviser to Dole and was the equivalent of a chief operating officer for DOT's 100,000 employees and $26.5 billion budget. He joined DOT in early 1983 as general counsel, leaving a post as associate deputy attorney general in the Justice Department.

An attorney from Greensboro, N.C., Burnley served as a local campaign chairman for President Reagan in 1980. After the election, he was appointed director of Volunteers in Service to America.

The new deputy secretary is Mimi Weyforth Dawson, currently a commissioner of the Federal Communications Commission. Her husband, Rhett Dawson, is a chief aide to former Sen. Howard K. Baker, President Reagan's chief of staff.

While Burnley has dealt with issues ranging from trucking deregulation to highway fund reauthorization, his stance toward critics of the nation's air safety angered senators who deal with aviation issues and may have contributed to the administration's delay in naming him to the top DOT post.

On CBS News' "Face the Nation" last May, Burnley accused critics of DOT's aviation safety record of talking "gibberish and nonsense" and frightening air travelers with "loose, quick, glib" comments.

GM-UAW

FROM PAGE 3

Roger Smith repeated that because of GM's high degree of vertical integration, it would need to modify the pattern set in the Ford contract. Meanwhile, local union leaders at GM and many in the rank-and-file had been saying for weeks they would accept nothing less than what Ford workers got.

At the same time, Wall Street analysts were maintaining that GM had to reject the Ford pattern or abandon its goals of world-class efficiency. Some said GM had to take a strike to prove to the financial community that it was serious about restructuring.

When the agreement was announced last Thursday — with the union claiming it "achieves all of our goals" and the company saying the contract could help it become more competitive, one seasoned observer in the International Union of Electronic Workers remarked that the entire process had been "masterful posturing" on the part of GM and the UAW.

GM workers got what they said they wanted all along — the same deal as Ford workers, he said.

Meanwhile, GM has an agreement it can maneuver with. As details of the Ford agreement have become available, it appears the new contract might not be the millstone analysts predicted it would be for GM. The company can still outsource when "practical," lay people off when sales are slow, sell plants and see its workforce shrink through attrition. That process will be hastened by improved pensions.

Thus it appears UAW President Owen Bieber got what he said he wanted when Ford was chosen as the target in late August: "an industry contract." Some local union leaders said, in fact, that the Ford contract was "cheaper" than it needed to be at Ford, precisely because it was designed with GM in mind.

A UAW source said the new contract "won't be that expensive for GM." He said GM had been pushing for special treatment for its component operations, but those demands "fell by the wayside."

Rather than face a costly strike, "they swallowed the pill — and it won't be that big a pill. They will have to spend a little more for job protection than Ford," the source said.

Ford has committed $500 million to back its Guaranteed Employment Numbers program. Published reports indicate GM will back its new job security program with a little more than the $1 billion it set aside for the Job Opportunity Bank — its current safety net for laid-off workers.

But analysts unequivocally said any operational efficiencies GM might get out of a new contract are not enough. They say GM needs to "cut heads" by closing assembly plants and uncompetitive component plants.

Ron Glantz of Montgomery Securities called the tentative settlement "incremental bad news" for the company. He said he had already downgraded GM stock to "sell," based on its earnings estimate, before GM agreed to the new contract.

"If there were a category lower than sell, I'd use it. I'm sitting here figuring out how to downgrade my earnings estimate" for GM, Glantz said Friday.

GM President Roger Smith, who was present when the agreement was announced, said he was pleased the settlement had come "without a labor disruption. It's an important time for us this year for new models." He called the settlement "a good contract."

Union dissidents say the GM agreement will face some degree of opposition at the GM council and before the membership. Local union sources at Ford say several large skilled-trades units turned down the contract because they said it will result in work-rule changes including teamwork for skilled tradesmen. "The job guarantee is for three years, but the work-rule changes are forever," said a Ford local officer.

Dave Yettaw, president of UAW Local 599, which represents 15,000 workers at GM's Buick City complex, said "GM workers are going to be disillusioned" if job protection in their contract excludes the 50,000 to 70,000 people who are on layoff or slated to go on layoff because of plant closings.

DEALERSHIPS

FROM PAGE 3

Jones also said he knows of a U.S. citizen who is fronting for foreign investors in buying dealerships. He said that the individual's plan is to buy seven dealerships in the next two years.

"I see it becoming part of the industry either by the manufacturers or outside interests," he said. Jones predicts that in the next two years, foreigners will own 10 to 15 percent more dealerships than they do now.

Robert Monteith, of Robert Monteith and Associates, in Westlake Village, Calif., said that two West Coast dealers are seriously looking at selling their stores to Pacific Rim investors, though he would not name the parties.

Robert Johnson, formerly an employee of Lex, is president of York Associates on Long Island, a firm that represents foreign investors looking for dealerships.

"I know of 30 examples that I have come across of foreigners who have purchased dealerships," he said. The buyers are from the United Kingdom, Australia, Hong Kong, Germany, Lebanon and Saudi Arabia.

"I am aware of one overseas investment banker — a relatively well-known one — who wants to invest money in U.S. dealerships," Johnson added.

Most of the investors come in groups; some represent manufacturers, including foreign automobile manufacturers, though that may occur through a front person, the dealmakers say.

Generally, the investors are looking for large dealerships with annual sales from $2 million to $100 million or more. Almost always, they look only at dealerships in major metropolitan areas. And most often they want dealerships with more than one franchise — preferably a domestic as well as an import.

Lex, for example, is looking for a multi-point dealership that has a strong domestic franchise as well as imports, preferably an Asian and a European franchise, Beck said.

Monteith said the U.S. vehicle franchise system is ripe for foreign investment because investors see opportunity in the richest market in the world where the franchise system is "antiquated." Real estate prices in many areas have skyrocketed and prices of dealerships have climbed; yet the traditional ways of financing dealerships remain unchanged.

Monteith pointed out that 10 years ago, a general manager or a general sales manager of a dealership, with $50,000 dollars to invest, could borrow $500,000 to buy his own single franchise.

"That kind of money won't even get him in the door today," said the former banker.

Monteith predicts a surge of foreign investment in U.S. dealerships in the next five years, as the present generation of dealers with large holdings ages and turns over its franchises to successors.

Some foreigners believe they can run the dealerships better and with bigger returns than can Americans.

"The feeling is we are not running dealerships the way they should be run, that we're not service-oriented," said Jones, of Action Brokers. "If they implement their own ideas into a dealership, they can make the move successful."

NADA

FROM PAGE 1

current First Vice President Jimmy C. Payton will succeed President James T. Caplinger at the Feb. 6-9 1988 NADA convention in San Francisco because that's the orderly way the NADA system works.

However, the real race will decide who will succeed Payton as first vice president, and thereby secure a place in the line of succession. The dealer elected first vice president will become president at the Feb. 11-14, 1989 convention in New Orleans until the Feb. 10-13, 1990 convention in Las Vegas.

Adcox, a 34-year Chevrolet dealer in Chattanooga, Tenn., and an NADA director for five years, believes the key campaign issues include dealers' rights in matters such as binding arbitration and marketing without factory intervention, as well as NADA's ability to take issue with the manufacturers when necessary.

Adcox said he prefers working quietly behind the scenes compared with fighting battles in the press. He said NADA has been able to accomplish things by open communications with manufacturers.

Banks, a 30-year Chevrolet-Cadillac dealer in Concord, N.H., and an 11-year NADA director, said the key issues facing NADA is the survival of the dealer in the face of "competition from overseas" and over-capacity of domestic manufacturers.

Banks, who once ran for Congress, said every dealer needs to be politically involved, that NADA "could get a little more attention" in "certain areas," and that he has a "new direction for NADA" that he intended to propose to the other directors this week.

Smith, a 30-year Kansas City (Mo.) Ford dealer, 7-year NADA director and former Region III vice president, said the key issue is improving NADA's ability to react quickly in daily business, particularly "when we have to put out fires."

Smith said he believes NADA needs to work publicly to call attention to issues and "in a quiet room" behind the scenes to solve the problem.

"I'm not one that tries to go out and beat the drum just to beat the drum," he said.

Tonkin, who operates nine stores and sells 13 makes in the Portland (Ore.) area, is a five-year NADA director and Region IV vice president, said the key issues "must unite dealers the way we've never been united before." He believes dealers have not been tough enough and should have a voice on the automaker's board of directors and in matters such as factory management/labor relations.

Tonkin, an outspoken critic of the current factory policy toward dealers, sent a tape of his 1987 Automotive News World Congress speech blasting those policies to each of the 58 NADA directors.

"There's no question that it's a real horserace," said NADA President Caplinger. "We have four good, strong candidates for the first time I can remember. I got a lot more mail than ever before, so that must mean there is more interest," he said.

"I don't think any of the candidates can win it on the first ballot," said James B. Woulfe, immediate past president and chairman of the nominating committee.

"It has been a spirited race," said Payton of the contest to name his successor. "There hasn't been any acrimony or anything like that, but I have received more mail from the candidates this year than ever before."

Although there is a similarity of opinion on key issues facing dealers, the way in which NADA and its paid staff deals with those issues, as well as day-to-day business, has itself become an issue.

Tonkin seems most likely to exert more control over the staff. He said that as president he might lease a Washington-area apartment to be a "full-speed-ahead and balls-out" leader. "The staff and leadership are there," Tonkin said. "It's just a matter of coordinating them."

Smith said officers "should not try to do the staff's job or vice versa." He said the staff is good enough so that the president doesn't have to get involved in operations. "We set the policy and the staff implements it."

Candidate Banks said one of the functions of officers is to "keep an eye on the bureaucracy" to keep it from getting out of hand. "The president and first vice president must express to the staff the will of the dealer body," he said.

Caplinger: "There's no question that it's a real horserace. We have four good, strong candidates for the first time I can remember."

Adcox said the NADA staff has "the most competent people available" who do not make decisions without input from the officers, and he does not believe a president needs to relocate to Washington to run the staff.

NADA Executive Vice President Frank McCarthy said some presidents seem to be more present than others.

"I'm happy and the staff is happy to work with whoever is elected," said McCarthy. "I have one strong rule: The staff stays out of elections."

Although most staff members claimed no interest in the outcome of the election, it is clear there is awareness of the staff autonomy issue.

Said one NADA director who spoke on condition of anonymity: "The time will come when we'll need a strong leader to deal with the factories, the press and everybody," he said.

"The staff likes to run the show," he said, "and the weaker the guy (who is president), the better the staff likes it.

"Although nothing has been said directly about controlling the staff, I think the staff is afraid of Tonkin and is being very careful not to show it or to take sides," the director added.

"Maybe the staff is talking about it (the election) a little bit more than normal, but I don't think anybody is sitting back and quaking in his boots," said Stephen R. Pitt, executive director of convention and member services.

McCarthy is the ranking paid employe of NADA. Two years ago McCarthy reorganized the staff, putting attorney John J. Ferron immediately under him on the oraganizational chart as vice president. The 12 divisional executive directors then reported to Ferron, who reported to McCarthy.

However, earlier this year, McCarthy once again shuffled the deck and took away some of Ferron's power. Under the May reorganization, only five executive directors report to Ferron. The other seven now report directly to McCarthy.

"It in no way diminishes Jay's responsibility and authority," McCarthy said.

McCarthy said he and Ferron discussed the change for months before it was made, to smooth operations and make Ferron's job easier.

Still, the change is viewed by some as having divided the staff into pro-Ferron and pro-McCarthy sympathizers.

"If there is any staff divisiveness, I have not seen it," McCarthy said.

Ferron did not return several telephone calls last week.

The NADA executive committee took no official action to either initiate or ratify the latest shuffle, thereby giving a de facto blessing. Said one director who spoke on the condition of anonymity: "Frank has made some changes that put him back in charge completely. Jay was running his own bailiwick. He's pushier and likes to do things faster."

Said another director, who also requested his name not be used: "McCarthy did what was necessary."

Incoming president Payton perceives no staff split. "Jay's job is a new job, and the job description might be blurred. It might be necessary to adjust the job description as the job is molded."

The candidates in this month's election also supported McCarthy.

Despite the staff housekeeping issues and the positions of the various candidates, most directors publicly remain noncommittal. They will cast secret ballots to decide the winner from among the four. Therefore, it is virtually impossible to accurately predict the outcome of the election.

The whole matter could come down to something simple, said one veteran board member: "Sometimes you vote for the guy you just plain know the best, and more than likely he's a guy from your line group."

NICHE

FROM PAGE 1

buyers. In addition, the newcomers are filling a void left when the Japanese headed upscale.

Domestic bargains such as the Chevrolet Chevette also have left the scene. And, Chrysler Motors created an opening when it stopped production of the Omni-Horizon series for six months earlier this year.

The success of this year's new entries reflects the strength of the under-$6000 market. As in the past, the entry-level segment has been anchored by young, first-time buyers. Another factor can be found in the changing circumstances surrounding the purchase of a family's second or third car, said Suzanne Kinsler, vice president for competitive assessment at Autofacts Inc., a forecasting firm in Paoli, Pa.

As car prices have risen and car loan maturities have been extended, it has become more difficult for many households to squeeze another car payment into the budget. "Once you get into the position where you are all borrowed out, those cars under $6,000 are the only way these people can afford a car," Kinsler said.

Of this year's five new entries under $6,000, only the Justy is built in Japan. The Fox comes from Brazil. The Precis (Mitsubishi's version of the Hyundai Excel), LeMans and Festiva are all produced in South Korea.

In buyers' minds, however, the source of the car appears to be fading as a concern. Hyundai, with its sudden success in the U.S. market over the last 18 months, gets a lot of credit for easing doubts about South Korea's merits as an auto producer.

As Hyundai has shown, it is not just the Japanese that have cornered a reputation for reliability, said George Peterson, president of the AutoPacific Group, Newport Beach, Calif. Customers feel that the Asian cars have intrinsic values that they don't perceive in domestic cars, he said.

Sourcing aside, it is still price that is drawing most buyers to these cars. The $6,000 mark remains a threshold — as evidenced by the just-under-the-barrier price tags on the base Fox ($5,990) and LeMans ($5,995).

With a sea of manufacturers touting price, the net effect is a blur of images to the consumer, said Roger Lykins, sales analysis manager at Ford, whose Festiva starts at $5,765. "It's not until you look at them (the cars) that you are going to make a discrimination between them."

And shoppers will find differences. Subaru's two-door Justy, for example, carries a 3-cylinder, 1.3-liter engine in its two models and tops out at $6,295 before options. The four-cylinder, 1.6-liter LeMans, meanwhile, is available in two coupe and two sedan models and climbs to $8,399. Options can push the price past $10,000.

It's not unusual for a customer to wind up paying $7,000 or more for a car they planned on spending $5,900 for. Analysts say that the profits these cars bring automakers will be limited. And extensive advertising will further erode the bottom line.

But for Ford and Pontiac, the Festiva and LeMans help broaden product lineups and provide a chance to create brand loyalty.

Mitsubishi, saddled with Japanese export quotas, says its Korean-built Precis broadens its dealers' line and gives them more units to sell. Subaru will be putting more emphasis on the Justy as it retreats from its troubled foray upscale.

Also, Japanese makers could mount a comeback in this niche. Honda is poised to sell a model below its Civic, and Nissan is preparing to bring in a Taiwan-built version of its 1.2-liter Micra. In December, Daihatsu will introduce its Charade minicar to the United States.

Here is a summary of how the five newest entries have performed so far:

FESTIVA: Ford staggered the launch of the Festiva in an effort to guarantee an adequate supply to its dealers. Sales have been climbing steadily since its West Coast introduction in April, and last month 5,885 Festivas were sold. With the launch concluding this month, Ford should have little trouble reaching its 1987 goal of 30,000 sales. Next year Ford expects 85,000.

Meanwhile, the Ford Escort has been able to hold its own alongside its new showroom partner. After the Festiva went on sale in California, Escort sales in the state rose 25 percent, said a spokesman. "We are finding a lot of people looking at Festiva and driving away in an Escort."

FOX: A launch slowed by a Brazilian strike could prevent Volkswagen from reaching its sales target of at least 40,000 sales in 1987. The company needs to close out the final quarter with more than 13,500 sales to reach its goal.

But aside from that early supply problem, the car has done all that has been expected. Monthly sales have averaged around 4,000 for six months straight. Inventories stand near the five-day level, and some dealers say they have been getting more than list price.

Volkswagen expects to sell 70,000 to 80,000 Foxes in the United States next year.

JUSTY: Subaru had hoped to chalk up at least 12,000 Justy sales in 1987 — and it could sneak past that mark now that supply problems have eased and shipments have been increased from 800 to more than 1,200 per month. Through September, 8,055 Justys had been sold. Next year, Subaru is looking at 30,000 sales.

Subaru's strategy is to put more emphasis on the lower end of its product lineup. A new national ad campaign will feature the four-wheel-drive version of the Justy, which goes on sale later this month.

LeMANS: Pontiac expects to sell 85,000 to 100,000 LeMans models in the 16 months between its June launch and the start of the 1989 model year. If August and September are any indication — U.S. sales averaged nearly 9,000 each month — Pontiac will surpass that goal easily.

The labor unrest in South Korea cost Pontiac three weeks of production at the Daewoo Motor Co. plant. LeMans supplies have fallen to 31-day levels.

PRECIS: Mitsubishi sold 16,047 Precis models between March and September and expects 25,000 sales for the year. With the South Korean labor crisis apparently settled, the company will attempt to keep the flow of cars steady at about 2,500 per month.

The Precis is in an unusual position: Through its 15 percent stake in Hyundai Motor Corp., Mitsubishi was able to secure 30,000 Hyundais a year and sell them under the Precis banner in the United States.

PROFITS

FROM PAGE 1

and models that provide high-volume sales or high per-car profit have been particularly hard hit.

Also, three plants that will produce the new GM10 mid-sized cars are on a slow acceleration schedule.

Ann Knight, auto analyst for PaineWebber Inc., said the third quarter will begin to show a squeeze on General Motors Acceptance Corp. earnings because of a rise in interest rates on the money that GMAC borrows.

For several years, GMAC's record earnings have boosted GM's overall earnings. Chrysler Financial Corp. and Ford Motor Credit Co. also are pressured by higher interest rates on borrowed money, but not to the same degree as GMAC, Knight said.

Ford is expected to earn roughly the same, or somewhat less, in this year's third quarter than it did last year. Based on the analysts' forecasts, Ford will earn about $660 million, compared to $693 million in the year-ago quarter.

Analysts said Ford's earnings were diminished by the company's recall of 4.3 million vehicles to install equipment to lessen the possibility of fires.

Chrysler is expected to report earnings of about $235 million. That compares with year-ago third-quarter earnings of $324 million.

Chrysler's third-quarter results this year include earnings from American Motors. Chrysler's acquisition of AMC was finalized during the quarter. Chrysler's year-ago figures do not include AMC, which lost $40 million in the third quarter of 1986.

Analysts said Chrysler earnings were reduced by the costs of its end-of-model-year incentive program, lower sales and a six-day strike by the Canadian Auto Workers union, which forced the shutdown of some facilities in the United States as well.

Quarter's output lowest since '82

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Domestic auto production in the third quarter dropped to a five-year low.

The total of 1,339,881 cars for the three-month span was the lowest since the 1,215,347 built in the same period of 1982.

The quarter's output was 18.01 percent below last year's third quarter total of 1,634,205.

September's output of 572,184 was 38.64 percent more than the August total of 412,717 but 10.70 percent below the year-ago month's 640,760.

Last week's scheduled production of 148,969 was 4.75 percent more than the previous week's 142,216 but was down 4.47 percent from the year-ago week's 155,933.

So far this year, 5,491,362 cars have been assembled, a decrease of 9.66 percent from the 6,078,279 completed last year at this point.

Last week's targeted output was shared as follows: General Motors, 51.10 percent; Ford Motor Co., 25.04 percent; Chrysler Motors, 15.57 percent; Honda of America Manufacturing Inc., 4.28 percent; New United Motor Manufacturing Inc., 2.28 percent; Nissan Motor Manufacturing Co. U.S.A., 0.81 percent; Volkswagen of America, 0.81 percent; and Mazda Motor Manufacturing (U.S.A.) Corp., 0.11 percent.

About 1,600 workers at Volkswagen's Westmoreland, Pa., plant were temporarily laid off Oct. 2 because of a shortage of engine parts. The shortage lasted three days and production of the Golf/GTI and Jetta was resumed last Wednesday.

Chrysler's Belvidere, Ill., plant was idle last week because of a shortage of parts for its new Dodge Dynasty and Chrysler New Yorker models. The plant was slated to resume output today.

Ford scheduled daily overtime this week at all its plants except Edison, N.J.

Chrysler's Kenosha, Wis., and St. Louis (No. 2) plants were slated for overtime last Saturday. Those plants are scheduled for daily overtime this week.

Truck production zooms to 27-year high

Despite the drop in the third quarter auto production, U.S. truckmakers reported their highest output for that period in 27 years.

Third-quarter truck production of 903,660 was the best for that period since the 949,586 built in the third quarter of 1960.

The third-quarter total was 4.22 percent more than the 867,031 built in the comparable three months of 1986.

September's truck production of 328,658 was 9.87 percent above the August total of 299,145 and 1.41 percent more than the year-ago month's 324,086.

Truckmakers scheduled production of 78,895 units last week, 1.77 percent more than the previous week's 77,526 and 11.62 percent more than the year-ago week's 70,680.

Year-to-date, 2,968,927 trucks have been built, 6.52 percent more than the 2,787,164 assembled last year at this time.

General Motors slated overtime last Saturday at its Flint, Mich., plant.

Ford's Wayne, Mich., and Lorain, Ohio, plants were scheduled for overtime last Saturday.

Ford Motor Co. scheduled daily overtime this week at all its truck plants.

Car output dips, trucks rise in Canada

Canadian car production for the third quarter was the lowest for that period in six years.

Third-quarter output was 128,910. It hasn't been that low since 1981 when 101,167 cars were built.

Production in the third quarter was 32.54 percent below the year-ago period's 191,081.

Car output for September totaled 65,316, more than double the August figure of 27,411 when several plants were idle for model changeover. But September's build fell 21.97 percent from the year-ago month's 83,710.

Last week's targeted car output of 20,266 was 24.17 percent more than the previous week's 16,321 but 14.96 percent below the year-ago week's 23,830.

So far this year, 587,887 cars have been built, 27.10 percent below the year-ago's 806,421.

Third quarter truck output totaled 164,673, 2.45 percent more than the last year's 160,735.

Output of 64,545 trucks in September rose 10.85 percent from August's 58,229 and was up 5.92 percent from the year-ago month's 60,940.

Scheduled production of 17,993 trucks last week was 1.90 percent below the previous week's 18,342 but 60.27 percent more than the year-ago's 11,227.

Year-to-date, 629,689 units have been built, 1.98 percent below the year-ago's 642,389.

EDS eyes satellite link to GM dealers

DALLAS — Electronic Data Systems Corp., General Motors' computer services subsidiary, has taken the first step to create a satellite communications network for GM dealers by signing an agreement with the Automotive Satellite Television Network.

The agreement, signed last week, gives EDS the exclusive right to offer ASTN programming to GM dealers. It also gives EDS "a substantial minority position" in ASTN, the Dallas-based satellite television network for dealers.

ASTN currently broadcasts six hours of training information, news and general information daily to more than 2,400 vehicle dealers in North America. The 900 GM dealers already in the ASTN network will have a second channel installed for programming tailored exclusively to GM dealers. In addition, EDS is investigating data communication capabilities.

Carl Westcott, ASTN founder, declined to say what percentage of his company EDS holds, but he said the equity position cost EDS $10 million. In addition, Westcott said that ASTN received between $50 million and $75 million for the five-year programming contract.

Luxury dealers in demand

Upscale imports battle for the best

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — The surge in new upscale, import automotive marques is setting up a scramble for top-flight dealers in key markets.

There are plenty of applicants for manufacturers to choose from, but the dealers the newcomers really want — well-capitalized, comfortable with affluent clients and with proven customer satisfaction records — are limited.

The biggest battle shaping up is between Honda's growing Acura Division and the startup efforts of Toyota's Lexus Division and Nissan's Infiniti Division, which together are projecting 1,000 dealers by the early 1990s. But the expansion of Austin Rover's Sterling dealer body and General Motors' efforts to set up Opel outlets by 1989 are adding to the crunch.

"Lexus and Acura are our two primary competitors," said William Bruce, head of Infiniti. "Many megadealers will choose one of the three. Others will have two or all three of us.

"A guy with one or two shops is more limited. He's the guy that will decide on one or another."

Acura, which expects to surpass 100,000 units in its second year of operation, is having no difficulty

New Mitsubishi Galant sedan with active suspension will debut at Tokyo

TOKYO: *Opening of auto show finds makers adjusting to new era*

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Japanese automakers, preparing for the international invasion that will be created by the Tokyo auto show Oct. 29-Nov. 11, are coming to terms with their changed circumstances.

They have spent 1987 adjusting to the high yen and proving that, at least in the short term, they can live with it. But the long-term effects, at a time of increasing competition worldwide, may serve to reshape the industry by the early 1990s.

One thing is sure: There will be no let-up in new-product introductions in spite of the more straitened times. Mitsubishi will be among those showing fresh production cars at Tokyo, including all-new Mirage and Galant models bristling with high technology.

Behind the scenes, cost-cutting in Japan's auto factories has ranged from turning off restroom lights to redeploying line workers to new-car showrooms. The industry is as competitive as ever, and nowhere more so than at Toyota and Honda.

Toyota Motor Corp. is shaving back production by approximately 40,000 units due to a drop of more than 9 percent in sales in the United States in the January-August period.

Mitsubishi's other Tokyo newcomer is the Mirage

Domestic sales have increased 8 percent, but not enough to meet the expected drop in exports.

Tsutomu Ohshima, executive vice president, said Toyota anticipates reduced production for the second consecutive year. Sales in the U.S. market next year "are likely to be less," Ohshima said.

On the surface, the changes ma reflect the beginning of what Ohshima called "a new turning point for the automotive industry." Toyota's methods of dealing with the new circumstances reflect the company's overall strength.

Toyota is focusing on the domestic market, where it already has a 43 percent share and is believed to be aiming for 50. Previously, 70 per-

Dealers call mail rebates a mixed bag

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Direct-mail rebate programs aimed at selected consumers received mixed reactions from dealers across the country as General Motors and Chrysler Motors began mailing 33 million coupons to owners of their cars and competitive makes.

Some dealers said offering rebates to a small group of consumers could help otherwise soft sales and reverse a trend of declining owner loyalty.

Other dealers said the current direct-mail program is too narrow and that consumers not included may react negatively toward the dealer or manufacturer.

"The 1988 model year is a key opportunity (for domestic automakers) to take advantage of the fact that the Japanese will continue to raise prices. But the issue still remains, 'Is it (a direct-mail program) enough?' " said George Glassman, Glassman Oldsmobile, Southfield, Mich.

"I think it's the best idea in (showroom) traffic-building in a long time," said Jay Tittman, vice president of Longmont Chrysler-Dodge-Plymouth in Longmont, Colo. "The people who get these invitations are going to feel important. And, it returns emphasis to the new-car launch, instead of having the customers just think about year-end clearances."

Three weeks ago, Pontiac and Oldsmobile decided to offer direct-mail coupons worth $300 to $1,000 on 1987 and 1988 models.

Chrysler followed a week later with a similar program that offers a selected group of its owners and competitive-make owners rebates between $250 and $1,000 on a wide range of 1987 and 1988 Chrysler, Plymouth and Dodge vehicles.

Compacts pace truck surge

Sport-utilities, small vans hot items in '87 model year

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Compact trucks, led by small sport-utilities and small passenger vans, were the primary driving force behind the truck industry's sales gain during the 1987 model year.

For a change, the overall truck market also got a slight boost from rising medium- and heavy-truck sales.

Overall, the industry retailed 4,959,870 trucks in the 1987 model year, up 1.17 percent from 4,902,796 the prior year.

Compact trucks benefited not only from the crossover of car buyers, but also grew at the expense of full-sized, light-duty conventional models. Sales of full-sized light duties were off in all segments.

Compact trucks, including pickups, sport-utilities and minivans, accounted for 2,840,221 sales, or a 57.27 percent share of industry, up from 2,642,917, or a 53.91 percent share, in the previous model year.

Full-sized conventional light duties accounted for only 1,841,302 sales, or 37.12 percent of the market. That was off from 1,988,533, or 40.56 percent, the previous year.

Medium and heavy trucks inched up a bit with 278,347 sales, accounting for 5.61 percent of the industry total, compared with 271,346 or 5.53 percent of industry sales in the 1986 model year.

Within the large, growing compact segment, minivans barely edged out small sport-utilities. Each had nearly identical gains.

Manufacturers retailed 701,570 minivans vans, up 15.72 percent from 606,279 in the 1986 model year.

Within this small-van segment, passenger models accounted for 82.48 percent of the sales, while commercial cargo models accounted for the 17.52 percent balance.

Manufacturers like General Motors and Ford have been shifting their small-van production into passenger models — and away from commercial cargo vans — to satisfy consumer demand.

Compact passenger vans posted a huge 24.40 percent gain on sales of 578,650 units in the

Domestic sales plunge 39% in early October

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Early October car deliveries stalled out after a late-September attempt at recovery. Sales of U.S.-built cars dropped 39 percent from last year's equivalent 10 days when the market was driven by incentives.

Only Honda and Nissan could report that their U.S.-built car sales surged in the Oct. 1-10 period compared to a year ago.

The 10-day sales decline was not as drastic as last month's first-10-day domestic-car downslide of over 51 percent.

Unlike last year, most rebates ended Sept. 30 this year.

A few dealers reported that increased used-car sales helped offset slower new-car sales.

FORD SHAKEUP: *Top execs shifted as company aligns 3 main business groups*

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — Last week's management shuffle at Ford Motor Co. will allow the automaker to groom its future leaders while reshaping the corporate hierarchy to reflect the changing nature of Ford's business.

Most of Ford's key executives were repositioned. At the same time, the company aligned its three main business groups — automobiles, financial services and diversified products — under Harold A. Poling, who moves up from president to vice chairman.

Company officials said the appointments will help give executives the diverse background they will need to lead Ford. The announcements also served to confirm impressions of who has the best shot at succeeding Poling and Chairman Donald Petersen early next decade. Poling, 62, is set to retire in 1990 and Petersen, 61, a year later.

Among the apparent winners are executive vice presidents Philip E. Benton and John A. Betti. Benton picks up the title of president of the newly formed Ford automotive group and will oversee international and North American operations.

Benton's position is viewed as a key spot as Ford moves to integrate its engineering and product development activities worldwide. It also gives him the most prominent role in the corporation under Poling and Chairman Donald Petersen.

There is some doubt as to whether he would someday move into either of their seats, however. Benton turns 59 in December and is scheduled to retire just three years after Poling.

Betti, meanwhile, will become executive vice president in charge of diversified products operations on Jan. 1. The 56-year-old career-long automotive man will now get exposure to another segment of Ford's business.

Similarly, Allan D. Gilmour, 53, leaves his job as chief financial officer to fill Benton's position as head of international automotive operations.

On paper the move appears as a step down — Gilmour reported directly to Petersen and belonged to the four-member office of the chief executive. Yet there are strong feelings within Ford that the move simply affirms that Gilmour is destined to lead Ford someday. Now he will pick up exposure to the automotive and international sides of the business, which should complement his career in finance.

As industry analyst Jack Kirnan pointed out, Poling and Petersen have both worked overseas,

Saturn pact different; 2,000 seek franchise

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

TROY, Mich. — Saturn Corp. this month will begin sorting through 2,000 applications — about the number it expected to receive from car dealers and others interested in its franchise.

The first dealer will be signed in February or March.

Meanwhile, Saturn has filed its franchise-offering circular with the Federal Trade Commission.

The franchise agreement is different from GM's other franchise agreements and those of other automakers in a number of ways.

Like the controversial new Jeep-Eagle franchise agreement, binding arbitration will be the final step in settling dealer-factory disputes. However, first the dispute must go before a mediation panel of an equal number of Saturn officials and dealers. The binding arbitration panel, too, is made up of both Saturn officials and dealers.

The National Automobile Dealers Association opposes the use of binding arbitration and has protested Chrysler Motors' inclusion of that requirement in its Jeep-Eagle franchise for former American Motors dealers. NADA said it is continuing efforts to get Saturn to change the provision. However, Saturn has informed NADA that it will not be changed.

"We're not trying to run roughshod over anybody's rights," said James Cubbin, Saturn general counsel. "We're trying to protect their rights, but do it in a way that is less expensive and more expeditious."

Saturn's plan to settle disputes came from the 15 dealers who helped write the franchise.

Dealers also will help write the rules for how mediation and arbitration are conducted. Matters will be settled within three to six months rather than three to five years in the court system, according to Saturn officials.

Saturn executives point out that the franchise will appeal to sophisticated, well-financed business persons. They will be aware of the dispute resolution process long before signing a franchise agreement.

The Saturn franchise agreements have no expiration date.

Potamkin Cadillac sold; Penske to add lines

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Penske Corp. has acquired the Manhattan operations of Potamkin Cadillac and announced that new Chevrolet and Buick franchises would be added, creating a Penske Auto Center of New York.

Chairman Roger Penske said the two new franchises should open by year end, making Penske the largest General Motors dealer in Manhattan.

Roger Penske and Victor Potamkin signed the agreements last week.

The Penske Auto Center will operate at three leased facilities in Manhattan. GM plans to spend $8 million renovating the facilities; one will get a complete facelift.

The complex leasing arrangement took several months to complete. Under it, GM leases properties from Potamkin for 25 years at $3.1 million per year, adjusted for inflation, and then subleases them to Penske on a per-car-sold payment basis.

The Potamkin organization has over $1 billion in annual sales. It will continue to operate Chrysler Dodge, Plymouth, Sterling, Mitsubishi, Toyota and Volkswagen franchises in New York.

Penske's billion-dollar Retail Automotive Group sells over 30,000 vehicles a year. Penske's Longo Toyota in El Monte, Calif., is the world's largest Toyota dealership and Penske Cadillac is one of the nation's largest.

Penske plans to add Chevrolet and Buick and create Penske Auto Center

GM broadens component exchange for dealers

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

General Motors recently began several programs that allow dealers to exchange malfunctioning component assemblies for new units instead of repairing them.

These programs involve newly introduced components and will allow the company to gain early feedback on quality.

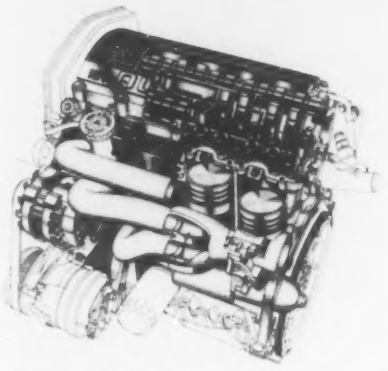
Included are the Quad 4 engine and ignition assembly in the Oldsmobile Calais; water pumps and serpentine belt tensioner bracket assemblies from the Quad 4 in the Oldsmobile Calais, Buick Skylark and Pontiac Grand Am; and the Borg-Warner five-speed manual transmission in the 1988 Chevrolet Camaro and Pontiac Firebird.

A GM spokesman also noted that the company has long had exchange programs for electronic "black box" assemblies.

"We want feedback from the beginning. Our goal is to have the most reliable, best product," said Donald Miles, chief engineer for the Quad 4 with Buick-Oldsmobile-Cadillac powertrain.

GM has conducted similar programs in the past, but Miles said "I think that on major components this is probably the most extensive exchange program we have had from the start."

Oldsmobile is the only division involved in the Quad 4 engine exchange, taking responsibility as the lead division for service on the powerplant, Miles said.



Oldsmobile Quad 4 engine

B-O-C doesn't anticipate any problems with the new engine, Miles emphasized. However, if problems develop, for example because of a supplier quality slippage, B-O-C wants to find out early, Miles said.

Among the problems for which GM will exchange a Quad 4 engine are cylinder block cracks; knocks as a result of problems with crankshaft or rod bearings or piston assemblies; low compression; and excessive oil consumption.

The Quad 4 features a distributorless integrated direct ignition system that also is covered by an Oldsmobile parts exchange program.

Although the system is used on other GM products, its packaging is different on the Quad 4.

"Our concern is the temperature environment. Temperature is harmful to the coils (that are mounted under an aluminum engine coverplate). We have been pleased to find that the cover serves as a heat sink," Miles said.

When a dealer finds a failure in an Oldsmobile, Buick or Pontiac Quad 4 water pump or tensioner belt, service bulletins ask dealers to return the failed part to B-O-C. These parts can be replaced from a dealer's parts inventory.

Another new product is the five-speed Borg-Warner manual transmission on 1988 Camaro and Firebird models.

Borg-Warner made significant changes in the transmission and the company "is trying to get earlier information on the product to be certain of its integrity," said Steve Zirkle, director of sales for the Borg-Warner Automotive, Transmission Systems Division.

The Borg-Warner exchange program is being conducted in cooperation with the Chevrolet-Pontiac-Canada Group of GM. Both Chevrolet and Pontiac have published service bulletins explaining the program to dealer technicians.

Borg-Warner, however, proposed the program and is absorbing the costs associated with it, Zirkle said.

It also makes Borg-Warner stand out in a market filled with tough competitors, all of whom are producing high-quality products, he said.

"It is tougher to find things you need to work on as you get better, but everyone is working at a high level and you need to differentiate yourself. This type of program gives us a better ability to do that," he added.

An exchange program, Zirkle said, can allow Borg-Warner to catch a problem in the system or in a new product before it reaches a large number of customers.

Borg-Warner has provided dealers with a list of instructions to determine if a transmission qualifies for the exchange program. Borg-Warner, Zirkle noted, might recommend a repair procedure in lieu of an exchange. In the event an exchange is deemed necessary, the dealer can receive a new transmission in one or two days.

Both the Borg-Warner transmission and Oldsmobile Quad 4 exchange programs are scheduled to run until GM and Borg-Warner are satisfied they have obtained the necessary information.

Service volume continues to rise

Shop business up for 3rd straight month, but rate of gain slips

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — The Automotive News Service Index showed a slight increase in August. It was the third straight month that the Service Index has climbed.

Service and parts business at new-car dealerships rose 0.8 percent over the August 1986 figure.

In July, the Service Index increased 6.1 percent, and in June it climbed 5.9 percent.

Shop business during the first eight months of 1987 was up 2.7 percent over the same period in 1986.

Dealers mentioned a variety of reasons for the slight increase in August.

A Ford dealer in the Northeast said business increased because of a change in management of the service department and a better overall attitude in the shop.

Also in that area of the country, a Saab dealer said business was up as a result of more major repairs than usual.

A Rocky Mountain Chevrolet dealer attributed his gain to an increase in new-car sales plus more service traffic from tourists. Motor home repairs contributed a great deal to his business.

SERVICE INDEX 100.8★

Gross Profit on All Labor and P&A Sales	+2.1%	+5.9%
Repair Orders Written	+0.2%	−2.3%
Total Labor Sales (Customer & Warranty)	+0.4%	+1.8%
Shop Parts Sales (Customer & Warranty)	− 2.9%	+2.9%
Sales of All P&A	+ 4.2%	+5.2%

★ Survey by Automotive News shows that dealers' service and parts business in August 1987 was 100.8 percent of business in August 1986. Service business in the first 8 months of 1987 was 102.7 percent of business in the corresponding period in 1986.

A Western Cadillac dealer said his service business declined as a result of less body shop work and fewer car sales for the year with less warranty work as a result.

Two dealers queried reported that their service business was about the same as in August 1986.

All indicators with the exception of shop parts sales (customer paid and warranty) were positive in August. Shop parts sales showed a 2.9 percent decline.

Sales of all parts and accessories led the August indicators of service business within dealerships with an increase of 4.2 percent. Gross profit on all labor, parts and accessories sales rose 2.1 percent; total labor sales (customer paid and warranty) climbed 0.4 percent; and repair orders written were up 0.2 percent.

Parts and accessories sales to off-premises customers climbed 10.6 percent in August.

Gross profit on all labor, parts and accessories sales showed the biggest gain of all in-shop indicators during the January-to-August period with an increase of 5.9 percent.

Sales of all parts and accessories were up 5.2 percent; shop parts sales increased 2.9 percent; and total labor sales climbed 1.8 percent.

Repair orders written fell 2.3 percent.

Parts and accessories sales to off-premises customers were up 6.7 percent for the first eight months of this year.

Super STAR tester and digital voltmeter are typical of modern service tools

Super STAR II helps technicians diagnose Ford engine problems

SHOP TALK

ARTHUR FLAX

Fixing a car these days requires a combination of old and new skills and technology.

One of the newest advances for Ford technicians is an inexpensive hand-held tester.

The Ford Rotunda Equipment department recently introduced a hand-held diagnostic tool called the Super STAR (self-test automatic readout) II. The Super STAR II is the latest update of its STAR and Super STAR testers.

The STAR testers read trouble codes stored in the Ford electronic engine control (EEC-IV) computer.

The first STAR cost about $130 and reads codes at the relaxed pace of one every several seconds. The Super STAR, introduced about a year ago, gathers those codes about 100 times faster, according to Shane H. Rachedi, project development engineer in the advanced service engineering department of the Ford Parts and Service Division. The technician can then play those codes back and forth at the push of a button.

The Super STAR was designed to be adaptable to future products, and the new Super STAR II includes the capability of working on the Ford Tracer and Mazda-built Ford Probe.

At about $170 for the Super STAR II or about $70 for an upgrade of the Super STAR to II status, each technician in the dealership can have one. The diagnostic abilities of the new tester also have been upgraded.

The Super STAR II can diagnose most electronic sensor malfunctions, according to Rachedi. For more difficult problems, Ford offers the EEC-IV Monitor and Recorder, at about $1,000, and is developing the Service Bay Diagnostic System, an advanced computerized diagnostic system that will carry a considerably higher price tag.

Even with modern technology, the technician must have mechanical skills.

Among the diagnostic procedures for the Super STAR are routines that require the technician to wiggle electronic connections or hammer on a manifold to activate a sensor.

Maserati boosts warranty to three years

Maserati has increased its new-car warranty from two years/24,000 miles to three years/36,000 miles.

The third year of the warranty will provide about 90 percent of the virtually complete car coverage of the first two years, according to Donald P. Morrissey, chief executive officer of Maserati Automobiles Inc., the North American importer and distributor. General Risk Management will administer the additional year of warranty, he said.

Maserati also is adding a customer-assistance plan that includes a towing service and trip interruption insurance service.

Maserati Automobiles also is adding a customer service manager.

"With the kind of product we are selling at the price we are selling it, we really have to have a way to communicate through our dealers to our customers that we are there to service them if there is any problem," Morrissey said.

The engines of older models, Morrissey admitted, were a bit temperamental as a result of a pressurized Weber carburetor and twin turbochargers. That, he said, has been corrected with the introduction of fuel injection on 1987 models.

Maserati technicians are trained at the company's service school in Baltimore. As new dealers are appointed, technicians from those dealerships are sent to the school.

The industry, however, has a universal problem in that it is difficult to find technicians who will stay at one dealership, Morrissey said.

Seasoned technicians have had a tendency to develop loyalties to low-volume makes such as Maserati and Ferrari, but it is difficult to develop that loyalty among newly trained mechanics, he said.

U-Haul, Ryder fight; truckmakers benefit

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Competition between U-Haul and Ryder, the two largest truck-rental companies, is churning up a lot of sales for medium-duty truck manufacturers and giving rise to some uniquely configured vehicles.

U-Haul International, which is fighting to retain dominance in the moving-truck rental business, plans to buy 50,000 to 60,000 new trucks during the next five to six years.

By some accounts, U-Haul hasn't made any significant purchases of new vehicles since 1979. The average age of a unit in its fleet is reportedly close to 10 years.

Because of the age and Spartanism of its vehicles, the company has been losing market share to Ryder. Typically, its vehicles have lacked many of the luxury/comfort options that today's drivers are used to.

U-Haul has "gone for a lot of deluxe features" in the new trucks it is purchasing, a spokesman said, citing examples like AM/FM stereo and cloth seats.

U-Haul has given Navistar International a guarantee to buy "at least" 5,000 specially designed low-profile trucks, the U-Haul spokesman confirmed.

The new low-profile truck will have a special air suspension in the back. It will have a special valve control in the cab that makes the rear of the truck "kneel down" so a mover doesn't need a lift to load it.

The special control allows the vehicle to be loaded from ground level.

Other modifications include spring brackets that have been moved higher on the frame to get a lower profile.

The vehicle will be basically built off Navistar's S-series of medium-duty trucks.

A production version, or possibly just a mockup, will be shown at a press conference U-Haul is planning around Dec. 1, the spokesman said.

U-Haul has been talking to Ford and General Motors about other kinds of new vehicles, he added.

"We've worked with Ford quite extensively in the past, and we're also talking to GM," the spokesman said.

Officials haven't determined the exact mix of their vehicle purchases yet, the spokesman added.

Meanwhile, Ryder officials predict that they'll overtake U-Haul in the overall rental market by the end of this year.

Ryder bought nearly 27,000 new trucks for its consumer division in the past two years, including 8,700 so far this year, according to a spokesman.

Its average fleet age is less than two years, the spokesman said.

It has 35,000 trucks in its consumer fleet and 140,000 in its overall fleet operations.

Of the 8,700 trucks purchased in 1987, 5,400 are parcel vans with low, easy-load floors, the spokesman said, including trucks that have loading ramps.

Its trucks have amenities like air conditioning, power steering and radial tires. Most have automatic transmissions. The equipment was dictated by safety considerations as well as market demand, Ryder's spokesman said.

Ryder, like U-Haul, has special contract arrangements with some manufacturers to develop unique vehicles for it own use.

Like U-Haul, Ryder is developing a low-profile vehicle, in conjunction with Kenworth. It, however, is a heavier-duty truck, geared toward commercial shipping and delivery.

Ryder is working with a number of other original-equipment manufacturers, particularly suppliers, on various research projects for such things as new braking systems and electr ic "black-box" controls.

Typically, they include companies like Rockwell and Cummins.

Ryder also does a lot of primary research and testing with OE truck manufacturers.

In the past, it worked with Ford to spec out a new chassis that subsequently became a standard-use vehicle. More recently, it developed a low-profile trailer for Chrysler's Mopar parts distribution operation.

Most of its purchases have been Ford and GM vehicles, the spokesman concluded.

Private carriers called healthy despite decline in size of fleets

The National Private Trucking Association said private carriers are still a competitive force to be reckoned with, despite a falloff in their average fleet size.

The average fleet size of a private carrier has dropped by nearly a third during the past two years, according to Thomas L. Moore, executive director of the association.

Moorse said he didn't read into that figure a lessening of commitment to private carriage or even a contraction of private carriage.

He cited members who had cut the size of their private fleets but are still hauling more freight than before.

Private fleets are taking advantage of a number of operational freedoms obtained under economic deregulation to improve productivity and efficiency, Moore said.

For example, he noted that more than 40 percent of private fleets have obtained their common or contract carrier authority. Thirty-seven percent of private carriers are conducting compensated intercorporate hauling with a like number engaged in trip leasing.

The numbers are based on a readership survey by The Private Carrier, the National Private Trucking Association's monthly trade journal.

Moore said that, to date, single-source leasing — the ability to lease the driver and the equipment from the same source — has not caught fire. In fact, he said, only 12 percent of private fleets reported using that option, down from 19 percent two years ago. Moore said the decline is in inverse proportion to the rise of dedicated contract carriage.

September car sales drop 22% in Canada; trucks up 8%

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Sales of North American-built cars in Canada dropped sharply last month as dealers tried to clean out their 1987 models before the 1988s were introduced.

Canadian dealers delivered 47,160 North American-built cars, down 21.89 percent from 60,376 in September 1986. The Big 3 domestic manufacturers offered sales incentives to customers on selected 1987 cars and trucks.

For the first nine months of the calendar year, domestic makers sold 536,538 North American-built cars, down 7.43 percent from 579,575 in the first nine months of 1986.

Domestic truck sales in Canada — which have remained strong throughout the 1987 calendar year — showed a gain in September.

CANADA MARKET SHARES September 1987

Cars	
General Motors	49.70%
Ford Motor Co.	27.55%
Chrysler/AMC	19.25%
Volvo	.40%
Honda	3.10%
Trucks	
General Motors	39.56%
Ford Motor Co.	35.69%
Chrysler/Jeep	24.75%

Dealers sold 28,207 North American-built trucks, 7.98 percent more than the 26,123 sold in September 1986.

For the first nine months of the 1987 calendar year, domestic truckmakers sold 284,324 North American-built trucks, up 5.75 percent from 268,867 in the first nine months of 1986.

All five domestic manufacturers reported lower car sales in September than in the year-ago month.

For the third straight month, General Motors was the biggest loser in domestic car sales volume. GM dealers sold 23,438 North American-built cars, down 20.96 percent from 29,652 in September 1986. During September, GM offered $750 cash rebates or financing as low as 3.9 percent on selected cars and light trucks. Only cash rebates were offered in Ontario because of a provincial law that prohibits offering both.

Chrysler Motors sold 9,079 North American-built cars, down 38.75 percent from 14,824 in September 1986. Chrysler offered cash rebates of $500 to $1,500 on Chrysler, Dodge and Plymouth cars. No cut-rate financing was offered on those models.

Chrysler's September sales included 356 Renault Alliance and GTA models and 45 American Motors Eagle cars. AMC sold 733 Alliance and Encore models and 32 Eagles in September 1986. They are not included in Chrysler's 1986 figures. Chrysler Corp. acquired AMC on Aug. 5 and has incorporated the former AMC products into its new Jeep-Eagle Division.

In addition to financing as low as 3.9 percent, Chrysler offered rebates of $1,250 on Renault Medallions and $750 on Alliance and GTA models during September.

Ford Motor Co. reported that its dealers delivered 12,992 North American-built cars in September, down 13.01 percent from 14,935 a year ago. Ford offered its Canadian customers $750 cash rebates or financing as low as 3.9 percent on Escort, Taurus and Sable models. On Merkur XR4Ti, Ford offered $2,000 or the low financing. Only cash rebates were offered in Ontario.

CANADIAN SALES OF NORTH AMERICAN-BUILT VEHICLES

TOTAL CAR	47,160	60,376	−21.89	536,538	579,575	− 7.43
TOTAL TRUCK	28,207	26,123	+ 7.98	284,324	268,867	+ 5.75

Sales of Canadian-built Volvos were off slightly. The Swedish maker sold 188, down 6 percent from 200 in September 1986.

Honda dealers sold 1,463 Canadian-built cars — all Accord models — in September. There is no year-ago comparison; Honda started production in its Alliston, Ontario, plant in November 1986.

GM, Ford and Chrysler set September truck sales records this year.

GM sold 11,158 domestic trucks last month, up 4.38 percent from 10,690 in September 1986. The previous September record was set in 1980 when the company sold 11,089 trucks.

Ford sold 10,067 domestic trucks in September, up 2.46 percent from 9,826 a year-ago, the previous peak for the month.

Chrysler sold 6,982 domestic trucks last month, up 57.61 from 4,430 a year ago, which was the previous record. Chrysler's truck sales this year included 5,104 Dodges and 1,878 Jeeps.

In addition to North American-built cars, GM sold 1,613 Suzuki-built Chevrolet Sprints, 1,340 Suzuki-built Pontiac Fireflys, 95 Isuzu built Chevrolet Spectrums, 89 Isuzu-built Pontiac Sunbursts and two Isuzu I-Marks.

Ford sold 889 Mercury Tracers, 29 Merkur Scorpios and 159 Merkur XR4Ti models. The Tracer is built in Taiwan; the Scorpio and XR4Ti are built in West Germany.

Chrysler sold 689 Mitsubishi cars and 16 Peugeot cars.

Honda sold 3,020 Japanese-built Honda cars, down 39.15 percent from 4,963 imported Hondas sold in September 1986. It also sold 583 Japanese-built Acura models this year; they were not imported in 1986.

Volvo sold 369 Swedish-built Volvo cars in September.

In the imported truck category, GM sold eight Isuzu Troopers and Chrysler sold 328 Mitsubishi trucks.

Import stocks at 9-month low

Car-truck supply declines to 49 days from 52 on Sept. 1

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Imported car and light-truck inventories dropped to the lowest levels in nine months on Oct. 1.

That amounted to a 49-day supply, compared to 52 days on Sept. 1 and 39 days on Oct. 1, 1986.

October opened with 714,897 imported cars and light trucks in stock — at U.S. ports, in transit to dealerships and in stores — compared with 810,982 units on Sept. 1, down 18.36 percent.

The combined total of unsold imported vehicles was 30.35 percent higher than the year-ago stockpile of 548,455 units and was almost twice as high as the the Oct. 1, 1985, count of 365,205, which was equal to a 29-day supply.

Although September's domestic and imported car sales trailed last year's record September numbers, imported and U.S.-built-car inventories were both much slimmer on Oct. 1.

Imported-car stocks were the lowest since April 1. At the beginning of October, imported-car inventories declined to 547,966, for a 48-day supply, down 9.65 percent from last month's 606,500, a 51-day supply.

The Oct. 1 stockpile of domestically produced cars was the leanest in 12 months, equaling a 57-day supply. One year ago, inventories of U.S.-built cars were 35 days.

The slimmest car inventories were Honda's, which stood at 14 days for imported models and 11 days' worth of U.S.-built cars. Honda's domestic and import car inventories and day supply levels were higher than last month.

The company's inventory of upscale Acura models dropped and were equal to a 19-day supply compared to a 27-day supply last month and a 24-day supply a year ago.

Hyundai inventories dipped to 20 days' worth on Oct. 1, down from 29 days a month earlier.

Incentives and better sales in September diminished Subaru's stock to 59 days on Oct. 1 compared to a 90-day supply at the beginning of September.

The imported light-truck stockpile fell to the lowest number in 12 months. Oct. 1 inventories stood at 166,931 vehicles, a 53-day supply. That was down from last month's 204,482, a 56-day supply, but it was higher than last October's 156,731 light trucks, a 46-day supply.

Chrysler Motors' imported light-truck inventories were 54 percent lower than on Sept. 1. Chrysler and its dealers had a 39-day supply on Oct. 1 compared to 84 days' worth on Sept. 1.

The Oct. 1 inventory of imported cars by country of origin was shared as follows: Japan, 69.47 percent; Germany, 13.69 percent; and other countries: 16.84 percent.

On Sept. 1, the inventory shares by country were: Japan, 67.55 percent; Germany, 13.78 percent; and other countries, 18.67 percent.

Days' supplies by countries on Oct. 1 were: Japan, 49; Germany, 54; other countries, 40.

UIS drops takeover bid for Walbro

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

UIS Inc., New York, has withdrawn its offer to purchase a majority of Walbro Corp.'s common stock and has dropped a lawsuit against the Cass City, Mich., maker of fuel-system components.

The two companies' managements signed agreements on Oct. 13 that benefit both companies, according to a UIS spokesman. UIS, which owns about 6.4 percent of Walbro's common shares, will become an exclusive aftermarket distributor of Walbro electric fuel pumps for three years. Walbro sells to original-equipment manufacturers.

UIS and Walbro also have agreed that Walbro will be able to buy back one-half of its common from UIS at $25.50 per share.

A year from now, UIS may sell Walbro its remaining shares at a per-share price of $25.50.

In early September, UIS, which owns seven auto supplier firms, made a hostile offer to buy approximately 60 percent of Walbro's 3.5 million outstanding common shares at $27.25 per share.

Walbro's management and some shareholders rejected the offer and agreed to hold on to a 30-percent interest in the company. To ensure independence, Walbro sold $35 million of a new issue of preferred stock to General Electric Credit Corp., New York.

UIS filed for a temporary restraining order in the Delaware Chancery Court to prevent Walbro from using the preferred stock proceeds for 20 days. Before last week's settlement, the order was granted.

In addition to resolving differences with UIS, Walbro has agreed to settle several shareholder lawsuits brought against the company in connection with Walbro's actions to stop the acquisition.

Mazda dedicates U.S. plant

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

FLAT ROCK, Mich. — The major problems for Japan as a nation and for Kenichi Yamamoto as president of Mazda Motor Corp., as described by him, have a familiar ring. They sound like problems expressed by American chief executives.

"My biggest concern and headache as president of Mazda is a result of appreciation of the yen in relation to the dollar. That has brought U.S. costs closer to Japanese costs and brings into focus the local-content situation," he said.

His remarks came at the formal dedication of the Mazda assembly plant here.

"This plant and local content exemplify the two biggest concerns in Japan today. They both are a result of the yen's appreciation. They are: How to survive and how to cope with the industrialization of Japan and the transfer of industry overseas with a resulting loss of jobs. It was in that context that Mazda launched its biggest project yet, the Flat Rock plant," Yamamoto said through an interpreter.

The executive said U.S. costs are very close to Japanese costs when the value of the yen is about 140 to 150 to the dollar. The rate currently is about 144 per dollar.

"This has meant we've had to look harder and harder for local content," Yamamoto said. The cars built at the plant are at a local-content point of about 50 percent. That figure is expected to rise to about 75 percent by the end of the current product cycle.

Another effect of the yen's high value was a boost in the cost of the Flat Rock assembly plant to about $550 million, $100 million more than was estimated, Yamamoto said.

AUTOMOTIVE NEWS/JOE WILSSENS

While performing a Japanese custom during the plant dedication, Nobuto, left, and Ron Shanks, a team leader, paint an eye on a Daromu Doll

The new facility went on stream Sept. 1 and is running at a rate of six Mazda MX6 cars an hour. The rate will rise to 53 an hour by the start of 1988 when the Ford Probe will be added to the plant's product line. A four-door Mazda 626 model will join the product mix later.

The projected normal, two-shift production rate of 240,000 cars per year is expected to be reached in September 1988, according to Osamu Nobuto, president of Mazda Motor Manufacturing (USA) Corp. With overtime, production can be increased to 300,000 annually. Ford's share of output is slated at 60 percent.

Flat Rock workers have voted to be represented by the UAW. Work on a contract will start in November or December with a conclusion expected early next year, said David Merchant, vice president of personnel.

"It appears the UAW is ready to embrace our type of philosophy," Nobuto said. "We met with UAW President Owen Bieber early on and are convinced of that."

On job security, he said "we have a letter of intent on the subject but, with us, job security is more a matter of mutual respect and confidence than of a contract."

The hourly wage rate at Flat Rock for assemblers is $10.98 an hour; skilled workers and maintenance people receive $12.92 per hour. Mazda officials said those wage rates are about 85 percent of the Big 3's rates and that the gap will be closed over three years.

Newspaper ad spending on autos up 34% in first half

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — A flurry of incentives, new warranties and new makes and models boosted newspaper advertising spending for the nation's automotive manufacturers, dealers and dealer associations during the first half of 1987.

Automakers and their dealers spent $314.6 million on newspaper ads during the first half of this year, up 34.06 percent over the $234.6 million spent in the first half of 1986, according to the Newspaper Advertising Bureau. The figures do not include ads placed by automakers and dealers in national newspapers such as USA Today or The Wall Street Journal.

The expenditures for the first half of 1987 exceeded the $314.2 million spent by automakers and dealers in the entire 1984 calendar year.

Val Corradi, vice president of automotive marketing for the Newspaper Advertising Bureau in Birmingham, Mich., said factories and dealers used newspaper advertising extensively to promote new warranties and incentives.

"During the first half of 1987, there was a warranty war that certainly spawned a lot of factory promotion," Corradi said.

"Also, dealers and factories advertised incentive programs in what I call 'call-to-action ads,' " he said.

Newspaper advertising spending by new-car and truck manufacturers alone totaled $94.6 million, up 123.12 percent from $42.4 million in the first half of 1986. In addition to incentives and warranties, many manufacturers introduced new vehicles in the first half of 1987.

For instance, Chevrolet spent $12.9 million on newspaper advertising in the first half of 1987, up 344.39 percent from the $2.9 million it spent in the same period in 1986. The dramatic increase was due to the division's three new products — Chevrolet C/K pickup truck, Corsica and Beretta — introduced in the spring.

Chevrolet was in a tight race with Ford Division to become the top-selling domestic nameplate in the 1987 model year.

Toyota ads to stress quality in 30th anniversary year

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Toyota Motor Sales will celebrate its 30th anniversary in the U.S. market with an advertising campaign emphasizing what has made it successful — quality.

Facing what could be its toughest year, Toyota will retain its themeline, "Who could ask for anything more?" preceded by the line, "Toyota quality," in both television and print commercials. Toyota ads broke Oct. 1 in selected markets and national ads broke during the weekend of Oct. 3-5.

George Borst, corporate marketing manager for Toyota Motor Sales U.S.A., said 75 percent of Toyota's advertising budget will be spent on television, 20 percent will be spent on print and the remainder will go toward outdoor signs and radio advertising.

The thrust in Toyota's advertising will be on its volume cars — Tercel, Camry and Corolla. Borst said 75 percent of its car advertising spending will be given to those models. Toyota's total advertising budget has been estimated at $200 million.

"Those cars are 75 percent of our volume and with our new U.S. plants coming on line soon, we want to build a broad base of support before the anticipated volume of cars (from those plants)," Borst said.

Toyota is building a new plant in Georgetown, Ky., that will begin building the Camry in the spring of 1988. It also will build Corollas in its new Cambridge, Ontario, plant beginning in fall 1988.

In the Corolla television spots, the car appears on the screen in a movie theater, then drives through the screen down the aisle of the theater while the young audience gasps. The voiceover says: "Toyota Corolla — new for 1988. Dramatic new looks that will stun you. Performance that will surprise you, and value that is legendary."

Corolla's sheet-metal changes are also the subject of a novel pop-up ad created by 3Dmark Inc. and Eastman Kodak. Special three-dimensional cardboard glasses will be inserted in the Oct. 26 issues of Cosmopolitan, People and Time magazines. When looking through the glasses, viewers can see the redesigned Corolla with a San Francisco skyline in the background.

Other television spots for Toyota cars include a pitch for the Cressida by golfer Chi Chi Rodriguez and voiceovers in advertising for other car lines by actor Martin Sheen.

Print ads for Toyota cars will give each car its own personality while continuing to use the tagline, "Toyota Quality: Who could ask for anything more?"

Truck ads will feature golfer Lee Trevino as a spokesman. In one spot, Toyota asks truck buyers not to compromise by buying a cost-cutter truck, referring to rebates, cut-rate financing and price-leader vehicles from domestic truckmakers this year.

Each truck line also will receive its own personality in print ads.

Niche marketing efforts will be increased this year. Borst said Toyota will continue its sponsorship of college football game broadcasts and the "Toyota Leadership Award" for selected National Collegiate Athletic Association football contests.

Marketing efforts aimed at blacks and women also will play important roles in 1988. Spot magazine buys in women's magazines and sponsorship of several programs on Black Entertainment Television will provide the major thrusts for Toyota in those markets.

Toyota broke its first movie theater ad last week. The 90-second spot features a chase scene between a "good guy" driving several Toyota models and a "bad guy" driving "Brand X," according to Borst.

The company also will promote its "Toyota Touch" owners' assistance programs in television spots for the first time this year. Owners are encouraged to call (800) 331-4331 with complaints and compliments on their Toyota models.

NEWSPAPER

FROM PAGE 29

The new Chevrolet car and truck models were promoted heavily last spring in a bid to regain market share.

Lincoln Mercury Division — which introduced its Mercury Tracer and Merkur Scorpio last spring — spent $1.4 million on factory advertising in newspapers in the first half of 1987, up 110 percent from $666,000 during the same period a year ago.

Domestic manufacturers and their dealers spent $149.9 million on newspaper ads in the first half, up 24 percent from $120.5 million in the same period last year. Importers and their dealers spent $118.3 million on newspaper ads during the period, up 54.9 percent from $76.4 million a year earlier.

In addition, the Newspaper Advertising Bureau includes a "several makes" category, which consists of multi-make ads by dealers. The total was $46.3 million in the first half of this year, up 22.5 percent over $37.8 million in the 1986 period.

Ford Division and its dealers outspent all other domestic and import nameplates in newspaper advertising during the period. Toyota and its dealers were the top spenders in newspapers in the import category.

Corradi predicted even stronger gains in newspaper spending during the second half of 1987 because of the advertising dollars spent for the year-end cleanup programs offered by all of the domestic manufacturers and many importers.

The increases in factory advertising by the domestic makers allowed individual dealers to cut back their newspaper advertising budgets. Domestic dealers spent $76.9 million on newspaper ads in the first half of 1987, off 12.09 percent from $87.5 million in the first half of 1986.

Ford Division dealers topped all other dealers in newspaper advertising during the first half of this year with $16.7 million.

Dealer associations spent $31 million on newspaper ads in the first half of 1987, up 31 percent from $23.7 million during the same period in 1986. Corradi said part of the increase was due to the influx of dealer associations formed by dealers handling new import makes. The dealer association totals are included in the manufacturer-dealer totals.

Total newspaper advertising for trucks — including factory, dealer and dealer association spending — totaled $19.9 million in the first half of this year, up 51.8 percent from the $13.1 million spent in that medium in the 1986 period.

Chevrolet spent more than any other nameplate on newspaper ads for trucks. The division and its dealers spent $7.3 million, up 329 percent from $1.7 million during the year-ago period.

High DeLorean price surprises auctioneer

LONDON — A DeLorean sports car has been sold at an antique auction here for the equivalent of $24,000. It was expected to bring about $19,300.

"It was probably because it was one of the earliest DeLoreans and as such it was something of a rarity," said a Phillips auctioneer.

He added that it was probably the "youngest antique" the firm had ever sold. It had only 270 miles on the odometer.

Built in 1981, the car was given to a noise-testing consulting firm and dry stored after the collapse of the DeLorean carmaking operation in 1982.

Auctions slap NHTSA title rule

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Rules proposed by NHTSA requiring that vehicle titles be present at the time of transfer of ownership and that full odometer disclosure be required on the title have come under fire from the National Auto Auction Association.

NHTSA and the 172-member association are at loggerheads over the impact of the proposed rules and particularly at what point the sale of a vehicle takes place. Is it when the gavel falls or later when the title is released by a financial institution?

The association argues that the new rules mean the title has to be present at the time of sale. NHTSA officials are waffling, saying the proposed rules say "transfer of ownership" and the states must decide.

If dealers have to bring vehicle titles to the auction to sell vehicles, sales will be affected, auction managers say, because many dealers who finance cars don't have the titles in their possession — the titles are held by the financing institution.

"It will create havoc in the industry and surely put a lot of smaller dealers out of business," said Warren V. Young, chairman of the association's legislative committee.

He said the auction association supports the Truth in Mileage Act and its intent to increase penalties for odometer tampering and to encourage stronger enforcement of the odometer law.

But he said that under the proposed rules, vehicle sales could be hurt, and financial institutions may elect to reduce drastically their participation in automobile financing if they have to produce titles before loans are paid.

"Most banks and finance companies require that the lien be recorded on the title to be protected and that they retain the title in their files until the lien has been paid, at which time they will release it," Young said.

He said that in order to comply with the proposed rules, financial institutions would have to be willing to give up possession of the titles before being paid. He said he believes that is unlikely.

Young, who is president of Manheim Auction Inc., contended that the act does not require the title to be present at the initial sales transaction nor does it say that sellers are not complying by providing the traditional mileage disclosure statement at the time of the sale as long as the title also contains the same mileage information when it is delivered.

He said requiring the title to be present will hurt all sales made on weekends or after 5 p.m. when banks, finance companies and dealership offices are closed, making it impossible to have the title present.

NHTSA has misinterpreted the intent the act if it requires that titles be present at the time of sale, Young said.

"We submit that the most effective solution is to comply with the original intention of the regulations in continuing to require that odometer disclosure statements be executed by both buyer and seller, and that the same mileage on the disclosure statement be included on the title and all title reassignments," he said.

But a NHTSA spokesman disagreed. "We have never said the title has to be present at the time of the sale," he said. "The proposed regulation says that at the time of the transfer of ownership, the odometer disclosure must be executed."

The act is very clear that the mileage disclosure should appear on the face of the title and not on a separate statement, he said. He added that it is up to the states to decide what "transfer of ownership" means and when it takes place.

Congress passed the Truth in Mileage Act last October to create a paper trail of true mileage on used vehicles for consumers by establishing uniformity among states in odometer disclosure and titling.

The new law changed odometer tampering from a misdemeanor to a felony and increased the criminal penalty from a maximum one-year jail term to a maximum three-year term. It also increased the civil penalty from $1,000 to $2,000 per vehicle for those convicted of odometer spinning.

NHTSA rules to implement the act should be approved by December. States will have until April 1989 to comply by changing their titles to conform with the requirements of the act.

The new law means consumers will not only know the true mileage of the vehicle but also its previous owners and whether it is a trade-in or a fleet vehicle purchased at an auction.

GE GROWS: *Adds 2 auctions; now owns 15 in bout with Anglo, Manheim*

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

GE Credit Corp. has added two new auctions to its portfolio with the acquisitions of St. Pete Auto Auction in Clearwater, Fla., and Clanton's Auto Auction in Darlington, S.C.

Industry sources say GE paid about $37 million for the package, setting a record for the price paid in a single deal for auctions. A source at GE said he believed that figure sounded high by roughly 25 percent.

The auctions were owned by J.C. Clanton Jr. and Ray Clanton Sr., who will continue in management roles at Clanton's Auto Auction in Darlington.

GE's purchase on Dec. 31 — to take advantage of capital gains — of the Los Angeles Dealer Auto Auction and the Southern California Auto Auction are said to have involved $22 million and $30 million, respectively.

The most recent purchase by GE, which further reflects the continuing consolidation of the auction business, will fuel the already heated competition among GE; Anglo American Auto Auctions Inc., which now owns 20 auctions; and Manheim's 17 auctions.

Clanton's was the largest independent auto auction in the nation.

GE has been on the acquisition trail since it entered the auction business two years ago. It now owns 15 auctions throughout the nation.

Industry sources say the company is still on the prowl and has struck a deal with Ohio Auto Auctions Inc. in Columbus, Ohio, and is nosing around Detroit for property to build a greenfield operation to compete with Anglo's APTCO Auto Auction.

GE has doubled its annual sales volume from 300,000 to 600,000 vehicles per year.

"We've quickly become a major force in an industry that sells over four million cars annually," said Mike Zafirovski, president and general manager of GE Credit Auto Auctions, a subsidiary of GE Credit Corp. "In fact, we plan to contribute one million cars and trucks to that total by 1989."

The purchase of the St. Pete Auto Auction marks GE Credit's entry into the Florida market. Sources said the company will sink more than $1 million into improving and expanding facilities there to compete with the three Manheim auctions in Orlando and Lakeland, Fla.

GE has shown a propensity toward purchasing auctions then sparing no expense to upgrade them as it did with the Denver Auto Auction, which it acquired in December 1985, and the Newburgh Auto Auction, Newburgh, N.Y., which it purchased earlier this year.

Auction leaders see more Big 3 action

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

COLUMBUS, Ohio — Nearly 800 persons, including representatives of the Big 3 automakers and executives of more than 175 independent and chain-owned auctions in the United States and Canada, attended the National Auto Auction Association convention here to exchange views and keep abreast of events in the fast-paced business.

"Business has been very good this year," said 1988 NAAA President Jim Wheatley, manager of the Harrisonburg (Va.) Auto Auction.

"Ford, General Motors and Chrysler are expected to sell more cars through auctions in the coming year. We expect sales to exceed 4 million vehicles in 1988."

Association members expressed concern over the NHTSA proposed rules for implementation of the odometer law and proposed legislation by lawmakers in Ohio and Virginia requiring out-of-state dealers to buy dealer licenses in their states to sell vehicles.

Next year is the 50th anniversary of the first car sold at an auction in the United States. Roughly 30 cars were sold at that first auction, at Rawls Auto Auction Sales, Leesville, S.C.

Plans are under way by the association to celebrate the advent of the car auction at the NAAA convention next year. It will include invitations to past presidents and NAAA Hall of Fame members.

J. Omar Landis, manager of Garden Spot Auto Auction in Ephrata, Pa., was elected vice president of the association. New directors elected at the convention are: Jake Hershey, Pennsylvania Auto Dealers Exchange, York, Pa.; Joe Greco, Florida Auto Auction of Orlando, Orlando, Fla.; Stuart J. Frankenthal, Louisville Auto Auction, Louisville, Ind.; and Curt Hakanson, Tri-State Auto Auction, West Fargo, N.D.

REBATES

FROM PAGE 1

As of last Friday, Ford Motor Co. was continuing to look at direct-mail programs and other alternatives to traditional cash rebates and low-interest financing.

Some Ford dealers contacted last week expressed concern that Ford customers may be offered coupons by GM and Chrysler and not by Ford.

"I want to retain the competitive relationship I have with GM and Chrysler dealers. If direct-mail incentives work for them, I want them," said Walter Douglas, president of Avis Ford, Southfield, Mich.

Although it is doubtful direct-mail programs will replace traditional incentives offered to all customers, manufacturers say they are trying to come up with new twists to low-interest financing and rebate programs, which are growing stale.

"What we saw in the September sales results (with 1.9 APR financing and generous cash rebates) was consumers saying, 'Aw, gee, I'm not going to buy now, they'll have a deal when I'm ready to buy,' " said Chrysler Motors Chairman Gerald Greenwald. "We'll see how this works."

Domestic-car sales were off 34 percent in September from September 1986. Chrysler domestic-car sales slid 48 percent during the month.

GM Chairman Roger B. Smith told a group of businessmen in Chicago last week that GM would not instigate the next round of low-interest incentives and rebates. He said GM dealers want to get back to selling products and not incentives.

Both Greenwald and officials from GM say rebate offers mailed to owners of their cars have been successful in the past. Chrysler offered direct-mail rebates to Chrysler owners and employees under its "Thank you America" program that ran from Feb. 11 until June 6, 1985.

A similar program was repeated a year later when Chrysler offered its "Thank You America, Again" rebate program between Feb. 20 and May 10, 1986.

GM experimented with direct-mail rebates earlier in the year in four test markets. All divisions were included in the program, which ran from May 20 until July 31 in Minneapolis, Cincinnati, Denver and Tampa, Fla. The program — called "Owners First" — offered two million GM owners in those cities rebates of $200 to $1,500 on almost all GM vehicles.

The program was so successful that Buick and Oldsmobile launched a nationwide direct-mail program on July 16.

The Buick program offered three million Buick owners and competitive make owners rebates between $300 and $500 on selected models. The Oldsmobile program offered an unspecified number of owners and competitive make owners rebates of $300 to $500 or reduced financing rates on selected models. The program ended Sept. 30.

But while the GM rebate programs generated sales, some dealers reported problems, including late payments by GM to cover the value of the certificates.

One Chevrolet dealer who participated in the "Owners First" program said his dealership had to wait several months to receive $47,000 to cover the rebates used as down payments.

A Buick dealer in the Tampa, Fla., area said his dealership covered $120,000 in rebate money for several months until he was paid by the factory. Some customers who chose to receive the cash rebate directly from the factory waited four to five months for their checks, dealers said.

GM dealers reporting problems were told that the corporation was not prepared to handle the large volume of responses. Administration of the program — validating certificates and handling complaints — was later given to divisional personnel, some of whom were not familiar with the program, according to dealers participating in the program.

Subaru, Peugeot add incentives for dealers; BMW extends 6.9%

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Subaru of America and Peugeot Motors of America have launched dealer incentive programs, and Subaru and BMW of North America have extended their customer incentive offers.

Subaru of America has extended its program of up to $1,500 in rebates and 3.9 percent financing rates to Dec. 31.

While the program remains essentially the same as when it began earlier this year, a Subaru spokesman said regional adjustments are being made by distributors. Under terms of the program, at least one car in the lineup must carry a $1,500 rebate and DL sedans and wagons must carry an $800 rebate. Incentive money is contributed by Subaru of America, the distributors and dealers.

Subaru added cash incentives for dealers. The program began earlier this month and runs to Jan. 8. Incentives are based on a dealer's performance against sales objectives. After a dealer reaches 80 percent of his goal, he will receive $400 per car. The payment goes up to $1,200 per car for those reaching 115 percent of the objective.

In addition, there is a Fast Start Bonus of $200 per car for those reaching 40 percent of their objective within the first month. Subaru had a 59-day supply of cars Oct. 1 compared with 90 days Sept. 1.

Peugeot Motors of America also launched a dealer incentive program earlier this month. It coincides with the consumer rebate of $4,000 to owners of Peugeot diesels toward the purchase of a new 1987 gas-powered model.

Peugeot will send the dealer a check for five percent of the wholesale value of the car for each retail delivery of a 1987 model. A Peugeot spokesman said the average wholesale price ranges between $17,000 and $18,000. The program runs through Dec. 31. Peugeot had an 85-day supply of cars Oct. 1 compared with 88 days Sept. 1.

BMW of North America is continuing its 6.9 percent financing rate through Oct. 31 on all 3-series models including the M-3 and the convertible. After that date, the program will be available only for the M-3 and convertible; it expires Dec. 31 for those models. The program originally was scheduled to end Sept. 30.

BMW had a 61-day supply of cars on Oct. 1 compared with 60 days on Sept. 1.

COMPACTS

FROM PAGE 1

1987 model year, up from 465,170 the previous year.

Compact cargo vans posted a 12.89 percent decline; sales of 122,920 were off from 141,109 in the 1986 model year.

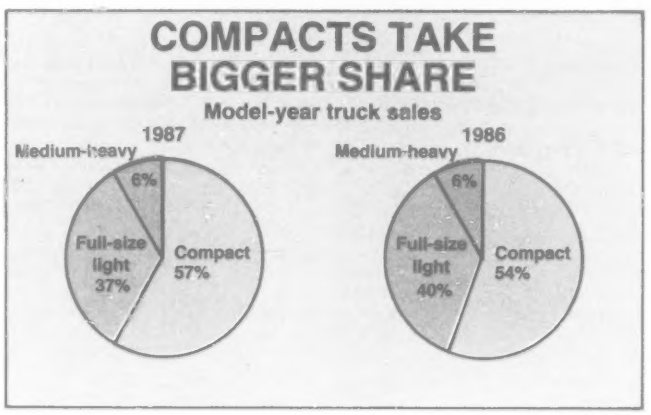
Small sport-utilities accounted for 697,521 sales in the 1987 model year, up 15.53 percent from 603,770 the year before.

Compact pickups, which are still the single largest segment in the entire truck market, have largely plateaued, as analysts predicted. This is a very crowded and mature segment with few new entries to spur its growth.

By contrast, many manufacturers have either introduced, or are planning to introduce, new entries in the compact sport-utility and van market.

In the 1987 model year, small pickups accounted for 1,441,130 sales, up marginally from 1,432,868 the previous year.

Full-sized pickup, van and sport-utility segments have all been shrinking, though GM predicts it will buck that trend with its new full-sized pickups in the 1988 model year.



LANCE GRAVES

Full-sized pickups, including the now-discontinued Chevrolet El Camino/GMC Caballero, accounted for 1,166,135 sales in the 1987 model year, off 6.63 percent from 1,248,975 the year before.

Sales of full-sized two-door sport-utilities, including Ford Bronco, Chevrolet Blazer, GMC Jimmy and Dodge Ramcharger, dropped to 110,171 from 129,441 in the 1986 model year.

Four-door station wagon-style sport-utilities, including Chevrolet/GMC Suburbans, Jeep Grand Wagoneer and Range Rover, accounted for 91,228 sales, off 7.70 percent from 99,195 the year before.

Sales of full-sized cargo and passenger vans were both off last year.

Commercial cargo models, accounting for 84.31 percent of the full-sized van market, had sales of 399,414 units, off from 422,351 in the 1986 model year.

Full-sized passenger vans, accounting for 15.69 percent of the big van market, had sales of 74,354, off from 88,571.

SALES

DOMESTIC SALES

	Oct. 1-10, 1987	Oct. 1-10, 1986
Eagle	656	2,680
Chrysler	9,187	12,836
Plymouth	6,627	11,497
Dodge	8,244	15,034
Chrysler Motors	24,714	42,047
Ford	26,066	40,474
Mercury	8,826	13,485
Lincoln	3,770	6,464
Ford Motor Co.	38,662	60,423
Buick	11,589	36,311
Cadillac	7,476	10,841
Chevrolet	27,648	37,985
Oldsmobile	15,397	30,302
Pontiac	14,922	21,591
General Motors	77,032	137,030
Volkswagen	805	1,310
Honda	6,784	5,203
Nissan	2,153	1,610
Toyota	593	0
U.S. Industry Total	151,043	247,623

"We've had two excellent months selling over 200 used units in both months," said James Hoffer, general sales manager, Jordon Motors (Ford-Toyota-Volvo), Mishawaka, Ind.

Sales of U.S.-built cars totaled 151,043, down from last year's 247,623. The daily selling rate this year was 16,738 compared with 27,514 a year ago. Both periods had nine selling days.

Many dealers said they expected better traffic with model introductions. Some admitted that consumers were waiting to see if rebates return. Others speculated that sales of new models may have been hurt by cancellation of television spots during National Football League games.

"There's definitely less traffic. Our sales are about 50 percent down, but we've sold all of the models with Quad 4 engines," said Johnny Crow, general sales manager, CMC Oldsmobile-Cadillac, Los Gatos, Calif.

The Big 3 reported sales downturns of 36 to 44 percent for the first 10 days of October compared to a year ago. Ford Motor Co.'s sales dropped to 38,662 units, down 36.01 percent.

Chrysler Motors' sales slumped 41.22 percent to 24,714. Mid-October sales may be boosted by the infusion of new rebates up to $1,000 that kicked off Oct. 15.

A Las Vegas Chrysler-Plymouth dealer said, "Inventories are good. The Fifth Avenue, Voyager are very popular. We're down about 10 percent compared to the first 10 days of September. We have about a 90- to 120-day supply. We're excited about the new incentives."

General Motors' deliveries slumped 43.78 percent to 77,032 compared with a stellar 137,030 a year ago. A bright star for Pontiac dealers is Bonneville, which more than doubled its sales of the first 10 days of October last year.

"The Bonneville SE is the highlight of our car line," reported Sam De Angelo, general sales manager, Ray Laethem Pontiac, Detroit.

Honda reported a 30.39 percent sales gain for the period with 6,784 deliveries vs. 5,203 last year.

Nissan's sales rose 33.73 percent. Toyota sold 893 cars in the first 10 days of October; it was not reporting sales of U.S.-built cars at this time last year. Volkswagen's sales of U.S.-built cars were off 38.55 percent. Mazda did not issue a U.S. sales report.

SATURN

FROM PAGE 3

Another provision is a right of first refusal: Saturn can buy a dealership if the dealer wants to sell to somebody who does not meet Saturn's qualifications. Saturn would buy under the same terms as the unacceptable buyer had offered. The same clause is in the GM dealer agreement.

But unlike the GM agreement or others, Saturn also has the right of first refusal when a dealer is threatened with termination. For example, if a dealer fails to meet performance standards for sales or customer satisfaction, Saturn can buy the dealership for the fair market value.

Cubbin said that because Saturn dealers will have unusually large market areas, Saturn cannot afford to have an area uncovered.

The successor provision in the Saturn franchise agreement is also different from others. Successors must go through the same selection process as initial dealers. Ideally, Saturn would like to have dealers write into their business plan who their successor will be. The successor then will go through the qualifying process long before the successor takes over.

In yet another unusual provision, the Saturn franchise agreement requires training for all dealership personnel. Training involves not only technical and product training but also teaching personnel the importance of customer satisfaction and how to achieve it.

In August, Saturn sent about 12,000 packets of information on the franchise to all GM dealers and others who had requested the information. The packets included preliminary applications.

Donald Hudler, Saturn vice president of sales, service and marketing, called the response "gratifying."

Saturn will have 100 dealers in 30 major markets when its car is launched in 1990. Dealers will be added as production at the Spring Hill, Tenn., plant increases gradually to 250,000 units a year.

Saturn will begin the dealer selection process by geographic area. Southern California dealers will be chosen first; New York next.

Qualified dealers will be sent a second, more detailed, questionnaire.

The questionnaires will be followed by visits by Saturn officials to the dealerships beginning in January and a visit by the dealers to Saturn headquarters to see the car and product plans.

Hudler said about 80 percent of the preliminary applications returned to Saturn are from GM dealers. They came from all over the country, and Saturn has received at least two applications for each of its 123 market areas.

Of the 2,000 applications received, Hudler said more than 1,800 met the minimum net worth of $1.3 million. He added that about 50 applications came from individuals or groups with no experience in the auto business.

In addition to processing applications, Saturn will study each of the 123 market areas to identify who the best dealers are. Hudler said Saturn will recruit good dealers who did not apply.

Dealers will be allowed to have multiple locations, including sites in shopping centers.
